The reformer, imbued with the beauties of the reform he advocates, in love with God's truth and humanity, especially the oppressed portion of humanity, by far the largest section, delights in meeting all the objections that social skepticism may find in the reform under discussion. At the same time let us remember, all around, that Truth is only given to those willing to search for it and willing to grasp it when found.

José Gros.

The Baccarat Aristocracy.

THE readers of the *Magazine*, many of them, at least, we do not doubt, are familiar with the English sensation, which has passed into history as the "Baccarat scandal," and is important chiefly because His Royal Highness, Albert Edward, Prince of Wales, heir apparent to the throne of England, and India, &c., &c., was one of the chief actors.

The government of England is a singular agglomeration of aristocracy, democracy, commons and lords, the real power residing in the commons, the King being a figure-head, and the lords, confessedly, as nearly effete as it is possible while a semblance of energy remains. Notwithstanding such facts, the people of England are loyal to the crown, and this devotedness, giving full credit for the characteristic conservatism of the English people, is due largely to the clean record made by Victoria, who as Queen, woman, wife and mother challenges the respect of the world.

Victoria is now seventy-two years of age, and is not likely to abdicate, and just now would not be permitted to do so if she were so inclined. The heir to the throne, since he obtained his majority, while a princely good fellow, has not developed those kingly qualities which in these latter days the English people regard as essential, and now, that the fact is placed beyond controversy that the Prince is a gambler, carrying about with him the tools of the business from place to place, he has not only disgraced himself and humiliated the English people, but has absolutely placed the English throne in jeopardy.

The heir to the throne going about the country with baccarat chips in his pocket, in readiness to start a game to win money is something so entirely at war with the dignity of royalty, thrones, crowns, scepters, and a that, as to make a hod-carrier cry out "shame!"

I write of the "baccarat" developments,

not that I care the value of a pinch of snuff or a hill of beans for anyone involved in the scandal, but simply to show that aristocracy, find it where you may, is a vulgar sham; that aristocrats, whatever their lineage, are base born, confirming to the fullest extent the inspired wisdom of Peter's immortal declaration, that "God is no respecter of persons," and in view of all the facts, the question is pertinent: Why should He be? What sort of an estimate must the Creator have of the Prince of Wales, the heir to the British throne who, as a common gambler, is caught and held up to universal contempt with a lot of baccarat chips in his pocket? I conceive that any honest workingman, in all of the British empire, stands in the estimate of Jehovah as much above Albert Edward, the Prince of Wales, as a giraffe stands above a cockroach; indeed, the commonest dwelling of an honest English toiler in Heaven's estimation must blaze like a palace of stars as compared with the home of the royal gambler—the Prince of Baccarat and Commander-in-chief of chips.

The Prince of Wales, excepting, perhaps his royal mother, stands at the head of the English aristocracy. If he is the highest, to what fathomless depths must the searcher go to find the lower strata? and if English aristocracy be so odious, what must be the character of the *baked-bean* and *codfish* article of the United States, resting, as it does, upon money obtained by practices which in comparison, lift "baccarat," faro, poker, and even chuc-a-luc, to divine elevation?

It may be that baccarat will be the *rat* that will eventually gnaw down the pillars of the English throne. Be that as it may, the game has opened the eyes of England to the fact that royalty at best is a stupendous fake, a gaudy sham, terribly expensive and not half as entertaining as Buffalo Bill's Wild West show. If such is the effect in England, what measure of contempt ought Americans to bestow upon the aristocratic abortions which spring up like toad stools around cattle chips in a pasture?

As has been intimated, the "baccarat scandal" is likely to prove valuable in various ways. It affords opportunities to investigate the true inwardness of royalty, the uppercrust element, what is called "our best society." It throws wide open the doors of aristocratic pest houses and sepulchers which, however fair and fashionable their exteriors, have interiors that would make clover or corn-fed swine turn up their snouts in disdain.

See, you; there stands the Prince of Wales. Does he look like a man having a divine right to rule anything superior to hounds? A creature filtered through the filth of a Hanover dynasty, a royal baccarat gambler, spending millions wrung from labor, in debaucheries which the English

language is scarcely able to characterize. Look again, at the beer, wine and brandy drinking crowd at Tranby Croft; painted women putting up their chips and watching a guest engaged in vulgar cheating, thereby reducing the bank of the royal dealer, who in the agony produced by losses, cries out, "put your chips where they can be seen." What is such a place but a gambling den, though its habitués belong to the aristocracy?

The growing sentiment in England among the people of the "middle class," as they are termed, that is to say, the class separated from the "nobility" by their virtues, constituting an aristocracy of brains and skill, that manages English industries and makes it possible for England to have food, and without whose aid England would in any twelve months be in the grasp of famine; I say, in this class there is a growing sentiment that the royal dynasty, the throne, crown and scepter are antiquated impositions which ought to be relegated to the limbo of effete tricks which have been played by royal jugglers for forty centuries.

Here, in the United States, it would seem natural for the people to laugh to scorn royalty, aristocracy, nobility, titles, and all else indicative of superiority that comes by inheritance or is secured by wealth or royal favor. But there are in this country exhibitions of subservieney, of degeneracy, of parasitical slavishness, and submissiveness, of flunkysim, which we are inclined to believe is never seen in monarchical England. English workingmen, by their self-assertion, under the shadow of the throne, offer a splendid example of manhood, which is telling the aristocracy that when the times are ripe they will take a hand in a game in which the King will not be dealer nor winner. Here the plutocrats are playing baccarat and winning the life-blood of workingmen, and though they, the workingmen, have the means at their command to win the "chips" and finally break the banks of the dealers, thousands of them prefer to *play scab*, while other thousands, without protest, witness the robberies and remain silent.

It was once said by a British Admiral that he preferred to resign rather than to be killed by the Yankees, who were loading their cannon with scrap-iron, old horse shoes and brass candlesticks. He was quite willing to be killed by any regulation shot, but thought the announcement that a British Admiral had been killed in battle by a brass candlestick would be an everlasting disgrace, and it may yet prove true that "baccarat" sounded the death knell of Albert Edward's chances to reach the British throne, and it may be that the scandal will convince intelligent workingmen in England and the United States that royalty,

aristocracy, plutocracy should, at the earliest practicable period give place to democracy.

James R. Buckley.

Can the People Buy the Railroads?

An editorial from the *Kansas City Times*, and an answer thereto by Geo. C. Ward, of Kansas City, Mo.

GOVERNMENT RAILWAYS.

The North Dakota state alliance recently adopted resolutions demanding the government ownership of railways. A great number of alliance organizations have made a similar demand within the past year. Whether or not the government should own the railways is merely a business question and it ought to be considered in a business way.

At the close of the war the debt of the United States was \$2,773,236,173. In 1888 that debt had been reduced to \$1,765,922,320. It consumed nearly the entire energies of the nation to reduce the debt one billion dollars in twenty-two years. The payment was only made possible by the enormous taxation levied through the medium of constantly increasing tariffs. The strain has been so great that taxpayers feel the burden grievously, when to it is coupled the other burden of extravagant administration. But with all its energy and all its resources, the United States was able to reduce the principal of its war debt but a little over a billion dollars in twenty-two years, and then the nations of the world looked on in amazed wonderment.

In 1888 the common stock, preferred stock, funded debt, floating debt and current liabilities resting on 130,000 miles of the 152,781 miles of railways then in the United States amounted to within a fraction of seven billion dollars. None of the bodies which demand government ownership of the railways have as yet formulated any plan whereby the government is to acquire such ownership. In a vague way it has been proposed that stocks and bonds issued in excess of the cost of railways be disregarded in the event that the government shall purchase, but the securities of the railways have gone into the hands of so many innocent purchasers that even those who advocate such a method would, on consideration, admit it to be impossible of adoption.

Assuming that within the past two years the increase in value by betterments and otherwise of railway properties has been such that the seven billion dollar estimate of 1888 may be taken as at least not an overestimate to-day, then the government would have to increase its debt by at least that amount if it were to acquire the ownership of the railways. All the development of our resources and all our natural prosperity, unexampled in the history of the world, enabled us to pay but a billion dollars of debt in twenty-two years and the people now groan under the burden of taxation. At the same unprecedented rate of payment, it would require 154 years to pay off the debt incurred by the purchase of the railways of the country, and the mere matter of interest with such a debt, added to the present debt, coupled with the expenses of government, would amount to about two million dollars a day.

It is argued that the profits derived from operating the railways would much more than counterbalance the interest charges and provide a sinking fund for the payment of the debt incurred by their purchase. In considering this phase of the question, those who believe that the government should own the roads should remember that in 1888 over 52 per cent of the railway stocks of the United States did not earn one penny of dividend and nearly 17 per cent earned less than 5 per cent. The chief argument for government ownership is based upon the theory that rates would be greatly reduced. The statistician of the interstate commerce commission reported that the total income for 1888 of the 130,000 miles of lines represented in his report was \$800,000,000. Those who demand government ownership would not be content unless rates were reduced at least one-fourth,

which would reduce the revenue to \$600,674,135. The total operating expenses of the roads amounted to \$507,796,345. This would leave but a little over \$92,000,000 to pay the interest on \$7,000,000,000 of bonds, amounting at least to \$210,000,000. This is based upon the supposition that the government could operate the railways as cheaply as they are operated to-day, which is far from certain. It is more than likely that the operating expenses would be so increased that the net revenue would not meet even the interest charges on the amount of the purchase.

Government ownership of the railways would make railway employees government appointees, and the dangers which might spring up out of such a condition are so apparent that they need not be specifically indicated.

The producers who believe government ownership to be a desirable thing are earnest and sincere in their opinions, but they will do well to carefully consider every phase of the question before they commit themselves to its advocacy.—*Kansas City Times*, June 28, 1891.

THE ANSWER.

Noticing an editorial in relation to "Government Ownership of Railroads," in the *Sunday Times* of June 28, I trust that you will admit to your columns a few thoughts upon the question at issue.

At the close of the fiscal year ending June 30, 1889, the cost of the railroads proper (not including "real estate and other investments") and deducting the amount of railroad stocks and bonds held by the railroad corporations, was something less than eight billions of dollars. When I say "cost" I mean "capitalization," represented by stocks and bonds held by so-called "innocent purchasers."

While many of the roads paid no stock dividends or interest upon mortgages, the average rate of dividends paid upon total stock issue, amounting to just about one-half of the eight billion dollars, was 2 per cent., while the average rate of interest paid upon the bonded indebtedness was 4½ per cent.

I now want to take up and examine this assertion, or claim, that the railroads must necessarily cost the people the sum of eight billions of dollars, because, forsooth, that amount of stock shares of railroad bonds are held by "innocent purchasers." We will presume that the government first exercises its undoubted prerogative of "eminent domain" and condemns for public use the national highways of the country now used by private individuals for private gain. What is the next step? Compensation for property taken. How and in what manner? First, by direct offer of fair and reasonable compensation. If the offer is refused, the second step is to appoint appraisers and have them affix a valuation or damages to be paid the owner of the property thus condemned for public use.

What then would be the fairest, surest and most appropriate thing for a "commission of arbitration and appraisement" appointed by the people, to do, in order to arrive at a just valuation of the railroads of

the United States? The question should be easily answered. They should go to the records of the New York Stock Exchange and see what their market value is. That is, by an examination of the record of past sales, they should see what private individuals are in the habit of paying for railroads when they buy them. For the owners of the stock shares of a railroad company are the owners of the railroad, subject to the mortgage upon it.

Let us then take a glance at the record and see if we can find out what railroads were selling at during the year 1890:

SALES OF LEADING STOCKS IN 1890.

Highest and lowest prices of shares sold on the New York Stock Exchange in 1890:

STOCKS.	Stocks Outstanding.	Highest, 1890.	Lowest, 1890.
Houston & Texas Central	7,726,900	7	12
Illinois Central	45,000,000	120	85
" leased lines	10,000,000	100	80
Iowa Central preferred	14,000,000	33½	17
Lake Erie & Western	11,840,000	19½	10½
" pref	11,840,000	68½	44
Lake Shore & M. S.	50,000,000	114½	101
Long Island	12,000,000	95	82
Louisville & Nashville	32,024,320	92½	65½
Louisville, N. A. & C.	5,000,000	53½	18
Manhattan Consolidated	25,504,780	117	92
Memphis & Charleston	5,312,725	64	39
Michigan Central	18,738,204	104½	83
Milwaukee, L. S. & W.	2,000,000	104	84
" pref.	5,000,000	117	100
Minneapolis & St. Louis	6,000,000	8	4
" pref.	4,000,000	20½	8½
M. K. & T. ex. 2d M. B.	46,405,000	20½	9½
Missouri Pacific	45,000,000	79½	53
Mobile & Ohio	5,320,600	31	13
Southern Pacific Co.	116,074,830	37½	22½
Tenn., C. I. & R. R. Co.	9,000,000	89	28
" pref.	1,000,000	119	71
Texas & Pacific	38,710,900	24½	12
Toledo, A. A. & North Mich	5,300,000	42½	12
Union Pacific	68,958,526	69½	40
U. P., Denver & Gulf	31,151,700	38½	17
Wabash	24,000,000	16½	8½
" pref	28,000,000	33	15

Now here are twenty-nine roads, among them eight or ten of the most valuable roads in the United States, the twenty-nine roads representing a stock capital of \$674,906,741, the stock shares of which, figured roughly, are worth upon an average 51 cents on the dollar. This must serve as an illustration of what I am driving at. The notorious Missouri Pacific is only worth 66 cents on the dollar. From the same report I gather the fact that Atchison, Topeka & Santa Fé stock was worth 37 cents on the dollar, while Atlantic & Pacific was worth 7½ cents. These two roads represent a capital stock of \$155,000,000; while New York, Lake Erie & Western, with a capital stock of \$86,000,000, was worth 23 cents on the dollar; or the three roads, with \$241,000,000 of capital on paper, could have been

bought by private individuals for \$53,000,000.

From these facts I assume that a careful comparison and examination of the records of the New York Stock Exchange for the five years ending December 31, 1890 will reveal the fact that the four billions of dollars in railroad stock shares is worth in cash not more than \$1,600,000,000. And very much the same state of affairs will be revealed in reference to railroad bonds. Why, then, should the people or government be expected to pay eight billions of dollars for something private individuals have bought and sold, over and over again, for less than one-half that amount? Having condemned the railroads for public use, let the people pay for them the average market price for the next preceding five years, such price to be determined by a United States commission of arbitration and appraisement.

But it must not be forgotten that there are numerous valuable "rights, privileges and appurtenances" that belong to and should go with the ownership of the railroads—such as a few million acres of land, for instance.

To simplify the matter and avoid lengthy argument, we will assume that the people bought the roads, *water and all*, for \$8,000,000,000, in United States *two and one-half* per cent. bonds, payable, at the option of the government, after ten years. This is done in deference to those who, like the *Kansas City Times*, include the wilfully ignorant holders of fictitious stocks and bonds, in the class known as "innocent purchasers." It is, however, difficult to comprehend why fraudulent paper, representing an outrageous swindle, should be any more sacred than a stolen horse or a stolen watch. It is to be understood that freight and passenger rates are to be kept so adjusted so that no greater sum than \$960,000,000 shall be collected each year. This would call for an annual interest payment of \$200,000,000, and an annual sinking fund of \$160,000,000. Now what do we find? The *net* annual receipts are exactly large enough to pay the \$200,000,000 in interest, and provide a sinking fund of \$120,000,000 each year, which we will assume, for the nonce, is swelled by savings effected in operating expenses to an annual sinking fund of \$160,000,000, amounting at the end of the first decade to \$1,600,000,000, being the amount of the first installment of bonds. Now note this fact: While there has been no *apparent* reduction of rates, there has been a very material *actual* reduction in rates. Upon a basis of 60,000,000 population for the fiscal year ending June 30, 1889, the *per capita* cost of railroad facilities for the nation was just \$16. For the year ending June 30, 1899, the population would be, say 80,000,000, and the *per capita* cost of railroad facilities \$12—

a reduction of 25 per cent. At the end of the second decade, or twenty years, another one-fifth of the cost of the railroads would be paid, and as the population would be increased to—probably 100,000,000, while the gross cost of railroad facilities remained at \$960,000,000—the same as for the year 1889—the *net per capita* rates would be \$9.60, a reduction of 20 per cent., or a gross *per capita* reduction for the twenty years of 40 per cent., and so on to the end of fifty years.

In explanation of above it may be stated that it will be readily seen that the increase of population and consequent density of settlement would be accompanied by a corresponding increase of freight transportation and railroad travel; so that, while the gross amount collected from the people annually would remain the same, there would nevertheless be a steady reduction, year after year, in freight rates per hundred or bushel, etc., and a corresponding reduction in passenger rates. I trust that I have made it plain, even to the *Kansas City Times*, that the people could buy the railroads, even at the price of fictitious capitalization, represented by stocks and bonds, which, as the *Times* says, "have gone into the hands of so many innocent purchasers that even those who advocate any other method would, on consideration, admit it to be impossible of adoption;" and yet not be more than one-fifth of the 154 years in paying for them, while rates would be reduced "at least one-fourth" the *first ten years*.

Now, I want to notice one other feature of this programme. The accumulation and setting aside of an annual sinking fund, amounting to \$160,000,000 each year, would, if no provisions were made to counteract the effect, retire from circulation during the first decade the enormous sum of \$1,600,000,000. How then, shall we obviate this difficulty? We can do this—*make of the sinking fund the vehicle or means for the demonetization of both gold and silver*. How can we do this? Accord to both gold and silver free and unlimited coinage, continuing the present system of issuing either coin, or gold and silver certificates, at the option of the owner of the bullion. Then as fast as gold or silver coin or certificates are received and sunk into the railroad sinking fund, pay out upon legal appropriations United States full legal tender paper money in the same amount to take the place of the gold and silver held to redeem the railroad purchase bonds.

It is likely that all sorts of people will urge all kinds of objections to this plan, but I warn all prospective objectors that they had better study and reflect, long, carefully and exhaustively, before they rush in with their objections to this proposition—*it's loaded*.

But, it may be asked, "How will that demonetize gold and silver?" I answer:

By the force of public education and the example of public precedent. We have now, in round numbers, about one billion dollars in gold and silver money, and with free coinage of silver the two metals may be relied upon to furnish \$60,000,000 additional each year. Under the operation of the system I have outlined, \$160,000,000 in gold and silver will be locked up in the government vaults each year, and United States legal tender, paper money, issued in its place; such money being "bottomed on taxes," and redeemable in United States 1 per cent. interconvertible savings bonds of small denominations. At the end of a decade \$1,600,000,000 of such money would be in the hands of the people, having replaced that amount of gold and silver, which would then be paid to the holders of railroad purchase bonds. What would these men do with this gold and silver?

They could do one of but three things:

First—Invest it across the ocean, either permanently in real estate, or temporarily in merchandise, which they would have to bring here and exchange for paper money. In investing abroad the gold and silver would be sold by weight, thus being demonetized.

Second—Store it in cellars or vaults, in which condition it would possess less value than a cellar full of potatoes.

Third—Use it at home in buying real estate and the products of labor, or loan it in competition with the paper money loaned to the people at 2 per cent., in accord with the demands of the Cincinnati platform.

Query: How long would it take the people to discover that in using these more or less useful metals as money, they were guilty of wilful waste and useless foolishness?

I had expected to write a fourth article in which I should take up and elucidate item for item, the various savings in "Operating Expenses," that might be effected by government ownership and operation of railroads. Since the manuscript for the three articles already published in the *Advocate* was put into your hands, there has appeared in the August number of the *Arena*, an article upon the subject under consideration, prepared by C. Wood Davis, who is known to be an experienced railroad man and an accurate and well informed authority upon railroad statistics.

In the course of the article in question, Mr. Davis presents a carefully prepared "Schedule of Savings," which would or could be effected by government ownership and operation. I shall therefore avail myself of Mr. Davis' superior knowledge in the premises and take the liberty of using his "Schedule of Savings." in the summary or recapitulation which I shall now offer, in which I hope to make the justice, necessity and feasibility of the people's owner-

ship and operation of the railroads so plain that "A wayfaring man, though he be a fool, need not err therein."

Mr. Davis' schedule is as follows:

Saving in consolidation of deposits and staffs	\$20,000,000
Saving in exclusive use of shortest routes	25,000,000
Saving in attorney's salaries and legal expenses	12,000,000
Saving in abrogation of the pass evil	30,000,000
Saving in abrogation of the commission system	20,000,000
Saving in dispensing with high salaried presidents, managers, etc.	25,000,000
Saving in disbanding traffic associations	4,000,000
Saving in abolishment of (all but local) offices	15,000,000
Saving in five-sevenths of advertising account	5,000,000
Total	\$160,000,000

It will be noticed that the total saving in "Operating Expenses" as scheduled by Mr. Davis is \$160,000,000 a year.

SUMMARY.

For the year ending June 30, 1889, the "Gross Earnings" of the roads were \$960,000,000.00; net earnings, \$320,000,000.00; (both round numbers.) The amount, \$960,000,000, given as "Gross Earnings," does not include the amount paid by the people to the railroads for the transportation of the mails; therefore such item is not a factor in the calculation.

The case would stand thus:

Present operating expenses	\$640,000,000
Deduct Mr. Davis' schedule of savings effected	160,000,000
Net operating expenses	480,000,000
Gross earnings	960,000,000
Deduct net operating expenses	480,000,000
Net earnings	480,000,000
Deduct interest account	200,000,000
Surplus	280,000,000
Deduct sinking fund	160,000,000
Available net annual surplus	\$120,000,000

At the end of ten years one-fifth of the cost of the roads would be paid, while the population having increased to 80,000,000, the *per capita* cost of railroad facilities would be reduced from \$16 to \$12, a gross reduction of 25 per cent. and an average annual reduction of two and one-half per cent., while the "net annual surplus" would furnish a fund of \$120,000,000 a year for all necessary uses.

The bonds being now payable at the option of the government, the sum of \$160,000,000 of such bonds would be paid each year, thus effecting an annual reduction in interest charge of \$4,000,000, and adding that amount each successive year to the surplus revenue and saved interest fund of the year before, such saving in interest charge and the net annual surplus amounting during the last forty years of the fifty years term to the enormous sum of \$9,320,000,000—or an average of \$200,000,000 each year for the term of forty years. This fund, thus furnished, would build all necessary additional trackage, and also construct second or double tracks to our principal trunk

roads, and would furnish a fund for the payment of any additional force of employes that might be employed, as well as shortening the hours of labor and increasing the wages of those already employed.

At the end of fifty years the roads would be fully paid for; and the whole sum of \$960,000,000 be available for operating expenses, which is equivalent to saying that the people would get their railroad facilities *at cost*. The population having increased at the expiration of fifty years, or in the year 1939, to at least 200,000,000, the cost of railroad facilities with one-half as much more mileage than at present, or 240,000 miles, and a gross annual charge of \$960,000,000 would be \$4.80 *per capita*, a reduction of 70 per cent. from the present rates.

So mote it be.

Geo. C. Ward.

KANSAS CITY, Mo.

NOTE.—The foregoing is a condensation and re-arrangement of a series of articles written for the *Topeka Advocate*.

The Single Tax.

I HAVE on my table the following tract, handed to me by a pronounced disciple of the "single tax" gospel. I ask the editor of the *Magazine* to publish it entire, that there may be no mistake about its authoritative character. Here it is:

HOW TO INCREASE PROFITS.

BY A. J. STEERS.

To the merchant of limited capital, to him who belongs to the vast middle class, about to start business for himself, or who perchance has been carrying on business on his own account, the query, How may profits be increased? will appear of a certain interest; and if we assure him at the outset that the plan we propose is certain to do what we promise—viz., to increase profits—he may think it worth while to read our method and weigh its value.

"A penny saved is twopence gained," is a wise old saw. First, then, we propose to increase profits by diminishing expenses.

"A nimble penny is better than a slow sixpence," is another equally valuable adage. Second, we propose to increase profits by making more and quicker sales.

Is it within your power, oh, citizen merchant, to decrease your expenses and add to your sales by one and the same method?

It is! And as before said, the method is certain, and, unlike most now followed by the ordinary trader, it is perfectly just. It will harm none. It will benefit all. What is it?

Abolish all taxes save one upon the values of land. But that is Henry George's theoretical humbug! Yes, friend! and it is a sure and certain remedy for your lack of business and for the numberless failures of men who, like you, with limited resources, have started to build up a business in the midst of our merciless modern competition.

Listen, then, how we propose to diminish expenses.

What is your largest single expense? The rent of your store, is it not? Well, we propose to lower that rent. Is that practical enough for you? How? Well, thus. The rent you now pay is of two kinds: one on the store building you occupy and the other for the land that building stands upon.

The first it is perfectly just you should pay; but

the last, that paid for the land, is not just—at present.

Now, if you and others like you would join with the other workers of the city or town or village where you live and labor, and instruct your legislative representatives in congress and in the state legislature to so modify the present methods of taxation that all the taxes should be placed upon the values of land irrespective of improvements, you can easily see that values of land would fall.

No one who held land would continue to hold it without using it; for if he did, the tax upon its values would soon eat him up.

Land would under such a condition be a useless thing to the holder unless he used it. Every owner of land would either put it into use himself, or, perforce, dispose of it to somebody else who would.

New buildings, new dwelling houses, new stores for selling and dealing in, would go up wherever they could be put up—and coming into the market and competing with the stores and dwellings now built and in use would cause rents to fall. And as this would be a general state of affairs it would affect all buildings and every neighborhood. So we should diminish your main expense—rent.

Next, by the same means, we would increase your sales.

For, if taxes were gathered alone from the values of land, as has been before stated, no man would hold land unless he used it. Improving, building, employing labor in some way upon the land would at once become the necessary condition of affairs.

Everywhere builders would be at work—painters, bricklayers, masons *busy at all times*.

But workmen won't work unless they are paid? True! therefore as the same conditions that compelled their employment would cause money to circulate that is now locked up, capital would flow out into building and the various ways of improvements of land, and the pockets of the workers would be filled with wages.

Now, as you know, these workmen need for themselves, their wives and children, the goods in which you deal. When they had full and steady pay they would buy more generously of you, and when your store was always full of customers your sales would increase, would they not?

So, then, by this means we would increase your sales and diminish your expenses.

I have been not a little interested in the paragraphs relating to "rent." The merchant is to be benefited at once if rent is upon the land his store is on, instead of being on the land and building, and the merchant is exhorted to labor with state and national legislators to have the tax laws so changed as to have one tax on land—or the value of land. So far I have not observed any rational statement, and for that matter, any statement at all, by which the assessor is to arrive at the taxable value of land. Why should the single tax advocates continuously avoid such fundamental propositions?

Mr. Steers, in the tract herewith submitted, steers clear of the subject. He takes a merchant into his confidence, deprecates the fact that he is paying two kinds of rent, one on the store and the other on the land the building stands on, and believing one kind of rent is sufficient, informs him, if the laws would authorize one tax on the land, he would escape the tax on the building, or, as Mr. Steers calls it, rent; the idea being, if A owns the premises, and is simply taxed on the value of the land it stands on, the rent will be predicated only on the land and that A will charge nothing for the use of the building. If this is not Mr. Steers' idea, we fail to catch on.

Now, suppose A paid \$10,000 for the land, cash down, and \$10,000 for the improvements—total \$20,000—and that his gross income from the investment is \$2,000 a year, or 10 per cent. Suppose A keeps accurate accounts, so as to know at the end of the year his exact net income from his investment something after the following style:

Investment	\$20,000.	Gross income	10 per cent.	\$2,000
Taxes	2 per cent. on \$20,000			\$400
Insurance	1½ per cent. on \$10,000			50
Repairs	½ per cent. on \$10,000			50
				500

Net income, 7½ per cent. or \$1,500

The question arises, if the tax should be placed on the land value, would it be more or less than \$400? If it were placed on the land value—would the value be \$10,000 which it cost, cash down, or more than that sum? What a great many people want to know is the method of ascertaining the value of the land, so that that the single tax can be equitably levied. Is it to be levied on a value predicated upon the amount of rent received? If so, then the buildings are necessarily included. If only naked land is estimated, is it upon the hypothesis that being susceptible of improvement it should have the same value as if it were improved? If this be the thing, is it not virtually taxing the improvements in advance? If not, why not?

I am not discussing Mr. Steers' proposition that idle land, if taxed, would be disposed of, rather than have it confiscated, but instead, if possible, to ascertain by what methods the taxable value of land can be arrived at; this is all the more desirable because Mr. Steers asserts that "all the taxes should be placed upon the values of land, irrespective of improvements."

It is such declarations that confuse the students of the single tax theory—since it is the purpose to tax naked land the same as if it were improved and used, no tax, under any circumstances, directly or indirectly, being levied upon improvements. Just here comes again to the front the question: By what standard is the taxable value of the land determined? To illustrate. A owns a tract of land of 500 acres, improved and in use, valued for taxation at \$100 an acre; immediately adjoining is another tract of land of 500 acres not in use. Is it the proposition to tax this land at the same price per acre as is levied upon the farm? If so, then the single tax advocates hold that unimproved have the same value as improved lands. I do not presume they will assert that such is their intention. I conclude, when brought face to face with the proposition, they would wobble, oscillate, and prefer glittering generalities, as does Mr. Steers.

In a bulletin recently issued by the National Census Bureau, it is shown that the total "ordinary taxes" of one hundred of

the principal cities in the United States amounted to \$139,283,226, and that the total ordinary receipts of these cities amounted to \$215,001,448, as follows:

Taxes	\$139,283,226
Special assessments, Streets and Bridges	13,296,025
Special assessments, Sewers	1,380,057
Liquor Licenses	11,782,307
Other Licenses	3,411,339
Fees, fines and penalties	2,711,464
Waterworks	18,826,259
Interest on deposits	575,057
Income from funds and investments	10,852,461
Miscellaneous	12,880,033
Total	\$215,001,448

Under the single tax this vast sum would be derived from land alone, and it is held that the single land tax would make land cheap, for, says Mr. Steers, "No one who held land would continue to hold land without using it; for if he did, the tax upon its values would soon eat him up."

Here again the question arises, how does Mr. Steers ascertain the "values?" If this question could be answered the way would be clear for argument and conclusion. The effect of the tax would be, doubtless, as Mr. Steers states it—the owners of unused land would sell if they could—all of which is outside of the inquiry, How does Mr. Steers propose to arrive at the value of unused land, as also used land, for really they are inseparable propositions?

It is not a matter of inference but a fact, that under the single tax regime all other property would escape taxation—no tax on Jay Gould's bushels of stocks and bonds, no tax on his watered investments, and what is true of him would be equally true of the entire plutocratic class who control money.

The single tax would be an experiment, and it is too early to prognosticate results. It might be, as Mr. Steers states, that buildings "would go up wherever they could be put up," and that all the vacant lots in all of the one hundred or one thousand cities in the United States would be built upon, and that owing to the great multiplicity of dwellings and stores, rents would go down and profits increase, that men of the building trades would have constant employment and money flow in an ever swollen current.

The present is an eminently practical age. The humble dwellers in cottages who know of fellow-citizens who have millions of money, bonds and mortgages, continue to inquire why such rich men escape taxation while they pay to support the Government. In replying to such questions, spread-eagleism does not answer the demand.

The assumption that the single tax on land would prove a panacea for the financial ills of the nation, reads like a fairy tale, a millennium without a "second advent," the chaining of Satan with a theory. But all this aside, the question now up for de-

bate is, fixing the standard by which the single taxers propose to determine the value of land for taxation.

Charles Marshall.

A Conundrum.

MR. W. P. BORLAND, in the July number of the *Magazine*, says:

"Say a piece of property rents for \$1,500; a year's interest at the prevailing rate on the value of the building, added to the annual cost of the insurance and repairs, and a sum sufficient to provide a sinking fund for renewals, amounts to \$1,200, the landlord is then collecting \$300 a year for the use of the naked earth. This is the sum which under the Single Tax system would be turned over to the government."

Very well. Without argument we will assume that the Single Tax has worked out its legitimate ultimate, and land has no speculative value, the full rental value being taken as a tax. Land is useless as an investment for money, because all increase in value is taken as a tax. In plain words, stripped of the ambiguity with which Single Taxers enshroud it, the result would be free land, or nationalization of land. Now, let us see how much labor would be profited by free land, unaccompanied by free money.

Labor has no capital or money, while dirt will neither feed the hungry, clothe the naked, nor build houses to shelter the poor. Labor as a class is a tenant. Labor must do the necessary work in building a house, but when it is built capital owns it and labor must pay rent for the use of it. So labor becomes the tenant of the landlord spoken of in the clipping. Will Mr. Borland show wherein and how that landlord pays any tax? The \$300 which Mr. Borland says "would be turned over to the government," is paid, not by the landlord, but by the tenant. If the landlord fails to collect it from the tenant the government gets no revenue.

Now, let me formulate a proposition, thus: No tax is so easily shifted as would be the single tax.

Interest on money is the basis of all forms of spoliation and robbery. We speak of rent, interest, and profit, but in reality interest covers all three. Rent is interest upon money invested in land. The selling value of land is that amount of money upon which the rent will pay the legal current rate of interest. This rent, in the case of all income producing occupations, is determined by the relative amount of profit gained by the occupation of any particular location or site. This rent the Single Taxers propose to take as a tax. Now, then, if under the present system all taxes imposed upon occupied land are shifted onto the general public, why will calling that rent a tax prevent such rent from being shifted, and how are you going to collect any tax

from the occupant of land who is engaged in an income producing business? The only ones who would pay any tax under the single tax system, for the use of the land, are the very ones who ought to be exempt, i. e. occupiers of residences who own their own residence sites. Vacant, or unused land would yield no tax or revenue at all. And what about interest? As the person occupying land need not invest any capital in the purchase of such land, capital would, as Mr. Borland says, all be invested in personal property—buildings for rent, merchandise, bank fixtures, &c., &c.

Now, in the case of where a man rents a privilege at a county fair to run a wheel of fortune, who pays for the privilege? His customers, of course. The single tax would simply rent to capital locations upon which to ply its avocation of collecting what we call interest and profit. Capital's customers would pay the rent.

Geo. C. Ward.

Single Tax Theories.

IN the August number of your esteemed magazine, Mr. B. C. Stickney, in the course of an able and well written article, uses the following language:

"This foggy notion that men should pay taxes in proportion to their wealth, seems to be based on the belief that some men get more wealth than they are justly entitled to and should, therefore, bear the burden of government in proportion to the wealth they have unfairly acquired."

Now I call that decidedly cool, to say the least. "Foggy notion," "belief," indeed. Does not Mr. Stickney know that "some men get more wealth than they are justly entitled to?" Let us consider the matter briefly.

The net average annual increase in national wealth, in individual holding, from 1880 to 1890, has been just about two billion dollars a year. Putting the average annual population for the decade at 56,000,000, and assuming that every fourth person is a bread winner, either for self alone or for self and family, the net average annual increase in individual or family wealth should be \$144.00 a year, or \$1,440 for the ten years. As labor produces all wealth, and the harder the labor is, as a rule, the more productive of wealth it is, it follows that those whom plutocrats are pleased to call "common laborers," should at least secure as much as their share, while idlers and loafers should get no more. Does not Mr. Stickney know of any industrious toiler, who, not only has had a miserable living, but has also failed to secure his pro rata of the wealth he helped to produce? And does he not, on the other hand, know of any loafing parasites, who have not only

fared sumptuously and extravagantly, but have also, during the past decade amassed their thousands, hundreds of thousands and millions of dollars?

But continuing to read, I find that Mr. Stickney, as he affirms is the case with Mr. Weiler, "has some misgivings that his theory is not perfect," so he qualifies it. He says: "The only sensible course to pursue in the premises is to readjust those laws which put it into the power of some men to get an undue proportion of the wealth produced by others; and if Mr. Weiler had seriously looked into the single tax idea he would have seen that it would have precisely this effect."

Ah, indeed! It will now be in order for Mr. Stickney to show how a tax that taxes every person for the use of land, except those who actually use, and are benefited by such use of land, can, by any possibility have the effect he says it will have. He can easily show that taxing unused and occupied land up to almost its full rental value would have that effect, but when he undertakes to show that a "single tax" upon land values alone, would be paid either in whole or in part by the man who occupied land for the purposes of an income producing business, why, then, he has no easy task before him. It is true that the economic rent would revert to the people, but then the people, among whom would not be the occupier of land, would pay such rent as a tax. Those who used and occupied lands would simply become tax gatherers, or the medium through whom the people would pay the single tax, but they themselves, would remain wholly untaxed. You may call it "shifting" or what you please, but the tax would be included in the prices of goods, commodities, rents, services, etc. Now, mind you, I do not say that the land owner, as such, would make any money, but I do say that he would pay no tax, the people, his customers, paying for the privilege of the use and occupancy of land. The only ones who would pay any direct tax for the use of land would be those who occupied land with their own improvements, for residence purposes. Of course a tax which was less than the full economic rent, if levied upon unused and unoccupied land, must be paid by the owner of such land.

One of the "theses" of the single tax is this: "Income and succession taxes likewise tend to drive away the rich." The anti-thesis is this: "The single tax would give the rich free land upon which to locate in the business of collecting interest upon money invested in buildings and merchandise."

Riches are direct evidence of crime, and the taking of usury is, perhaps, a worse crime than speculating in portions of "God's footstool."

Geo. C. Ward.

SALVETE MILITES.

Welcome! And when we say it, we pack our hearts
In the saying,
Just as we did in the days war crested, flaming and
thunderous,
When half the people were fighting, and half the
people were playing.
And slowly from crimson quags the granite of
Peace rose under us.

Ah, those were lofty days, when straight through
our mincing and canting,
The soul of the Nation flashed, and gripped the
hilt of its brand,
And drained its aloes like wine, and strode forth,
kindled and panting,
Hewing, in forests of Lies, clear space for the
Truth to stand.

Ah, those were mighty days! Mighty for stress and
for sorrow,
And mighty for regnant Manhood that turned
them to glory and gain—
What would have been the cast of Humanity's
crown to-morrow
Save for our yesterdays of turbulent passion and
pain?

Save for the vivid swords which our reverent hearths
are keeping—
Save for the eloquent guns that held high faith
with the State—
Save for the heroes that sleep, and those who pass
to their sleeping—
Save for the dead that are shrined and the living
who calmly wait?

This is our time of thrift; of Commerce, and Art,
and Science—
And Nature, our nursing mother, healeth the
burts of war;
But lustre light of our years are the sacrificial
glants.
Who clave our blackness asunder and beacons us
where we are.

Thomas, poised Titan of Battle—and Sheridan,
Wrath's archangel
And him whose Cosmic purpose not Chaos itself
could shake;
And lance-like Sherman who spurred with the cen-
tury's sharp evangel
In to our centuried drowse, and clarkoned sloth
awake—

And Hooker, climbing the clouds when his quarry
perched above him
And Meade—Disciple of Duty—(our hearts bend
over his grave);
And plumed McPherson the splendid—the true—
Heaven guard him and love him—
And the sceptreless kings of the ranks—the vast,
unlaureled brave—

Living or dead, earth thrills with their luminous
fervor of spirit;
Living or dead, their blood hath entered into our
veins;
Their voice—the nebulous stars of the pinnacle firm-
ament bear it—
Their work—in nethermost pits its august influ-
ence reigns.

For what are our times and spaces? Leonidas
greeted Warren;
Under our scarlet fields great Marathon's secret
ran;
Nothing is Past, or Future; nothing is hidden or
foreign;
The speech of Freedom is one—and one is the soul
of Man.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

Current Notes and Comments.

Something more about Engineers and Firemen. So much of the article in last month's *Magazine* under a part of the above heading was so truthful and

hit so near the mark, that a few more words on the subject may not be amiss. Mr. Purvis is quoted as writing: They could enlighten themselves on many subjects if they would devote a small portion of their leisure time to reading suitable books, but to these men reading is distasteful and irksome; hence, "they have no use for book knowledge." A case right to the point comes to my mind now: During the campaign of 1880 there were three generals of the army nominated, namely, Garfield by the Republicans, Hancock by the Democrats, and Neal Dow by the Prohibitionists. My engineer at that time was an ardent Republican, and our usual conductor an equally strong Democrat and many a hot argument did I have to listen to during these months. As I did not side with either of them, my engineer asked me the plain question who I was in favor of, and I answered "I am a Neal Dow man." Some time after I was surprised to have my engineer tell the conductor that I believed in "kneeling down" about the subject. Not seeing the point, I contended that both parties were so corrupt that a little prayer would do neither of them any harm, and it was some weeks before I caught onto the fact that I had been misunderstood in my declaration for Neal Dow, and it took me some time longer to explain that there was such a man in nomination, and all this in spite of the fact that my engineer was a daily reader(?) of the *Sun*, which no doubt had hundreds of allusions to the prohibition candidate. This same man said the company did not require him to know it all, he knew enough to "start and stop her," and draw \$95 or \$100 a month, and books were of no use to him. If he could get no more information from books than he appeared to get by the reading of his paper, it was not to be wondered at that books were of no use to him, for it is evident that he could not understand them, and that in order to do so he would have to go back to the very rudiments. Some persons when they read aloud do so in such a manner,

that no one is able to understand them, and it is a matter of doubt whether they can understand it themselves. As an instance: Take the officer whose duty it was to preserve a *uniform* method of working in his order, but who persisted in spite of all efforts to the contrary, in asserting it to be the *uninformed* method, with the book before his eyes, and he came near convincing his members that he was living up to his method of reading it. There is evidently no other help for such men except self-culture, and that must be commenced right at the very bottom, in trying to get such a mastery of the language, as to enable them to read readily, and also to be able to understand the definitions of the more common words. In order to do this a portion of every day should be spent in reading, and even while at work the study of language may be pursued, by watching the modes of expression and the difference in which words are pronounced or accented; and by getting acquainted with a new word a day, it in a surprisingly short time will give an unexcelled use of the terms of speech, and readily proclaim its possessor as a student. Did you ever notice the difference in the expression of even the same words by an illiterate person and a man of even the most common school education? An ordinarily trained ear can in the hearing of this difference, at once detect the mental calibre of the persons by the differing intonation of the words even when the same words are used. Did you ever notice this fact? If not just watch the way your comrades on the road talk, and you will soon note the difference between them and be convinced of it. Why should a person thus carry with him these marks and the attending difficulties when a little study and self-denial is sure to result in a great transformation?

* *

(54) B. H., Gordon, Pa., asks:

1. What causes the right glass in a Nathan lubricator to break? We have one engine that it is impossible to keep a glass in. A.—If the right glass breaks more than the others, there is some local cause that puts an extra strain on the glass. Look for it. 2. Suppose you break both eccentric blades on one side. If you take off the back-up blade on left side and put it in place of the right go ahead, will the engine go? A.—Yes, if full-stroked slowly; but it would be quicker, safer and easier to take down the main rod and run on one side. 3. Does water, carried in the top gauge cock, cover the flues at front end of a "pushing 72" boiler on a grade of 120 feet per mile, wheel base of engine 51 feet? A.—You have no engines with that wheel base, you are counting the tank. Top gauge should cover heating surface with water on any grade the engine has to stand on. Get length of boiler and height of gauge above tubes, and figure it out yourself. There are 1250 feet per mile. When there is water in sight in the glass, or at the lower cock, a man ought to feel safe about his heating surfaces on any grade; if not, the gauges should be raised.

To the last of the above questions from the *Locomotive Engineer*, we would like to

add another and more definite query for the study of our readers. Suppose the front end of the crown-sheet is 10 feet from the gauge cocks, which are placed in the right side of the back end of the boiler, and that the lower gauge cock is placed a little over 2½ inches above the level of the crown-sheet, and that said crown-sheet runs level all the way to the front end of the fire-box. Will the front end of the fire-box (not to say anything of the front end of the flues) be covered with water on a grade of 120 feet to the mile? Also suppose a curve of about 600 feet radius to the right were to be placed on this grade, how much would this elevate the left side above the right? The master mechanic of a road says that the engine is safe with one gauge of water; what do our readers and writers say?

* *

Surprise is often expressed among engineers that steam in a locomotive at high speed can keep up with the piston, or rather that it can exert any pressure upon it. The velocity of the piston at high speeds is rising 1,200 feet per minute, and of course the speed of the steam must exceed this or it could not exert any pressure, but this speed is quite within the velocity of steam per foot per second, which is stated by various writers to be from 300 feet per second upward. We do not know that any reliable data exists as to the speed of steam per second.—*Engineer.*

We had seen no tables of that kind and did not know how it could be measured or calculated, for, as we before ventured to remark, steam is so peculiarly formed as to prevent a close inspection, and especially is this the case when it is escaping into the air, so that there is yet room for us all to put in our guesses work on this puzzle.

* *

A Paterson, N. J., dispatch says that the Cooke Locomotive Works of that city, employing 1,000 men, have been closed owing to dullness in business.

What's the matter here? The other shops seem to have all they can do.

* *

The railway mileage of the United States July 1, 1891, was, as we figure it, 169,225 miles, with a good prospect that it will be at least 172,500 miles at the end of the present year—or double what it was twelve years before. This is a prodigious rate of increase.—*Railway Age.*

Pleasant news; more miles means more work on both sides of the iron horses; somebody to drive and somebody to feed them.

* *

Master Mechanics' Convention.

Mr. Forney, of the *Engineering Journal*, thus discourses about the late Master Mechanics' convention:

It is said that in some countries, where the inhabitants make much pretense of religion, their prayers are written on revolving sign-boards which are placed by the roadside, and that in order to save time in saying them, the devotees give the board a twirl with the ejaculation of Sam Weller, that "them's my sentiments." The late meeting of the Master Mechanics was so much like many which

have preceded it, that in commenting on it we are tempted to refer our readers back to what has been written in previous years, and add the remark that what was written then will apply to the meeting which has just been held.

There were this year perhaps a few more of the same kind of people present that usually attend the meetings. The master mechanic was there in force. The superintendent of machinery was in a minority, apparently doubtful whether it was not beneath his dignity to be present and take part in the proceedings. The "representative" of various manufacturing interests was there in a large majority; the wives, the sisters, the cousins, and the aunts of the masculines in attendance decorated the borders of the assemblage as plots of flowers ornament a vegetable garden. There was an exhibition of a great variety of appliances, with attendants who could talk like water-wheels. The inventor was there, as solicitous of his creation as a cow is of its calf. The "crank" lingered on the outskirts, hollow-eyed and anxious. There was an entertainment committee with extended hands for "assessments." There were carriages and flowers for the ladies, dancing by night and music by day—young ladies and old, flirtatious girls and coy maidens, dudes and hard-handed sons of toil. The ocean was there, and the people bathed and fished in it, and told fish stories afterward. There was a laboratory in a back room, where the laws of chemical affinity were illustrated by inverting a metal frustrum of a cone over a glass vessel of similar form, and then agitating the contents. When the reaction was complete the experiment was continued by the audience, who put themselves outside of the chemical combination. In some cases another reaction occurred about a half hour afterward, attended with more or less ebullition of jollity.

On another page we give a brief report of the proceedings. There was nothing very remarkable about them. The discussions were generally rather tame, excepting on the subject of compound locomotives. Representatives of the Baldwin and Schenectady locomotive works presented the claims of two and four cylinder locomotives, but the members generally were rather chary of expressing opinions. Altogether, there is not much to say of the meeting, excepting that it was held—in the usual way. The attendance was a little larger than heretofore, showing a steady growth in that respect. The reports were neither better nor worse than usual—none of them were remarkably good, although some were uninteresting.

One member was sat upon by the graduates of technical schools for saying that he could not, in his experience, recall an instance in which any one by the use of an indicator had found out anything about a locomotive which was worth knowing. In the discussion which followed some of those who took part in it attempted to crush this member, as a housewife rolls out incipient pie crust. He still lives, however.

And to prove that he is alive he sits down on the convention in this rather satirically humorous way. Well, if they deserve it, hit them again; they may need waking up.

* *

At the Master Mechanics' meeting this year an associate member attempted to tell how much better a compound locomotive was than a simple engine. He is a member of the committee of science and arts of the Franklin Institute of Philadelphia, and one of the men sent out to report on the compound. He stated before the Master Mechanics that the compound went up a hill easily on the Reading road, that was so steep that it was impossible to get water into the boiler of a common engine, and when some irreverent members smiled he asked Superintendent of Motive Power Paxton to help him clinch his argument. Mr. Paxton said the men didn't put in coal on that grade (they burn anthracite). The men probably thought the speaker was as green as grass in practical railroading and so filled him up for fun. The idea that the mechanical heads of our American roads are called upon to sit open-mouthed and listen to

such rot, strikes a man up a tree as "sorter komikal." We wonder if the cream of the Franklin Institute is represented by the committee of science and arts, and, if it is, of what use a report on a railroad subject is from men who can be induced to believe that you can't put water into a poor, common locomotive on a dizzy grade standing up on end—like a kite string—almost thirty foot per mile. The master mechanics ought to pass a law that associate members must know enough about practical railroad engineering so you could notice it on 'em.

The above from the *Locomotive Engineer* is what might be called a "double ender," for it seems to hit both ways; the Franklin Institute for sending such a representative to make a report, and the master mechanics for making it possible for such a thing to happen in their convention. It is self-evident that a law requiring a small amount of railroad knowledge from associate members would be a much to be desired amendment to the constitution of the association.

Wm. Weiler.

MR. EDITOR:—I have read with great pleasure the very considerate reply of "Vulcan" in the July proofs, to Mr. Lockwood's position on the movement of a rolling wheel. By the same mail I received the *Scientific American* of July 11th, and I am sure that your readers will enjoy reading the following extracts from an article by A. J. Knisely in that journal, exactly in the line of the position which "Vulcan" has always held, and also in the terms used by me in your *Magazine* of January, 1889:

The top of a rolling wheel moves twice as fast as the center, while the bottom of the wheel is as stationary and motionless as is the corner stone of Bunker Hill monument.

In the case of a cogged wheel rolling on a cogged rail, the space between two adjacent cogs in the rail being stationary, a cog in the wheel, which fits that space, must necessarily remain stationary so long as it is in the stationary space.

If we take a carriage wheel containing 14 spokes and remove the tire and felly and cause the wheel to roll at the rate of one revolution in 14 minutes, it must be plain that when spoke No. 1 comes in contact with the ground—i. e. becomes the bottom of the wheel—the lower end of the spoke remains stationary, and is merely the point on which the whole wheel rocks for the space of one minute, or until spoke No. 2 strikes the ground.

If there were 14 million spokes in the wheel, and if it made 14 million revolutions in a second, the lower end of each spoke would come to a full stop as it struck the ground; but would tarry for the space of only 1/14,000,000,000,000 of a second.

Theoretically a circle is a polygon. The distance from any point in the circumference of a circle to the very nearest next point must be something, though infinitesimally small. So long as any point in the circumference of a rolling wheel is the bottom, it acts as a pivot, and is at a dead rest until the next point becomes the bottom, when the point that was the bottom begins to rise.

Now, I take it for granted that Mr. Lockwood will candidly admit that "Vulcan" has fairly shown him where the "four times" comes in, and will join with everybody else in abandoning the "times nothing" fallacy, thus letting the "rolling wheel" have a rest at both top and bottom, for awhile.

But the leverage of the driver—can we not agree on that, too? I have just been looking over back numbers, and I call attention especially to my two articles, one on "Locomotive power," September *Magazine*, 1888, page 738; the other "Vulcan Illustrated," November *Magazine*, 1888, pages 820 and 821. These two articles contain over a hundred lines of statements of mechanical principles and logical deductions bearing on this subject. If the principles are sound and the deductions are fairly made, the conclusion arrived at is inevitable. Now, while these articles have been discussed the integrity of the propositions has not been assailed. "Vulcan" has shown that he can expose a fallacy and courteously point out an error. Is it too much to ask him to go over these two articles carefully again, and without discussion or asking questions, point out any principle which is unsound, any statement which is incorrect, any deduction which is unfair or illogical? Will "Vulcan" please try this?

My reason for asking this favor is that as "Vulcan" has in his last article located "weight," repeating his former position that the "work of a locomotive is the pull of the axle against the box," I wish him to see how clearly I have proved that in no other way can he get this "pull of the axle" than by a leverage of the driver with the fulcrum on the track. He is exactly right about the "work of a locomotive," and that the thing to be moved or pulled is the axle. He must therefore look elsewhere for his "fulcrum" or immovable point.

Ambry Division.

On the Wheel Problem, to Eccentric and Vulcan.

My attention having been called to the enclosure herewith, with illustrated diagram, from the *Scientific American* of July 11th, 1891, page 21, I deem it worthy of a place in the Mechanical Department of the *Magazine*, in further answer to the inquiries of "Eccentric" and for the further and better information of "Vulcan," who seems to be one of the "doubting Thomases." It so fittingly supplements my article in the Mechanical Department of the *Magazine* for July, 1891, that I bespeak for it your kindly consideration and its publication for the reasons herein given.

William E. Lockwood.

THE ROLLING WHEEL.

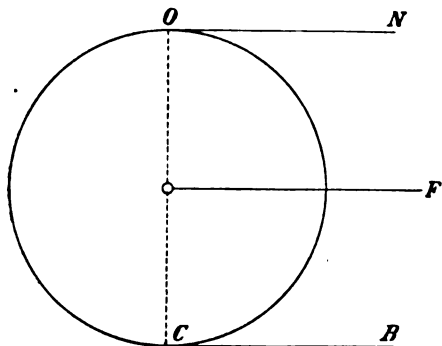

To the Editor of the *Scientific American*:

In *Popular Science News* of November, 1890, in answering the question, "Does the top of a rolling wheel move faster than the bottom?" the editor says: "The top of a carriage wheel moves faster, with reference to the observer, than the bottom, because in addition to the movement of rotation, it has the direct forward movement of the carriage as a whole. The bottom of the wheel moves in an opposite direction to that of the wheel itself, and, as

the two motions partially neutralize each other the bottom part *appears* to move past the observer more slowly than the top."

"Faster," in the sense in which it is here used, implies that the bottom of the wheel moves, but not so fast as the top.

There is no point in a rolling wheel which moves in an opposite direction to that of the wheel itself. The top of a rolling wheel moves twice as fast as the center, while the *bottom* of the wheel is as motionless as the corner stone of Bunker Hill monument.

That the top of a rolling wheel moves twice as fast as the center may be easily demonstrated by taking a round block, such as merchants' ribbons are wound on, stick a pin in the center, on one end. Around this pin tie a thread loosely, so that a pin can revolve in the knot without winding the thread, then fasten the end of another thread to the circumference of the roller and wind *this* thread several times around the roller. Let the upper thread lead off from O toward N, and let the center thread lead off from P toward F. Roll the wheel toward the right hand, and you will discover that the upper thread "pays out" just twice as fast as does the center thread.

Now, in the vertical line, C P O, the distance from C to O being twice as great as the distance from C to P, if the point O moves twice as fast as the point P, it is a simple mathematical proposition that the point C is without motion, being merely a center around which the line, C P O, revolves.

In the case of a cogged wheel rolling on a cogged rail, the space between two adjacent cogs in the rail being stationary, a cog in the wheel, which fits that space, must necessarily remain stationary so long as it is in the stationary space.

If we take a carriage wheel containing 14 spokes and remove the tire and felly and cause the wheel to roll at the rate of one revolution in 14 minutes, it must be plain that when spoke No. 1 comes in contact with the ground—i. e., becomes the bottom of the wheel—the lower end of the spoke remains stationary, and is merely the point on which the whole wheel rocks for the space of one minute, or until spoke No. 2 strikes the ground.

If there were 14 million spokes in the wheel, and if it made 14 million revolutions in a second, the lower end of each spoke would come to a full stop as it struck the ground, but would tarry for the space of only 1-196,000,000 (0.000,000) of a second.

Theoretically, a circle is a polygon. The distance from any point in the circumference of a circle to the very nearest next point must be *something*, though infinitesimally small. So long as any point in the circumference of a rolling wheel is the *bottom*, it acts as a pivot, and is at a dead rest until the next point becomes the bottom, when the point that was the bottom begins to rise.

Inclosed is a diagram showing the lines described by different points in a rolling wheel.

A B represents the ground on which the wheel, C E O, rolls. The curve described by a point in the circumference of a rolling wheel is termed a cycloid, and its properties are discussed in the calculus.

A. J. Knisely.

COUNCIL GROVE, KAS., Aug. 8th, 1891.

MR. EDITOR: In the August issue of the *Magazine* page 695, is very interesting to me and should be to every progressive fireman. I have thought of and argued some of those questions with enginemen at this place.

Why can't we have a page or two of the *Magazine* devoted each month to just such queries and answers? If the questions appear very simple and plain to some, they may be instructive to others. I might profit by hearing or reading something that another would not think worthy a second thought. A great many of the railway systems are promoting firemen, making their engineers, or a portion of them, and it is to our interest to make ourselves familiar with every part of the machine from the bottom of the tires to the top of the smokestack. We can't tell in advance what will be asked at the examination. We are sure of one thing, and that is, there will be enough to satisfy the examiner. We cannot imagine any question that is too simple, and I would like to see more interest taken in this department.

I would like for some one to tell me what I should do in case a side-rod of a locomotive would break; the eccentrics are on the forward driving axle and the main rod connected on the middle drivers.

What should be done if a trailing driver axle break outside the box.

What should be done if a main driving axle on an ordinary locomotive break.

W. B. Baldwin.

Disconnecting an Engine.

MR. EDITOR: Wm. Peirce wants to know about disconnecting an intermediate connected engine, when an eccentric rod has been broken or when the links have to be taken down from any cause. When an eccentric rod is broken or the link taken off there is no motion in the valve on that side, hence the ports on that side must be covered and the main rod taken off. By taking the link off, the valve has been disconnected and needs only to be adjusted over the ports and clamped there, which is usually done by screwing up one side of stuffing box nuts harder than the other. The main rod is taken down to avoid the wear and injury to the cylinder by the friction of the piston, which, in the absence of steam is generally supposed to be very injurious to the parts, but as on many roads there are long stretches of down grades on which no steam is used, it would seem as if an engine could be run for some distance with the main rod up even if she was not using steam, provided that the rods were not strained or twisted when the other parts were disabled.

The rockerarm is known as such all over

the country, and in all the books treating of locomotives it is called by that name, so no other name can be given our friend.

Mr. Peirce wants the reason why that valve stem did not move put down in "black and white." He ought to have seen the reason in iron and steel when he had it right before his eyes on the engine. When the pin is on the forward dead centre on either side it is self-evident that the piston must be as far ahead as it can go on that side, and that it must move the other way, no matter which direction the engine is moved. In order to give it this return movement, steam must be admitted between the piston and the front cylinder head, and in order to do this the front port should be open to the amount of lead which the engine may have. If both movements have the same lead the valve will be open just the same when the lever is ahead as when it is back, but it is likely that if Mr. Peirce had been able to stand by the valve stem while the lever was being moved he would have seen a slight movement toward the cab and then ahead again, and when the lever had reached the front end it would place the valve in the same shape as at first. It may seem strange at first to think that no matter which way the engine is to move she must take steam on the same end of the cylinder, but when you remember that the opposite side is then on the quarter with the piston in the centre of its stroke, and that this is the side which determines the direction in which the engine will move it ceases to be a surprise. Perhaps it may be as well to state here that if Mr. Peirce had watched and measured the other valve stem he would have found that it moved the full travel of the valve; at one end of the quadrant having the front port open full width and at the other end opening the rear port full width; thus deciding the question of the direction of movement for the engine, as the other side would just as readily go one way as the other. In proof of this, did not Mr. Peirce note that an engine disabled on one side, will, if stuck on the centre, just as lief start contrary to the reverse lever as not, thus proving that the dead centre side has no control over the motion?

I have tried to be as plain as possible and hope that I have answered to Mr. Peirce's satisfaction, for even if he does deprecate the answers as simple, there is hope for a man if he will only ask questions on any subject that he can not understand.

Vulcan.

The present cost of operating the railroads of the country with steam power is, in round numbers, \$502,000,000 per annum; but to carry on the same amount of work with men and horses would cost the country \$11,308,500,000.

Three Hundred Miles an Hour, with a 30-foot Driver.

Some writer in the *New York World* encourages the present craze for impossible speed and unheard of appliances by the following imaginative writing, which is rather more absurd than the average of similar reportorial productions:

Ten years from now there may be only one railroad in this country, to which trunk lines will be feeders. The Americans of the near future must travel faster. There are no reasonable grounds for believing that the present record of locomotive speed can be improved upon while the gauge and rolling stock continue as they now are. The diameter of the locomotive driver wheels must be increased to secure greater speed, but master mechanics are not all agreed as to how this can best be done. The enlargement of the drivers beyond seven feet would necessitate a widening of the gauge, and this experiment is not likely to be repeated while the present forms of rolling stock are in use.

But 60 miles an hour is not fast enough for the American of to-day. The locomotive has probably attained the maximum of its efficiency. It makes a more economic use of steam than any other form of engine. The marine engine loses 91 per cent. of the latent energy in the coal, but the locomotive utilizes fully 83 per cent of it. Therefore the problem is not to improve the locomotive, but to enlarge its capacity to get over the ground.

This can only be done by some radical change in the form of the roadbed and the rolling stock. To increase the diameter of the wheels is the first requisite. This will necessitate a widening of the permanent way. Suppose the driver wheels to be 30 feet in height, the gauge ought to be 20 feet. The rails would have to be a foot high and ought to weigh a ton to the rod. They will be bolted to ties made of the largest tree trunks obtainable. Mammoth fish plates will join them end to end.

The cost of construction will be trebled. Bridges and viaducts will have to be built of the heaviest material and tested to bear the weight of a 200-ton locomotive. The heaviest engines on the Pennsylvania railroads used in the passenger service weigh 40 tons, and one five times as large will give power enough to pull the great cars that will travel on 30-foot wheels.

The gigantic engine will be suspended below the axles instead of resting upon them. The boiler will be built around the axles and the smoke stack will not be higher than the tops of the driver wheels. The cab will be very commodious and located just behind the smokestack atop the boiler. Several firemen will be required and they will be provided for on a platform at a lower level on the rear of the engine.

If the same number of piston strokes can be obtained by 30 foot drive wheels per minute as attained by an engine with six-foot wheels, the increase in velocity will be as 90 feet to 18 feet. In other words the train will travel exactly five times as fast. If the best speed of the present passenger locomotive be 60 miles per hour it may be hoped that the engine of the future will attain 300 miles per hour. Strange as it now sounds, it will then be possible to run out to Chicago after breakfast, take luncheon there with a friend and return to sleep in New York. Chicago ought to be about a four hour run. The track will be kept absolutely clear, and there will not be any stops except to change engines at a half way point.

Of course such a road can only be made to pay between great cities like New York and Philadelphia, Chicago or Boston. In another generation there will be ten cities in this country with a million people each. The saving of time will stimulate traveling and every train will be filled. The engines will burn a tremendous amount of coal, but the cost of driving the train will be about the same as at present, because the time consumed will be a mere fraction of what is now requisite. Nobody will travel long distances by the old lines. There will not be any competition offered by the existing systems of transportation.

This brings us to a consideration of the cars. They will be 18 feet wide and probably 130 feet long. The most scientific artificial ventilation and heating ap-

paratus will be adapted to the case. Of course no windows can be left open on a train going 250 miles an hour. They will have to be closed with the heaviest plate glass—double windows in fact. The structure of the cars will be much the same as those of to-day.

They will be built wholly of iron and steel. The walls will be steel plates and the interior finish and furnishing will be beautiful and luxurious. The size of the cars will insure a single compartment for every traveler. An aisle will run through the car and the staterooms will be arranged on each side thereof, shut off by a curtain or wickerwork door. These rooms will be seven feet in width and provided with a large easy chair or sofa. The trains will be vestibuled so that it will be quite possible to pass from one car to the other.

It is very doubtful if the element of danger will be increased. The cars of steel can be made of such form and braced in such manner as to render them less liable to go to pieces in case they leave the rails. Collisions will be impossible because trains will never be permitted to follow each other within half an hour, and not even then until the preceding train has passed the station, situated at least 30 minutes' time distant, say 100 miles. Double tracks will be the rule, not the exception.

Difficulties about stopping the trains when once under headway will occur, but they will be met by improvements on the brakes that will render the gigantic machinery as tractable as any now in use. An ingenious system of signals will be devised, the bell and whistle no longer being useful, because they cannot be relied upon. They will be drowned by the noise of the monster train.

The local service of the present roads will be utilized for intermediate points. If a man wants to go to Detroit, he will run through to Chicago in four hours and thence to his destination by an express. Cleveland and Pittsburgh will be reached by regular train from station at which the halt is made to change engineers.—*Railway Age*.

150 Miles an Hour.

"I predict," said a friend of mine yesterday—

"An earthquake?" I asked.

"No, I am a railroad Wiggins. I predict a regular hair-raising advancement in railroad time making. I predict that in the next twenty-five years the people of the United States will see trains making a speed of 150 miles an hour. My idea is this: The railroad of to-day is too small an affair; it is too crooked and too insignificant. Take points like Chicago and New York. An ordinary railroad is too small an affair to do the business. Let a mint of capital build a road as straight as the crow travels from New York to Chicago. Let it go right straight through, regardless of hills, mountains and valleys. Build a track, say fifteen feet wide. Let the rails be as big—well, as big around as a sea serpent, for instance. Then build an engine with drivers ten feet high, everything heavy and strong in proportion. I mean build a great big railroad as much ahead of the present roads as the present roads are ahead of stage coaches. Steam up your big engine, pull the throttle wide open and let her go! Give her a straight track, clear the deck, and I'll bet she'd—Well, I'll bet she would make the fastest time of to-day ashamed of itself. Mark me, what can be, and is needed, will be."—*Atlanta Constitution*.

Belief Historical Notes.

The first railroad in this country was built in 1827. It was a horse road, and was built for hauling granite from the quarries at Quincy, Mass., to the Neponset River.

The first street car line in the world for conveying passengers through the streets of a city was built on Fourth Avenue, New York, and put in operation in 1831-2.

The second street car line was opened for traffic on Sixth Avenue in August, 1852.

The first street car line in Europe was built in Birkenhead, England, by George Francis Train, in 1860. This enterprise was not received with favor, the tracks were torn up, as were also those of another line in the suburbs of London laid in 1862, and not until 1868 was a line in practical operation in the old country, and this was in the streets of Liverpool.

The first elevated road was a cable road, and was built and operated on Greenwich Street, New York, by Chas. T. Harvey, in 1868. This was the beginning of the present New York elevated system by steam which was inaugurated in 1871.

The first street cable line was built by A. S. Hallidie, in San Francisco, Cal., and put in operation in August, 1873. Many years previous to this, however, cable traction had been successfully employed upon certain railways in coal mines.

The first practical demonstration of operating cars by electricity generated by a dynamo was made at the Berlin exposition in 1879 by Dr. Werner Siemens.

The first electric road actually put in operation in this country, was at Menlo Park, New Jersey, by Edison in 1880.

The first electric road ever operated as a business enterprise was by Stephen D. Field at the Chicago Exposition in June, 1883.

The first electric road operated in the streets of a city for traffic was built by Bentley & Knight, at Cleveland, O., on the lines of the East Cleveland Co., in July, 1884. This was operated by the underground conduit system.

The first overhead electric wire railway was built in Kansas City, Mo., in 1885, by John C. Henry.—*American Journal of Railway Appliances*.

GERMAN railways now aggregate 24,000 miles and employ 12,620 locomotives, 26,008 passenger cars, 556,851 freight cars and 618,000 officials and other employés. In 1890 there were 3,088 accidents of all kinds. This is an average of one for about every eight miles, which on the mileage of the United States would mean 20,000 accidents. Of course this method of comparison is not entirely fair, though it is suggestive.—*Railway Age*.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

WOMAN BEFORE THE LAW.

Advocates of equal rights have many annoying things to contend with, many exasperating arguments to meet, many disagreeable people to answer, and these are all embodied in the woman who "has all the rights she wants." There is some excuse for the opposition of men who are unwilling to share their long-exercised power. Some allowance must be made for those men who are conscientious in the belief that the lines will be made harder instead of easier for women when they possess political equality, and who oppose it for these kindly, although misguided, reasons. But patience reaches its limit when it encounters a woman who would deny all other women the suffrage because "she has all the rights she wants." There is only one person more narrow, selfish and ungenerous, and that is the woman who signs a "remonstrance" against granting the ballot. A few women have done this, an infinitesimal number compared to those who have signed petitions asking for the privilege of voting, and their posterity will blush to read their names. The woman of a few generations hence will be utterly at a loss to understand the spirit that would inspire one of her sex to ask that freedom and independence might not be conferred upon her.

But let us consider for a moment the condition of these women who "have all the rights they want." We will glance at the events of one week, that chanced to get into the daily print, only a small part of what is happening in this respect all the time. We find Miss Irene W. Coit passing with honors the severe examination for entrance to Yale College and refused admission because she is a woman. We see a number of Methodist Assemblies of ministers voting against permitting women to sit as delegates in the General Conference simply because they are women. We read of the Presbyterian Conference of Alabama voting that women shall not be permitted to speak in public. In the city of Toledo a street must be cared for by two commissioners who own

property on the street. Upon one it was found that every property owner on the street was a woman but one. Therefore, instead of appointing this man and one woman, they selected a man from another street for the other commissioner. In New Hampshire a drunken Canadian farmer stole their child from his wife and gave it to his parents in Canada. The mother, protected by a detective, secured the child, which she found covered with dirt and rags. The father carried the matter into court and, sustained by the law, a constable took the child away from its mother and returned it to the husband's parents in Canada.

In Iowa a man and wife lived together eight years and had two children, but whether they were married or not, nobody knew. Finally the man deserted her and left her to provide for the children by her own labor, which she did. One night he stole the children. The law decided that, if she was a wife, the husband should have the children, if she was a mistress, she might have them. A fine distinction and encouraging to matrimony! The man swore that they were married, and the judge gave him the children. Down in Kentucky a poor woman worked three months with her needle to buy a cow in order that she might have the milk to raise her three little children. Her husband "traded the cow for a gun, filled up with whisky, and started on the war-path." The woman was helpless because in that State the wife's earnings belong to the husband. These are mere straws, drift upon the current. Similar cases are occurring every week out of the fifty-two, year after year. And yet well-protected, happily-situated women, having no thought for their less fortunate sisters, will lean back in calm complacency and say, "I have all the rights I want and I am not willing that the burdens should be lifted from the shoulders of other women."

Do they know what are the laws regarding women in their own State? There are only three or four States in the Union where a mother has the right to her child. In the others, either the child belongs absolutely to the father where he has not forfeited his right, or where both are proved to be equally capable of taking care of it, the law gives it to the father. In New York the father may will his children away from the mother and at his death they will be taken from her and disposed of as directed. He may will away an unborn child and at its birth it will be taken from the mother's arms. In every State in the Union the joint earnings of the two belong absolutely to the husband. In many States the wife's property, real and personal, becomes the possession of the husband at marriage. In others, if the wife dies without children, the husband takes all the property; if he dies the wife

gets but one-third, and in some instances only a life interest in this. In a number of States if the woman earns furniture, clothes and food by her own labor, the husband may sell them and pocket the money. If the wife breaks an arm or leg she cannot sue for damages, but the husband sues the cause of the injury for the loss of her services, and the money belongs to him. In more than half of the States little children, from seven to twelve years of age, may consent to their own ruin, and the mothers are powerless because the law sanctions it.

In forty-three States women are forced to pay the full amount of their taxes and are permitted no representation, not even the privilege of voting for the assessor. They are compelled to obey laws they have no voice in making and, when accused of crime, they are refused trial by a jury of their peers. Space is too brief to mention all the inequalities of the law. It is true there have been many improvements since the day when the old common law of England everywhere prevailed, which gave a man the same ownership of his wife as he had of his horse or cow, but these changes have represented the labor of years. It will also be found that, almost without exception, the champions who secured the repeal of the obnoxious laws were pronounced woman-suffragists, and they will testify that the difficulty has been infinitely greater because they were working for a disfranchised class. Our law makers represent their constituents, the ones who placed them in power. They have an eye single to the interests of those who possess the influence of the ballot. They are not legislating for Chinese or Indians or idiots or women. Women have the right of petition, but legislators scorn a petition which is not signed by voters. Massachusetts women petitioned twelve years for the right to own the clothes upon their backs. While the natural progress of public sentiment may, in the next fifty years, be sufficient to strike out most of these unjust laws, is it necessary to await the slow process of half a century? Can anyone doubt that if women were enfranchised it would be one-fourth of that time until there would be an absolute equality of the laws?

It will be observed that in considering this question only the equity has been noticed. The social side, the effect of woman's ballot upon education, temperance, morality, and kindred matters, has been entirely omitted, because there may be a variety of opinions upon these subjects; but it does not seem possible that there can be a difference of sentiment upon the point that, in matters of justice, all should have the same privilege and the laws should bear upon all alike. We ask our readers of both sexes to lay aside prejudice and consider

this subject from the standpoint of reason, logic and broad humanity, and answer the question whether a government can be truly republican which makes these invidious distinctions.

THE *Railroad Trainmen's Journal* comes to our desk with a Woman's Department ably conducted by Mrs. H. W. Matthews, of Battle Creek, Mich. Her editorial comment is exceedingly interesting and helpful, and the correspondence is bright and entertaining. We extend greetings to our younger sister.

PLEASE do not consume valuable space in telling what interesting things you are going to write about if this letter is accepted. Why wait to put them into a future letter? Correspondence is accepted not through favor but for merit. Put as good work as you are able into every letter.

A FIREMAN'S FRIEND, Edna, of Monrovia, Cal., will have to send a more legible letter if she wants it published. Poor handwriting we have to overlook, but we must draw the line on first attempts with the typewriter.

PLEASE send letters for this department directly to Indianapolis, according to directions at the head of the column. All letters from women will be placed in this department, no matter to whom they are addressed.

A FIREMAN'S WIFE, N. C., of Valentine, Texas, writes very kindly of New Year Lodge, No. 135, which, she says, is composed of brave and noble men.

B. L. H., of Tuscumbia, Ala., writes in complimentary terms of Monte Sano Lodge, No. 279, and speaks words of praise for the *Magazine*.

WEST ST. PAUL, MINN., July 14, 1891.

Editor *Woman's Department*:

Some time in early spring I saw in one of the *Magazines* a letter from "Engineer's Wife, H. C. P.," which I fully intended answering, but many cares—and who is not acquainted with them?—kept me from doing so. But now in the July number comes another from his pen, which I want to reply to later on if I may have the privilege. I want now to put a spoke in the wheel of temperance, belt ever so small, in answer to "Sella." First, I want to tell you I am a fireman's, or a newly fledged engineer's mother, and, with the privilege this accords, I want to throw in my mite to influence the "boys." I am an intensely interested reader of your valuable *Magazine*, and educator of workmen, and for that matter, idle men and all classes of men if they would heed its advice. I admire your noble efforts for the betterment of the working class, and your brave, fearless denunciation of their wrongs and the oppressor. I don't know how large a circulation your *Magazine* has, but I wish every working man and working woman in the United States would read it and heed it. Federation is the only thing that will ameliorate the evil that is encroaching on both the body and soul of labor; and the sooner all workmen take in the full significance of the past, the sooner the "Shy-

sacks" will have to make restitution for the pounds of flesh taken, and God's glorious sun will shine on equity and a "square meal" for everybody. Senator Olcott's speech embodies deep, stern truths, and all truths, and if the many who are counted among the laborers and who decry the evils and oppressions could, like brave men, men who have an equal chance for liberty and equity in free America and God's beautiful land, take up the battle cry of freedom from "white slavery," and with their noble rothens who are already on the road, march hand in hand with heart speaking to heart, the great "I am" would weld the broken links and make strong the chain of brotherly love; and not another decade could pass over our heads before the cherished dreams of a government of the people, by the people and for the people would be not merely a chimera, but a grand reality. Methinks that even the old "Independence bell" would mind itself and ring out the glad tidings, "a new era is born." But so long as we live in the semblance of men—and one wouldn't think they were not at a first glance—make of themselves "dumb, driven cattle," instead of pulling out the old dead stuffing and filling up with manhood and using the talents God has given them for a grander, higher purpose than the rum shop, just so long as they will not, like men, step boldly into the tank and help redeem their cause from degradation, the consummation of the hopes of thousands of noble hearts will be retarded, and they will go on wasting precious time and whining without considering the trouble is housed inside their own threshold. And, like "Shandy Maguire" in the case of poor Ireland, whose woes find a sympathetic corner in my heart, we shall have to bemoan the fact that they are "blind and cannot see afar off," and ask God to pity them and open their eyes in the near future.

The single tax question is one of deep interest. Elliot and W. B. Richmond only stand for two more coats and pairs of pants inflated with gas. With this difference, Elliot's is a little the heavier. I noticed a reference to the editor of this *Magazine* regarding this valuable and helpful post. Like one of the other sisters I will say: "Don't do it unless you feel assured a labor paper would be the means of reaching the mass of people, and a weekly admonition would make the pulse of interest flow in a steadier vein." In some families newspapers are law and gospel and it is just possible that a newspaper would be easier read than a magazine. But the really true and noble depend upon you for healthful and helpful advice. I, too, had placed you on the highest pinnacle of the United States, together with a prayer that if you ever held that post of honor, God and your own true manhood would keep you free from the "sins that so easily beset us," and the presidents and officials and give you a clean record.

I did not intend to diverge so widely that any spoke wouldn't fit, but now I will have to splice it another time, if this is thought worthy of acceptance. My son tells me the R. of L. F. Cooke Lodge, of which he is a member, is now held in the Paul Martin block and is keeping stride with the sister lodges. They average one or two members a month. Our beautiful twin cities are being knit closer together owing to the fact of there now being sidewalks reaching from one city to the other; and many think the time near at hand when they will be joined in the wedlock of union and strength. We have few old historical landmarks; we have one, however, of which the people are justly proud. Minneapolis Falls always has been a place of interest ever since Longfellow immortalized it in verse; but now the attraction is greatly enhanced and as a pleasure resort it excels. There is probably no state in the union which has more beautiful lake resorts than Minnesota. One thing, however, mars the otherwise harmonious whole, and only with the pure water which flows in so great an abundance, could wash the foul blot from our fair cities and make clean their officials. The law says saloons must close on Sunday, but bless you, they are in full blossom—and the flowers—God pity, with a prayer for the cause I am sincerely a friend.

Mrs. L. Wells.

[This is a helpful and excellent letter and we will always have room for more from this correspondent.—Ed.]

FT. MADISON, IOWA, July 14, 1891.

Editor Woman's Department:

Why do we never see anything in these columns from Ft. Madison? Not because we lack the ability I know.

The "West End" is composed mostly of railroaders and some of their wives are among the best ladies I have ever known; and those wives are full of knowledge. Now why can't we hear from them once in a while?

I have been much interested in the Woman's Department of the *Magazine* generally, but when I read such articles as Mr. Richmond writes, I wonder what class of ladies (?) he associates with and wonder if his mother was worthy of her name. I am pleased to know he does not voice the greater class of men in his opinion. He wants us to "obey the laws of man." Why should we when those laws are not good enough for men themselves to obey?

I am very thankful indeed, that my husband is in no way like Mr. R. and I sincerely pity his wife if he ever gets one. He also will need pity, for a man with such ideas can only get the poorest of poor wives.

We have the Santa Fe hospital at one end of our city. If Mr. Richmond will just make us a call we will send him out there. At the other end of our city is the penitentiary. We will also have him visit there and see the result of such ideas as his.

Farewell to Mr. R. and may he be in better humor when next he comes is the wish of

L. H. W.

[Be charitable.—Ed.]

DALLAS, TEXAS, July 12, 1891.

Editor Woman's Department:

I have been a constant reader of the good old *Magazine* for over one year, and every one becomes dear to me. I love the Woman's Department. I love to read it all. It may be for the sake of a very dear friend that gives the book to me to read, I can't tell, anyway I read them all. I've never seen a letter from Dallas, and hope that I may be permitted to correspond regularly. If I am welcome, I will come soon with a long letter, telling you all about our nice city, its schools, its numerous churches, its street railroads, and will try hard to interest someone if not all.

I am very thankful to those kind ladies for those nice cake recipes, as well as other recipes. Do, please, someone give some nice pickles and preserves recipes. I am not a cook, but I know a certain engineer who enjoys good dinners, and want to learn to cook them for him.

In the future I will give some ideas of how to make some pretty little costumes for children and how to make over old last winter's and spring's dresses so that they will look like new and save the expense of new ones for awhile.

May God bless every railroad boy; I was going to say, especially one, but I will not be that selfish; everyone is dear to someone, I am sure.

As Nella says, I would sign my own name, but do not like to be criticised by friends, I will just sign my given name,

Azaliah.

BOSTON, MASS., June 5, 1891.

Editor Woman's Department:

This is my first letter to the *Magazine* and I hope not the last. I have been watching the Woman's Department with much interest since January, to see if any of my friends had ever contributed any letters, but so far I have not seen any from Massachusetts. Why is it? Surely the *Magazine* is known everywhere. Now why I have written this time is to see if some won't gather courage enough to write, for I and many others should like to see some in print.

In the last number a letter signed "Lu," spoke about exchanging patterns in fancy work. I should be pleased to do so in crocheted patterns.

Hoping I may write again, I remain

Yours truly,

G. H.

[You may write again if you have anything to say.—Ed.]

TO KATY, ELDORADO, KAN.

Dear Katy, your name has an elegant sound,
It pleases my eyes and my ears,
It makes every pulse of my heart daily bound,
Till I melt in the happiest tears;
For I think of the time in the sweet long ago,
When I strutted about full of pride,
With my nose in the sky and my bosom aglow,
Talking love to the Kate at my side.

It is little I dreamt what the future would bring
To the union of hearts which we made;
I was happier then than glad birds on the wing,
Seeking mates in the gem-spangled glade;
All I thought of was how I could press her sweet
lips.

And extract the choice nectar thereon;
But a year in the harness my joy did eclipse,
And the glow of her kisses was gone.

Let me tell you, dear Katy, dry nursing and such,
Teething babies and terrific squalls,
Are enough to make Job such young catamounts
clutch

By the throat till he'd silence their bawls;
I have not got his patience, I'm human, my dear,
And my wails of distress are so sad,
That I sing them in anguish, disconsolate here,
Till my readers suppose I am mad.

I'm consoled by true friends, like your own darling
self,

Who are numerous over the land;
And but for them I'd be an unfortunate elf,
Who could never such misery stand.
When the cabs and the cradles are modeled for two,
All the sweetness of courtship is gone,
For it makes a poor devil look hopelessly blue,
When he thinks he should only have one.

Still I tell her I love her almost every day,
And I hug her close up in my arms;
But her waist is as round as a hillock of hay,
When I used to delight in such charms.
And I kiss her, but Katy, her lips have grown dry,
All their humbleness seems to have fled,
Once I told her so, Lord! how Old Sweetness did cry,
And I wished ere I spoke I'd dropped dead.

Many ladies suppose that "Imprudence" is all,
Which I study when singing my grief;
Mrs. Miller—God bless her—will soon on me fall
With her pen and denounce me a thief;
Clover Leaf, Pearl Johnson, and charming Irene,
Mrs. Harper, and scores of old friends,
Are all waiting to flag me with eloquence keen,
If I don't for the past make amends.

Put yourself in my place and you'll not be too hard
When I sing in disconsolate strains;
And remember the wails of a lachrymose bard
Indicate a whole breastful of pains.

Rosy lips and bright eyes I see only in sleep,
As they haunt me when snoring in bed,
Till the call comes round, when I upward must
leap.

With their memories thumping my head.

Shandy Maguire.

[As men approach "the sere and yellow
leaf" they seem to live only in reminiscence.
—Ed.]

DECATUR, ILL., July 14, 1891.

Editor Woman's Department:

I have been a reader of the *Magazine* for some time
past. Now since it has been decided that marriage is
a failure (in some cases), and husbands have been
"managed" in every way, please tell me how to
"manage" to have something nice for his lunch
basket.

I am just a beginner in packing a lunch and find it
hard to make changes. All information on this sub-
ject will be thankfully received by me.

I hope this will meet with a ready response.

Chump.

WASHINGTON, DAVISS CO., INC.

Editor Woman's Department:

The ever noisy Fourth of July has passed out of
sight and I believe there were more patriotism and
powder used this year than ever before, and suppose
as long as science holds forth so many inducements
and so many new modes of using powder will be in-
vented, so, in proportion, will the amount of noise
be continued.

There are so many excellent articles in the July
number that I can sit and learn each one by heart
before giving up reading. I second every word Mrs.
Harper says in her editorial. It is surprising how
many mothers now a days bring up their daughters
in ignorance of household duties. So many have
come under my own personal observation that I can-
not wonder there are so many bachelors. Now a
great many girls of the present age aspire to marry
railroaders. Why should they not? The organiza-
tions have had much to do with making gentlemen
of the railroad boys, but at the same time the men
earn their wages by the sweat of their brow. They
are not millionaires, and yet I know of many a girl
that has married a workman before she knew
how to cook a steak, bake a loaf of bread or a bi-
cuit, and as to sewing, not knowing even how to
make a common calico dress. Now these girls think
that the men earn such good wages that they will
willingly pay for the making of all these things or
pay a servant to do it. The men of course have to
keep for the work, but in nine cases out of ten they
do not do so willingly. The average workman needs
a home where he can come to be comfortable
after his daily toil is over. What comfort can he get
if, almost before he is in, his wife says, "I want sev-
enty-five cents to pay the dress maker for my wrap-
per. Oh, yes, and one dollar to pay for making that
sateen shirt. Then, John, you may just as well
give me the fifty cents to give my washerwoman,
she will be here to-morrow." John hands out two
dollars and twenty-five cents that goes for things
that any average girl could do as well herself; but
instead of doing this she is from house to house gos-
siping, and where there is too much gossiping there
is always some lying. I may speak plainly, but I
could cite cases where such occurrences come within
my notice and not write from imaginary cases.
Just think of a woman who owns a sixty-five dollar
machine, keeps a hired girl, yet is too indolent to
make even her husband's shirts or the common
aprons for the children; yet is continually in hot
water from some misstatement she has made in re-
gard to some of her neighbors. I pity the husband
of that woman from my heart.

Will Mrs. W. W. Weaver allow me to give my way
of making bread and then the sisters can experi-
ment—my bread is as white as snow, too. I set either
Warner's yeast or Yeast Foam over night in the
usual way. Next morning when I see the yeast is
light enough I sift my flour, adding about two table-
spoonfuls of salt, one good tablespoonful of good
lard and half a teaspoon of granulated sugar. I never
knead over fifteen minutes; then the greatest secret
in good bread is to have your dough carefully cov-
ered so that not the least little bit of air can reach
it—I have a large tin which has a cover fitting tight.
After it has risen turn the sides inward to the middle
of the dough, thus pressing it gently down; cover
again and let rise to the top, then take it on the
board and cut it in sections and keep working each
section with the palm of the hand, put into your
baking pan and cover tight again; when risen to the
top then bake. Now there is not the least trouble in
this after you have got used to it, and your bread
will be sweet to the last bite. Just before you take
it from the oven glaze it over with butter if you
want it extra nice looking.

Ellen M. Stata, here's my hand, although you do
not agree with my opinion of cards. I expect the
Prince of Wales wishes he had been of my mind;
and the way ex-President Hamlin was called away is
a little in favor of my argument. Shandy Maguire
is all right; he means no harm. Mrs. Taylor, I saw
my mistake as soon as I had written my letter, but
you will allow the initials were enough to puzzle me
for a moment, my other friend's being J. V. Taylor.
Just as soon as I read in the *Railway Service Gazette*

the article suggesting Mr. Debs for President, I took it to our city papers to copy, which they readily did. So you see, Mrs. Harper, I was very busy making votes for Mr. Debs before the Woman's Department had time to second the motion. Kindest wishes to all. I am, as ever,

Mrs. Henry B. Jones.

[It would be much better if women could cast their own votes instead of going about trying to influence the men; do you not think so? The poem will appear in next month's *Magazine*. Your letter will be answered as soon as a few moments' time can be spared.—Ed.]

HOPE, IDAHO, July 15, 1891.

Editor Woman's Department:

I was so much interested in the many instructive and entertaining letters in the *Woman's Department* in July's *Magazine*, I thought I would come again and tell something about this part of the realm. Hope is a small town, situated in Northern Idaho, and is the junction of the Rocky Mountain and Idaho divisions of the N. P. Railway. The town is built on the side of a mountain, near the base, overlooking the lovely waters of Pend DeArelle and its beautiful surroundings. The north shore of the lake is quite close to the base of the mountains, there being very little level ground and that little is utilized by the railway company for a round house, yard, hotel and other buildings. The population consists chiefly of railroad men and their families, with a few miners and prospectors. On account of the peculiar situation, one can get a good view of the town only from a boat on the lake, and that is a very pleasing one. The town boasts of only one street and many long, tiresome flights of steps. The one street presents all manners and styles of road building, there being trestle work, bridges, rock work and common mud pikes. Some parts are quite steep, but it serves to make an excellent toboggan slide during the winter. There is every style of architecture introduced in the building of the houses, there being from the common "shock" and log hut, with its mud roof, up to the nicely painted, well built, and cosy five-room cottage. Many of the houses have nice porches and verandas surrounded with lattice work, with hops and trailing vines growing all around them, interspersed with hanging flower pots and China hats with many kinds of flowers growing in them. I would suggest to the ladies, if they possess a China hat, to use it for a hanging flower garden, as they seem to be made especially for that purpose and they last so long and are very cheap. Many of the citizens, by walling up with rock (of which there is an abundance) and leveling off the ground, have nice little yards and flower gardens that look so pretty, with their many pyramids of stone, whitewashed, and flowers growing on top of them, and many queer shaped and unique flower beds and boxes, made of stone and roots painted in all kinds of colors. There is no church in the town, but the ladies, God bless 'em, have been giving strawberry festivals and societies to raise money to build one this summer, and I am pleased to say the contract has been let for the building, and the town will boast of a church in the near future. The credit and honor of this move belong solely to the ladies. The men were all very inactive and careless in the matter, while the ladies were untiring in their devotion to the cause and persistent in their efforts till sufficient money was raised for the building. There was a schoolhouse built here last summer, partly by subscription, and the residue was raised wholly through the efforts of the ladies of the town. What would we do without the dear ladies? The only trouble there is in this highly favored section, they are too few. There are two hotels, both operated by the railway company, one for the accommodation of the employes and one for the benefit of summer tourists and pleasure seekers, which is kept open only during the summer season. There was an athletic club formed here this week and they are using their best efforts to raise sufficient means for the erection of a building, to

consist of reading and bath rooms and a gymnasium and also to clear away and prepare a base ball ground near here. May success crown their efforts.

The absence of churches in this town and places where good and wholesome amusement is dispensed, has had a very demoralizing effect upon some of our young men and otherwise good citizens. But with the advent of the church and athletic club, with the pure and ennobling influence of the former and the good and wholesome effect of the latter, I look forward to a desirable change and a long looked for reform among some of our citizens. Many persons frequent gambling dens and saloons, for want of a better place to go. There being many without families and being away from home and friends they become careless and indifferent in their conduct and to the places they frequent. There is one blessing attached to the town, that larger and more pretentious towns are not always blessed with, and that is good, pure water. The water comes from a spring on the side of the mountain above the town, which makes it easy to bring into every kitchen by a small outlay for water pipes, and by having a reservoir sufficient pressure is obtained to use a hose to sprinkle the yards and walks, to say nothing of the safety during a fire, and the best of all, the supply is abundant and never failing. The one great attraction of the town and the one that commends itself to all lovers of the beauties of nature is lake Pend DeArelle and the lovely view obtained from every doorway in town. One seems to never tire gazing upon a scene.

"Where every prospect pleases,
And only man is vile."

The lake is fed by the waters of Clark's Fork river, and is very deep and clear. It is about forty-five miles long, but its zig zag shore with its projecting headlands and numerous bays makes it difficult to determine its average width, but I believe about four or five miles is the mean average. The lake and its surroundings present attractions to suit the taste of the most fastidious. Its ever beautiful bosom furnishes a tempting field for the oarsman and yachtsman. Its waters abound in several species of trout, the most plentiful being salmon and mountain trout and several species of white fish, and for all lovers of the rod and reel it is a paradise. In many places its high, precipitous shore, which forms the base of the surrounding mountains, invites the daring and intrepid climber of cliffs and dizzy heights in search of specimens. Nooks and grottoes, are very numerous. Many tall mountains present themselves where one may climb to the regions of almost perpetual frost. Foot hills and small valleys present a field for all lovers of the mild eyed and timid deer, the grizzly bear, with his wonderful propensity to hug, and the no less succulent grouse and other small game, too numerous to mention. In the meanwhile the luscious blackberry and raspberry will invite his attention and tempt his palate at this season of the year. For lovers and those romantically inclined, it is a golden field, the calm quiet, moonlight nights, when one may take his best girl (if he has one to take) boat riding on the beautiful and shining waters, when every dip of an oar seems to make music, and every whisper is perfectly audible, to row among the many secluded nooks and dells along the shore or go onto one of the islands and take a stroll on land among the gravelly shore or take a stroll on land among the pines, where one may talk to the people in the seclusion. I say, if people are in the least romantic, if they don't fall in love they run a great risk.

Before closing, I wish to say I heartily endorse Mrs. J. H. Shannon's letter in the July number in every detail. Would some one kindly prescribe for "Alzetta." With best wishes for all, I am

Bystander.

[The *Woman's Department* returns thanks for this entertaining letter. The pretty mountain town seems rightly named and its description is most alluring to one who is surrounded by bricks and mortar, and the thermometer up in the nineties. What is it like in the winter?—Ed.]

VAN BUREN, ARK., July 21, 1891.

Editor Woman's Department:

In looking over and reading both the Engineer's and Firemen's journals, I have often been tempted to write, but as I am not an accomplished writer or much of a society woman, I have been afraid to try my pen in that way. As my aim is to write something both good and useful, I am in fear I shall fail.

There are a great many ways to do certain kinds of work, and our aim should be to find the best way and then to do our best.

Just let me say the unmanaged husbands are, I believe, the best husbands after all. I think if we wives learn to manage ourselves and our household duties we will have our hands full enough to keep us busy.

Someone speaks of card playing. While I do not uphold gambling in any way, I would like to say a few words in regard to card playing. If you find your children inclined to play cards don't forbid them, for nine times out of ten they will play when you don't know it. Just get a pack of new cards and play with them, and while you play with them you can impress on their minds that it is not the cards that cause the trouble, but the abuse of them. I have found in other things as well as cards, that while taking part and explaining they catch the meaning, and your aim is accomplished almost before you realize it yourself.

The same in regard to strong drink. Teach the use, and at the same time the abuse, for it is the abuse and not the use of such things that causes so much woe and misery.

Another one says, teach the girls to cook. Yes, and teach the boys to cook, too. What different husbands we would have for our girls if the boys were taught not to despise a girl's work, and to think it was beneath them to wash a dish, set the table, cook a piece of meat or boil an egg. The more a boy does for his mother and sisters the more he thinks of them; provided he is not made to think he must do thus and so; then, in that case, the reverse is the result.

But I am writing too much. I will close with love and best wishes and a hearty God bless the railroad boys.

An Engineer's Wife.

KANSAS CITY, MO., July 3, 1891.

Editor Woman's Department:

Having established a reputation for "honesty," and having the assurance of at least one reader that she "enjoyed" my letter, I have decided to accept your kind invitation to call again. Not that I wish particularly to impress my views, however honestly they may be expressed, upon others, but simply to promote interest in this department and in the *Magazine* in general.

No, Mrs. L. H., we have no quarrel. We are only looking at the matter from different points of view. Your view is the one most frequently and loudly proclaimed before the world; mine the sentiment that exists down deep in human nature and seldom find a champion honest or sentimental, if you please, to declare its existence.

I admit that the picture you draw is not a pleasing one for more and weightier reasons than you give. My view is the one taken by the man who loves "for keeps." When he becomes engaged he does so without thought or suspicion that there will be any other termination to the engagement than wedlock or death. And in the latter event what more blessed recollections than those that come in dreams of after years even when the hair is tinged, aye, whitened by the touch of time, when he feels again those loving arms wound tenderly about his neck and the soft, warm cheek laid confidently against his own?

One sees again those earnest eyes, filled not with the unsteady gaze of doubt and distrust or the scintillations of sensual passion, but with a soul-inspiring good look that discloses no thought save that of perfect trust and devotion, and feels again the yielding form, every shred and fibre as responsive as the needle to the magnet, pressed to his heart in a full surrender to one of the most pure and commendable impulses known to our human nature.

In my judgment there are in this world few things more spiritual, and hence more pure, than the love of one man for one woman, and *vice versa*, and that, being so, no exceptions can justly be taken to such demonstrations, within the bounds of morality, as the interested parties may feel disposed to make. A proper time and place, of course, being always selected.

Too many homes have gone to deplorable wreck through too much "dignified modesty." Undignified gushing, if you please, was never begun after marriage. But I must desist. I have taken more space for this topic than I intended or its importance, perhaps, warrants. Remember that I was addressing my advice to a young lady who was engaged, and that with me means "business." Take a good survey of the situation and exercise your "dignified modesty" before you are engaged. After that leave the dignified off.

Before closing I want to say a few words about card playing at home. I do not believe that playing with the children at home has anything to do with making gamblers of them.

That my boy was drowned in attempting to recover a card blown overboard I should no more deplore than that he met a similar fate in an attempt to recover any other trifle. That he was a confirmed gambler I should most grievously regret. That parents are largely responsible for the bad habits of their children is doubtless true; but that they are aware how or wherein they are at fault in the matter of bringing up their children I do not believe. A man to be a gambler must possess a number of attributes that he does not attain in learning to play cards, especially if he is properly taught while learning. A confirmed gambler is seldom, if ever, honest in the game. He has no scruples about taking other people's property without making any return. He does not hesitate to lie or steal to win. He usually cares very little for his winnings after he has secured them. Another essential feature of the gambler is conceit. He, of course, thinks he is a little smarter than his opponent, and he is almost always superstitious. If you can bring up your children without these attributes they will never be gamblers. Now do you think that sitting and playing with them, with the game conducted as it can and should be, will produce in them these attributes of character I have mentioned? If you do the best you know how to bring your family up to be useful and exemplary citizens, and fail, you will of course be sadly grieved, but you have no cause for self condemnation.

With thanks for kind references, I desire to remain the b—b—ect,
"Friar Tuck."

[In a private letter to the Editor, the "Friar" states that he does not want the readers of the Woman's Department to know that he is married, as this fact will detract from the interest of his letters. For that reason we will say nothing about it, as his communications are very readable.—ED.]

MONTPELIER, July 19, 1891.

Editor Woman's Department:

From one or two articles in the July number of the *Magazine* it seems as though I have gotten myself into trouble with some of the lady correspondents and I hardly know what course to take to get out of it. I would get down and beg for mercy, but I know a great many of the women have made up their minds they never will forgive me, and you might as well try to dip the Mississippi river dry with a teaspoon as to try to get a woman to say she will when she has made up her mind to say she won't. Therefore I do not think I would be very successful in obtaining mercy by begging for it.

I will have to thank Mrs. J. H. S. for her advice as to how a fellow should conduct himself to get a wife, for I am satisfied she knows by experience (through her husband), she says W. B. R. shows his ignorance by comparing a foreman and his men to a man and wife, as if a wife was hired for wages. I would ask Mrs. J. H. S. how many wives are there

to-day who are hired for wages and very poor wages at that? And how many are not hired for wages but are nothing more than the negroes used to be—*slaves*? I have not the slightest idea but that she could name a great many of them if she were so minded. Mrs. J. W. T. thinks W. B. R.'s letter in the May number an insult to all true wives while I think she takes the wrong meaning of it. No one should wear a shoe if it does not fit her. I hope no one will think that I had reference to any true woman, or meant to condemn all, as Mrs. J. W. T. says I did, for I know there are some good and true women, even in the village of Montpelier, as ever graced God's green earth. But how many women are there to-day going about trying to make childish Eves and silly Adams believe sin is sweet? How many an innocent girl do they not degrade into an evil minded woman? To how many a youth do they point out the narrow by-path as the nearest cut to a girl's heart?

Women have more power for good or evil than they think of. It is just when a man's character is forming he falls in love. Then the woman he loves has the making of him. I am sorry to say I do not think they always use their influence for the best. Their ideal hero is as "Once a fireman's sweetheart" said in the Montpelier Observer, "A conductor or engineer, and maybe a true hearted fireman, enchanted by love is lost to life and use and name." Women, it is with you more than all the preachers, to roll this earth a little nearer heaven. Be fair in mind and soul, as well as face, and men will glory in your service. Throw off your disguising cloak of selfishness and stand in the robe of purity, and there will be thousands of hearts that are now cold and indifferent, filled with love and respect for you. *Chronic.*

[Mr. Richmond evidently does not intend to be unjust to women but he has possibly some cause for bitterness. One of the hard lessons we have to learn is not to permit ourselves to be prejudiced by our own personal experience. When we have been deceived or betrayed by one we loved, it requires great breadth of mind and liberality of spirit not to say, "They are all alike and nobody can be trusted." An unprejudiced observation, however, will show that the majority of people are worthy of confidence and that treachery and infidelity are the exception. Let us cling to our faith in human nature.—Ed.]

LAREDO, TEX., July 1, 1891.

Editor Woman's Department:

Perhaps you would like to hear from this part of the country once more. I have been waiting very patiently for some fireman's best girl to put in a good word for the boys, but it is the letter that never came. We have been warned time and again not to praise the boys so much, and I guess my letter won't stand any show, but I will trust to luck. I must tell the girls that Mr. W. B. Metcalf, Master of White Breast Lodge, No. 278, deserves the greatest praise, for he devotes all of his time to the great work of the B. of L. F., and is always on time at lodge, and does credit both by his conduct and personal appearance. He is in no way behind in exerting himself to render assistance to those in need. The only fault he has is that he is awfully bashful.

Boys, girls, do you ever think of your mother: of the one who gave so much of her life to supply yours, who has loved, cared for, watched over you, and prayed for you for years? Do you ever think how much we owe to our dear mother? None but God knows the watchful care of a loving parent who thinks of the dangers, the pitfalls, the temptations set all along the road of life. How we do wish that men would be good to women, that all husbands would be kind, loving and considerate to wives. Women need all the love they can have from husbands, for theirs is a load continually. We know

men who are cold, domineering and hateful to the one they should always be kind to and considerate of. We wonder that more women are not lost, that more divorces are not obtained, when there is so much abuse, neglect and selfishness. Not that all men are bad, or that all mean to be abusive, but some of them are so careless. When they "to you a-wooling come" see that your own heart is pure and filled with good intentions, drive out all of that terrible selfishness which fills the hearts of thousands as they give it welcome, to the making of other lives heavy and miserable. See that your lover is honest, that he is not a loafer with no object in life save to associate with thoughtless men. Look down into his life and if in it you find the germ of manhood it is no matter how poor he may be, for wealth may come and wealth may go but loving manhood endures forever, or until it is trodden upon, driven out and wrecked by that heartlessness that follows fashion. Trust the man who means well: give all confidence to the one you love, or give none. Men are too often what women make them. A good wife can make a bad man good if she will but try, that is, if his manhood be not entirely lost, and a heartless woman can make a good man bad if she drives him into the world for the love she promised to give. When you have a husband live for him, and he will in turn live more for you than for all the world beside. Such is the love of an honest man. Help him to economize, to provide a home, to beautify it, not alone with senseless objects for the eyes to rest upon, but with that heart-love and soul born care and caressing that will make almost any man a willing captive to women. Encourage his good intentions, know that he has a heavy load, dark hours and much striving, that he has to battle with all the world, and if he has a sweet reward at home he will battle bravely and successfully for you alone. Do as much to line his heart with velvet as he does to cover your floor with carpets, and if he be a man worthy of woman's love water never gushed from the rock when touched by Moses as will love and the truest affection leap and grow like a beautiful flower. Do as you would be done by and the good angels will carry your good intentions.

How I wish I could help Charley, in June Magazine, to select a good wife. I won't try to give one idea, but if the question were to judge a good husband I would be there. I would then tell what kind of a man I should pick, and what I would do and what he should do.

I have said more than I intended to, and so I will close. With host of good wishes for the B. of L. F. I remain
A Fireman's Sweetheart.

[Come again. Poem next month.—Ed.]

RADFORD, VA., July 14, 1891.

Editor Woman's Department:

I have just been reading the Magazine and as I haven't seen a letter from this place I thought I would write one. My dear husband is a fireman, and a braver, truer heart never beat. He always comes home with a smile on his face and is always ready to help me about my housework or anything I ask him and of course I try to please him and that makes us both happy. But oh! it makes my heart sad to think he is not a Christian. We all know that is the most important step in this life, for God says seek first the Kingdom of God and all these things shall be added unto you. But my hopes are strong and I trust to God that he will soon turn from this sinful world and put his trust in Him who is able to save. My daily prayers are for his safety and protection while on the road. I try to be a Christian and have great faith in prayers.

Now a word in behalf of Ed. I believe you have earnest workers in your lodge and hope you may succeed; though you can do nothing of your own accord. You must trust in God to help you, and may His richest blessings rest on you as my earnest prayer.

A Fireman's Wife.

[A husband as good as you represent yours to be is certainly an example of practical Christianity. Do not worry about his belief.—Ed.]

THE SEQUEL.

"I would not marry a railroad man,
Oh dear me, no, oh no!
For I never could know what hour he'd come
Or when he'd have to go.
Besides, one never knows where they are,
Nor what pretty girls they see:
No, when I marry I want a man
Who will have no sweetheart but me."

She settled herself back haughtily,
And looked in her sister's face.
This elder sister smiled at her,
With a gentle and good-natured grace;
For she had married a railroad man
And had never had cause to regret;
So she minded not what this saucy miss said,
After all, she was only a pet.

"Charley is going to bring to-night
His fireman home with him, dear.
He asked him to come, he had quite forgot
That visit of yours was so near.
His mother has gone to the east, Charley says,
In about a month will be back,
And so he promised the anxious mamma,
That we would take care of her Jack.

"So now try to make the best of it,
And behave yourself as you should.
For though he is a railroad boy,
After all he may be good."
But this dainty miss shook her golden head,
"I'm very sure I shall soon tire
Of this railroad boy whom you call Jack,
This monster of soot and fire."

"For he'll always have black face and hands
Just like Charles, the impudent boy;
And to rub them over my clean face
Is to him the greatest joy.
Oh say what you please now, I don't care,
But I'm very sorry I come
Just when this fireman's mother
Went for a month away from home."

Well, she met this "dreaded monster" that night,
And as she slyly looked at him,
She saw his curly brown hair and mustache,
And the dimple in his chin,
But this hard-hearted girl would not own to
herself,

As the moon through her window shone bright,
That the handsomest boy she had ever seen
Was the boy she had met that night.

And Jack? Well now, cannot you guess,
That he certainly thought it his duty
To fall "head and ears" in love
With this young, golden-haired beauty.
So here's the end of my story. "This girl
Married a fellow who is 'oh, so dear,'
But 'tis not Jack the fireman,
For he's now an engineer."

Mrs. A. M. Coffenbarger.

DENVER, COL.

SIOUX CITY, IA., July 8, 1891.

Editor Woman's Department:

It is with pleasure that I look to the forthcoming of each monthly magazine, containing as it does much that is interesting and useful, and more especially do I look into the Woman's Department, where one can find such interesting household affairs, and also lively conversational topics. I noticed that one young lady, a fireman's friend, gave a very instructive lesson in last month's Journal, "on how to make over a last year's dress," giving a lesson as it were in the economy of clothing. I also noticed by a remark from the editor, that Mr. Theo. Ogden, of Chicago, had written an excellent sketch of a ball of S. S. Merrill Lodge, No. 188, but for a reason known to the readers, it was not in. Now I hope Mr. Theo. will not get mad but will write about something else, for instance on the subject of courtship. I am sure he could say something very pretty.

I am going to look for it in the next journal. I observed too, that a nice young man, at least I hope he is, asked advice in the way of how to judge a good wife, and I think it necessary that he should be informed, so maiden-like, I hither take upon myself the responsibility of telling him how he should detect a model wife. In the first place, my dear young man, when you behold a pretty Miss smiling on you with mischief lurking in those sweet smiles, her beautiful eyes with their sad depths of meaning, her lovely tresses arranged so as to throw a softened appearance over already lovely features, her dress so neat yet so attractive, I pray young man, pause ere you choose too quickly, for it follows that all women have a certain charm of loveliness around them whether they will make a model wife or not. Leaving these outward signs and coming down to the fine points wherewith you may choose rightly and with a certainty, first of all your ideal must not be possessed of too great an amount of common sense, but the deficiency must be supplied by a whole pile of U. S. Dollars by you when you take her for your own. She who is a good wife, never troubles her mind about the cares of the household, very seldom enters the kitchen, only when she has something important to tell the servants in regard to the getting up of a fine dinner, four o'clock tea or something of that sort, where particular instruction is required; although for that matter she could easily send for a first class cook, who could attend to all this and thus relieve his wife of this little work. Again, she is an excellent wife when at parties or sociables she is all gaily, entertaining and charming, but upon the least provocation she becomes cross, domineering and dangerous. Watch, my young man, those persons who are so dispersed, and you can readily see that such a person should be your choice. Now I have told but few of the many points wherewith you may detect your future wife, but these few will convince you that you are on the right road to matrimonial happiness. I know that the girls will sanction this testimony, so true in every detail, and with the hope that this advice may be taken kindly by this young man that asks for such, I will leave on the next lightning express for supper, and as I partake of my delicious repast will wish the B. of L. F. a bright futurity and heaps of success and the editor a long and happy life.

Yours, with best wishes,

Kitty.

HARVARD, ILL., July 9, 1891.

Editor Woman's Department:

Having just received at noon the *Firemen's Magazine* and read almost all of the letters in the Woman's Department, I concluded to write a few lines. I will not attempt to give any of my ideas on the subjects the married ladies are contesting, as this is my first effort at writing. Nevertheless, I am greatly impressed by the earnestness and spirit with which the ladies discuss the subject, but I think it will best myself better to try and give a short description of the place where I live.

Harvard, a little city of 2,000 inhabitants or more, is just sixty-three miles from Chicago, the great metropolis of the Northwest, on the C. & N. W. Ry. It contains five churches, four manufacturing industries, a magnificent public school building, electric lights, well kept streets and splendid dwellings. An artesian well is being bored and two good hotels handy by the depot where meals are served and where hot lunches are ever ready for the hungry railroad boys at any time of day or night. If "Shandy" were to stop over for lunch I'm sure he would get an "Irish stew" that would make him forget Mrs. Maguire and the twins for the time.

I am very much interested in the poetry written by "Shandy." Mrs. Nellie Bloom and Geo. W. Hall, and on opening the *Magazine* the first thing I look for is the verses from those poetry-making persons.

I was very much interested in a bit of history written by Ellen M. Stata, and hope, as the editor does, she will write again.

I will now close, for perhaps I have already made it too lengthy. With kind regards for all, I remain
A Fireman's Cousin,

Mad.

SEATTLE, WASH., June 27, 1891.

Editor Woman's Department:

The interest excited by the article on the financial value of housework, and by several of the letters in the June number, is my excuse for writing so soon after my first venture and before I know whether that has been accepted or not, and whether one is allowed to write so often. I liked the article very much indeed and want to ask if you don't think the time has already come when "girls hesitate to sacrifice a life of independence for the dependent position of a wife." I am sure I have seen nothing in the lives of the wives I have known, to tempt me to give up my work and pay for a life like theirs. There are now so many occupations open to women that every girl can find employment suited to her taste and strength and by means of which she can earn a comfortable living for herself and, perhaps, help her family. Then why marry when all she can expect in exchange for this independence is a life of never-ending work and worry, with as much pay for it as her husband "chooses to give her." But every girl hopes to have a home of her own some day and the making and keeping of that home implies for her much work and care, for which she should receive more than merely a shelter, her board and what is absolutely necessary in the way of clothing, and that given to her, perhaps, with much grumbling. It would not be at all romantic, but at least sensible, for young people to arrange their financial affairs before marriage rather than after, when, if your husband is going to be selfish, you can't help yourself. I would like to send the three or four pages I have written about this, but am so afraid of being left out and will be so disappointed if I am not admitted to your circle.

I hardly think that W. B. Richmond would really like to have women adopt the masculine style of dress. Dress reformers have invented many garments which, if used, will be found to be just as healthful and comfortable for the ladies as the clothing of men is for them.

What an instructor in the art of courting "W. I. F." would make. I hope he will write again. As a critic he is all that could be desired.

If my letter were not already too long, I am sure I could give "Charlie" all the information he desires.

Very truly yours, *Marie F.*

[Of course married life has some compensations that cannot be measured by dollars and cents, but the future woman will require much more of an equality in the partnership than is extended to the women of the present. We welcome our new correspondent.—Ed.]

SYRACUSE, July 5, 1891.

Editor Woman's Department:

Well, well, what a gloomy Fourth of July we Syracuse people were subjected to. It rained incessantly the greater part of the day. All our pleasure trips, boat rides and family picnics had to be abandoned for indoor amusements, and although the paper stated there were "forty seven" kinds of noises in the air all at once, and no one but a deaf and dumb man could hear himself think, in our part of the city it was very quiet and, had it not been for the occasional booming of cannon and the small boy's fire-cracker, I should scarcely have realized it was anything but a rainy day. It gave the Odd Fellows that are gathering here for the grand canton rather a wet reception. They are here without number and still pouring in from all quarters of the globe. It is the International Encampment of the Patriarchs Militant and will be an event the like of which this city has not seen in many years. It is estimated that Syracuse will be called upon to furnish meat, drink and beds for about 100,000 during the week's encampment.

Syracuse is a beautiful growing city and at one time closely nestled in the valley with the Onondaga hills rising on either side, but is rapidly spreading over the hills and stretching itself away to the east and west, till in a short time it will compete with

some of the larger cities of the Union. It has beautiful lake and summer resorts, fine schools and churches and, as I stand on the top of the hill and count the many spires pointing heavenward, it calls to mind a remark when a child, that Syracuse was such a wicked city. I wonder if it is so very different from other cities. I have not seen very much of its wickedness. There are the good and the evil, go where we will. There is much more good than bad in this life. Better to search for the good than the evil although it seems to be the most natural for the human family to point out the faults and conceal the virtues. How many families have been deprived of each other's society for years, yes, and even been broken up entirely on account of the little harsh words that grate on the heart and brain. Life is short; at the longest it is but a little while and we shall be called to render an account of all these hasty words and actions. Let us be kind to each other while life may last, be it long or short; kind to the young and kind to the old, kind to the aged mother who sits by our fireplace. The bloom of youth has faded from the cheek we love so well, and the hands that smoothed back the tangled tresses and lulled us to sleep when our little bodies were racked with pain and disease, have nearly finished their work. Oh, how we ought to forget self and deprive ourselves if need be, to give comfort and happiness to the aged ones, whether they be under the roof that shelters us or in the home where their loved ones have come and gone, and thus made home such a sacred place. It is no wonder the loftiest hearts have been tuned to sing "home, sweet home."

We can not fail to see that the shadows of the approaching evening of life are slowly gathering over mind and heart, shadows that cannot be dispelled, and in a little while mother will be singing with the angels on the other shore. So let us be kind and patient, so that down in the recesses of our heart we can feel when all is over we have done all in our power to make her last days happy. I know the space in the *Magazine* is limited, but as I sit here alone, children asleep and everything quiet my pen flew so fast I scarcely realized I had written so much. Since last I wrote my fireman has taken the right side, so I cannot sign myself a Fireman's Wife, but my heart as well as his is with them still.

Yours, truly, *Olie Blanchard.*

[A good letter. Come again.—Ed.]

MARTINSBURG, W. VA., July 10, 1891.

Editor Woman's Department:

As I have not had the pleasure of seeing No. 430 represented I will try and introduce this lodge. We are in our infancy yet, although we have several members. They are of that class of men that like to see everything moving on in this century of progression. Martinsburg is one of Virginia's old towns, has about 9,000 inhabitants, is situated on North Mountain, has a very healthy climate. The people are of a kind, benevolent and religious sort peculiar to Virginia. The old church is standing in the south part of the city where General Banks had his men during the war. The Winchester pike also runs through here on which Sheridan had his ride.

Since I have been here I had the opportunity of seeing Harper's Ferry, which is about 20 miles away. It is a very small place situated on the Potomac river and is the proud possessor of that historic building, John Brown's fort, which is a brick structure of small dimensions, with heavy iron doors. There still stands at one end of the building a cannon but I believe that the fort at present is occupied as a stable or at least it looked so to me. From the Ferry you can look just across the river and the mountain is so high that the wild goats look no larger than cats. The mountain is almost perpendicular on one side but the goats seem to experience no trouble in ascending. Down the river a little ways is the Government bridge, which is a beauty in itself. It has three tracks—two railroad tracks and a wagon road, which has a toll gate in the bridge.

I will endeavor next time to describe Mount Vernon, the home of Washington, the father of our country.

Edna Rogers.

IN MEMORIAM.

Ten years to-day, I remember it well,
 'Twas the day mother bade us a long, last farewell.
 Six children survived her, all were there, father,
 too,
 Though desolate our hearts felt, 'twas better, we
 knew
 That from misery and pain, she at last might be free,
 For heaven and home, with her Saviour to be.
 She prayed and longed for: it was granted at last,
 From this life, with its woes, to a better she passed.

We have drifted apart many thousands of miles
 And changes have come, with the march of time.
 I've wondered as often my thoughts back would
 stray,
 Did they too think of mother, and remember the
 day.
 She was quiet and patient, her words were but few,
 After all words are fruitless, without virtue too.
 Her life was so simple, so earnest and pure,
 That the influence shed o'er our lives, still endures.

Sleep in peace, mother dear, thy race was well run,
 We'll cherish thy memory, till our journey is done.
 May the children which gathered around thee to
 take

The last look on earth of thy dear loving face,
 Greet thee first in the land that is fairer than day.
 Where the tears by God's hand have been all wiped
 away.

To rest where the Saviour's own face is the light,
 In that home, eternal, celestial and bright.

Mrs. C. I. Miller.

EAGLE BEND, MINN., July 15, 1891.

KNOXVILLE, TENN., July 6, 1891.

Editor Woman's Department:

I have been thinking for some time I would like to see something in the highly appreciated *Magazine* from our town, but have been disappointed so far. The B. of L. F. has been recently organized at this place, and I suppose they all like myself, feel somewhat backward in making the attempt. I enjoy the *Magazine* very much. Some of the letters are real interesting while others are right amusing, especially the editor's remarks.

My husband is a fireman and a member of the Brotherhood of Locomotive Firemen, and thought my letter might be allowed to occupy just a little bit of the Woman's Department.

Knoxville is a flourishing town. It has quite a lot of churches, I think of most every denomination; it would be rather tedious to mention all and two or three of a kind of a great many of them, but to say there are as many good people in proportion who go to church as there are churches, I couldn't say, for the Bible tells us to judge not. Shops and factories there are of every kind I suppose that could be mentioned from railroad shops down to blacksmith shops, furniture factories, shirt factories, candy factories and broom factories, rolling mills, marble mills, flouring mills, woolen mills, cotton mills and so on I couldn't tell how many more. Of course I couldn't think of them all at once for my mind is rather scattering unless I hear a train whistle and a bell ring that sounds familiar and then my mind is right there.

Knoxville has electric cars, horse cars, and dummies. We can go anywhere in the city without walking, that is if we have only got the money, but of course it comes in right handy to walk sometimes when we don't feel too lazy and save that little bit of money with which we could have had such a nice ride on the cars.

Money is quite an object in this world of ours, for without it we could scarcely manage to live. While our husbands work hard and earn the money we wives should use all possible means to work and save all we can, so our husbands won't become discouraged and say, "Well, I work hard and earn all the money I can and I can't see what becomes of it or where it goes." Poor man! I am so sorry for any man that toils day after day and never has anything to show for it.

When health will permit I do my own washing, ironing, cooking, house-cleaning, and care for the

little one who is all the time piling playthings here, yonder and everywhere. It makes it real hard sometimes doing all the house work alone but I struggle on, as I see there is quite a saving by me doing so. I so often hear the remark made, "I am going to do so and so or have something, the money goes anyhow, so I don't care," but if we will only hesitate one moment and think, "Well, if I don't try to do my part and make my husband's earnings go as far as possible and save up a little what would become of us if he should get sick or hurt or maybe killed, or some of the family get sick?" I think it is our duty to do our part as best we can and encourage our husbands, and I am sure the husband that is a good husband will do his, and all will be well at the end.
 A Fireman's Wife.

ALBUQUERQUE, N. M., June 28, 1891.

Editor Woman's Department:

I have been a reader of your *Magazine* for nearly seven years but have never seen a word written about this city. My husband is a member of Lodge No. 12, Buffalo, N. Y., also a member of the Engineer's Brotherhood Division, No. 446. He is an engineer on the Atlantic & Pacific R. R. and his run is from here to Winslow, 286 miles west. Their average pay is \$160 a month.

The city is situated on the eastern bank of the Rio Grande river. Farther east is a level tract of land thirteen miles broad called the Mesa. Then the Rocky Mountains rise to an elevation of seven thousand feet. On the western bank of the river are three extinct volcanoes. The river is never clear, always muddy. The population, as taken last summer, was 10,000. There are eleven churches, two daily newspapers, four public schools, a Methodist College, a Congregational Academy, a Catholic Academy, and the Territorial University, water works, gas works, telephone system, electric light, both arc and incandescent, horse cars, two national banks, two private banks, a large number of wholesale houses. There are a good many Mexicans here. There is also a tribe of Indians thirteen miles south of here called the Pueblos.

Three other families and ourselves went on a camping out expedition. We went 76 miles on the cars, then 20 miles up the Pecos river in wagons. We took tents, bedding and provisions, stayed about ten days. One of the men caught a trout fifteen inches long and others nearly as long. We were at an altitude of nearly 8,000 feet. Twenty miles north of there is a mountain covered with snow the year round. As quick as the sun went down we had to build a big camp fire to keep warm. I guess this letter is a little too long now and as my little ones want dinner I will close.
 Mrs. G. W. P.

P. S.—After writing this I looked through some of the *Magazines* to see if you had asked to have any one write of the cities where they reside.

[Yes, we like to hear of our correspondents' homes, especially when they are in new parts of the country of which little is known.—Ed.]

ATLANTA, GA., July 2, 1891.

Editor Woman's Department:

I am going to say something that will make some of the good sisters hold up their hands in holy horror, viz: I went to church last Sunday, the first time since last August. No, it is not because I was sick, but simply because I live in a town where it is not proper or good style to carry babies, and I will not leave mine at home. Last Sunday I went to a "Hardshell meeting" and there were seven babies out at church. Now, here in town that would have been monstrous. It was in the country and when one would get to crying all you had to do was to take it out doors and let it get cool. I wonder how many readers of this have ever been to Hardshell or Primitive Baptist church. The Gospel is preached there free to all. They are the only preachers I know who preach simply from their love of God. They ask and receive no salary at all and often quit work and go several miles to preach. But they shine out in all their splendor on communion days, which

days are in May and August. Then they gather and carry dinner and have a good time. They have what no other church I know of has, and that is foot-washing. All hail to those noble men who preach simply from their love of the Saviour. But I did not intend to preach, for I am not like the majority of women of to-day. I do not believe in women preaching in public and voting and all such as that. If they will rule their household well they will not have to preach and vote. Women who have children and a house to look after do not have much time to spare.

Here is a receipt for a plain cake. Five eggs, two cups sugar, four cups flour, one cup butter (if strong butter is used, three fourths of a cup is enough,) two teaspoonfuls of baking powder, one and a half cups of sweet milk or water. Cream the butter and sugar together, add the yolks of the eggs well beaten, then the flour and powders, next the milk or water, and lastly the whites of the eggs beaten to a stiff froth. It makes an excellent cake.

For yeast to make light bread the following is a good receipt, but the yeast must be kept in a warm place and where the wind will not blow on it. Take as much warm water as you think you will want yeast, say one cupful, into this put two spoonfuls of meal, a little sugar and salt, sweet milk about half the amount of water, and thicken it to a good batter with flour. If water rises on it after it has set awhile, add a pinch of soda and stir it up well. It makes a good pone of excellent bread. With best wishes to all,
Mrs. A. A. Muner.

[We must always consider the rights of others. A mother would, perhaps, better be deprived of the sermon than that the minister and the whole congregation should be disturbed by a crying baby, but surely there could be no objection to leaving the baby in good hands for one hour each week. Cannot our correspondent give us some better reason for her objections to women preaching and voting than that they should look after their home and family? Some women have no home and family.—Ed.]

MARQUETTE, MICH., July 20, 1891.

Editor Woman's Department:

For some time past I have been interested in reading the *Magazine*, especially this department. It is an excellent idea to exchange thoughts on those subjects, so dear to every woman's heart. In this way we often come across some bright idea that we never thought of.

I agree with "H. C. P." in part, as to the moral education of children. I have read the article referred to and deem it excellent. But I am afraid H. C. P. has made a greater error in a far more important direction. It undoubtedly shows more presumption than broad enlightenment to put on human spectacles and criticise the sweetest words ever spoken—the gospel of Christ. The very fact of His coming on earth and suffering His ignominious death on the cross shows His infinite love, kindness and charity. "As the Father hath loved me, I also love you. Believe me and trust in my mercy." Can human reason ask greater proof of His wondrous love for man than this earnest plea?

Thomas a Kempis, whose great wisdom and judgment we must all acknowledge, says that our curiosity is often a hindrance to us in reading the scriptures, when we wish to inquire and discuss when we ought to pass on in simplicity. "If thou wilt derive profit, read with humility, simplicity and faith, praying to Him who dictated it to enable thee to understand, to relish and to practice it. For men pass away but the truth of the Lord abideth forever."

No, "H. C. P." I am afraid that one "Engineer's Wife" lacks what all the wealth of the Orient and the wisdom of the ancients could not bring her—the peace and love of Christ's holy gospel. To be able to kneel beneath the shadow of the cross, to listen to the comforting words of our blessed Saviour, be-

fore whom the bright winged angels veil their faces in speechless adoration.

I would like to give one instance of a lady holding a public office. In our city of 11,000 inhabitants, we have a woman at the head of our schools. We never had a more efficient superintendent, and I never met a more perfect lady than she. Now, will Sella please give her reason for thinking that a woman should not hold a public office? Please don't give a woman's reason, "Oh! because." Be more definite.

Now, dear Editor, if you will pardon me for taking up so much of your valuable space, I promise it will be my last offense.
Elsie.

[By all means come again, and observe the rule to send your own name.—Ed.]

GLADSTONE, MICH., July 4, 1891.

Editor Woman's Department:

I think I told you in one of the last winter *Magazines* that when the fireman married his little blue-eyed sweetheart I would write the editor of the fact. Well, here is the item:

MARRIED—This morning at nine o'clock, at the residence of the bride's parents, by the Rev. —, amid the well wishes and hearty congratulations of friendship. They took their departure on the 10 o'clock train to spend their honeymoon elsewhere.

O joyous, happy and content,
Should live the wedded pair,
And as life's varying scenes present,
Their joys and sorrows share.
Not all the joy that wealth imparts
Nor home, nor honor gains,
Equals the bliss of kindred hearts
Where love and friendship reigns.
A Fireman's Mother.

[The Woman's Department extends congratulations, but regrets that it does not know the names of the newly wedded pair or the parents.—Ed.]

WHEN WOMEN ARE DANGEROUS.

Balzac has said that a woman of 30 is at her most fascinating and dangerous age, and it is, indeed, true that all women famous for power over the hearts of men, from Cleopatra and Helen down, were nearer 40 than 20 when at the zenith of their power. Perhaps the secret lies in the simple fact that the woman of 20 must be pleased, while the woman of 40 tries to please; and the older woman's power consists not, as has been so often said, in understanding and making the most of her own charms, but in comprehending and with happy tact calling out and making the most of the good qualities of the man whose favor she seeks. A man admires a clever woman, but he enjoys himself better with a woman who makes him feel that he is clever. He likes being entertained for a little while by a well-informed woman, but he enjoys much better the happy tact which makes him believe that he is entertaining the well-informed woman and telling her a great many things that she never dreamed of. And the woman a man likes best is not always the one who is the most brilliant, but the one who has a happy knack of discovering the subject he talks best on, and is well enough informed to listen intelligently and draw him out with happy queries until he is astonished at his own brilliancy.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

FACTS ABOUT FEDERATION.

The *Locomotive Firemen's Magazine* has from the first, with such ability as it could command, championed federation.

The principle is axiomatic. The mere statement that in "unity there is strength," is one so self-evident, that argument would, were it possible, weaken the proposition.

In all of the labor organizations there is not a man so demented as to deny the central truth that in organization, united effort, there is conquering power.

Federation is simply carrying the power of organization to its uttermost limit. It is organization's *Ultima Thule*.

There is no longer debatable ground relating to the proposition.

The difficulties in the way are entirely separate and apart from the question of the power of federation.

In federation there must be co-ordination. The federated bodies must be co-equal.

If this supreme requisite is not recognized, then the federation becomes a farce, which, instead of conferring power, breeds confusion and calamities.

But to constitute federation a success instead of failure, to give it power instead of weakness, there must be an honest recognition, on the part of each constituent body, of the co-equality of every other constituent body, just as in Colonial federation, Rhode Island and Delaware were the co-equals of Virginia and Massachusetts.

Again, in federation there must be the recognition of mutual interests to be guarded, protected and promoted. If this is not done, then *ab initio*, federation is a failure, more, it is a calamity.

Moreover federation is Democratic, it is not autocratic, aristocratic, nor plutocratic. It recognizes absolute equality, based upon mutual interests, and not upon numerical nor financial strength; as for instance, in Colonial federation, a colony with 50,000 population was equal in the federation to a colony with 500,000 population.

It must be assumed, in federation, that

there is an equality of intelligence, integrity, and honor, self respect, loyalty to obligation, and of all things of good report among men. Manifestly, this must be taken for granted, since no power can determine anything to the contrary until the facts develop the lack of such essential virtues.

Coming to the federation of Railway employees, such an organization is a failure if one organization assumes that it is, from any cause whatever, superior to any other organization in the federated body. Such an assumption is necessarily fatal, since it totally ignores the prime essential of federation—the protection of mutual interests.

If, therefore, one organization assumes superiority because of its larger membership, or larger wages *per diem*, or of its greater importance to the railway service, it can never federate with other orders of railway employees which it regards as inferior; or if it were to consent to federation and should demand a controlling influence, proportionate to its assumed superiority, thus discarding co-equality and mutual interests to be protected, it would be a death blow to federation.

Federation, then, to be a success must recognize the co-equality of the federated bodies.

Federation to be a success must have a congress or a council with delegated powers by which and through which its power may be exerted, and this congress or council must be constituted by the representatives of the federated orders, and these representatives must be equal and clothed with power to enact rules for their government.

In the Supreme Council of the Federated Orders of Railway Employees the principles we have outlined were carried into effect.

Co-equality was established and maintained. No power was assumed not clearly delegated by the orders represented, and in the exercise of these powers great good resulted.

But, says some one, the SUPREME COUNCIL got into trouble and serious calamities have befallen it. That is true. But we assume that no eye but that of omnipotence could have foreseen the trouble, no hand but that of omnipotence could have guarded against the calamity.

To censure the SUPREME COUNCIL, to intimate that it could have known of the treason that invaded its ranks is to assume that fallible man can penetrate the future and foretell coming events; more, that one man may read the thoughts and know the purposes of another man. Had this Godlike power been conferred upon George Washington, Benedict Arnold had not committed treason.

Now then, with every fact before them, we challenge the most astute foe of federation to point out wherein federation, as es-

tablished under the SUPREME COUNCIL, has committed an error in the organization of that body of representatives indicative of a want of caution and an honest purpose to do right.

The trouble that has come upon the Supreme Council is as foreign to federation as was the treason of Arnold. It in no regard involves federation.

The Brotherhood of Railroad Trainmen stood as high for intelligence and integrity as any order of railway employés on the continent, and only God himself, who reads the thoughts of men, could have been aware that conspiracy lurked in the hearts and minds of any of its chosen representatives.

The poor drivelling comments made by feeble minded scribblers, relating to the SUPREME COUNCIL, are totally unworthy of consideration, and will so be regarded by men who have the capacity to comprehend honest endeavor, to map out a highway for the relief of men when wronged and oppressed.

THE UNION MAN, THE NON-UNION MAN AND THE SCAB.

This Magazine has not hesitated in the past to go upon record with regard to the three classes of workingmen named in the caption of this article—the union man, the non-union man, and the scab.

We do not hesitate to say that the union man is preëminently the superior type.

In discussing the superiority of the union workingman, it is not required that we should assert that he is necessarily the most skillful, that he is a man of superior integrity, more honorable and a' that, but his superiority is manifested in the fact that he has a profounder conception and a broader comprehension of the needs of workingmen and of the power of organization to secure and maintain their rights.

The union workingman is essentially a philanthropist. His work is not entirely selfish, it includes the welfare of others, not only immediately but remotely. He lays the foundation of structures designed to protect and shelter future generations. His high ambition is to educate men to a realization that all laws and institutions which in any wise detract from the rights and privileges of workingmen are to the last degree vicious, and should be discontinued. The union workingman is a student of conditions and of the causes which underlie conditions. He is forever asking the reason why of things as they exist. If there is peace and prosperity in the ranks of workingmen he discovers the reason why, and approves. If there is poverty, oppression, degradation, unrest, discontent and strikes, he would know the reason why; he would find the cause and remove it. He would agitate and protest. He would arouse public attention. He would

carry the case into courts, into legislatures, into Congress, and everywhere battle for the right. And here it should be said if in the world of labor there is to be seen any advance in the condition of the toiling masses, it is by virtue of the work of union men. The credit wholly belongs to them. They are the men who have battled and bled, they are the men who have gone down when the enemies of labor triumphed, they are the men who made the sacrifices and suffered, but when they triumphed, when they obtained an advance in wages, when they reduced the hours of toil, when they bettered their condition, and could live in better houses, have better clothes and more abundant food, they were not the only ones benefited. No; then the non-union men shared in the advantages, in the gain, in the profit, and all workingmen shared in the good secured.

The non-union men, the men who stood aloof from the organization, who were wanting in courage, who would make no sacrifice, never contributed anything to advance the welfare of workingmen. Nor will they ever have any part in the upward movement of the toiling masses or be in any way helpful to them.

They are not always content; they would have things improved, they would like to obtain better wages. They are not without ambition, but they are wanting in courage. They lack spine. They are willing to drift with the current. They are inert and irresolute, and without always designing it, they are on the side of those who oppress labor, rob it of its rights and disgrace workingmen.

If, in the ranks of organized labor, there are exhibitions of hostility to non-union men, the reason for such opposition and repugnance is easily explained, but its justification is not thereby established; in fact, it is quite clear that when this animosity is carried to the extent of denying employment to non-union men, it is clearly indefensible, and can never have the sympathy nor the approval of the public.

The absolute right of a workingman to join or not to join an organization cannot be questioned, and the proposition to impose any penalty whatever upon this exercise of prerogatives is so definitely at war with every rational conception of justice, that the mere mention of it carries with it its condemnation.

No citizen, inspired by any rational conception of justice, can be told that union men are denied employment because they are union men, without expressing indignation for the outrage, and only the avowed enemies of labor will be silent when such a wrong is perpetrated.

Men have an inalienable right to organize, to form unions and Brotherhoods, and to

impose any penalty whatever, directly or indirectly, because of the exercise of this right, is an exhibition of czarism that should find no advocates in the United States of America. But the wrong has been inflicted time and again, and is still the policy of many employers.

On the other hand, to decline to join a labor organization is a right as absolute as the right to join such an organization. About this there can be no question, hence it follows, to impose any penalty whatever, directly or indirectly, for the exercise of this right is a wrong in all regards as flagrant as in the first case cited. There is no escape from the conclusion. In both cases the principle is fundamental—disregard it and confusion follows.

How stands the case? In the first place employers refuse to hire men because they are members of labor organizations and in the second place labor organizations, animated by the same species of hostility seek to deprive non-union men of their right to work because they are non-union men—forgetting that their maledictions upon employers for refusing to employ them can be, with equal propriety, leveled at them for doing, to the extent of their ability, the same wrong.

In both cases there have been victories. Employers have ostracized union men and union men have been able, occasionally, to put non-union men under the ban, and in both cases there has been public disapproval, but the severity of this censure has been more pronounced against labor organizations than against employers, because working men profess to be deeply concerned for the welfare of labor—and when they seek to exile non-union men from work they are at once in flagrant antagonism to their professions.

In this connection, the term *scab* should be properly defined, and it should be clearly understood that non-union and scab are *not* synonymous terms—but when a union man refuses to work with a non-union man he practically makes them equivalent. The injustice is glaring and never has, and in the nature of things, never can be conducive to the interests of organized labor.

It will not do to reason that because scabs are non-union men that therefore all non-union men are scabs.

A scab is a degenerate workingman. He is devoid of principle. These are general propositions and will hold good.

Are there exceptions? It would be strange indeed if there were not, but our purpose at this writing is not to point them out, it being sufficient, if we succeed in awakening reflection and creating in any degree a more rational conclusion on the part of union men relating to the status of men who stand aloof from labor organizations.

Manifestly they ought to cast their lot with those who in storm and shine are battling for the welfare of laboring men. To win them by suasion, by ocular demonstrations, by appeals to their manhood is full of hope, but to inflict penalties for what may be considered obduracy is the climax of bad policy. It is to widen the breach and cultivate enmities. It plays directly into the hands of those whose ambition it is to prevent unification of working men and perpetuate oppression.

THE UNIVERSAL NUISANCE.

All organizations of workingmen are subjected to one misfortune; none are exempt. It comes sooner or later. It is not usually serious—simply annoying—a nuisance. It has been found utterly impossible to guard against it. It is found in the church, in all benevolent organizations, brotherhoods, clubs, guilds, unions, of whatever character. In all lands and climes human organizations are subjected to the same nuisance—annoyance, infelicity—and to make matters worse there has been discovered no way to get rid of the nuisance. It possesses inordinate "stickability," as Sam Jones would say. Does some one inquire what this universal misfortune is? We answer, the Kicker. There he is: look at him; measure him, weigh him, estimate him, put him through an examination, analyze him, and he will simply be a kicker, a misfortune, an annoyance and a nuisance. When others want to go ahead he pulls back; when others are full of confidence, he doubts. The *Stationary Engineer* takes up the question of the Kicker and discusses it so thoroughly and in such happy style that we cannot do better than make an extract for the benefit of our readers. "The Kickers," says our contemporary, "are prone to imagine that what is new to them is new to others, forgetting that studious or older men have perhaps heard of such things before. They, as a rule, are loud in their admiration of the 'practical' man, using that adjective with a meaning not recognized by the compilers of lexicons—in fact, they mean *working* man when they say *practical*. They are the men that invariably vote with the minority and think they are accomplishing wonders, and fancy they do it from a stern sense of duty; that they make a great mistake never occurs to them, they are so fully filled with egotism that it is impossible for them to know that the sensible pity them, while the judicious grieve. These men get into voluntary associations, and then exhibit their "kicking" propensity to the top of their bent. They always take the wrong side of any question that may come up, and if debates ensue, the less they know of the subject, the longer they will talk, until called to order, and when that is done, they cry

out "the gag law is in force." They are the men that, when they find that the sensible majority will not endorse measures that they present, at once talk of "cliques," "hired votes," and an intention to "withdraw," "surrender charter," and make various threats that have no weight, and attract but little notice. In fact, the Kicker is an unmitigated nuisance, and should be suppressed in some way, but how to do it is not clear to many. We have heard of a few cases where bodies of sensible men, tiring of the ignorance, conceit and intense cussedness of this class, have by the adoption of a resolution passed by a two-third vote, backed by a president who could do right without rule or precedent, and a stalwart sergeant-at-arms, made an assembly very happy and comfortable."

Such is the "Kicker," as understood by our contemporary. The picture is not overdrawn, the annoyance is not magnified, the characteristics of the "Kicker" are not exaggerated. The Kicker's mission is to pull down, not to build, to pull back, not to push forward. He impedes rather than expedites. His influence is always demoralizing. Nothing is more certain, than if he sees a good thing he will kick it or kick at it. He is a fault finder, not a path finder, an affliction well calculated to test the courage and patience of his associates. The *Stationary Engineer* suggests a remedy for this Kicker affliction, which it may be worth while to consider. It is the passage of resolutions as follows:

WHEREAS, J. T. Q. has been a member of this assembly for fourteen months, and has done nothing for its prosperity or the advancement of the cause it represents, but has on all occasions opposed the measures the majority decided were necessary, and would conduce to the good of the order, and although he has been regular in his attendance, and has paid all dues and assessments, yet we find that his presence at our meetings does not add to the strength or influence of this order, that on the contrary, he makes the majority uncomfortable, impedes business, prevents many of our best members from attending, who are tired of hearing his conceited, pointless talk, based entirely on ignorance and overweening vanity; and that the future good of this order cannot be expected if he remains in it, and demands his expulsion; therefore be it

Resolved, That J. T. Q. is hereby expelled from this assembly, and that his name be stricken from the rolls of our order, and that the sergeant-at-arms be directed to remove him at once from this room. That all other branches of this order be notified of this action.

It will be conceded that the remedy is heroic, robust, but it would remove the annoyance. But in these days of reformatory effort, it might be well for organizations to have a "kicker committee" whose duty it should be to labor with the "kicker" and seek his reformation before proceeding to the g. b.—which means the "grand bounce." In many instances, doubtless, the "kicks" could be removed and the "kicker" made a valuable member of the organization. Manifestly, mild remedies should be re-

sorted to first—gentle, persuasive arguments, if these prove fruitless, suspension for a time might be tried, and then if the kicker is still determined to kick, the grand bounce could be administered, and the kicker given the great outside world in which to kick until the time arrives to hand in his checks as the last kick is given. The subject is eminently worthy of consideration.

ROBBING WIDOWS AND ORPHANS.

The statutes grade crimes all the way up from a chicken thief to the indescribable demonized wretch who is guilty of matricide, and the statutes determine the penalty in each case when the culprit is found guilty.

But there are unwritten statutes—laws written in the consciences of men, unchangeable and irrevocable—and to each a penalty is attached—a penalty worse than imprisonment, worse than death. Such crimes grow in hideousness the more they are contemplated. They exhibit depravity from which there is no redemption, a hell born and a hell nursed wickedness, known only in hearts in which honor, truthfulness, virtue, decency are not tolerated and are forever exiled.

It will not be difficult for the average reader to catalogue such crimes, to recall such criminals. We have neither the inclination nor the space to print the list, but we want to say just here, that defaulting Collectors and Receivers in the lodges of the Brotherhood of Locomotive Firemen are the robbers of widows and orphans. They are the meanest of all robbers; sneak thieves of the lowest and most degraded type; miscreants without one redeeming trait, who deserve to be scourged through the world with whips of fire.

It is eminently worth while to paint a picture of such a defaulting scoundrel—such a vile villain. The task is difficult; language is inadequate; colors are wanting; we are half disposed to abandon the undertaking. But however unpleasant the job, we feel it to be a part of our duty as editor of the *Firemen's Magazine*. We should like to know if there is pigeon-holed in the archives of hell a more detestable crime than robbing widows and orphans.

We do not know, because we have failed in our reading to see it recorded in the history of reptile or beast, where anything from a garter snake to an anaconda, from a tom cat to a tiger, lived by stealing from the weak and unprotected. There are man-eating tigers and man-eating lions; there are sheep stealing dogs and lamb devouring wolves; spiders that sing invitingly to flies to come into their parlors, but all these reptiles and beasts are gentlemen compared with the man who would steal from widows and orphans. And that is just what de-

faulting Collectors and Receivers do who collect money of Brotherhood Firemen and refuse to account for it.

Of all the trusts committed to our Brotherhood, not one is as sacred as the obligation it is under to widows and orphans. It is impossible to overestimate the binding obligations which rest upon the order, and upon each individual member of the order. It is the divinity of our principles—a trust of which it may be said, heaven and earth combine to give it dignity.

In the machinery of the Brotherhood members must be intrusted with the duty of collecting, receiving and accounting for the money required to meet the great obligation the order is under to its widows and orphans, and if these turn traitor to the trust, then the glory of the Brotherhood departs—its sun goes down in a cloud.

The question arises, can this robbery be stopped? We think it can. The law of the order provides reasonable security against robbery.

The laws provide that Receivers shall make a report at the first meeting in each month, and that Collectors shall make their reports at the first regular meeting in August, November, February and May. These reports are to be examined and approved by the Board of Trustees. It is, in a large measure, owing to a neglect of these requirements that irregularities occur. If the officers of lodges fail to do their duty demoralization must be expected, but such neglect of duty in no wise mitigates the crime of defalcation on the part of Collectors and Receivers.

The funds in their custody should be sacred, and though officers may neglect their duty, and though the laws of the order may not be faithfully observed, still, such things in no sense condone the crime of theft, nor relieve the scamp who appropriates the money from the damning weight of guilt which his crime richly merits.

It is of the greatest possible importance that this thing of defalcation on the part of Collectors and Receivers should cease, and the members of the lodges should demand that the laws in such cases are faithfully executed. As for the thieves, let their names be published and wherever the miscreants go, let them be made to realize that they are vagabonds, outlaws, unworthy to associate with honest men.

JOHN A. HILL, Editor of the *Locomotive Engineer*, in enclosing \$1.00 for the Robinson Monument Fund says: "Every engineer in America has been benefited by the sacrifices of Wm. D. Robinson and should consider it a privilege to contribute a mite to this fund. We are not ungrateful—we are thoughtless."

KEEP IN GOOD STANDING.

Locomotive firemen, members of the Brotherhood, know exactly what it is to "keep in good standing." The term is wonderfully suggestive. When it is said of a member of a lodge, "he is in good standing," it is an indorsement of the highest value. We would like to have each member of our Brotherhood give the subject a half hour's consideration. "Good standing." "Keep in good standing." What is good standing? In our grammars we have positive "good," comparative "better," and superlative "best." Good standing is first to see that one is square on the books of the lodge. If he is not he knows the consequences. If his dues and assessments remain unpaid, if this essential to "good standing" is disregarded, there may come a time when it will result in a calamity to those who are to the firemen as dear as life—wife, children, mother. When a fireman mounts to his position in the cab, and the train begins to move, does he know that he will come back to his loved ones alive? He does not. Is he not therefore profoundly interested in the matter of "good standing" in his lodge? If he falls at his post, goes down in the wreck, what becomes of those dependent upon him? If the dead fireman was in "good standing," if his dues and assessments had been paid according to the laws of the order, if he had been watchful and mindful, and had been careful to meet the obligations of his membership, in due time \$1,500 would find its way to his desolate home and the widow and the orphan would realize that the husband and father had thought of them and provided for them. And on the other hand, if the fireman had neglected to meet his obligations, and was found not in "good standing," then the widow and the orphan in sorrow and in tears would bewail their fate. But it so happens frequently that the friends and neighbors are ignorant of the standing of the fireman whose death all deplore, and as the \$1,500 is not forthcoming, they charge the non-payment upon the Brotherhood, greatly to the injury of the order, since to vindicate the Brotherhood would be to advertise the fact that the dead brother had neglected his duty, thereby increasing the poignancy of the grief of the relatives. Taking this view of the case, and we submit that it is eminently a rational reflection, the duty of firemen to "keep in good standing" is placed beyond the limit of prudent debate. We invite our readers to give the subject their careful consideration. Indeed, it is a subject that may be prudently discussed at the fireman's home, and the wife and the prattling children may ask husband and father if they are in good standing.

Admitting, for the argument, that "good standing" means simply being right on the

books of the lodge, there is still a "better" standing. The member who pays dues and assessments and always attends the meetings of his lodge when he can do so, is a better member than he who simply pays dues and assessments and neglects the meetings of his lodge. Again, the member of the lodge who is always square on the books, who attends the lodge meetings on all occasions when it is possible, who takes a deep interest in all things pertaining to the welfare of the Brotherhood, who works for it, talks for it, and is willing to make some sacrifices to promote its growth and influence is the "best" fireman. He works, he does not kick nor croak. He inspires confidence. He is never despondent. He throws doubt aside. He advances. Such are the "best" firemen. Such is the universal verdict. It is not a difficult matter to keep in good standing. And no fireman should mount his cab without knowing that he is in good standing. There is too much at stake to tolerate neglect or forgetfulness. Let the watchword be "I am in good standing," and let all bear in mind that the ascending grade is positive "good," comparative "better," and superlative "best."

ONE OF THE SIGNS OF THE TIMES.

Possibly there are those who would decide that a student of the "signs of the times" is a crank—a strange sort of a being, innocent and harmless, afflicted with mental infirmities, whose vagaries afford the stronger minded amusement. If the self-sufficient critic does not take that *chute* he will doubtless assume a dictatorial role and pronounce the student of signs as a dangerous lunatic who ought in some way to be silenced or locked up.

Some years ago a favorite method of silencing students of the signs of the times, who dared to tell what they had discovered, was to torture them—make them deny their honest convictions, or if they were stubborn kill them. In such cases there were always conflicting signs of the times; a sign that thought was awakening, and that ignorance, superstition and bigotry were in alliance and on the alert to place obstacles in the pathway of Truth and maintain the bondage of Error. History is prolific of illustrations. The dead past is alive with them, and the present, so full of life and energy, is nursing and warming into maturity reptilian vices to make the future as repulsive as the past.

Nevertheless, there are signs of the times which inspire hope. The signs of the times relating to physical or material advancement were never so numerous or so encouraging as in the living present. In all of the continents and islands of the earth the battle cry is "Onward!" There

is no longer a *terra incognita*. The "dark continent" has been explored. We know the source of the Nile and of the Congo. Steadily, ceaselessly, the armies of civilization with bibles and bullets are offering savage tribes the alternative of submission or extermination. The forests and the jungles are disappearing. The hosts of civilization, with guns and banners, are marching to kill and to make alive. Everywhere there is a highland of vision, upon which, even with the naked eye, there can be seen the majestic strides of the conquering hosts. In the mountains and in the sands, where the Infinite Creator stored the precious metals and the precious stones, excavations are going forward and wealth is piled up until arithmetical numbers tire in the task of expressing sum totals. The march of physical empire is sublime, such as prophet nor seer never told. They did not see the signs of coming events. Visions of the present and of the far more interesting future were hidden from them. We of to-day see more in an hour than Methuselah saw or dreamed of in all of his nine hundred and sixty and nine years. We see signs of the times in the midst of all our prosperity and progress, which in numerous instances are productive of alarm, but there is one sign of the times resplendent with hope. Like the Star of Bethlehem, it points to where redemption lies, lowly born, perhaps, but even in its infancy and obscurity giving promise of redeeming power. It is found in the wide open discussion of truths—a discussion that will not down at the bidding of any earthly power. Free thought is to be neither dammed nor damned from this time forward while the stars shine. It is to wage eternal battle against error in all its forms. It is to assert itself in government, in religion, in education, in finance, in industries, and in commerce—in all things relating to man's welfare. It is to attack with iconoclastic fury antiquated dogmas, old, rusty, worm-eaten creeds, every form of bigotry and superstition, and the "gates of hell" are not to arrest its onward march.

In this connection we introduce what Prof. Joseph Rhodes Buchanan says of a "giant evil," in the June *Arena*:

There is a crime which has run in wild unbridled career around the globe, from the most ancient recorded time, beginning in barbaric tyranny and robbery of the toiler, advancing with the power and wealth of nations, and flourishing unchecked in modern civilization, sapping the strength of nations, paralyzing the conscience of humanity, impoverishing the spirit and power of benevolence, stimulating with alcoholic energy the mad rush for wealth and power, and making abortive the greater part of what saints, heroes and martyrs might achieve for human redemption. But alas, such has been its insinuating and blinding power that it has never been opposed by legislation, and never arrested by the Church, which assumes to obey the sinless martyr of Jerusalem, and to war against all sin, yet has never made war upon this giant sin, but has fondled

and caressed it so kindly that the pious and conscientious, believing it no sin or crime, have lost all conception of its enormity, and may never realize it until an enlightened people shall pour their hot indignation upon the crime and the unconscionable criminals.

This crime which the world's dazzled intellect and torpid conscience has so long tolerated without resistance, and which antiquity admired in its despotic rulers, splendid in proportion to the people's misery, is that misleading form of intense and heartless selfishness which grasps the elements of life and happiness, the wealth of a nation, to squander and destroy it in that ostentation which has no other purpose than to uplift the man of wealth and humiliate his humbler brother. That purpose is a crime: a crime incompatible with genuine Christianity; a crime which was once checked by the religious fervor of Wesley, but checked only for a time. Its criminality is not so much in the heartless motive as in its wanton destruction of happiness and life to achieve a selfish purpose.

That squandering wealth in ostentation and luxury is a crime becomes very apparent by a close examination of the act. There would be no harm in building a \$700,000 stable for his horses, like a Syracuse millionaire, or in placing a \$50,000 service on the dinner table, like a New York Astor, if money were as free as air and water; but every dollar represents an average day's labor, for there are more toilers who receive less than a dollar than there are who receive more. Hence the \$700,000 stable represents the labor of a thousand men for two years and four months. It also represents seven hundred lives; for a thousand dollars would meet the cost of the first ten years of a child, and the second ten years would be fully repaid by his labor. The fancy stable, therefore, represents the physical basis of seven hundred lives, and affirms that the owner values it more highly, or is willing that seven hundred should die, than his vanity may be gratified.

This is not an imaginative estimate. A thousand dollars would save not one but many lives in the Irish famine. It would save more than a score of lives in New York, if diligently used among those who are approaching the Potter's Field, which annually receives eight thousand of the dead of New York. It would establish, if invested at seven per cent., an institution that would permanently sustain educating to a virtuous manhood, two hundred of the waifs gathered in from the pollution of the streets, sending forth fifty redeemed ones every year. When \$700,000 is squandered, such is the amount of human life destroyed, by destroying that for want of which the benevolent are unable to stay the march of disease, of crime, and of death.

The thought of snatching food from the starving, or turning out half-clad men and women to perish in the wintry snow, excites our horror, but which is the greatest criminal, he who for avarice destroys one family, or he who in riotous ostentation destroys the means that would save a hundred lives? Does the fact that they are not in his presence, or may be a mile or two away, change the nature or results of his act? And does his accidental possession of the basis of life authorize him to destroy it?

It will not be denied that the national conscience is torpid. The purpose is to arouse it, vitalize it, open its eyes and intensify its sensitiveness, and bring about a revolution by the power of reason, of argument and of truth.

A revolution is inevitable. It requires no soothsayer, nor yet a Daniel, to interpret the signs of the times, and the prudent and the hopeful cling with unrelaxing tenacity to the one sign of the times, the attacks which Truth is now making upon the strongholds of Error for redemption, without which pent up wrath will eventually burst through all barriers and overwhelm the nation in disasters which no man can contemplate without a shudder.

THE B. OF L. E. "JOURNAL" AND DeLAW-CRIMISM.

The accredited editors of the B. of L. E. *Journal* are P. M. Arthur and H. C. Hays. These editors have sought to impress the readers of the *Journal* that they are a pair of sublimated mortals, totally incapable of saying aught that could be construed as offensive to "sister organizations," or any of the members of such organizations.

In the editorial department of the *Journal*, when any reference at all was made to questions relating to "sister associations," the editors were certain to plume themselves that they indulged in no personalities—that they believed in "brotherly love," "loving thy neighbor as thyself," "fraternal feelings," etc., to the end of the chapter of hypocrisy.

The fact is established beyond controversy, it is known to all the brotherhoods of railway employes, that under P. M. Arthur's editorial control the *Journal* never had a generous word to say of any "sister association." It maintained an attitude of "impassiveness." One of the great propositions announced by the chief editor in referring to other organizations was that "they should mind their own business," that "he wanted no entangling alliances with them." At one time he declared that "the B. of L. E. was capable of taking care of itself; that it never had, and while he was Grand Chief, never would cooperate with any other labor organization," etc., etc., through all the utterances indicative of a cold and selfish policy, so pronounced and unjustifiable that it became the common talk of the members of the B. of L. E., and was scathingly denounced by D. J. Brown, a prominent member of that order, in a masterly address at San Francisco, an address so much in the nature of an exhortation, that the *Journal* sought, editorially, to parry the blows of Mr. Brown, and in doing so only made its editor the more ridiculous.

The editors of the *Journal*, by their sanctimonious utterances, have sought to make it appear that they are too sublimated to use abusive epithets towards others, especially towards the editors of other labor publications, declaring that such expressions were productive of "hard feelings" and engendered strife, and upon such topics they have rung all the changes possible, and have succeeded, doubtless, to some extent in palming off such stuff as genuine conviction, their manifest purpose being to array their readers against the editor of the *Firemen's Magazine*.

There is an aphorism that "a lie answers the purpose of truth until it is crushed," or words to that effect.

Now, we propose once more to gibbet the editors of the B. of L. E. *Journal* before the world. We will again strip the masks from

behind which they have played their game of vulgar hypocrisy.

For at least five long years the editor of this *Magazine*, at all times and in the ways most conspicuous and honorable, sought to advance the interests of the B. of L. E. by championing its acts, glorifying its record and publishing the addresses of its Grand Chief. Kind and generous words were lavishly spoken and every conceivable expedient was employed to create and maintain pleasant and harmonious relations between the B. of L. E. and the B. of L. F. That is the record of the *Firemen's Magazine*, in proof of which its pages will speak for themselves.

During all these years, the *Engineers' Journal* was as silent as a paving stone. Not one word glowed upon its pages indicative of a purpose to recognize the B. of L. F. The young Order was studiously, persistently and everlastingly ignored. But notwithstanding the cold, callous policy of the *Engineers' Journal*, the B. of L. F. grew, expanded to such proportions as to create alarm in the mind of the Grand Chief of the B. of L. E., and then began another policy so fruitful of love for "sister associations," the enactment of laws calculated to embarrass and degrade the firemen's brotherhood. More than any other man, more than all other men, the editor of the *Engineers' Journal* was responsible for every offensive, obnoxious and degrading law enacted by the B. of L. E. against the B. of L. F.

At New Orleans, when the writer hereof was the accredited representative of the B. of L. F., and the bearer of fraternal greetings, Grand Chief Arthur's declarations were such as to make the lasting impression that coöperation, fraternal relations and any recognition of equality was totally out of the question, and then steadily the laws of the B. of L. E. became more obnoxious and exclusive.

To change the attitude of the B. of L. E. toward the B. of L. F. to effect the repeal of certain laws that were a menace to fraternal relations, became the duty of the editor of the *Firemen's Magazine*, and it is enough to say that he gave himself to the task and that his labors in that direction were attended with satisfactory results.

From first to last the editor of this *Magazine* never uttered one word derogatory of the Brotherhood of Locomotive Engineers, and whoever asserts to the contrary is ignorant of the facts or is guilty of flagrant and malicious falsehood. All that was ever said related to laws and policies which were designed to humiliate the B. of L. F., and here it should be said, that as soon as the great body of the B. of L. E. comprehended the wrong done the B. of L. F., the obnoxious laws were changed.

We now take up the evidence of the duplicity of the editorial management of the B. of L. E. *Journal*. They, as we have shown, have deplored personalities, epithets, etc., because such things were calculated to create "hard feelings" and estrange brotherhoods. If they were sincere in such professions, would they not restrain their correspondents in indulging in what they denounce as unbecoming? Why should these pharisaical editors hold up their white hands, call attention to the "impassive" dignity of their policy, profess to keep their pages clean and permit their correspondents to beset with their vulgar epithets and innuendoes other portions of the *Journal*? This they have done repeatedly and their August issue overflows with such filth.

But the question arises just here, is the billingsgate credited to correspondents that of correspondents? On the contrary, is it not the utterances of the editors of the *Journal* themselves, and are not fictitious names, dates and places given to cover up the low, base-born duplicity of the editors of the *Journal*?

Who, for instance, is John R. DeLancie? Is he not H. C. Hays, one of the editors of the *Journal*? Is not the name of DeLancie used as a covert behind which the editor lies in ambush and lets fly his malignity at the editor of the *Firemen's Magazine*? Is there anything in the whole realm of journalism as degenerate and contemptible as this sort of business? Does not a paper that will resort to such disreputable methods forfeit all claim to confidence or respect and deserve to be scorned of honest men? Is this knavery in journalism not practiced by the editors of the *Journal* that they may claim exemption from the charge of blackguardism while squirting their filth over the names of men who have no existence?

When the editors of the *Engineers' Journal* point to their editorial department as exempt from billingsgate, we invite the reader to turn to such cesspools of filth as appear over the signatures of DeLancie and others, and to remember that they are the productions of these self-same dignified and "impassive" editors.

In this we have the exact character of the editors of the B. of L. E. *Journal*, and a standard by which to measure and weigh them.

We quote from DeLancie, *alias* Hays, as follows: "Personally, I believe that Mr. Arthur has never committed an ungentlemanly act against Mr. Debs." Is it a gentlemanly act to make a personal attack on a man who is a thousand miles away and has no chance to defend himself? That is exactly what Mr. Arthur did to Mr. Debs. At the Denver convention of the B. of L. E., over which he presided, Mr. Arthur took occasion to eulogize the grand officers of the

B. of L. F., excepting Mr. Debs alone, whom he singled out and viciously assailed, the purpose being to have it appear that the latter had done him and the B. of L. E. incalculable injury. Of course Mr. Arthur was applauded in the household of his friends and Mr. Debs was set down as lacking in every essential of manhood and honor. From the DeLancie standpoint this was doubtless a very gentlemanly act, but from any manly point of view it was an act of cowardly detraction which it would be difficult to properly characterize.

As was to have been expected, Mr. Debs, when he heard of the outrage, called Mr. Arthur to an account, inviting him to repeat the accusations at some place where he might have an opportunity of defending himself. This Mr. Arthur never did and never will do. And then began the talk about Mr. Debs creating "hard feelings" between the B. of L. E. and B. of L. F., and this puerile gabble has been kept up, to obscure the real issues, ever since.

Just here the editor of this *Magazine* desires to put upon record the fact that he has never assailed the B. of L. E. *Journal* nor its editors without overwhelming provocation, nor has he ever made a charge or allegation against either that was not absolutely true. In this we challenge contradiction.

What we have had to say we have said openly and frankly where everyone could hear it. Nor did we seek to evade the responsibility of our utterances by playing DeLancie. It may also be worthy of remark in this connection that we have never found it necessary to slander and vilify the editors of the B. of L. E. *Journal* in our private correspondence with members of the order. Do the editors of the "impassive" organ see the point? Using a stiletto at long range and in the dark, while preaching "love thy neighbor as thyself," is not our way of creating "good feelings" between the two brotherhoods.

The editor of this *Magazine* avers that the entire responsibility for the "hard feelings" which have existed rests with the B. of L. E. *Journal* and its editors, and he is prepared to prove it beyond all question. We challenge the *Journal* to point out one statement we have ever published with reference to the B. of L. E., the *Journal* or its editors, that is not an absolute verity. Will the *Journal* do it? If this is not agreeable we are willing to meet the whole editorial staff of the *Journal* before any audience of Brotherhood Engineers and Firemen anywhere in the country and give them an opportunity of proving what they have so often asserted, that the editor of the *Firemen's Magazine* has made untruthful and unwarranted statements in reference to the B. of L. E. and its grand officers, thereby estranging the two

brotherhoods of locomotive men. We will speak by the record, we will produce incontrovertible proof of every proposition made, and if we fail to make a clear case and secure an overwhelming verdict in our favor before any body of engineers and firemen in the country, we will publish an unequivocal apology to the editors of the *Engineers' Journal* and retire forever from participation in labor organizations.

We will now briefly discuss another phase of DeLancieism. Why should he prate about "paid editorials?" Do the editors of the *Journal* seriously desire that proposition discussed? Would it not be more becoming men who can't write half-way decent English to remain silent on questions relating to literary capability? Have any "paid editorials" ever appeared in the *Engineers' Journal*, or, rather, has an editorial ever appeared in its columns written by either of its editors? Would the editors like to have some of their "paid" editorials pointed out? Is not such journalism the height of vulgar impertinence? Is this a specimen of the "impassive" policy of the *Journal*?

Literary infirmity is always to be pitied, but when stupid and malicious scribblers, whose orthography is a series of bad spells, and whose punctuation is of the house-fly order when decorating ceilings, vault into the arena and assail those who are incomparably their superiors, they deserve the casting they are sure to receive.

Before closing we desire to introduce a sample statement from another correspondent(?) in the *Engineers' Journal* for August. The writer says (page 728) that it has been stated "that the *Firemen's Magazine* during the past year has lost 2,000 subscribers and \$2,000.00 in cash."

The present circulation of the *Magazine* is 33,000 copies per month—4,000 copies more than last year at this time, and larger than ever before in the history of the order. The report of the Board of Grand Trustees, just issued, shows that instead of a loss of two thousand (\$2,000) dollars there has been for the year a net profit on the *Magazine* of nine thousand and fifty-four (\$9,054.71) dollars and seventy-one cents.

Further on the same writer says:

Notwithstanding this bad showing the directory at San Francisco increased his (Debs') already princely salary instead of meeting this deficiency, as they should have done. To my mind it would have been more in keeping with the condition of affairs if the representatives had decreased his salary instead of increasing it.

First, it should be remembered that the committee on salaries reported an increase of salary for Mr. Debs, against Mr. Debs' objection. For proof of this, the chairman of the committee, now Secretary of the Board of Grand Trustees, may be consulted.

Second, the records of the Grand Lodge

show as follows: Mr. Debs received as salary for the first year he served the brotherhood \$1,000.00, and during the same year he expended \$1,100.00 for clerk hire; for the second year he received \$1,500.00, of which he expended \$1,300.00 for clerk hire, so that for his first two years' salary, the most trying and exacting years in all his service, he received *net* \$200.00, or \$100.00 per year. His average salary for serving in the capacity of Grand Secretary and Treasurer and Editor and Manager of the *Magazine* for ten years, up to the San Francisco convention, was \$1,960.00 per year, and during this time he was under a bond for \$75,000.00, good at its face value anywhere, to guard the order against any possible loss, nor has the order ever sustained the loss of *one cent* during his entire administration.

Now compare this *princely salary* with the salary, responsibility and bond of any grand officer of the B. of L. E., and let us have the result for the edification of our delegates, who are so densely ignorant as to their affairs and so feeble-minded that a member of another order is required to lecture them upon their extravagance and rebuke them for their folly and stupidity.

We introduce these statements as a fair sample of the balderdash and mean mendacity that is emptied into the pages of the *Engineers' Journal*, an organ of professed "purity" and "dignity," that never, no never, permits its columns to be defiled with anything offensive to a "sister organization."

Several pages of this sort of rot appears in the *Engineers' Journal*, and this is supposed to be a reply to an article which appeared in the June issue of the *Magazine*, in which we stripped the drapery from the chief editor of the B. of L. E. *Journal* and presented him to the world in his true light. Should anyone care to read it, it will be found on page 539, captioned "Facts vs. Opinions." It is history, correctly written, and not an allegation therein contained can be successfully controverted.

The article, doubtless, blistered like fire, stung like a cat-o'-nine tails. It afforded us personally no pleasure to write it. It was simply a duty we owed to the Brotherhood of Locomotive Firemen, and when a duty of that kind is to be performed, we hew to the line.

It is well understood that the B. of L. E. and the B. of L. E. *Journal* are not one and the same. The B. of L. E. has in it thousands of honorable men, men of fraternal feelings, men of brains, who are in sympathy with all labor organizations, among whom the editor of the *Magazine* is proud to know he has hosts of friends, men who are satisfied that the *Journal* ought to be in the hands of men too honorable to stoop to DeLanceism to shield themselves from merited scorn and contempt.

B. OF T. CONVENTION.

The annual convention of the Brotherhood of Telegraphers is to be held at St. Louis, beginning September 14th and a large attendance is expected. As matters of vital importance are to be considered, the friends of the order are looking forward to the approaching convention as one upon which will largely depend the future prosperity of the brotherhood. The B. of T., notwithstanding it is one of the youngest organizations in the field of organized labor, has accomplished enough to warrant the prediction that it will develop in numbers and expand in influence until it will take rank with the most advanced labor organizations of the times.

One of the propositions to be considered is consolidation with the Order of Railway Telegraphers. It appears that the members of both organizations favor consolidation, but they have not been able to agree thus far, as to the terms upon which this is to be effected. The *Magazine* hopes that this subject will receive the careful consideration its importance merits and that by mutual concessions and arbitration means may be devised to unify the two orders. This accomplished, friction will disappear and the work of organization will go forward until the telegraphers of the country united and invincible will be able to secure fair pay and fair play which has so long been denied them.

SIXTH ANNUAL CONVENTION OF THE S. M. A. A.

Active preparations are being made by the Switchmen's Mutual Aid Association for the holding of their sixth annual convention, which is to meet at Philadelphia on Monday, September 21st. The order now has 160 lodges and of these it is expected that not less than 145 will be represented. A special committee is now at work revising the constitution. Some radical changes are to be made, the old constitution having been outgrown, being no longer adequate to requirements. The proposition to hold biennial instead of annual sessions is also to be considered. Many other matters of vital interest to the organization are to be brought forward and the delegates will doubtless be taxed to the full capacity of their resources to perform the arduous and onerous duties that will devolve upon them.

The S. M. A. A. has done a noble work in the past and we hope that the deliberations of the coming convention may be such as to vouchsafe to the organization still further victories and a larger field of usefulness in the future.

It is stated that the number of passengers carried daily by all the railroads in the world average 6,500,000. For 365 days the total would be 2,372,500,000—and as yet railroading is in its infancy.

THOUGHT TO BE DEPLORABLE.

The Chicago *Times* published some time ago an article deploring the universal lack of knowledge concerning American history. It says:

Of 12,000,000 American electors how many have read the constitution of the United States? Of 4,000,000 residents of Illinois how many are familiar with the provisions of the fundamental law of the state? Of more than 1,000,000 Chicagoans how many are acquainted in a general way even with the act under which the city is incorporated? There are 63,000,000 inhabitants of America, some of whom make loud professions of patriotism and perform a ghost dance when they give the star-spangled banner to the breeze. Of these how many are sufficiently acquainted with the history of the republic to name off hand the president in a particular year? What fewer number would be able to lucidly explain the salient differences presented in successive presidential campaigns or give the names of defeated candidates in chronological order?

An outline of American history is a text book for common-school scholars, but the hard conditions of life make it necessary for many, indeed most, boys to quit school and commence the struggle for bread before the text-book would be reached in the ordinary course. Whether or not they read soberly thereafter depends upon their own desire for the possession of solid information. Lack of knowledge of the history of the republic is by no means confined to Americans who have been denied opportunities of study. The failure is common. Twenty-five reporters were sent out in a single day in New York city to ask representative business men these simple questions: Who was president of the United States in 1840? in 1849? in 1850? in 1852? in 1860? in 1865? in 1870? in 1875? in 1885? in 1889? The result was amazing. Very few correct replies were given. Some persons regarding the questions as impertinent concealed their information or their ignorance by refusal to answer. Among those who replied incorrectly were C. M. Depew, Mayor Chapin of Brooklyn, and Russell Sage. These men may have poor memory for dates and yet be possessed of the substantialities of history. The test may not be regarded as altogether fair, yet it showed in the wildness of some answers marvelous ignorance of a simple chronological succession easily fixed in the mind. Start with Jefferson at the beginning of the century, bear in mind the two term presidents, the death in office of Harrison, Taylor, Lincoln, and Garfield, and the rest is easy to any one who can recall the order of the presidents.

The point relating to the organic law of the Nation, of States and Cities is well made. Citizens should be familiar with the text of such documents. Practically it wouldn't amount to much if they were committed to memory, since it requires the ceaseless study of lawyers to decide what they mean.

So far, in the history of the country, law-makers have utterly failed to make themselves understood. No sooner is a law of any importance enacted, than the question is sprung, is the law constitutional? And when the test is applied by the Supreme Court, nothing is more common than decisions that the laws are unconstitutional.

Strange as it may appear, it is not more strange than true, that unconstitutional laws which are null and void from the beginning, are permitted to remain on the statute books as constitutional, until some one decides to test their constitutionality. If declared unconstitutional, the particular case upon which the test was

made is thrown out of Court, but in all other cases the verdict is permitted to stand, though the law was unconstitutional, and *ab initio* void.

With such environments and entanglements, the man who has read constitutions and charters and is so familiar with them that he can repeat their provisions is very little better off for his knowledge, than the man who never read such mysterious documents at all.

Books which propose "to make every man his own lawyer," every man "his own doctor" and "preacher," do well enough until one or the other of the professional gentleman is wanted, when the man who thought himself equal to the occasion, is likely to admit that "a little learning is a dangerous thing."

The *Times* is of the opinion that Americans should know the names of the Presidents of the Republic, from Washington to the present time, several of whom have been great men, particularly the first four—George Washington, John Adams, Thomas Jefferson and James Madison—and it would be well for every American youth to know just why they were great men and worthy of remembrance.

It is well enough to know that James Monroe and John Quincy Adams were Presidents. James Monroe was a revolutionary soldier, and possibly had some claim upon the American people on that account, but John Quincy Adams, while a man of distinguished ability, found his chief claim to the presidential office centering in the fact that he was the son of his daddy, John Adams.

All Americans know that Andrew Jackson was President of the United States, and one of the most conspicuous figures in American history. His fame was world wide before he became President. A patriotic and successful General, his country owed him a debt of gratitude which it sought to pay by making him President. In this his countrymen made no mistake. His courage and his patriotism saved the Union in its first great peril, and he was the first Chief Magistrate to comprehend the danger to American institutions, by protecting a nest where plutocrats were hatched.

Who knows or cares much about Martin Van Buren, or for his immediate successors.

Wm. Henry Harrison had some reputation as an Indian fighter, and was borne into office on a tidal wave of song and parade, and John Tyler, who was Vice President, and therefore an accident, went into the office of President and out of it the same representative of moderate abilities.

Zachary Taylor, was another President, made so solely upon his success in a single battle, to die in office, and to be almost totally forgotten in less than fifty years, ex-

cept as old Rough and Ready, the hero of Buena Vista.

Millard Fillmore, made President by the death of Taylor, secured immortality as cheaply as it was ever bestowed upon mortal man, and then lent his influence, such as it was, to help the Know Nothing bigots.

Nothing could be more interesting than to assign some rational reason why Franklin Pierce and James Buchanan were made Presidents, or to point out some act that lifted them one inch above thousands, who, whether right or wrong, were esteemed statesmen.

No one has been able to tell why Abraham Lincoln was elected by the American people for President. Many reasons have been assigned, but they fall short of a satisfactory explanation, and now, in the estimation of cool headed men he was the *only* man in the nation that could have steered the ship of State in the stormy seas she was required to sail. His successor, Andrew Johnson, another accident President went out of office a smaller man than when he entered it.

Everybody knows that Ulysses S. Grant was President, and they know the reason why—and they know that the great officer in no sense added to his fame, which, like Washington's, had filled the world before he became President.

Only in a general way is it known why Rutherford B. Hayes was made President, and though still living, is almost forgotten.

The elevation of James A. Garfield to the Presidency places his name in the roll of the immortals, and his tragic death gave him monumental fame, but his successor, Chester A. Arthur, another beneficiary of fate, like John Tyler, Millard Fillmore and Andrew Johnson, is remembered because recorded, but awakens no interest.

Grover Cleveland survives, and being still regarded as Presidential timber, is kept in view by the press—and certainly all men know that Benjamin Harrison is now Chief Magistrate.

What of all this record? Not much, aside from the fact that Chauncey M. Depew is put down by the *Times* as one of the men deficient in historical knowledge of his country. The press reporters ought to have sounded him on labor questions, such as strikes, Knights of Labor and Pinkerton thugs, "tunnel" disasters, and Judge Van Boodle, who thought Chauncey, though a director of the N. Y., N. H. & H., didn't know enough about the business to be responsible.

Talking about what a man should know, it may be said that first of all, he should know his business thoroughly. A certain amount of information and knowledge can be obtained by looking on, by close observation. Still more by asking questions, the reason why? and then by doing the thing.

In this way a man may learn to fire and run an engine.

If with this he is content in these times, he will *never get on top*, or, if he does, he will find himself, after a while, pushed off—crowded out, forced down. In a word, a man must study—become thoroughly posted in all matters concerning his trade or calling.

It is eminently proper to be familiar with American history from the landing of Columbus to date, and the task is neither difficult nor expensive. It is well enough to know as much as possible about constitutions and Presidents, parties and politics, to be familiar with governmental affairs; but, above all, a locomotive fireman should study engines and everything pertaining to their management. In doing this he will acquire a taste for study, and if ambitious, he will find still higher places than the throttle for the display of his abilities.

THE OUTLOOK FOR LABOR.

Is it true that labor, and only labor, creates wealth? If it is not true the time has arrived when some *savant* should answer in the negative, and support his denial with such proof as honest men would accept as worthy of consideration.

If it be true that labor, and labor only, creates wealth, then it is true that labor pays all revenues, all tribute money, all taxes (but another term for revenue), debts of every description, individual, corporate and national.

Here we dismiss the "if," all words implying uncertainty, and assert, challenging contradiction, that all wealth is the product of labor, and that without labor not another dollar of wealth would be produced within all the boundaries of the earth.

We do not deem it necessary to introduce illustrations to prove an axiom. If there are those who believe something exists other than labor that produces wealth, we shall be glad to give them a hearing in the *Magazine*.

Of all men profoundly interested in questions relating to the production of wealth, the workmen of the world stand at the head, and hitherto of all men they have been the least thoughtful in such matters. They have had no voice. Like the coral they have builded and died; like the silk worm they have spun their task, leaving the wealth they create to others who did not spin, and those who controlled the product accumulated fortunes, rolled in luxury or squandered their wealth, totally regardless of the toilers.

This wrong, self-perpetuating, has been going forward since the tribes began to build Babel in the plains of Shinar, and will continue until the sun rolls in space a dead orb, cold and dark, unless workmen shall

beat it down by the majesty of their aroused ire and enlightened power.

In contemplating the subject, labor is confronted by figures authoritatively published by the United States Census Bureau at Washington, giving foreign and domestic indebtedness, which we reproduce from *Broadstreet's*, as follows:

From the figures given it appears that the debts of the several divisions above enumerated, less sinking funds, were as follows in the years 1890 and 1880:

DEBTS LESS SINKING FUND.

Divisions.	1890.	1880.
Foreign nations	\$25,636,075,840	\$23,481,572,185
The United States	915,982,112	1,922,517,364
States and Territories	223,107,383	200,326,643
Counties	141,950,845	124,105,027

The debts of the principal foreign nations in detail were as follows:

DEBTS BY COUNTRIES.

	1890.	1880.
Austria-Hungary	\$2,224,509,572	\$2,866,339,539
Belgium	272,919,276	380,504,099
France	4,271,782,478	4,416,783,398
German Empire	No report.	77,577,719
Great Britain & Ireland	3,577,746,690	3,350,719,563
Greece	51,079,492	107,306,518
Italy	2,011,237,382	2,324,826,329
Japan	345,073,805	305,727,816
Mexico	117,193,728	115,606,675
Netherlands	382,440,317	430,589,858
Nicaragua	No report.	1,711,206
Russia	3,318,953,099	3,491,018,074
Spain	2,583,209,252	1,251,453,696
Sweden	56,551,435	64,220,807
Norway	17,543,837	13,978,752
Switzerland	5,873,299	10,912,925
Egypt	191,520,600	517,278,200

These figures deal with totals merely, and are not very informing until we go behind them to compare the relative burdens of indebtedness in the principal countries of the world. A comparison on the basis of indebtedness per capita shows that the burden of debt falls less heavily upon the inhabitants of the United States than upon those of the principal foreign countries. For example, France in 1889 had a debt per capita of \$116.35, which it appears does not include certain annuities of an unstated but large amount. Great Britain, whose debt is decreasing, had an indebtedness of \$87.79 per capita. The debt of Russia was \$30.79 per capita, that of Austria-Hungary was \$70.81, that of Italy was \$76.06, that of Belgium \$83.10, and that of the Netherlands \$95.56. The indebtedness of the United States on the other hand, was only \$14.63 per capita, and nearly one half of it was made up of non-interest bearing notes. Within ten years the debt has shown a remarkable decrease per capita, falling from \$38.33 in 1880 to \$14.63 in 1890.

What is said here refers of course to the national debt and not to that of the States and other local divisions. As will be seen by reference to the first table given above, the indebtedness of the States and territories in the United States has been reduced from \$290,326,643 in 1880 to \$223,107,383, a decrease of \$67,218,760 for the decade. The reduction per capita has been from \$5.79 in 1880 to \$3.56 in 1890. Part of the reduction, however, is due to refunding in some of the Southern States, the amount involved being estimated at about \$28,500,000. The debts of the counties show an absolute increase of over \$17,800,000 for the decade, growing from \$124,105,027 in 1880 to \$141,950,845 in 1890. This increase has not, however, kept pace with the growth of population, and as a result there has been a decrease in the debt per capita from \$2.47 in 1880 to \$2.27 in 1890. If now the indebtedness of the United States and of the States and territories and the counties be added together we get an aggregate of \$1,281,020,840 in 1890, as compared with a total of \$2,336,949,035 in 1880, a decrease of over \$1,000,000,000 for the decade. This is a reduction of somewhat less than one-half in amount,

while, owing to the change in population in the interior, there has been a per capita reduction from \$46.59 in 1880 to \$20.46 in 1890, or more than one half. This decrease, it is pointed out, has been brought about mainly by voluntary taxation. It would not take long to wipe out the indebtedness of the country of every kind if anything like the same rate of reduction were kept up. As it stands the record is a remarkable one for the United States.

Nothing like it is seen in the case of any foreign country except Spain, which shows a reduction from \$2,583,209,252 in 1880 to \$1,251,453,696 in 1890. The majority of the foreign nations show an increased indebtedness for the decade. Leaving out the German empire and Nicaragua, for which comparisons cannot be made owing to the absence of figures for 1890, the only foreign nations showing decreased debts for the ten years are Great Britain, Japan, Mexico, Spain and Norway. The debt of Greece has more than doubled in the course of the decade, that of Switzerland has nearly doubled, while that of Egypt is about two and two-thirds times as great as it was ten years ago.

We are not so much interested in the details of the foregoing summary, as in the sum totals, the \$26,911,096,180. If this debt is ever paid it will be paid by the surplus earnings of labor. If we assume that this indebtedness is at 4 per cent interest, then labor, before it pays one cent of the principal, will pay an annual interest debt of \$1,076,443,847.

While the reader will doubtless be interested in the figures showing foreign indebtedness, they will be far more concerned in the statements showing domestic indebtedness, the debt of the Republic and the debt of the States, amounting in 1890 to \$1,281,020,340. If this indebtedness draws 5 per cent interest, then labor pays \$64,051,017 the first year, and whatever reduction of the principal is recorded.

Now then, if there are those who contend that there can be any plan devised by which the debt can be paid except by the surplus wealth created by labor, now is the time to state it. Now is the time for the world to know the fact.

The world is full of cranks, but not one will be found sufficiently demented to deny the proposition that labor pays for all.

In view of such facts it is surprising that labor demands so much of the wealth it creates as to make it comfortable, respectable, independent? To this it is coming. Labor is mustering its mind resources. Labor is going to school. Labor is reading, thinking, planning, looking forward to a time when justice will bear sway.

Labor is not despondent. It is hopeful. It is courageous. It is winning battles, and when defeated is not discouraged.

ONE of our correspondents remarks: "In reading the communication of the gentleman who writes from Milwaukee for the *B. of L. E. Journal* (pages 728 and 729 of the August number), it occurred to me that if he would dismiss his initials and change the first letter of his name from W. to F. it would not only suit his calibre but would be vastly more significant."

PARENTALISM.

The *Journal of the National Association of Railway Surgeons* says, the question, "How shall Railways take care of their employes when injured?" is one of great importance. The same question used to be asked "down south" by the owners of slaves, together with several other questions in the same line. The master, notwithstanding he was always ready to buy a "nigger," held that Providence had placed the human chattel under his control—that if the nigger got sick he ought to have a doctor; that he ought to have some sort of food and clothing and shelter, and a great many of these masters were conscientious men, often very religious men, who getting all the work possible out of the "nigger," were solicitous for his physical comforts.

They frequently asked, How shall we "take care" of these niggers? It was a question of "great importance," just as the *Journal* referred to, says it is a question of great importance, "How shall Railways take care of their employes when injured?"

A railway employé is generally a white man, a sovereign citizen of the great American Republic. He works for wages. He is free and independent, or ought to be. When his day's work is done, his employer has no more claim upon him than he has upon an arch angel. How he is to be taken care of, when, and by whom, is no more concern of the Railway corporation than how, and under what conditions, a Railway official shall be "taken care of," is the concern of the employé.

Does the Railway ask, How shall we take care of our President, Vice President, General Manager, and so on? Not at all. They pay such men salaries sufficient to enable them to take care of themselves, and this is just what should be done for the other employes of the Railway.

If an employé gets injured in the line of his duty, then, in that case, there should be a question of pay—not give, nor charity—and the question, "How can we take care of our employes?" should be answered by paying them sufficient wages to enable them to take care of themselves. If they are totally disabled, pay such damages as are just, and not attempt to evade responsibility as is now the universal practice.

As we write we have a sample case in mind, where an engineer was disabled from ever running an engine again. A clearer case for damages was never presented in Court, but the victim could not so much as get into Court. The railway officials fought him at every step, and finally, standing upon the threshold of the Court, he was told to limp his way through life. There was no law for the course pursued by the Railway and the Court; simply some antiquated decisions, made before man was

redeemed from savagery, handed down through centuries of ignorance, bigotry and prejudice, but held to be justice in the closing years of the nineteenth century, at a period when the gush about the star spangled banner, liberty and independence, justice and right, were it water, would float the British Navy. Such facts demonstrate that as yet, Railway corporations are not losing any sleep in lamentations over the woes of their employes.

On the New York Central, the Vanderbilts, the Webbs, Depews, *et al.*, are agitated fearfully upon the question, "How can we keep our employes clean?" The idea is to have them bathe daily, perhaps, at small expense, and engage in gymnastics when they have a leisure hour, so as to make themselves robust, and that the philanthropists (?) may pose before the public, and exclaim, "See how we take care of our employes!" And how long will it be before the employes will be required to exhibit their wives and babies for the gratification of Railway officials, that they may exclaim, "Look at them, and note how we take care of our live stock?"

Railways are neither built nor operated upon principles of sympathy. It is proverbial, that "corporations are created without souls." Why attempt to exhibit them with such attachments? Why attempt to parade a corporation before the public with tears in its eyes, or wearing crape or other insignia of mourning? It never grieves with a grievance committee, nor rejoices when the "boys" secure an advance of wages. Its purpose in the world is to make money, and if it were upon honest cash investments the world would applaud, but the corporation has one supreme idea of existence, and that is to make money. What it does is to make money, and what it does not do is because if it were done, it would not be a money making venture.

Parentalism, deep solicitude for the welfare of the employes on the part of corporations, will be credited something better than a sham when the corporation pays employes honest wages. Till then their solicitude and sympathies find proper illustration in the story of the spider to the fly.

SCIENTISTS, who make evolution a study, are investigating a Baltimore frog, which, when annoyed, cries. It is thought that the reptile is in the first stage of development towards becoming a citizen of "Maryland my Maryland."

In Texas the Railway Commission are slashing rates on wheat bagging and ties, and work has just begun. The intention is to save, if possible, enough from the crops of the state to enable farmers to purchase seed for the next crop.

CASTE.

If the question were seriously asked by one of such commanding intellect as would secure attention, Is there any proof whatever that our much vaunted civilization is drifting backward? the answer would be no with special emphasis. If there were those who should be so bold as to intimate that an affirmative reply to the interrogatory could be supported by so much as one fact, he would be required to produce the fact, or stand convicted of heresy, worthy of thumbcrews or faggots. Indeed, it is to be questioned if the bold, outspoken Christian would be permitted to present such facts as he might believe he had secured in support of his conclusions. He would simply be charged, arraigned, tried and condemned without an opportunity to make a defense. The cry would at once go up and go forth, "crucify him."

Is this sheer gammon? Is it vagary—a mere whim, a hallucination? Mr. B. O. Flower, in the *Arena*, writes of "society's exiles" as follows:

It is difficult to over-estimate the gravity of the problem presented by those compelled to exist in the slums of our populous cities, even when considered from a purely economic point of view. From the midst of this commonwealth of degradation there emanates a moral contagion, scourging society in all its ramifications, coupled with an atmosphere of physical decay—an atmosphere reeking with filth, heavy with foul odors, laden with disease. In time of any contagion the social cellar becomes the hotbed of death, sending forth myriads of fatal germs which permeate the air for miles around, causing thousands to die because society is too short sighted to understand that the interest of its humblest members is the interest of all. The slums of our cities are the reservoirs of physical and moral death, an enormous expense to the State, a constant menace to society, a reality whose shadow is at once colossal and portentous. In time of social upheavals they will prove magazines of destruction; for while revolution will not originate in them, once let a popular uprising take form and the cellars will reinforce it in a manner more terrible than words can portray. Considered ethically, the problem is even more embarrassing and deplorable; here, as nowhere else in civilized society, thousands of our fellowmen are exiled from the enjoyments of civilization, forced into life's lowest strata of existence, branded with that fatal word *scum*. If they aspire to rise, society shrinks from them; they seem of another world: they are of another world; driven into the darkness of a hopeless existence, viewed much as were lepers in olden times. Over their heads perpetually rests the dread of eviction, of sickness, and of failure to obtain sufficient work to keep life in the forms of their loved ones, making existence a perpetual nightmare, from which death alone brings release. Say not that they do not feel this: I have talked with them; I have seen the agony born of a fear that rests heavy on their souls stamped in their wrinkled faces and peering forth from great pathetic eyes. For them winter has real terror, for they possess neither clothes to keep comfortable the body, nor means with which to properly warm their miserable tenements. Summer is scarcely less frightful in their quarters, with the heat at once stifling, suffocating, almost intolerable; heat which acting on the myriad germs of disease produces fever, often ending in death, or, what is still more dreaded, chronic invalidism. Starvation, misery, and vice, trinity of despair, haunt their every step. The Golden Rule,—the foundation of true civilization, the key-note of human happiness,—reaches not their wretched quarters. Placed by society under the ban, life is one

long and terrible night. But tragic as is the fate of the present generation, still more appalling is the picture when we contemplate the thousands of little waves of life yearly washed into the cellar of being: fragile, helpless innocents, responsible in no way for their presence or environment, yet condemned to a fate more frightful than the beasts of the field; human beings wandering in the dark, existing in the sewer, ever feeling the crushing weight of the gay world above, which thinks little and cares less for them. Infinitely pathetic is their lot.

We invite the careful perusal of Mr. Flower's views. Are they true? Who so bold as to deny them? Who can disprove Mr. Flower's assertions? What is the inevitable conclusion? Is it not that a civilization, professedly based upon the precepts of Christ, is even now going backwards to Brahmanism, to caste, as taught and practiced by Hindoo heathen? Is not the tendency in direct conflict with the declaration of the apostle Peter, that "God is no respecter of persons?"

What is the condition of the lower castes of Brahmanism? Are they not exiles from society? To say that the miserable exiles from society in America, may, if they will, rise by a sudden bound, or by regular gradations to the higher castes, is begging the question. The exiles cannot rise; with rare exceptions they sink to lower depths of degradation. It is the law of plutocracy. The cry of "room on top," is like the mirage of flowing fountains, to the thirsty traveler in Sahara. Like the victim in the grasp of quick sands, the more he struggles the deeper he sinks. He is an exile. Only money can lift him out of his thraldoms and that is used to crush him.

What is there for the woman in the great cities, who sews with a "double stitch," a shroud and a shirt? Starvation, suicide, or a life worse than either. She is an exile. Amidst all the splendors of wealth, no hand is stretched forth to save her or her children—or, if here and there one is offered, there are ten thousand raised against her.

In the palatial churches the robed divine, and jewel-bedizened audience, wrangle over creeds and dogmas, fly at each other's throats with the fierceness of tigers endeavoring to make it appear that an infinite God has somewhere in this universe a place in reservation worse than New York, but the way of escape for the exiles is not via the aristocratic church.

The caste era is here already. The exiles from society are increasing. We hear of their "colonies" in cities. They are *planted* every year by thousands in the Potter's fields. They are the unknown dead, and still their number increases—and this is in the "land of the free and the home of the brave"—in the closing years of the nineteenth century.

What can be done for the exiles, for the "lower castes" in this Christian land? Mr. Flower, in what we have quoted, suggests no remedy. What forces can be applied to

bring the exiles back, to lift the apparently doomed castes to a level where they may realize that American institutions have some blessings in store for them?

The last hope is in the organization of workmen and in the federation of such organizations. The power of the working class, the working caste unified, disciplined, knowing the power of the ballot and wielding it discreetly could crush the power of the plutocrats and arrest the power of the growing plutocracy.

In some way this power is to be exerted. If legitimately, the revolution will be peaceful. It will come as the spring time comes, when the ice fetters are broken and the world rejoices. But come it will. The exiles will return, the castes will revolt. If the Pharaohs are stubborn, then their doom is another Red sea.

BUREAUS OF LABOR STATISTICS.

We have on our table a pamphlet of 132 pages, giving the proceedings of the Eighth National Convention of the Officers of Bureaus of Labor Statistics in the United States, held in the city of Philadelphia, May, 1891.

We learn from remarks made by Mr. Chas. H. Simmerman, Secretary of the New Jersey Bureau, that Labor Bureaus really had their origin in a Labor Congress, held in Cleveland, O., in 1867. He said:

My knowledge of the origin of Labor Bureaus goes back to 1867, at the old Labor Congress in Cleveland, when for about the first time in the history of the country the workmen made an attempt to formulate a platform, or a declaration of principles, and demanded the correction of the evils of which they complained. I think that was quite as intellectual a body of men as ever assembled in this country for the purpose of considering and discussing social questions. There were men there who were familiar with all the books, and Wm. H. Sylvius made the remark: "Here we can formulate declarations, but they amount to no more than the declarations of other bodies of men; they would simply be our opinions. Facts are what we want. We want to base our demands on well-defined data, and until we have that data it is impossible for us to formulate a demand that we can defend under all circumstances." It was at that convention that the first demand for the establishment of Labor Bureaus was made. A year or two afterward the Massachusetts Bureau was organized, and then the Pennsylvania Bureau, and these have been followed by many others. From that time to the present, you will notice that every convention and every representative body of workmen have been persistent in their demands for the establishment of Labor Bureaus.

Here we have the announcement made, in a convention of officers of the Labor Bureaus of the United States, that they had their origin in a convention, or a congress of workmen.

Mr. Carroll D. Wright, President of the Convention and Commissioner of the National Bureau of Labor, Washington, D. C., in his opening address said:

The growth of our convention is very gratifying. The first meeting took place at Columbus, Ohio, in 1883. There were then in the United States eleven

Bureaus of Statistics of Labor. The only gentlemen now connected with the convention that were present at that first meeting are Mr. Bishop, of New Jersey, Colonel Lord, of Illinois, and myself, representing Massachusetts. There were eleven Bureaus at that time, as I have said. We now have twenty-seven. The growth since 1883 has been very great indeed—from eleven to twenty-seven. Since the last convention, which was held at Hartford in June, 1889, there have been five Bureaus established, although some of them are not yet fully organized. These are the Department of Labor and Statistics of South Dakota, the Department of Agriculture and Labor of North Dakota, the Bureau of Immigration, Labor and Statistics of Idaho, the Bureau of Statistics of Utah, and the Bureau of Labor Statistics and Mines of Tennessee, making in all twenty-seven offices in the United States now devoted to the collection and dissemination of information relating to the industrial, social, moral, and educational interests of the people. The creation of new States keeps somewhat ahead of us. As you see, if the number of States had remained at thirty-eight, where it was when this Convention was organized, we should have represented here twenty-six out of thirty-eight States; yet, with forty-four States, and with twenty-seven Bureaus and departments (including the Federal department) devoted to statistical work, I think we can congratulate ourselves and our constituencies upon the progress made.

It is seen by the foregoing that since 1867, when the Labor Congress met at Cleveland, there have been twenty-seven Bureaus of Labor established in the United States, one of which is the Federal, or National Bureau, with headquarters at the National Capital.

If the question is asked, what has organized labor done to advance the interests of workmen, we point to the declarations of Mr. Simmerman and Mr. Wright. Their testimony is conclusive.

Men, who are ceaselessly engaged in writing and talking down labor organizations, who are the enemies of workmen, and who would, had they the power, annihilate every labor organization in the country, ought to turn their attention to the establishment of State and National Bureaus of Labor, and as they note the great work these Bureaus are accomplishing for the welfare of society, cease their idiotic and malicious attacks on organizations of workmen, since it is questionable if since 1867 a movement can be named originating from any source fraught with so many and such lasting blessings to society at large as the establishment of Labor Bureaus, the credit for which is due to the intelligence of organized workmen.

Those who have opportunities for examining the reports of the Chiefs of these Bureaus of Labor will be amazed at the mass of valuable information they contain upon a variety of vital questions relating, not only to the interests of working men and women, but to the well-being of society.

These annual or biennial reports include almost every question of importance to workmen.

Take, for instance, the question of railroad management and operations; and it will be found that in some cases the reports are exhaustive, giving every description of em-

ployment and the wages paid in each department, enabling the reader to comprehend at a glance to what straits some of them are put to keep out of the poorhouse.

In some cases the manufacturing enterprises of a state are exhaustively analyzed and the wages paid employes given in detail, in such a way as to silence conjecture and permit conclusions to be based upon facts.

Again, the question of strikes, the causes which led to them and the results obtained, are voluminously set forth, so that gains and losses can be ascertained with approximate accuracy.

In another instance, the question of child labor is discussed, and facts tabulated in a way that legislators, economists and philanthropists may understand the deep damnation which results to society by forcing physical tasks upon children which wreck mind and body, and sends multiplied thousands to perdition.

It will be found also in these reports that the sanitary condition of buildings where men, women and children are employed, has not been overlooked, but forced upon the attention of legislatures and upon society, pointing out shameful neglect and demanding reforms.

These Bureaus, while discussing wages, have devoted attention to the cost of living, and have shown to the world that the tendency has been to low prices, often involving untold sacrifices and suffering.

In numerous instances statistics relating to agriculture are compiled, showing the boundless resources of the country, and bringing into baggard prominence the fact that while the country has such a surplus of food as to make the thought of famine a vagary, thousands of people who work seldom know the luxury of a square meal.

We could extend the list indefinitely, showing the work Labor Bureaus are doing to advance the interests of labor throughout the country, a work which will eventually command universal approval.

The point we make, and which is borne out by the facts, is that this new departure in the interest of labor and of society originated with workingmen. To them all the credit is due, and here we repeat what we have said on various occasions, if LABOR has moved upward and onward to better conditions since Egyptian slaves built the Pyramids, it is due entirely to the organization of workingmen, and if now labor is depressed, if workingmen are wronged, defrauded and degraded, it is due to the fact that they are not organized—or if organized, will not federate for their protection.

The literary production of Mexico is quite wonderful. One of her latest biographical lists mention no less than 12,000 volumes by 3,000 native Mexican authors.

THE B. of L. E. and in fact all labor orders in railway service, owe Mr. Arthur a debt of gratitude for his persistent efforts in their behalf.—*John E. De Lancie Hays, Assistant Editor B. of L. E. Journal.*

We deny it. We owe Mr. Arthur neither gratitude nor anything else. If Mr. Arthur had his way there would be no Brotherhood of Locomotive Firemen. It should be sufficient that the firemen "are taken care of" by the B. of L. E. That was the original Arthur idea, and it has only been changed by the logic of stern necessity. Mr. Arthur once avowed that he would never coöperate with the Brotherhood of Locomotive Firemen. And he didn't until he was compelled to. The Brotherhood of Locomotive Firemen is now great and prosperous and influential, but Mr. Arthur did not help make it so. It solved the problem of success in spite of him. Hence we acknowledge no gratitude or any other obligation to Mr. Arthur.

If the conductors, trainmen, and switchmen owe Mr. Arthur a debt of gratitude, we have no doubt they will acknowledge it and in due time liquidate the obligation.

ROBINSON MONUMENT FUND.

The following subscriptions to the *Robinson Monument Fund* have been received since our last report:

J. H. Cunningham's friends, Washburn, Texas,	\$4 00
Chas. O'Neal, Poplar Bluff, Mo.	1 00
Cherokee Lodge, No. 428, B. L. F., Van Buren, Arkansas	12 50
Member of Cloud City Lodge, No. 196, B. L. F., Leadville, Colorado	1 00
Gilbert Lodge, No. 240, B. L. F., Jackson, Mich.	10 00
M. A. Henry, Jackson, Mich.	1 00
Jno. A. Hill, New York, N. Y.	1 00
B. L. Searles, Minto, N. D.	1 00
W. Dempster, Willow Springs, Mo.	50
W. E. Jones, Terre Haute, Ind.	1 00
Frank C. Salter, Tucson, Arizona	1 00
Geo. C. Cavins, Centralia, Ills.	1 00
W. F. Hynes Lodge, No. 48, B. L. F., Peoria, Ills.	5 00
Previously acknowledged	41 10
Total	\$81 10

Remittances should be directed to *Locomotive Firemen's Magazine*, Terre Haute, Ind.

THE great eight hour law went into effect August 1, and what has been the result? The labor element of Omaha has lost a hundred thousand dollars and most of the men who struck have returned to work or are about to do so. The responsibility for this loss must be placed where it belongs, directly on the shoulders of the labor leaders. If the laborers of Omaha had expected an increase of pay and a reduction of hours at the same time, the result shows poor judgment on the part of their advisers. We are willing to advocate for all labor the shortest possible work day, but we do not, and never will, advocate that a man be paid for what he does not perform. If a workman works eight hours he is entitled to pay for those hours and not one cent more.—*Railway News Reporter.*

FEDERATION IS IN THE AIR.

Mr. John McMinn, writing from Detroit to the B. of L. E. *Journal*, comes out in favor of federation between the Brotherhood of Locomotive Engineers and the Order of Railway Conductors. He says:

"I sincerely believe that it would benefit the Engineers and Conductors were they to perfect a system of federation, and to harmonize, if there be any conflicting interests. They are the representative employees in the railway service. They are held responsible for untold millions of traffic. They should so fraternize that grievances of the future, pertaining to their positions, may at all times receive attention."

We like this. It breathes a fraternal spirit in so far as the Conductors are concerned. It is a starter, and if Mr. McMinn should continue to think and write upon the subject he may finally so broaden his views as to include other orders of railway employees.

We are obliged to Mr. McMinn for his reference to "representative employees" because it affords us an opportunity to say some things pertinent to the discussion.

The central and essential curse of labor is the ceaseless boasting of superiority in which some members of labor organizations indulge.

Now, what is it that a locomotive engineer represents on a train or in railway service? Is it an engine, a throttle, or steam? Take them all, if desired. What does a fireman represent? Suppose we answer, fire. That answers every purpose. The engine is valueless without steam. There can be no steam without fire; there can be no fire without a fireman, hence engine and throttle are both totally valueless without a fireman; and, therefore, without a fireman the engineer represents nothing at all.

The conductor is in the same boat with the engineer. His punch don't punch, and he is a representative of much elegant leisure until the fireman "makes her hot" and gets things ready for "all aboard." Hence it occurs to our mind that a locomotive fireman is a "representative employee in railway service." If not, Mr. McMinn can tell the reason why.

But let us proceed and crush out this "dampfoolism" about "representative employees in the railway service."

Perhaps Mr. McMinn can tell when railway trains would start, and how far they would go without brakemen and switchmen. Without these men Mr. McMinn would linger in the depot until his eye-teeth dropped out. By virtue of the services of switchmen, brakemen and others too numerous to mention, the engineer is enabled to grasp his throttle and turn a wheel, the conductor to use his punch, and the fireman to "make her hot." This being true, why not include these men among the "rep-

resentative employees in the railway service."

The trouble in such matters is the outgrowth of false estimates of the importance of what may be called "common" as distinguished from "skilled" labor. And as "skilled" labor receives more pay than "common" labor, the simple fact of wages has become the foundation of an odious and contemptible aristocracy in labor organizations, and, therefore Mr. P. M. Arthur's inquiry goes the round, "What has a \$4 a day man got to do with a \$1 a day man?" Such a query involves all that is abhorrent in plutocracy. It is the quintessence of vulgar, low-bred, base-born arrogance. Carried into practice, it is destructive of fraternity, fellowship, generosity and everything indicative of equality. It is that perfidious principle which prompts Chauncey M. Depew to employ Pinkerton thugs from the slums and arm them with repeating rifles to murder workmen in cold blood, because, here in free America, they dare resist oppression.

Mr. McMinn may at his leisure put such reflections in his pipe and smoke them.

We have no disposition to tear a plume from the caps of engineers and conductors. If they desire to federate they have our unequivocal indorsement, but while this cooing and kissing is proceeding, the *Firemen's Magazine*, true to its convictions, will demonstrate that other employees in the railway service are also representative, and we will see to it that they are neither ignored nor degraded without protest.

READ this:

Come closer together by fraternizing in their lodges and divisions, and though Mr. Debs may be, as I honestly believe that he is, the paid emissary of others, to rant and belittle our efforts
—John R. De Lancie Hays, Editor B. of L. E. *Journal*.
(August issue, Page 72.)

Then this:

It is a source of pride that . . . no scurrilous attacks, bitter taunts or despicable methods were indulged in through the columns of the *Journal*. Such jargon and insensate arguments as we have perused in some of their publications filling columns with what is known as "rot" and mud stinging from men . . . can be considered in no other light than that of originating from a diseased brain whose pin head is overburdened with insipidity. The average member of this Association . . . realizes the perfidy of the man who would give utterance to such public wholesale condemnations of labor leaders, sister organizations or systems that employ us. It is time that a new mode of procedure was adopted whereby personalities and pernicious proceedings were relegated to other fields and the several organizations strengthened by a concert of action based on fraternal friendship. (Italics ours. *ED. MAGAZINE*.)—Editorial B. of L. E. *Journal*, April issue, page 300.

And then don't fail to "chime in" that the *Firemen's Magazine* is creating "hard feelings" between the two Brotherhoods, while the *Engineers' Journal* is preaching "Love thy neighbor as thyself."

THE LABOR PRESS.

Indirect Taxation. There are hundreds of persons in this country laboriously engaged in a vain endeavor to convince the American people that the tariff is not a tax, and the most plausible argument they can bring to their aid is that the tariff, not coming direct from the pockets of the people, is not so noticeable or so burdensome as though it were paid in cents, dimes and dollars directly from them. That sum paid on an article over and above the cost of production and legitimate exchange is a tax. Some call it profit. But it stands as a fixed fact that the consumer is taxed to yield a profit to the producer, or, more accurately speaking, the manufacturer. A manufactured article, passing through a port of entry, paying a duty of 10 or 20 cents as a protection to the industries of the country it enters, must sell for 10 or 20 cents more than if that tariff had not been levied. It matters not that the foreign maker must pay the extra 10 or 20 cents to secure admittance for his wares, the consumer must also pay that or a greater sum, in addition to the price of the article, when he buys. It makes but little difference whether it is called a duty, a tariff or a protection fee, the consumer is taxed to pay it, or we do not know what a tax is. It is not with the tariff or the principle of protection that we now take issue, it is with the principle of deception that is practiced on the people when they are told that this duty, tariff or protection fee, being indirectly paid, is not felt to be a hardship or so onerous as though it came direct from their pockets. In plain Anglo-Saxon, it means that if the people can be taxed indirectly, or without being told that they are being taxed, they will not know it; or if they do know it they will not mind it, the sum being so insignificant. The advocacy of this principle presupposes ignorance or indifference on the part of the people. And right there is where the danger lies. Where the people pay taxes directly, knowing what they are paid for, they are careful enough to follow the matter up and ascertain to what use the money is put. Each taxpayer in the municipality and county is certain to inquire into the why and wherefore of every increase in his taxes. He knows he is being taxed, and he desires to know why. He makes it his business to know what is done with the money. It is not so with the tariff, or indirect taxation, and the consequence is that the same vigilance and caution is not exercised by public officials in caring for the people's money. No more fruitful source of corruption or dishonesty can be found than that which lies concealed beneath the very plausible and innocent looking scheme of taxing the people in an indirect and roundabout manner. Indirect taxation in all its forms should

give way for the more practical business-like and honest method of collecting taxes directly from the people. Then they will be more apt to take a deeper interest in the question of taxation; they will know what they pay for, and will pay for what they get and no more.—*Journal of the Knights of Labor.*

**

The *Journal* has often urged political action by railroad men, and will continue to point out reasons which make it necessary. The laboring people should not lose sight of the fact that the laws of the country have everything to do with securing for them, or failing to secure for them, as the case may be, the just portion of the wealth created by their labor. We cannot expect a law to set the rate of wages, were such a thing desirable, but we should expect it to prevent unreasonable conditions which either directly or indirectly rob labor in general of immense sums of money.

A case in point is the co-employed law which, in many states, operates to keep in the hands of the corporations thousands of dollars that ought to be paid to disabled employés or to the widows and orphans of the men killed in the service. But for this outrageously unjust interpretation and application of the laws the employés would stand practically where the traveling public does. As it is, the passenger who is maimed for life when the train goes through an open switch into the ditch receives four or five thousand dollars from the company with but little trouble, while the trainman, who is just as badly crippled and probably left without a dollar in the world, is refused a cent, because, forsooth, "the accident was caused by the carelessness of a co-employed." It takes, indeed, a profound legal mind to discover the justice in this. And this violation of both common justice and common sense is excused by corporation attorneys on the ground that "public safety" requires it—that utter recklessness can be prevented in no other way.

It is easy to see how this law operates to rob labor in general. If passengers and employés were accorded just the same protection and recompense for injuries received, the millions of dollars raised yearly by the various organizations of railroad men would be paid from the earnings of the roads, as it should be. The wealth of which railroad labor is thus unjustly deprived would improve its condition immeasurably. For the Brotherhood of Railroad Trainmen alone it amounts to forty-three thousand dollars for the month of September.

But this is only one of many ways in which we are deprived of cash by the legislative schemes of corporation lobbies. The remedy is for us to think upon these questions, agitate them and work unitedly

to prevent such things. And the first preliminary step toward this is the work of getting all the various railway organizations settled down to harmonious relations—to the point where we can make a long, strong pull all together. The little, spasmodic efforts by one organization at a time amounts to nothing more than to call public attention to the injustice we suffer. But if the united force of the railroad men is once brought to bear on a single point it is irresistible. Let it once be clearly understood that the member of a state legislature who votes down a measure for relief from any given injustice, thereby closes his political career, and such business will promptly stop, and the politician will hasten to take the safe side.—*Railroad Trainmen's Journal.*

Learning

The examination of firemen before promotion seems to have suddenly struck some of our roads as necessary—time some of them woke up. Lots of eastern roads are now calling in their oldest firemen, and asking them questions of all kinds, some fitting the case, and others too deep for any use.

A couple of firemen from a Brooklyn Elevated Road recently called upon us to point them out the way to get properly posted, what books to read, etc.—they had just failed to pass a very easy examination.

Both seemed anxious to learn now, they had fired over three years, but seem never to have had the chance they were entitled to. Promotions had been made on age entirely, so they had waited. They had never been told what to learn, how to learn, or where to learn; they have to keep their engines clean, and do all a regular fireman's work on short runs where there is a lay over at each end of only four to nine minutes; the engines are double-crewed, so they see them only in service. These men have even been, until now, debarred from entering the shop—yet the officers of the road expect them to know something about locomotives.

We claim that the officers of this road are at fault for having this kind of men. They should have told them in the start what they had to know, and where to find it out, and then have examined them occasionally to see if they were learning. One of the men said that when he asked his engineer how to set an eccentric, he was told that "that was an engineer's secret." The other fireman's engineer always looked wise at a question, and told him to "figure it out himself, and then he'd know." A little examination of engineers might not be amiss here; a fireman ought not to be blamed for having a poor engineer.

These firemen are scrambling around now hunting books, reading papers, and thinking

about their business; they should have been doing this the three years past, but it's better late than never. We think, under the circumstance, that they deserve time to post up for another trial, and, perhaps a change of engineers.

Out of a late "batch" examined on the N. Y. Elevated they only got one out of four. These elevated roads won't hire an engineer; they put firemen where there is little time or opportunity to learn, and then expect the men to know their business thoroughly. Roads placed in such peculiar circumstances in this matter should be provided with some place where men can get a chance to learn, extra care should be taken to see that engineers impart some correct information to the firemen, and that the latter have some opportunity to learn their business, and especially the peculiarities of their own engines and service.

The N. Y. Central have recently begun examination of firemen and are finding lots of ignorance they didn't suppose existed—and for which the officers are not entirely blameless—and many old firemen who have been merely time-servers are liable to be dropped out.

The reform comes none too soon; but many men whose principal fault has been indolence or indifference are liable to be punished, because the operating officers have been in the past recreant to a plain duty. This trouble is not confined to one road or one section of this country, but is, with very few exceptions, as wide as the continent. Are you posted?—*Locomotive Engineer.*

The observation that an eminent jurist once made, that "no statute is enacted that a coach and four cannot be driven through it," is well illustrated in the workings of the Chinese restriction, the interstate commerce, the alien contract and similar laws that have been offered as a palative to the demands of the people by our legislators both of the nation and states. A law is enacted, supposedly to cover certain demands, accomplish certain objects that are certainly in the minds of the people when they make the demands, the text of the law seems to be sufficient, but when it comes to be enforced it does not work that way at all. Some judge, hidden behind his musty books and the antiquated ideas of a past age, decides what was intended, or if it cannot be got around that way a constitutional way is found to annul it. Cannot some way be found to give the people what they demand, or at least keep the judges in step with the age.—*Union Pacific Employes Magazine.*

THE celebration of Labor Day in Chicago was on a gigantic scale. Fully 7,000 men were in line.

WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the *Magazine* we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground
where heroes sleep?
'Tis not the sculptured
piles you heap!
In dews that heavens far
distant weep
Their turf may bloom,
Or genil twine beneath the
deep
Their coral tomb.

"What's hallow'd ground?
'Tis what gives birth
To sacred thoughts in souls
of worth!
Peace! Independence!
Truth go forth.
Earth's compass round
And your high priesthood
shall make earth
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

WM. D. ROBINSON.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died in poverty,

that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine*, Terre Haute, Indiana, all of which will be acknowledged in its columns.

BOILED DOWN.

As we expected, the publications of the various organizations of Railway Employés discuss in their latest issues the action of the Supreme Council of the United Orders of Railway Employés, in relation to the Brotherhood of Railroad Trainmen.

This is eminently right and proper. It is opportune. The simple purpose should be, in the first place, to get at the facts—the honest truth.

In doing this there need be neither passion nor prejudice. On the contrary, what is required is cool, dispassionate investigation, and when the facts are ascertained comments may take such wider range as writers may deem prudent.

Our investigations lead us to catalogue the facts as follows:

Fact No. 1.—Federation became an accomplished fact in June, 1889, with three independent organizations in the compact, viz.: The Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Brakemen and the Switchmen's Mutual Aid Association.

Subsequently the Brotherhood of Railway Conductors was admitted, and the federated orders were four in number.

Fact No. 2.—At a meeting of the properly accredited representatives of the first three named orders, an organization was formed known as the Supreme Council of the United Orders of Railway Employés. This Supreme Council formulated certain rules for its government, and to the extent of its authority, for the government, in certain cases, of the various orders which were represented in the Supreme Council.

Fact No. 3.—The rules, or the constitution of the Supreme Council were designed, primarily, to make strikes less frequent, and, if possible, prevent their occurrence altogether, by consultation, arbitration and concession, to maintain the rights of employés, and to engage in a strike only as a last resort.

Fact No. 4.—The Supreme Council in no wise affected the autonomy of the federated orders. If any one of them had a grievance it could pursue its own methods for a settlement. If it could not adjust the grievance it could summon the Supreme Council and make known, not only its grievance, but the steps taken for adjustment. It then became the duty of the Supreme Council to bring about an adjustment of the difficulty, and in this, the first thing to determine was: Is the grievance of such a character as to warrant a strike? If decided negatively, the good offices of the Supreme Council might be employed to amicably adjust the difficulty. If the decision was affirmative, then, in that case, the grievance must be adjusted alike honorably to all parties or a strike would be declared, and if

declared, then all the orders represented in the Supreme Council would participate.

So far we have stated four facts. There they stand. Everyone can examine them at their leisure, and comment upon them as they may deem proper.

Suppose some one should say they could be improved? Who doubts it? Or who denies it?

No one connected with the Supreme Council ever set up the claim of infallibility. No member of that body ever rejected a proposition to amend any of its rules which would render them more efficient for good, and it is a fact which no *honest* man will deny, that the Supreme Council has often accomplished results of a highly beneficial character. And here let it be said as an introduction to other facts which we propose to introduce, that the Supreme Council never contemplated any jurisdiction over members of the various orders in the federation. That is to say, members of the various orders, if they violated the laws of their organizations, could not be punished by the Supreme Council. To have assumed such authority would have at once and effectually destroyed the autonomy of the order, just as, should the Federal Government assume certain prerogatives not delegated to it by the States, would destroy the autonomy of the States, and create a centralized power—an autocracy.

The power of the Supreme Council, in its uttermost limit, is to settle strikes when the order having a grievance finds its power inadequate. Just as the county of a State may ask the Governor of a State for aid to quell a riot; just as a State may call upon the President for aid when its own resources of defense are not equal to the requirement.

With these reflections we are ready to introduce another series of facts, and will begin with

Fact No. 5.—A difficulty or difficulties arose between members of two orders belonging to the United Orders of Railway Employés, the Switchmen's Mutual Aid Association and the Brotherhood of Railroad Trainmen.

Fact No. 6.—In the first place these difficulties were purely *individual* or *personal*, and in no proper sense involved the Supreme Council except as a mediator whose good offices might be properly employed to bring about amicable relations and harmonious action.

Fact No. 7.—It was never believed and never asserted that in these difficulties the wrongs were all on one side. No one ever charged that such was the case except, perhaps, the parties involved in the misunderstandings, who banded criminations and recriminations. It was clear that passion and prejudice and malice had prompted words and deeds fruitful of calamities, and

it is a fact that the Supreme Council left no effort untried to bring about an honorable settlement, and it is true that the Supreme Council had the right to indulge the belief that the threatened storm had blown over and that serious trouble had been averted.

Fact No. 8.—It was at this juncture that the charge was made that the Brotherhood of Railroad Trainmen had entered into a conspiracy with the officers of the Chicago & Northwestern Railway to discharge all the switchmen in the service of said road, and stipulating that members of the B. of R. T. would take their places.

Fact No. 9.—This charge was not denied by the parties inculpated, and subsequently was proven to be true.

Fact No. 10.—Here, then, we have the case as presented for the action of the Supreme Council after all extraneous matter had been eliminated. Every palliative circumstance had been patiently heard, every extenuating word and act had been patiently considered, and the finding of the committee was, **GUILTY**. The committee to whom had been assigned the unwelcome and onerous duty to hear testimony and render a verdict reported that

"We find the Brotherhood of Railroad Trainmen guilty of conspiracy as charged."

Fact No. 11.—The Supreme Council upon an *aye* and *nay* vote received and indorsed the report as follows:

S. M. A. A.	Yeas, 3 votes.
B. of R. C.	Yeas, 3 votes.
B. of L. F.	Yeas, 3 votes.—Total, 9 votes.
B. of R. T.	Nays, 3 votes.—Total, 3 votes.

Fact No. 12.—The Supreme Council found the B. of R. T. guilty of conspiracy, as charged, by a vote of 9 to 3.

Fact No. 13.—The Supreme Council having found the B. of R. T. guilty of conspiracy, as charged, proceeded to affix the penalty and expelled the Brotherhood of Railroad Trainmen from the Supreme Council by an *aye* and *nay* vote, as follows:

S. M. A. A.	Yeas, 3 votes.
B. of R. C.	Yeas, 3 votes.—Total, 6 votes.
B. of R. T.	Nays, 3 votes.
B. of L. F.	Nays, 2 votes.—Total, 5 votes.

The foregoing includes every essential fact in the case. Comments, charges and counter charges, criminations and recriminations, personal feuds, misunderstandings, epithets and abuse do not and cannot modify nor in any degree change the facts. The guilt of the B. of R. T. stands forth clear and undeniable, proven beyond doubt, and after every extenuation and modification, haggard and monstrous.

There is one amazing fact connected with the trial, the one thing never heard of before in all the annals of civil or criminal trials. We refer to the extraordinary concessions made by the Supreme Council to the representatives of the B. of R. T. during

the trial of their order on the charge of conspiracy.

We alluded to the facts in our August issue as follows:

The B. of R. T. was on trial. It was charged with a grievous offense, nothing less than conspiracy. That it should be heard in its own defense was right, beyond that any concession was extraordinary. Notwithstanding this, on the motion to accept the report, which, if accepted, carried with it condemnation, it was permitted to vote; but more extraordinary still, on a motion affixing the penalty after condemnation, it was permitted to vote. If the question of liberality, concession, brotherly kindness, is ever raised, the record will demonstrate that such consideration was never before extended to any party on trial for a wrong. It was an exhibition of regard which at once hushes to silence any intimation that up to the last and to the uttermost limit, every right that could possibly accrue to the order by virtue of membership in the Supreme Council remained, or was allowed to remain intact. It was permitted to have a voice and a vote upon every proposition, even to affixing a penalty upon its own offending.

There is not a code in the world that permits a party on trial to have a voice in determining either a verdict or a penalty, and we are confident the Supreme Council of the United Orders of Railway Employees made the first and only departure in this regard on record.

We are anxious that the readers in reviewing the facts as herein set forth, shall have in full view the concessions made by the Supreme Council by virtue of which the grand officers of the B. of R. T. were permitted, not only to vote to reject the verdict of guilty pronounced against them, but to record their votes in the negative when the question of the penalty to be inflicted was to be decided.

Now suppose the decision by the Supreme Council had been in strict accordance with courts in all lands, the grand officers of the B. of R. T. would have simply been permitted to testify and to be heard in their own defense, but to vote on a verdict and upon a penalty to be inflicted they would have been silent.

In this, did the Supreme Council err? Manifestly so, but it was an error the benefit of which accrued to the grand officials of the B. of R. T., and should at least silence ungenerous animadversions upon the Supreme Council.

These reflections and statements bring into prominence the *called* convention of the Brotherhood of Railroad Trainmen to be held at Galesburg, beginning October 5th, since that organization is vitally concerned in the unfortunate complications on the Northwestern, and on the action of the delegates, who, it is to be hoped, will be men of large comprehension and cool and dispassionate judgment, will depend largely the future prosperity of the order.

We would have the Northwestern affair probed to the bottom, every essential point brought out. In other words, we would have the representatives know the whole

truth and nothing but the truth, and then, in our opinion, there need be no misgiving as to final results.

EDITOR L. W. ROGERS TO THE TRAINMEN.

The *Railroad Trainmen's Journal* is edited by L. W. Rogers, a man who is careful of his words, and which are always signs of ideas. Bro. Rogers evidently writes of the serious misfortune that has befallen the Brotherhood of Railroad Trainmen growing out of the conspiracy entered into by the B. of R. T. with the officers of the Chicago & Northwestern railroad. Bro. Rogers' paper is temperate throughout. The writer sees and comprehends fully the "mistake" made by certain grand officers of the B. of R. T., and would favor any proper measure to remedy the mistake.

The full text of Bro. Rogers' letter, which is captioned "A Word to the Brotherhood," and appears in the August issue of the *Journal*, is as follows:

As a direct difference of opinion (and I believe an honest and sincere difference on all sides) exists between some of my colleagues and myself regarding the Northwestern affair and, moreover, as there appears in this number of the *Journal* circulars which define the position of the Grand Lodge, I deem it necessary, in order to avoid any misunderstanding, to say plainly where I stand on this question. For two months I have lived in the hope that the serious trouble in which our Brotherhood has become involved might lie dormant, and at least grow no worse until the convention could meet and take the matter in hand; but as time passes it seems that the breach between the two organizations widens, and I feel myself irresistibly impelled to take the only position I believe is open to those who are looking to the future security of organized labor.

From the first I have been impressed with the belief that a serious mistake had been made, but I had hoped it would pass by as one of the errors of humanity is heir to, and that harmony and confidence would be restored. With this belief in mind I took the story of the Northwestern trouble as it was given me, and endeavored to place the facts before the public in the most favorable light for the Brotherhood in which they could be set and present, as far as possible, reasons that might be pleaded as some excuse for the act that was then beyond recall—in other words, to make the most of mitigating circumstances.

But this hope that the trouble would prove temporary and that the storm would soon pass over has gradually given away to the settled conviction that organized railroad labor is rapidly approaching a crisis that demands the earnest attention of every toiler—a crisis of which it may yet be said, "These are the times that try men's souls." I know the thoughtless may scoff at the assertion. It is natural. We are apt to laugh at the earthquake until the ground rocks beneath us. We stand close to a great event in history as we do to a great monument, so close that we do not measure its vastness. It is when a little removed by space in the one case and by time in the other that we look back upon its true proportions and realize its real significance.

Whoever has given any thought to the vital principles upon which labor organizations rest, and to the relation between their attitudes toward each other and their continued success and even existence, will not deny that an open war between them must finally result in complete disaster. The power of an organization depends upon its relation to other orders. United with others it is invincible; alone with neither assistance nor resistance it can do much; but alone and opposed it is completely at the mercy of its corporation enemies. Labor has but

one weapon to fight its battles and that is the strike. If the principle of union men taking the places of other union men is once established, whether or not by a technical avoidance of written laws, the only weapon labor holds is destroyed beyond recovery and the arms that have fought the most gallant battles in labor's history will fall, never to be lifted again. Let us not go astray by any false theories about protecting personal rights regardless of the means adopted. Any victory won by a method which antagonizes the very life principles of organization is a boomerang that slays the victim but returns to the slayer laden with disaster. I beg of you to remember that on the power of our organization depends all that the trainmen of America have to hope for. Upon it depends fair and courteous treatment from officials and the continuance of good wages. Upon it depends the happiness of twenty thousand families. Upon it depends the comfort of our wives, our children, our sisters and our mothers, and it is the duty of every man who would see its power perpetuated to raise his voice to stay this impending war.

It is possible any thoughtful man can fail to see the coming conflict and the disasters it will bring, if not averted? Is any man so blind that he can not see whither we are drifting? It is idle to say we are better off outside the federation—to proclaim that the federation is a failure. Why have we worked two years to secure a federation and build it up? Why have we spent money to keep our representatives in the Supreme Council? Every candid man will admit that the Supreme Council is the most powerful and effective railroad organization ever brought into existence. Its history furnishes the indisputable fact that it has secured concessions that no one organization could possibly have won. It was feared and respected by every company in the country. It has made mistakes, and serious ones, but that does not prove that we are better off without it. There is but one place for each railroad organization and that is in the federation. (Circumstances demand it and the logic of events will compel it. There can be no side show combinations. No two or three organizations can go together and have a federation of their own that will endure. There can be but one railroad federation as there is but one nation and any attempt at establishing separate independencies will result in failure. But no such attempt will be made. The wisdom of each organization will come to the front. The evils of the laws governing the Supreme Council will be remedied, justice will be done on every hand, the war between organizations will be stopped and railroad labor will reach a still more prosperous condition.

I want to speak so plain that I can not be misunderstood. There is no question that the switchmen in the Chicago yard were responsible for the trouble. No man can deny that the trainmen were patient and long suffering and there will be but few so uncharitable as not to agree that under the circumstances they were justified in doing everything except violate the principles of union labor. There can be no question about the justice of our cause, and if our members, blinded by the outrageous treatment they received, made a mistake and went too far in retaliation, the mitigating circumstances should always be kept in mind. But if, as I believe, a wrong was done in the discharge of all the switchmen of the entire system in order that the real offenders might be reached, there is but one course to pursue and that is to right it as far as possible. There are a few switchmen who deserve severe censure, but that is no cause for hostility toward the many. I know that in some places like Chicago, Kansas City and Denver trouble sometimes exists but I cannot believe that the trainmen and switchmen of the more than four hundred railroad centers covered by our organization are ready to come to open hostility, and I deplore anything which tends to incite them to war, instead of attempting to restore peaceful relations.

I said in the beginning that although there was a difference of opinion in the Grand Lodge, I believe it is an honest and sincere one, and on that subject there is something more to be said. A certain labor paper has strongly hinted, if indeed it has not openly

charged that Grand Master Wilkinson was paid by the Northwestern company to take the course he did. This seems to be accepted by many who are at a loss to understand it otherwise. I believe that little by little I have succeeded in learning the whole inside history of the matter, and I want to say that such a theory is absurd and totally inconsistent with the facts. I have been closely associated with Mr. Wilkinson during the past two years and know him to be guided by the sincerest motives. I can understand how he can make mistakes, but how he could be guilty of such a thing as intimating is beyond my comprehension. If we cannot agree with a man it is no cause for assailing his motives. I hope to see the time come in the labor world when we can differ and be friends. Whoever expects to be credited with honest motives himself, should not suspect the sincerity of another. Whatever he has done in the belief that it was right, and if he made a mistake I believe it was an error of judgment and not an attempt either to gratify ambition or secure personal advantages.

The real question before the Brotherhood is whether it is to take and maintain an attitude of war towards the association or whether we are to seek the means of peace; whether we are to dogmatically maintain that we are right in everything and wrong in nothing, or whether we shall say that although we were greatly wronged ourselves, yet if we made a single mistake we will correct it. For my part I believe there were mistakes on both sides and that the continuance of hostility will lead to fatal results. It is pleasant to think we are too strong and independent to be affected by any trouble, but let us not close our eyes to the facts. We are threatened with external trouble and torn with internal strife as is no other organization in the country. We are under the frown of the labor world on account of the Northwestern affair, and we may expect the censure of the united labor press unless a disposition to desist from feeding the flame of dissension is speedily shown. An organization can no more disregard public opinion or outrage public sentiment and still succeed, than can an individual. Our brotherhood must stand toward the others as a member in good standing does to the brotherhood. No organization is so strong that it can disregard the moral standard by which others measure it. It is madness to defy established customs. Continued success can come in but one way and that is by a recognition of the principles which have brought it to others.

In this crisis let every man take a fair and unbiased position. Let him wait for the whole truth before he comes to a decision. Let every lodge send a delegate to the convention. Let that convention determine the facts, and if mistakes have been made see that they are corrected. Let absolute justice be done. Let it show that it is equal to the emergency and let it prove to the world before it adjourns that the record of the Brotherhood of Railroad Trainmen is still clear and its reputation untarnished.

L. W. ROGERS,
Editor Journal.

The foregoing is an unqualified indorsement of the Supreme Council and as just as it is unconditional and direct.

True, Bro. Rogers says the Supreme Council "has made mistakes," but it is equally true that Supreme Courts have made mistakes. Moses also made mistakes, and the fact that the Supreme Council made mistakes, "does not prove," says Bro. Rogers, that "we are better off without it," and adds: "There is but one place for each railroad organization, and that is in the federation. Circumstances demand it and the logic of events will compel it. There can be no side show combinations. There can be but one railroad federation as there is but one nation."

Bro. Rogers comprehends the situation—he reasons logically and his conclusions will stand the test of analysis.

Only upon one material point do we differ with Editor Rogers, and that is in regard to the responsibility for the trouble on the Northwestern. The switchmen were not entirely blameless, nor were they entirely at fault. It is safe to say that so far as responsibility is concerned honors are easy. The grand officers of the B. of R. T. may recite the outrages perpetrated upon the B. of R. T. by switchmen until they have exhausted the patience of their listeners, and for every tale of woe they unfold they will find grand officers of the S. M. A. A. ready to show that a similar wrong was perpetrated upon their members by the B. of R. T. There have been mutual persecutions, mutual enmities and hatred between the individual members of both organizations. If there was any advantage, one over the other, it was the advantage of numbers and, as we believe, the vanquished should have "taken their medicine without squealing." Suppose the trainmen had triumphed over the switchmen in this factional quarreling, and the S. M. A. A., with the consent of their grand officers, had entered into a collusion with the company to discharge all the trainmen, innocent and guilty, would the grand officers of the Trainmen have submitted quietly and said "so mote it be?" or would they have burned with indignation at the outrage and sought with all their might to resent it and punish those who perpetrated it?

Bro. Rogers does not hesitate to intimate that there were mitigating circumstances to be considered in deliberating upon the action of certain grand officers of the B. of R. T. But the case is summed up in the statement that the grand officials of the B. of R. T. "went too far." In the final act of the grand officers there were no mitigating circumstances. It was the entering into the conspiracy, and the carrying out of the conspiracy that hushed to silence every alleviating, moderating fact in the case.

The great body of the Brotherhood of Railroad Trainmen are not guilty of conspiracy, of treason, of bad faith, though suffering grievously for such acts. The way to emancipation from such burdens is open, redress is easy and may be speedy. The B. of R. T. in convention may be relieved of every burden and embarrassment in a day, and we shall believe, until acts dissipate our faith, that the B. of R. T. will be speedily reinstated in the federation of railway employees.

ITALY has a hammer which weighs fifty tons. When that hammer blows, how much does it blow?

STRIKE ON THE LAKE ERIE & WESTERN RAILROAD.

Strikes by railroad employes are sometimes a necessity, and ought to be approved and sustained by every friend of labor. But at best, strikes are in the nature of calamities, and should be ordered only to prevent greater calamities.

Railroad employes are the victims of numerous grievances, but it is not every grievance that warrants a strike; on the contrary, it is doubtful if one grievance in a hundred demands a resort to such an extreme measure.

The strike on the Lake Erie & Western Railroad had its origin in a grievance of brakemen, in which it was set forth that they were not paid for over time, time lost when on the road, caused by the delay of trains, and for which the men were in no wise responsible.

There can, we think, be no controversy about the justice of the men's demand for pay for such lost time. Once establish the fact of lost time and a popular verdict in favor of the men is certain to follow.

Objections to the course pursued by the trainmen of the Lake Erie & Western Railroad grow out of considerations entirely apart from the justice of their demands. The strike, even if it were justifiable at all, was fatally hasty and inconsiderate. The preliminary steps required for a hearing by the proper authorities of the road were not taken as provided by the laws of the B. of R. T.

A postponement of the strike was requested by the under officials of the road until the matter could be laid before the General Manager, who could grant the requests of the men. This request was eminently reasonable and just, but was denied by the men. Why, it is difficult to determine upon any reasonable hypothesis. It would seem that the men had determined to strike, and that nothing but a strike would satisfy them, and hence they quit work.

As we write, August 25th, the strike is still on, and bad feelings exist. It is reported that at certain places men were engaged to take the places of the strikers, but had been persuaded by the strikers to desist.

We notice that some expressions of dissatisfaction are indulged in because the laws of Indiana prohibit the employment of Pinkerton thugs, the murderous gangs from the slums, so useful to the New York Central, presided over by Chauncey M. Depew, indicative of a purpose, were it not for the law, to disgrace civilization by the employment of such debased creatures.

The latest information on hand is that the President of the road asks the strikers to resume work and that their grievances

would be considered, but as the same proposition had been made by the General Manager and declined by the men, it is difficult to say what the final outcome will be.

A noticeable incident connected with the strike is that the waiting girls at a Lafayette, Ind., hotel, refused to wait on the men who came from Chicago to take the places of the strikers. Such feminine courage is in the highest degree commendable.

As the case stands the railroad involved is losing thousands daily, and the men are losing their wages.

It requires a deal of moral courage for men to confess an error and retrace their steps, but it would seem the right thing in this instance for the men to resume work; then begin over again, do all things to adjust their grievances that are honorable, and then, if a strike comes, have all the rights on their side.

LOCAL AND PERSONAL MATTERS.

We are constantly in receipt of anonymous communications. They do not appear in the *Magazine*. It may be proper to say that "anonymous" means "without a name." A person may desire to write over a *nom de plume*, a fictitious signature, which is well enough, but in numerous instances such writers forget to sign their real name, and such negligence is fatal, since under no circumstances will any communication upon any subject appear when the real name of the writer is withheld. If, therefore, writers from any cause do not wish to be known, they can save themselves a deal of trouble by withholding their contributions.

Again, by order of the convention, purely local and personal matters, such as various resolutions, that have no significance beyond the locality, cannot appear in the *Magazine*. The reasons for this policy have been fully stated and need not be repeated, except to say that matter appearing in the *Magazine* must be of importance to the entire Order.

THE B. OF R. T. CONVENTION.

The Brotherhood of Railroad Trainmen will meet in called convention in the city of Galesburg, Ill., headquarters of the order, Monday, Oct. 5, 1891. Business of great and vital importance will be brought before the convention, which will put to the severest test the wisdom and prudence of its best men.

We do not doubt that the most searching inquiries will be made into matters of vital concern to the order, and that responsibility will be fixed where it properly belongs.

If the investigation is conducted dispassionately, by cool-headed men, the *Magazine* believes it will result in placing the B. of R. T. in its rightful position before the world.

TWO CIRCULARS.

In the *Railroad Trainmen's Journal* for August appeared two circulars signed W. A. Sheahan, Grand Secretary and Treasurer, and S. E. Wilkinson, Grand Master of the B. of R. T. The first is dated June 10th and the second, July 1st.

These circulars give an exhaustive account of the difficulties between the S. M. A. A. and the B. of R. T.

We have read these documents carefully. They are full of purely personal griefs and grievances—of accusations indicative of intense personal hostility—and giving the reasons why such feelings were aroused and continued until a climax was reached.

It is not required that the *Magazine* should reproduce the statements of Messrs. Wilkinson and Sheahan, because every important fact has appeared in the *Magazine* entirely free from personal bias. To thrash this straw over again would be space thrown away.

It has been stated that the Grand Officers of the B. of R. T. and of the S. M. A. A. were not on friendly terms, and unfortunately for all concerned, it seemed to be impracticable, if not impossible, to change the situation, all efforts put forth in that direction proving useless.

Notwithstanding the fact that the two orders named were federated for mutual aid and protection; notwithstanding these mutual obligations were sacred and binding, there was from time to time exhibited a purpose on the part of certain officials to "down" somebody—to "get even"—and to "do up," terms, however *slangish*, having special significance.

Mr. Sweeney, of the S. M. A. A., is quoted as saying that "war is on, and on to stay"—and in reply, Messrs. Sheahan and Wilkinson say in the June circular "that the Brotherhood of Railroad Trainmen will protect its men," and further on we find the following declaration:

So long as the corporation is disposed to treat organized labor fairly we hold that it is the duty of organized labor to respect the rights of that corporation, and whenever organized labor attempts to control the management of a corporation to the extent that it shall compel it to dismiss from its service men against whom no charge can be sustained then it strikes a blow at its own foundation, it sacrifices the good will of the people and it deserves the condemnation of every friend of labor."

[Italics ours.—ED. MAGAZINE.]

These be brave words. They have the right ring. They will be universally indorsed. They appear in Messrs. Wilkinson and Sheahan's circular of June 10th.

It was charged that certain grand officials of the B. of R. T. did enter into a conspiracy with the Northwestern Railroad "to dismiss from its service men against whom no charge can be sustained." In doing this they "struck a blow" at the foundation of organized labor; they committed treason against organized

labor, and by their own language, "*deserve the condemnation of every friend of labor.*"

Grant, as true, everything charged against the S. M. A. A., it in no sense exculpates the officers of the B. of R. T. who entered into a conspiracy with the Northwestern. The wrongs committed by others shed no halo around treason.

Benedict Arnold had been a brave and trusted Continental soldier. He had won the confidence of Washington; he had been badly treated, he claimed, but such treatment, had it been a thousand times worse than he represented it, would not have saved his neck had Washington been able to entrap him.

Messrs. Wilkinson and Sheahan in this June circular, after stating their grievances, say "at last the crisis has been reached," and add, "There is a limit to human endurance; there is a time when forbearance ceases to be a virtue." That depends: There are cases when forbearance *never* ceases to be a virtue—as for instance, a man should never strike his wife—and certainly no honorable man will commit *treason*, whatever may be the character of his affliction: he will commit suicide in preference. Such old aphorisms are often used to extenuate wrong, but they serve a poor purpose in certain cases, and the one under discussion is of that description.

The discussion in the circular of July 1st proceeds very much after the style of that of June. It purports to give a history of the trial, at the conclusion of which the B. of R. T. was expelled from the Supreme Council.

In this history, the B. of R. C. is introduced as the enemy of the B. of R. T., predicated chiefly upon the votes of the Grand Officers of that organization—a matter which there is no cause for us to discuss.

The readers of the *Magazine* may be interested in the *finis* of the circular. It sums up the matter as follows:

"If the Supreme Council ever did a good act for the Brotherhood of Railroad Trainmen, it was on June 29, 1891, when it declared it expelled. Expelled from what? Better say the Supreme Council expelled itself from the support of the Brotherhood of Railroad Trainmen, for this Brotherhood represents more strength in railway service to-day than all that remains of the Supreme Council. As the Supreme Council stands, the Brotherhood of Railroad Trainmen is far better off out of it than in it because the three representatives of the B. of R. C. and the representatives of the S. M. A. A. are avowed enemies and there being but twelve members in the Council and one of the remaining six not entitled to a vote you can see how fruitless would be any attempt to pass a measure that would in any way benefit the B. of R. T. and how easily any measure to injure it would be carried, hence my claim that the best act the Council ever did for the B. of R. T. was to release it from the bonds and give it a chance to protect its members, and this, I assure you it can and will do regardless of what its enemies may say or do."

We have no disposition to enter into any discussion upon the final conclusion arrived

at by Messrs. Wilkinson and Sheahan. They appear to take a *rosy* view of the situation, quite in contrast with that taken by Mr. Rogers, the editor of the *Trainmen's Journal*.

During the connection of the B. of R. T. with the federated orders not one act or vote of the Supreme Council was ever so much as suspected of hostility to the B. of R. T. until the charge of conspiracy was made against that order, a charge that was proven to be true.

It was a serious charge, and in dealing with it, serious work had to be done and serious votes cast, but that these votes were cast by virtue of enmity to the order we do not believe. On the contrary, we believe the members of the Supreme Council sought to punish the conspirators, and having, as we thought, a misconception of what was proper, included the whole order in the penalty.

We shall still believe that prudent, discreet and honorable action will be taken and that in the end good will come out of this purely personal imbroglio.

TALK IN THE RIGHT DIRECTION.

There is a railroad known as the Philadelphia & Reading. Not long since the president of this road was Austin Corbin, the most inveterate and implacable foe of organized labor has met.

In Philadelphia is published a paper called the *Public Ledger*. During the war waged by Corbin on organized labor, if the *Ledger* at any time said a word in favor of organized labor, if at any time it so much as intimated that labor had a right to organize, we do not remember it. If at any time the hostility of Corbin, or the hostility of the dago Bonzano (and other vulgar villains of the Corbin gang) to labor was denounced by the *Ledger*, we failed to notice the fact. Corbin slaughtered every labor organization of employes on the Philadelphia & Reading railroad. He subjected these employes to unparalleled degradation. He did such things under the very nose of the Philadelphia *Ledger* and it never offered one word of condemnation.

We are glad to notice that recently the *Ledger* has changed front, or by some means has secured the required courage to say some very prudent things about organized labor—the organization of working men.

The *Ledger's* article, to which we refer, is based upon a telegram relating to a "strike and a lockout in a great steel rolling mill," in which it was said that "the company insists that it will not recognize organized labor in any manner."

The trouble with the steel rolling mill company, as set forth in the dispatch, is the one that confronts working men in many localities throughout the country. It is born of autocratic arrogance. It is an as-

sumption that workingmen have no rights that capitalists, who are employers, are under any obligations to recognize or respect.

Workingmen, by organizing and by federating their organizations, are teaching plutocratic employers that there is a power in organization which can and will compel recognition, and the press of the country, even the capitalistic press, begins to see it. Says the *Ledger*:

The *Ledger* thinks that at this late day, when the interests and the rights of the working people are engaging so large a share of public attention, and have made such important advance towards securing for those rights and interests the just and full consideration which we believe them to be entitled to—it would be a grave and vital mistake to refuse to recognize organized labor—or to ignore it when any claims or grievances of workmen are brought to the notice of employers in a fair, manly and honorable way. Workingmen, laborers, have an indisputable right to organize into unions or assemblies or federations, or any other style of aggregations: they have indisputable, indefeasible right to deliberate, to combine, at the meetings of their organizations for the protection of their wages, to resist reductions, to request increases, to better their interests and condition, to consider and to endeavor to improve whatever is improvable in their relations with their employers—and to express and urge their views so long as they observe the proprieties of life and the requirements of justice between man and man—and in conformity and in obedience to the law. That right exists inherently among workingmen as it does among employers—and the "company," or the representative by any name among employers, who attempts to ignore it or refuse it, commits, in our judgment, a vital mistake. Progress is too far advanced to admit of that.

Certainly, the *Ledger's* views, as expressed in the foregoing extract, have the right ring and workingmen will applaud them.

The great body of organized workingmen are law-abiding. Not only this, but a vast majority of them prefer to suffer than to strike, and it is this fact which has been used by numberless employers to oppress, degrade and defraud them.

The *Ledger* expresses the opinion that workingmen have the same right to organize as their employers claim, the denial of which, on the part of employers, is a "vital mistake," and says:

That mistake is as vital and, if acted upon, as fatal as is the counter mistake of the workingmen who, refusing to work at the wages offered, or upon the conditions and terms stipulated by employers, undertake, by violence and riot, to prevent other men from working at those wages or upon the proffered terms and conditions. And such workmen commit an equally vital error when they undertake to force upon employers either the employment or discharge of foremen or superintendents—according to their opinions of the merits or demerits of such supervising employes. This belongs to the administration of the trade or business, that must of necessity be left with the discretion of the employer—or else no mill, no factory, no workshop, no mine and no enterprise requiring the employment of many hands can be carried on.

In the foregoing there is manifested a purpose to "hedge," to modify what precedes it, to carry water on both shoulders, to placate employers, etc.

The great body of American men do not engage in "violence and riot," and lecturing them upon such matters is entirely

gratuitous. It does, however, sometimes occur that workmen express a desire to have foremen, those who exercise authority over them, removed, and it is safe to say the knowledge workingmen have of the "merits and demerits" of the "foreman," is vastly superior to the knowledge of others—and when their "discharge" is demanded, it has been found in a vast majority of cases that the good of the service demanded it. Such demands are in no proper sense an exhibition of a purpose to interfere with "the administration," except to the extent that self-respecting workmen will not permit a poltroon to abuse and degrade them. But this aside, we note with much satisfaction the fact that the Philadelphia *Ledger* now champions labor organizations, and we hail the fact as an evidence that in due time the press of the country will be a unit in defending, all along the line, the rights of labor.

THE BROTHERHOOD OF RAILWAY CAR MEN.

Second Annual Convention of the Order, at Pueblo, Col.

The Brotherhood of Railway Car Men, held its second annual convention at Pueblo, Col., beginning August 4th, under the most encouraging auspices, largely due to the members of Pueblo Lodge, No. 15.

Although but two years old, the order has sixty-one Lodges and 4,000 members, figures in the highest degree encouraging.

Opening exercises were held in the Mineral Palace, at 10:30 A. M., and the attendance was large, composed of delegates and their wives and the good people of Pueblo. Several brief addresses were made, but the meeting in the evening in Mineral Palace was a more notable event. The attendance was large. The *Colorado Chieftain* says, "On the platform sat Major W. F. Townsend, F. A. Geiger, chairman of the local arrangements committee; Rev. W. J. Jackson, Master Mechanic Kelker of the Rio Grande; Grand Secretary and Treasurer S. Keliher, Grand Chief W. H. Ronemus and Grand Vice Chief and Instructor W. S. Missomer. Grand Treasurer of the order, S. Keliher, presided, and after a few remarks, introduced Major W. F. Townsend as the principal speaker."

The Major said he had been considering what to talk about to interest and edify the car men and give them "something to talk about," and added:

I said that I would speak to you about the "World on Wheels," and it is a good subject, for this is the age of wheels. The child of to-day says, "I want to see the wheels go round," and this is the result of our civilization. The children of Mesopotamia, of Egypt, and of other ancient lands did not want to see the wheels go round. If they had wanted to they could not have seen them for they did not have them to see. This, however, is the age of wheels. Nothing that we eat, wear, see or hear, but is the re-

sult of wheels. But before proceeding further let me say that all this is the outcome of the civilization planted here by our forefathers and later on I will show that all the great inventions have been made in a narrow strip of land but little more than a hundred miles wide.

The real, elementary principles of civilization are found by tracing history from primitive man down through the ages to the present time. The very first is the desire for something to eat, and to gratify this desire industry is necessary. Industry then is the first element. The next longing is for something to worship, something to satisfy the longing of the inner souls. This second element is found in all classes, climes and countries. Society is the next element; first of the family, then of the neighborhood and finally of the country. Laws are then necessary. Next after society comes the need of a governing head with power to enforce the laws. The fifth element is philosophy. Mankind needs something to think about. The earlier countries, with the exception of the Greek and Magi, hardly approached to this. Art is the sixth and last and in it is shown the result of the development of man by all the others. This grand and noble structure which surpasses anything else in the world, I don't say this merely as a Puebloite, has been reached by art. It is the result of wheels. In order to reach the highest point in civilization these elements must be segregated, which can only be under a democratic government. In Russia, for instance, men are even deprived of the fruits of the invention of their own brain. What incentive is there then for a man to invent or improve his own condition? None of these elements were segregated previous to the time of the Greek empire; but there we find the three—industry, philosophy and art. There were the first philosophers and sculptors and painters. Down to the discovery of America religion was bound in with all the others, for never until our ancestors established the immortal principles of the right of every man to worship according to the dictates of their own conscience had there been religious freedom. Only in America are all six segregated and one of the proudest results of the civilization which our ancestors founded is the patent office which is a mighty force in the civilization of the United States. In the strip of land lying between Boston and Baltimore and extending across the continent most of the important inventions of the age have been produced. Throughout the world American inventions are in the lead and all because American genius is protected by the patent office which gives an incentive to the workers. The world truly is on wheels and there are men here who will see trains going across Alaska to Bering straits and then being taken across on some wheel invented by a Yankee to meet the trains on Russian soil.

The universe is run on wheels and it must of necessity be so. This body can take the credit to itself of seeing that the wheels are in condition to run and without your inspection they could not run. I am glad to meet such a body of men, men who are on wheels and running on to their own success. The railroad companies expect perfect service of your organization and it is just the thing to give them perfect service. As I said before everything is on wheels and I doubt not that the day is coming when we will go to heaven on wheels.

We find space for the full text of Major Townsend's address, because the speaker wheeled into it much that the car men may talk about, particularly the closing sentence, in which he expressed the belief that his audience would finally "go to heaven on wheels." The expression is scarcely orthodox, but the idea is novel and gives to railroading a new hold upon the kind regards of the world, and should it be introduced as a new article of faith, the Railroad Car Men ought to derive special advantages from its adoption.

Pleasant remarks were made by the Rev. .

W. J. Jackson and members of the order, when an adjournment was had.

The purposes of the Brotherhood of Railway Car Men are praiseworthy, and the *Magazine* will be most gratified to publish any fact relating to its continued prosperity.

THE SWITCHMEN.

The position of switchmen in the railroad service of the country, in very many regards, is one of unquestioned importance; indeed, it is a difficult matter to overestimate the serious character of their duties.

Notwithstanding these facts, there exists a purpose on the part of certain scribblers to detract from the gravity of the duties switchmen are required to perform by referring to the men themselves in discourteous terms.

In the first place, the duties of the switchmen are perilous to life and limb—dangers lurk on every side. They are, in all railroad centers, constantly in a labyrinth of tracks where moving cars and trains require the utmost watchfulness and caution, not only to preserve their own lives, but the lives of others and the property of their employers.

A switchman must be a man of courage—no weak-kneed, chicken-hearted man ever made a good switchman. He must be a man not only of courage but of quick perceptions, and one whose fidelity to his duties never permits him for one moment to relax his vigilance when on duty.

We doubt if there is any class of railroad employes so frequently subjected to the wrongs and insults inflicted by conscienceless bosses, since in no other department connected with moving trains are men so continuously subjected to the annoyances of men who, dressed in a little brief authority, make autocratic fools of themselves. As a result it is not surprising that switchmen are charged with restlessness and striking propensities, when, in fact, the same treatment inflicted upon other classes of employes engaged in train service would be productive of calamitous strikes involving entire systems.

In point of robust self-respect and self-reliance, switchmen are not required to doff their hats in the presence of any labor organization in the world. If they err at all, it is in the quick resentment of indignities—a trait of character which, though sometimes carrying men too far, is honorable and commendable. It is a quality which finds its possessors always on the side of the wronged and oppressed, and, it is said, as a crowning glory of switchmen, that there is a smaller per cent. of *scabs* among them than can be found in any other class of railroad employes in the country, and a higher compliment it would be difficult to place upon record.

With such facts in full view, it is difficult to surmise the motives that prompt certain persons to write depreciatingly of switchmen.

We have had ample opportunities for studying the characteristics of the men, and in speaking of them as a body, we have learned to appreciate their fidelity to labor, to all things designed to lift labor to self-respecting independence.

In such traits of character labor finds its surest guarantee of triumph over those who would degrade it to vassalage and compel workingmen to wear the brand of serfs.

UNION MEETINGS.

The term "Union," in its application to political and industrial affairs, is pre-eminently American, to an extent, indeed, which may well be styled phenomenal. Look at the operations of political parties from primaries to national conventions, and it will be observed that from the initial step, at every stage of progress to the day of election, everything depends upon union, compact organization and drill. This union is sometimes derisively alluded to as a "machine" with belts and wheels, and the moment it gets out of order there is consternation in the camp. The point is, if a party hopes to succeed it must be united and aggressive. In the absence of such factors defeat is inevitable. To inspire hopefulness, to augment strength and force, union meetings are held and pivotal issues discussed. Agitation is kept up, discussion goes forward. Propositions are laid down and defended, and thus the work of increasing the power of union goes forward.

We are aware that such illustrations are trite, but they are nevertheless fundamental, and apply to union in industrial affairs. The demand is—and here we refer to employes in the railroad train service of the country—for union, for federated union, and to strengthen the demand and achieve success union meetings are held and purposes discussed.

Why this effort on the part of railroad employes to secure union—federated union? Hugh O. Pentecost, editor of the *Twentieth Century*, said recently: "How to insure the worker the fruits of his labor is the social problem of to-day." * * * "Already the coal miners of this country are reduced to actual slavery." "Already the farmers of the country, as a class, are mere tenants-at-will." Mr. Pentecost starts out by saying:

"Because wage-earners, as a class, enjoy to-day more of the good things of life than ever before, by some it is argued that in their condition there is nothing of which they may reasonably complain. But the question concerning the wage-earning class that is up for discussion, as fair-minded persons will perceive, is not whether they en-

joy more of the wealth they produce than heretofore, but whether they enjoy all they are entitled to."

Here, then, as we have often contended, the supreme question is wages—fair wages, honest wages. It is as Mr. Pentecost says, "How to insure the worker the fruits of his labor." The employer is not disposed to permit the employé, the worker, to have "the fruits of his labor." This is the "social problem," the industrial problem, the problem of problems, and it is the problem that railroad employes engaged in the railroad train service of the country are trying to solve by holding union meetings. If the worker can secure "the fruits of his labor," all is well. In such a proposition the "eternal justice" is on the side of "the worker." If he does not succeed it will be because of his supineness, his cowardice. It will be because in the ranks of organized labor if there is not a scab element there is a scab sentiment, a sentiment which wars against federated union and power.

Every union meeting of railroad employes demands for workers "the fruits of their labor," nothing more. Plutocracy eternally wars against this demand, and strange as it may appear it is not more strange and humiliating than true, in the ranks of labor are found men who are in alliance with the plutocracy, and feel themselves honored when such a plutocrat as Chauncey M. Depew deigns to give them his indorsement.

There are so called labor organs which ceaselessly prate of the "rights of capital." Certainly capital has rights, but it has not the right to enslave workers. Why not commend wolves for devouring lambs? or the man-eating tigers of the jungles? These wild beasts have rights. Organized capital makes war upon workers and reduces workers to slavery. The federated orders of railway employes would reduce this power of organized capital to the minimum—to the lowest point practicable—and the discussions at all union meetings take this shape.

What of it all? Analyzed to the last degree, what is it that is demanded? Simply fair play. This secured, the social problem, the industrial problem is solved. Carnegie don't get rich so rapidly. The Vanderbilts and the Jay Goulds have less money in bank—more moderate incomes, and workers get more of the wealth they produce. To this it is coming, or if not to this, then conditions which will present the naked question: Shall the few enslave the many? Says Mr. Pentecost: "What the outcome will be no man can prophesy. Economic education may be so rapid that needful modifications will be made, or stupid indifference may lull the mass of the people into a carelessness that will be punished by complete industrial servitude—a mighty plutocracy living in unparalleled splendor, with

millions of human drudges providing them with whatever their vitiated tastes may demand; or an increase of the power and impudence of the capitalists may lash an awakened and outraged people into fury that will express itself in bloody and dreadful war." We do not take such a gloomy view of the immediate future, but already conditions are such as to warrant workers to increase their zeal for organization and federation, and multiply union meetings for the discussion of subjects of vital interest.

STEAM POWER.

The *Age of Steel* prints the following:

According to a recent estimate, four-fifths of the engines now working in the world have been constructed during the last twenty-five years. France owns 47,590 stationary engines, 7,000 locomotives and 1,850 steamboat engines. Germany has 10,000 locomotives of all kinds, 59,000 stationary engines and boilers and 1,700 ship and steamboat engines. Austria has 12,000 stationary engines and 2,800 locomotives. The force equivalent to the working power steam engines represent is: In the United States, 7,500,000-horse power; in England, 7,000,000-horse power; in France, 3,000,000-horse power; in Austria, 1,500,000-horse power; and in Germany, 4,500,000-horse power. In these figures the motive power of locomotive engines is not included, whose number in all the world at the beginning of 1890 was 105,000, representing a total of between 5,000,000 and 7,000,000-horse power, about 6,000,000-horse power, which, added to the other powers enumerated above, gives a total of 49,000,000-horse power for the world. A steam "horse power" is equal to three actual horses' power, and a living horse's strength is equal to that of seven men. Therefore the steam engines of the world represent, approximately, the working power of 1,000,000,000 men, or more than double the working population of the world, the total population of which is usually estimated at 1,455,923,000 inhabitants. Steam has accordingly enabled man to treble his working power, making it possible for him to economize his physical strength while attending to his intellectual development.

In the foregoing, we have the population of the world estimated at 1,455,923,000—and the statement, that the steam engines of the world represent "the working power of 1,000,000,000 men, or more than double the working population of the world." Suppose, for easy calculation, we put the population of the world at 1,500,000,000; deducting females, we have 750,000,000 masculines. Tabulated, we have results as follows:

Males	750,000,000
Deduct 20 per cent. of rich, who don't work	150,000,000
Deduct 10 per cent. children under 16 years of age	75,000,000
Deduct 10 per cent. old and infirm	75,000,000—300,000,000
Total working force	450,000,000

By this it will be seen that the *Age of Steel* is approximately correct in its estimates, the steam power of the world being more than double the working population of the world.

It will be noticed that "four-fifths" of the engines now in operation have been "constructed during the last twenty-five years"—that is, steam power equal to 800,000,000 working men, or nearly double the number

of working men of the world—and it will not be contradicted that during another twenty-five years the construction of steam engines will show a still greater rate of increase. What then? Only this; be patient, be vigilant; let the work of organization go on; demand a less number of hours for a day's work. At the rate steam engines are multiplying, in another twenty-five years they will be doing the work of 2,000,000,000 men, and while this increase is going forward there will be an increase of men, required to work or starve. If there is any remedy for such conditions it must be found in reducing the hours of labor.

RAILROAD LEGISLATION.

The States of Iowa and Texas are being subjected to adverse criticism owing to legislative action relating to railroad management within their borders. The *Chicago Herald*, commenting upon the situation, says:

In Iowa railroad legislation has been carried so far that the railroads have cut down their train service to a minimum and are doing nothing within the borders of the state that they can avoid, while railroad construction has practically ceased. Texas is, however, as much worse than Iowa than Iowa is worse than New England. The managers of Texas railroads have come to the conclusion that there is no chance for a square deal there under any circumstances. Texas has a law which provides for the confiscation of any railroad charter unless the management maintains general offices in Texas. The Atchison has a few miles crossing the northwestern corner of the state, but is obliged to maintain that line as an independent railway with a resident corps of officials. For the same reason the Gulf, Colorado & Santa Fe, which is owned by the Atchison, is operated by a Texas staff. It is estimated that this law costs the Atchison \$750,000 to \$1,000,000 yearly.

The trouble between railroad magnates and states lies chiefly in the fact that the magnates, as soon as their charters are granted with all the valuable franchises which their charters guarantee, totally ignore state authority and set up the claim that the people have no rights that they are bound to respect, and if they, the people, find fault it is due entirely to their ignorance or cupidity, or both; that it is a war upon capital deserving ceaseless reprobation; that the people are incompetent to manage their own affairs and require the guardianship of the aforesaid magnates.

On the other hand, the people are assuming to know their own business. They, too, are students of finance and economics, and they are delving into the mysteries (?) of railroading and propose to be heard.

The *Herald's* statement, that it costs the "Atchison" from \$750,000 to \$1,000,000 a year to obey the law, has the appearance of exaggeration—and few there are who will believe the story—and the other statement, relating to Iowa roads has all the earmarks of bluff, the position of the roads being that of direct antagonism to the authority of the state.

The theory put forth is that railroads are of incalculable benefit to the country, and the declaration is, upon general principles, admitted to be true, but it does not follow, because the general proposition is admitted, that there are not numerous instances where great wrongs are perpetrated and require correction; as, for instance, the government acted wisely in granting pensions to Union soldiers, but subsequently it appeared that attorneys who prepared the papers to enable the veteran to obtain his rights under the law, were ceaselessly victimizing the soldiers, hence the law restraining the greed of the legal sharks. Like the statements of average wages of working men, it sounds well for the employer to say, "average wages paid by me are \$2.50 a day," and thus it happens that the poor fellow who receives seventy five cents a day, by which his family is kept on the ragged edge of starvation, is overlooked. If, therefore, railroads are a "great blessing," Iowa proposes that some of the benefits shall fall upon the people of that state, as well as upon the gentlemen who receive dividends upon watered stock and mortgage bonds. In other words, the blessings are not equitably distributed.

The farmers who "feed the world" have become impatient. The roads were built to aid them, not to rob them, and they are demanding such rates of transportation as will enable them, at least, to hold their own. For this they are making a valiant stand in Iowa and Texas. In fact, throughout the country. It seems rational and natural.

The assertion that the railroads of Iowa have cut down their train service to a minimum and are doing nothing within the borders of the state they can avoid, is indicative of a spirit totally at war with things of good report. It is virtually saying to the people of Iowa, "If you enact what we deem unwise laws, you shall pay such penalties as we may choose to inflict." And according to the *Herald* the penalty so far is the reduction of the "train service to a minimum," that is to the lowest point practicable. What objects have the railroad magnates in view by the adoption of such a policy? Is it not designed to intimidate the people? Does it not say "change your laws or take such penalties as we may choose to inflict?" It is a repetition of the arrogance of the national banks when they gave Congress to understand if it passed certain laws, they would create a panic. Is it not the outcropping of plutocracy clearly defining its purpose? Verily.

ELECTRIC fans in passenger coaches is a new thing, and one of the best things railroad officials ever did for tired and sweating mortals.

ANNUAL CONVENTION OF THE B. OF R. C.

The Brotherhood of Railway Conductors will hold its Third Annual Convention in the city of Louisville, Ky., commencing September 21, and the indications are that it will be an event of commanding importance to the order.

The history of the B. of R. C. is unique. It came into existence by virtue of the prevailing demand for protection, which the O. R. C. had failed to recognize. Conductors had been badly treated and there was little or no redress for their manifold grievances. In such facts we have the cause of the origin of the B. of R. C., and its phenomenal growth attests the necessity for the organization. Geo. W. Howard, the Grand Chief of the B. of R. C., is a man of indomitable energy. His experience in practical railroading exceeds that of any other Grand Officer of any of the orders of railway employes. His zeal for the welfare of railroad employes is always active; it never flags; it knows no change. Experienced, energetic and sympathetic, he exerts commanding influence and on the rostrum his power is universally acknowledged. Under his administration the B. of R. C. is steadily growing in numerical force. Lodges are being organized and the outlook for the order is encouraging.

Under such circumstances the coming annual convention will be of more than ordinary significance, and everything will be done to make it a success.

The *Magazine* cherishes the hope that the occasion will realize the Brotherhood's most sanguine expectations.

BROTHERHOOD OF RAILROAD TRACKMEN.

We have on our table the Constitution and Rules of Order of the Brotherhood of Railroad Trackmen, in which we find the following Preamble:

To unite the Railroad Trackmen, to promote their general welfare, to protect its members, and their families, when in distress by furnishing financial aid, enough to raise them above the cold charity of the world, such are the aims of the Brotherhood of Railroad Trackmen.

The Railroad Trackman of America constitute a body of men whose connection with railroad enterprises is of unquestioned importance, though seldom awarded by the public its proper place in the service.

We do not doubt that the Brotherhood, under the guidance of Mr. Geo. E. Gunn, its Grand Master, is destined to be of incalculable value to the Trackmen of America. Such organizations, properly conducted, dignify their members, they lift labor to a higher plane and are essential in the maintenance of the right, now-a-days so frequently wrecked. The *Magazine* will most cheerfully render any service in its power for the promotion of the welfare of the Brotherhood of Railroad Trackmen.

\$25.00 FOR KNOWING HOW.

The following from the *Age of Steel* is wonderfully suggestive:

"I paid a bill the other day," said a large manufacturer, "without a murmur, simply because of the way it was worded. My engineer found that his hot water pump would not work, and after pottering at it for an hour concluded to send for a machinist. He bothered with it half a day and concluded it must come apart. I was much annoyed, for that meant the stoppage of my factory for a long time. Before I gave the order to take it to pieces some one suggested that a neighboring engineer be sent for, as he was a sort of genius in the matter of machinery. 'He came, and after studying the pump awhile he took the hammer and gave three sharp raps over the valve. 'I reckon she'll go now,' he quietly said, and, putting on steam, 'she' did go. The next day I received a bill from him for \$25.50. The price amazed me, but when I had examined the items I drew a check at once. The bill reads this way: Messrs. Blank & Co. Dr. to John Smith. For fixing pump, 50 cents. For knowing how, \$25."

"Had he charged me \$25.50 for fixing the pump I should have considered it exorbitant, but 50 cents was reasonable, and I recognized the value of knowledge; so I paid and said nothing."

The lesson the foregoing teaches ought to be of great value to locomotive engine men. The trouble with many of them is, that in certain contingencies they are not masters of the situation, they don't know how. To know how requires study—critical, exhaustive study—without it many a man has lost his position and drifted into obscurity and poverty. To be ignorant of what should be and could be known by application, is fatal to success, and we have seldom seen the fact more truly and convincingly stated than in the incident the *Age of Steel* supplies.

The startling announcement is made that John L. Sullivan, though achieving fame as an actor, sighs for the ring, and will in the near future meet Slavin for \$10,000 a side and the highest purse that any club will offer. It is understood that Slavin is anxious for the meeting. In this it is seen which way our civilization is tending. Spain is still content with bull fighting, and the rich men of Cuba indulge extensively in cock fighting, but in the United States nothing takes better than to train two brutalized humans to hammer faces out of shape—and the "upper crust" put up the money to carry forward that sort of civilization.

MR. JAY GOULD has expressed a willingness to contribute to the curiosities of the Christopher Columbus Exposition, the identical patent mouse trap, with which—his sole capital—he started out in his young manhood, to make a living, and it is quite possible that Mr. Gould can be induced to give an exhibition of lamb-shearing, as practiced in Wall street. In addition to these things, if Mr. Gould would exhibit the syringe with which he injects water into stocks, he would confer a favor entitling him to a brass monument.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

THE FARMER AND THE ENGINEER.

The farmer sat on the topmost rail
Of the fence, 'neath the maple bough,
While his dear old wife, with a big tin pail
Was milking the brindle cow;
And the "yaller dog," 'mongst the barrels and kegs,
Was out in the hen-house sucking eggs.

And puffing away at his old cob-pipe,
At the same time chewing his plug,
He awkwardly gave his mouth a wipe
As he thought of the old brown jug.
But it took all the eggs and the butter too
To get him tobacco enough to chew.

"But where there's a will, there's a way," he said,
"And we'll fill up the jug again."
So he laid out a plan in his crafty head
To lay for the railroad men;
And he patiently watched by the crossing near
For a chance "to squeal" on the engineer.

For a clause in Missouri law is found
That imposes a heavy fine,
If perchance the whistle should fail to sound
For the crossings along the line;
And provides that half of the fine shall go
To any one little enough to blow.

And it chanced that the Number One passed by
With never a toot one day,
But she fired her rockets straight and high;
You could hear it a mile away.
And a grin of triumph spread over his "mug"
As he went to the station to fill his jug.

So the farmer "squealed" on the engineer
For failing to sound the alarm—
Though the roar of a train you can plainly hear
All over his weedy farm—
And the section found in Missouri law
Put a ten-dollar bill in his greedy "paw."

Geo. W. Hall.

REMEMBER THY MOTHER.

Lead thy mother tenderly
Down life's steep decline;
Once her arm was thy support,
Now she leans on thine.
See upon her loving face
Those deep lines of care.
Think it was her toil for thee
Left that record there.

We've forgot her tireless watch
Kept by day and night,
Taking from her step the grace,
From her eye the sight.
Cherish well her faithful heart
Which through weary years
Echoed with thy sympathies
All thy smiles and tears.

Thank God for thy mother's love,
Guard the priceless boon,
For the bitter parting hour
Cometh all too soon:
When thy grateful tenderness
Loses power to save
Earth will hold no dearer spot
Than thy mother's grave.

R. W. B.

WISDOM IN RHYME.

There's danger lurking 'neath the guise
Of many a smiling face,
There's treason sleeping in the eyes,
Where truth we used to trace;
We've deadly foes on every hand,
Who play their hellish pranks,
But, boys, the worst, o'er all the land,
Are those within our ranks.

Gigantic labor reels, to-day,
In anguish on the plain,
Cursed by a fratricidal fray,
Which causes deadly pain
To those who watched the grand career.
United men enjoyed,
Who felt the dawn of justice near,
Alas! for hopes destroyed.

How long, oh Lord, will selfishness
In human breasts prevail?
To-day in sadness and distress
Are orders of the rail:
It ruled instead of wisdom when
Cool judgment should have sway,
And filled a bitter draught for men
To drink for many a day.

Creative brains had pondered long
On how was best to build
A bulwark, which would guard 'gainst wrong,
When e'er a tyrant willed:
A structure which was raised with skill,
Did all their efforts crown,
Till hands, that should protect it still,
Were clasped to pull it down.

A sadness reigns in hearts where hope
Was wont to hourly cheer,
And men around in darkness grope,
Their courage awed by fear.
An open foe with guns afloat
They'd meet in war's array,
A hidden one their bosoms daunt,
And saps their strength away.

For God's sake let us harmonize,
With reason for our guide;
In union is our grandest prize,
In peace we must abide.
Close up our scattered ranks once more,
And in each other trust,
If not, our warring we'll deplore,
When cowering in the dust.

Shandy Maquire.

THE WORLD'S GLOSS.

I am tired of seeing this show and seeming:
I'm weary of it all—
The gaudy dress, the sham, the jest,
The feast, the banquet hall.

I'd give a throne to be alone,
Away from the haunts of men,
From the stare and glare of the so-called fair
In the world where I have been.

My face is masked and I am classed
With the rest of the sordid crew.
Of toilers and spoilers, dreamers and schemers
Who boil in the earth's big stew.

I fain would hide where there is no pride,
Where the purest waters flow;
Where man's a man and where no clan
Of discord one shall know.

I would like to sleep at the willow's feet
As they dip in the waters cool;
I would like to rest 'neath the robin's nest,
(And by my side, for my latest bride,
The brook or the silent pool.)

For, after all, the funeral pall
Is the truest and surest friend;
Though poor or rich, no matter which,
He's with you to the end.

P. M.

Brotherhood of Blacksmith Helpers of America.

EAST ST. LOUIS, ILL., August 6, 1891.

Editor Locomotive Firemen's Magazine:

Please grant me space in your valuable *Magazine* to say a few words to the blacksmiths and helpers of America, in whose ranks the members of your noble organization have many friends, that they may lend a helping hand to uplift them from their downtrodden position.

We are all aware of the fact that the blacksmith's trade is one of the leading trades of the world. It is the blacksmith who shapes the iron and makes the tools that all other trades must use to pursue their avocations. On the other hand, they are the poorest paid mechanics of the present age.

Taking into consideration the skill required to make a blacksmith, the blacksmith's helper stands next, and he too is poorly paid. Why is it that their wages are kept down? I answer, because they are not organized.

Come, you weary blacksmiths and helpers, awake from your slumbers. There is an old proverb, and a true one, "Never too late to mend." Come boys, strike while the iron is hot. There is a heat on the anvil and we must sledge it down. We must strike together or we will never get it down.

This being true, the blacksmith helpers in the city of Chicago, Ill., on the 21st day of June, 1890, organized themselves in a local union, from whence sprang the order known as the Brotherhood of Blacksmith Helpers of America, and at a meeting of the Grand Lodge held in the city of Chicago in July, 1891, the following preamble was adopted:

Believing all who obey the Divine injunction "In the sweat of thy face shalt thou eat bread," we call upon all worthy men of our craft to join us.

We declare to the world that our aims are:

1st. Protection by kindly bearing with each other's weaknesses; aiding with our council erring or distressed brothers, and to exercise at all times our influence in the interests of right and justice.

2d. Hoping and believing that it is for the best interests both for our members and their employers that a good understanding should at all times exist between them, it will be the constant endeavor of the organization to establish mutual confidence and create and maintain harmonious relations between employers and employés.

3d. To secure to our members sufficient leisure in which to develop their intellectual, moral and social faculties, all of the benefits arising from recreation and pleasures of associating, in a word to enable

them to share in the gain and honors of our advancing civilization, are the aims and objects of the Brotherhood of Blacksmith Helpers of America.

E. E. Wallis,

Grand Sec'y and Treas. B. of B. H.

[The foregoing communication has the hearty endorsement of the *Magazine* and we shall hope that the B. of B. H. will have a prosperous career.]

The order ought speedily to be one of the largest in the country. The blacksmith is everywhere. For a community to be without a blacksmith is in the nature of a calamity. The trade is essential to the march of civilization, indeed there is no advancement without iron. There is a great army of blacksmith helpers in America and we shall be glad to see the Brotherhood grow.
—ED. MAGAZINE.]

WITHIN ONE MILE OF HOME.

Lines written upon the death of engineer James Hopkins, of the Lehigh Valley railroad, who had completed his run within one mile, on a passenger train, when he was killed in a collision at Southport Junction, Elmira, N. Y., on the night of July 22d, 1891:

He stood upon his flying steed,
His face was calm and clear;
His look betrayed no thought, indeed,
Of danger lurking near.
His heart was light with happy thoughts
Which to absent ones oft come
Who by their line of duty brought
Within one mile of home.

The signal lights were burning bright
High up on the signal pole,
And Luna shone with waning light
As he neared the fatal goal.
He little thought his time so short,
So near his eternal home;
He little thought, done was his work
Within one mile of home.

Perhaps he thought of those at home
He loved and soon should meet
As the head light on the track was thrown
Almost beneath his feet;
He failed to note the lights were changed
Though the signals brightly shone
Or else the air brakes failed to work
Within one mile of home.

With lightning speed he glided past
The signal lights placed there
To stop all trains from going past
While red shone on the air.
With unslacked speed, a moment to gain,
Alas; too true was shown.
He crashed into a long freight train
Within one mile of home.

The engine turned upon its side
Beyond the signal red
Beneath its ponderous weight betide
The engineer lay dead,
'Twas by a miracle, the fireman
Without a broken bone
Escaped; tell how; God only can;
Within one mile of home.

How sad the sight; yet such is life
That oft waits the engineer,
Who flies along through the darkest night
With death oft lurking near.
Oh God; why should such be his fate—
Though he died without a groan;
They've carried him through the churchyard gate
Within one mile of home.

J. H. Bartholomew.

A NEW SONG—THE OPEN SWITCH.

WORDS BY CY WARNAN. MUSIC BY H. B. ISZARD.

Copyrighted 1891. All rights reserved.

All the summer, early and late,
And the autumn days so drear,
A maiden stood at the orchard gate
And waved at the engineer.
He liked to look at her face so fair
And her homely country dress;
She liked to look at the man up there
At the front of the Fast Express.

There's only a flash of the maiden's eye
As the engine rocks and reels,
And then she hears in the distance die,
The clinkety-clink of wheels,
Clinkety-clink, and a mile apart,
And the fireman seems to hear
The clinkety-clink of the maiden's heart
And the heart of the engineer.

Over the river and down the dell,
Beside the running stream,
She hears the clang of the engine bell,
And the whistle's screech and scream.
Clinkety-clink, so far apart
That nothing can she hear,
Save the clink of her happy heart
And the heart of the engineer.

Even the trembling steed of steel
Seems to understand
Their sweet distress; and seems to feel
The touch of a magic hand.
Clinkety-clink, so far away
In the twilight dark and drear;
But what does the heart of the maiden say
To the heart of the engineer?

The subdued sound of the engine-bell,
As the Roger rolls away,
Seems solemnly to toll the knell
Of the dim and dying day.
Clinkety-clink—there's an open switch—
Oh! angels, hide her eyes.
Clinkety-clink—they're in the ditch—
Oh! hear the moans and cries.

Clinkety-clink—and down the track
The train will dash to-day;
But what of the ribbons of white and black
The engine wears away?
Clinkety-clink—Oh! worlds apart—
The fireman hangs his head;
There is no clink in the maiden's heart—
The engineer is dead.

[As a lyric poet Cy Warman is taking high rank. In none of his productions has the "Sweet Singer of the Rockies" struck a happier vein than in the "Open Switch," copies of which with the music can be had for 50 cents upon application to the *Western Railway*, Denver, Col.—ED. MAGAZINE.]

Addresses Wanted.

T. J. BOYLE.—A member of Salt Lake Lodge No. 178 is requested to correspond with the officers of his Lodge.

JAMES F. McNAMARA.—When last heard from, about eight or nine years ago, was stopping on South State street, Chicago. An anxious mother wishes to hear from him. Address, Mrs. A. McNamara, 72 Liberty street, Danbury, Conn.

A. W. WELCH.—Late a fireman on the Nickel Plate at Conneaut, Ohio. He left there November 1st, 1889, and has not been heard from since. He is 25 years of age, is dark of complexion, about six feet tall and weighs about 135 pounds. His mother, who is an invalid and in poor circumstances, is very desirous of hearing from him. Address communications in reference to the matter to J. S. Schuyler, Lyle, Minn.

Total Disability Claims.

In making application for the allowance of a claim for Total Disability the regular form prescribed by the Grand Lodge, of which a copy has been forwarded to each lodge, should *invariably* be used. It should be remembered that the physician's certificate which appears on the blank *should not* be filled out when the application is forwarded to the grand lodge, as the law provides that in every instance the physicians must be appointed by the grand officers and the examination made under their personal supervision. The face of the application as far down as where the "Grand Officers' Report" appears should be filled out and then forwarded to the grand officers, leaving the reverse side for the physician's report blank. All applications thus received are placed on file and as soon as it is possible the Grand Officers visit the lodge in person where the claim originated and have the applicant examined as the law provides. Many applications are received upon which the report of the physicians is filled out, the examination having already been made. This is a useless expense, as the examination must be made again under the personal direction of the Grand Officers to conform to the laws of the order.

There is frequently delay in having applicants examined, but under the circumstances this cannot be prevented, as the points to be visited are often widely separated, necessitating a great deal of extra travel on the part of Grand Officers whose other duties are so exacting as to allow them only a limited time to devote to the examination of applicants for total disability claims.

Union Meetings.

A great many union meetings are being held under the auspices of our various lodges and some of them are inclined to find fault because the grand officers are not in attendance. It should be borne in mind that the duties of grand officers are very exacting and that, in the nature of things, the demands upon their time are such that they can not possibly accept the numerous invitations they receive to attend union meetings.

It should not be assumed that "the grand officers will be in attendance" unless they have notified the committee to that effect, and even then allowance should be made for emergencies which are likely to arise to prevent them from fulfilling their engagements.

A Corner on the Market.

A wild specimen of the native Virginian entered Staunton the other day and asked credit for some tobacco and sugar at a grocery, promising to pay in six weeks. "On what do you base your expectations of being able to pay in that time?" asked the grocer. "On coon skins," was the prompt reply. "But you may not catch any coons." "Oh, as to that, I've got seventeen of 'em already plugged up in a holler tree, and am only waiting for the fur to git prime!" He got the goods.—*Wall Street News*.

Acknowledgments.

COLUMBUS, Ohio, August 6, 1891.

To the Officers and Members of the B. of L. F.:

DEAR BIRDS AND BROTHERS:—I wish to return my sincere thanks for the kindness shown me during my misfortune, and also for the draft of \$1,500, due me on my disability claim, and furthermore, I wish to thank the brothers of No. 9 for their kindness during my illness.

Hoping the Brotherhood may ever prosper, I remain, always a brother. ARTHUR C. BALL.

PINE BLUFF, ARK., August 6, 1891.

To the Brotherhood of Locomotive Firemen, Lodge 163:

GENTLEMEN:—I desire to return my sincere thanks for the payment of fifteen hundred dollars, the insurance due on the policy held by my late husband, Frank W. Jagemann, who was killed by accident, at Jonesboro, Ark., on May 23d. I also wish to express my appreciation of the kindness and attention shown him at his burial. I have not words to express the gratitude I feel toward your noble Order. May God bless and prosper you one and all is the earnest wish of

OLLIE E. JAGEMANN.

SOUTH KAUKAUNA, WIS., August 4, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I hereby acknowledge the receipt of a draft for \$1,500, the insurance due me on the death of my brother, B. Grey. With heartfelt gratitude I return my sincere thanks to the members of John Hickey Lodge, No. 266, for the many favors shown my dear brother during his illness and for the many tokens of brotherly friendship performed by them after his death. Respectfully yours,

LIZA GREY.

STAPLES, MINN., July 18, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to extend my sincere thanks to Pine City Lodge, No. 81, for their kindness and to the Brotherhood in general for the payment of fifteen hundred dollars (\$1,500) insurance, due me on the death of my beloved husband, E. B. Davenport. Trusting that every member of the Order may be as well prepared to meet their Redeemer as he was, Very respectfully yours,

MRS. JENNIE DAVENPORT.

KINSTON, N. C., July 15, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Accept my sincere thanks for your kindness shown my beloved brother, John R. Cobb, during his illness, and for the honor and sympathy shown by accompanying his remains home. I also thank you for the fifteen hundred dollars insurance, received this day. I love the Brotherhood, and shall always be pleased to hear of their success. God bless you all, is the prayer of a bereaved sister.

SUE V. COBB.

CHATTANOOGA, TENN., Aug. 20, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—We take this opportunity of expressing our heartfelt thanks to Mr. M. W. Manker, receiver, and Mr. J. C. Gilbreth, secretary, of Mt. Lookout Lodge, No. 289, for a draft for fifteen hundred (\$1,500) dollars, the insurance due us on the policy of our dear son, W. R. Clark, who was killed in a collision May 27th. We also desire to thank the members of Lodge No. 289 for the many little acts of kindness and attention during our bereavement. May God in His goodness and wisdom watch over and protect your noble order and especially the officers and members of Mt. Lookout Lodge, No. 289, is the prayer of a lonely father and mother.

T. A. CLARK,
EMMA CLARK.

THE treatise on "Some of the Functions of a Locomotive," by H. A. Luttgens, of Paterson, N. J., is having a wide reading. Among other things the author says: "The stack base damper handle was at first, according to common practice as regards adjustable devices for locomotives, placed under control of the engineer. In this way the usefulness of the damper was determined, but the many duties of the engineer made it impracticable for him to regulate the steam pressure with regularity, therefore the handle for operating the damper is now placed on the fireman's side. It cannot be denied that the damper, to be effective, changes the ordinary methods which an easy fireman on railroad where fuel economy is no object, is not apt to catch on at once, from the fact that changes in methods, however useful, give some trouble at first. The problem for the fireman in this case and the personal question of interest to himself is whether filling the firebox as far as possible at comparatively long intervals and then allowing an intense draft to do a good part of the cleaning of the fire for him, will be less labor than to maintain a light fire by the regular use of the damper, a diminished quantity of coal to be handled and a more regular use of the ordinary appliances for cleaning the fire. In practice the latter procedure, as compared with the first, shows a balance in favor of the use of the damper and we would therefore advise all firemen on engines fitted with the variable stack base damper to make proper use of the same and thereby insure personal comfort and saving to the railroad company."

The pamphlet is of special interest to firemen, and can be obtained by enclosing a postage stamp to the author, H. A. Luttgens, Box 131, Paterson, N. J.

FEW persons realize that there are in existence and frequently in circulation thousands of scarce coins, which are wanted by numismatists and museums, and for which high prices are paid. In the large cities are established dealers who handle these rare pieces of money, buying from the public wherever they can and selling to the fanciers of such things at a fair profit. The largest business of this kind is done by a Boston dealer, Mr. W. E. Skinner. He advertises extensively and employs several clerks in the attention of his correspondence. This gentleman buys over nine hundred different kinds of American coins, to say nothing of the almost unlimited number of foreign specimens. Firemen have excellent opportunities to honestly add to their income by keeping their eyes open for such kinds as are wanted by the dealer. Their wives and children can also become interested in the hunting of coins and may thereby earn pocket money easily. Some people have found coins worth as high as a thousand dollars, and frequently the newspapers cite instances where persons have picked coins out of their change which have proven to be worth from a few cents to several dollars over par value. Further particulars regarding this coin business can be obtained by writing to the above named dealer, whose establishment is at 325 Washington St., Boston. When you write, mention this journal and enclose stamp for his reply.

T. FISHER UNWIN, the London publisher of the *Century Magazine*, has completed arrangements with the ARENA PUBLISHING CO., of Boston, by which he will be enabled to bring out in London an English edition of Mr. Hamlin Garland's remarkable volume of Western stories, entitled "Main-travelled Roads."

A little Baggy street boy begged his mother to lend him her cutting board.

"What do you want it for, Eddie?" she inquired.

"I'm goin' to be married, and keep house, an' I want it to set the table for my wife."

"But your wife will not like to eat her dinner on a board," said his mother.

"Won't she?" answered the boy. "Then she's too pertikeler for me." And he went to housekeeping in a corner of the sitting-room on his own account, without the imaginary wife.—*Detroit Free Press.*

HANNA.

Allus the way with the wimmin fokes—
Prouder'n Lucifer;

'Twas that-a-way with my second wife.

An' it was the death of her.

She never gimme a minnit's peace—

She tuck it inter'er head

She wanted to live in Tompkinsville—

An' "be somebody," she said.

An' so I swapped the ol' farm off

An' went an' moved to town;

But we hadn't got reely straightened up.

Before the house burnt down—

Yis—Yis-sir-ee, the house burnt up

'Fore we'd got settled down.

'Twas dreadful sudden; fust I knowed

In the middle of the night

The neighbors was hollerin' "Fire!"

An' everything was a-light;

An' there before the lookin' glass

Wus Hanner a standin' still—

Her mouth chuckful o' hair pins—

A primpin' fit tew kill.

Sez I, "The house is all a fire—

They haint no time tew spare—

Gosh darn-all-fish-hooks, Hanner.

"What air you doin' there?"

"Hold on," sez she, "I caint go out

'Till I've hid up my hair."

Sez I, "Oh, Helen Blazes!

I'm gettin' toasted broown!

Come, git right couter this winder

Before I sling ye deown!"

Sez she, "How kin I—without my hoops—

B'fore all the folks in town!"

Wall, there she stuck like a pup to a root.

Or a coon in a holler tree.

Dancin' an' yellin', "I caint go deown

A-lookin' the way I be!"

An'—I jumped out, an' the roof fell in.

An' that wus the last I see
of Hanner.

SIMILARITY OF PROVERBS.

Old Sayings Which are Common to Many Countries.

Examples of ideas which seem to be indigenous to all countries occur to the mind in bewildering redundancy. "One swallow does not make a spring," we find alike in English, German and Russian. In the Sunny South it takes the form, "One flower does not make a garland." In Italy we find, "He who grasps all, less gets;" in France, "He who embraces too much binds badly;" and in our own country, "Grasp all, lose all." Our "Birds of a feather flock together" is represented by the Italian "Every like covers its like;" the Greek, "A comrade loves a comrade;" the French, "*bui se rassemble s'assemble*." Plato declared more than 2,000 years ago that "A beginning is half of all," and has found an echo in our "What's begun is half done," and in the Italian, "Who commences well is at the half of the task."

There is a true Oriental ring about such proverbs as "Among the sandal trees are deadly serpents," "Rivers have lotuses, but also alligators." It is needless to suggest the Western correlatives. "By a number of straws twisted together elephants can be bound," is again only the Indian form of the Scotch, "Many a little makes a mickle."

The Greeks, wishing to cast doubts upon a man's probity, declared him to be "A sheep with a fox's tail," which answers to our "Wolf in sheep's clothing, and the French "*Il fait le bon apotré*." The familiar "*Finis coronat opus*," has passed by literal translation into French and Russian. "All's well that ends well," bears a strong resemblance to the German "*Ende gut Alles gut*." There is a lengthy Oriental proverb, "Let a cur's tail be warmed, pressed out straight and swathed with bandages; if released after twelve years it will nevertheless return to its natural shape."

It is easy to trace the similarity of idea in our "You cannot make a silk purse out of a sow's ear." "Man proposes, God disposes," appears in the German, while in the Russian it takes the form, "God makes the crooked arrow straight." "Charity begins at home," in Russian assumes the more graphic and suggestive form, "One's own shirt is nearest to one's own body."

We discourage carrying "Coals to Newcastle," the French deprecated taking "Water to the river." We "Drink as we brew, or would if we could;" the French, "Sleep on the bed as they have made it." The old Athenian was as much concerned to see a bull in the city as we are when that quadruped appears in a china shop. With us "Still waters run deep;" in Russia they "Swarm with devils," a much more vigorous figure.

SERVANT GIRL WORTH HAVING.

How She Succeeded in Delaying the Dinner Until the Bread Arrived.

A lady from Kansas who was visiting a family on Walnut street, West Philadelphia, a week or more ago, told a wonderfully clever story of a woman's wit, says the Philadelphia Press:

"When my husband was a candidate for the state senate we lived on a farm two miles from our nearest neighbor, and four miles from town. One day, just as we were sitting down to dinner, a wagon drove up containing four of my husband's political friends. They were influential and expected to dine with us. To my horror the Irish maid who lived with us informed me, after they had all assembled, that there was just bread enough for our own dinner, and there was no flour in the house for biscuits. Here was a terrible and unusual quandary. Four able-bodied men, and bread enough for only two of them. Only a woman with her husband's interest at stake can fully appreciate my feelings. I called my oldest son out of the room, put him on a horse, with a bag over his arm, and told him to ride at a gallop to Mrs. B——'s, our nearest neighbor, and borrow all the bread she had, explaining my predicament. As Bob rode away my

servant, Mattie, said: 'Sure, mum, the bread will all be gone intirely before the lad reaches B—'s. But just lave it till me, mum,' she added, with a grin. 'Don't worry yer swate sowl about it, we'll have it in time.'

"I went back to the dining-room and my heart dropped as I saw that only four or five slices of bread were left on the plate, though there was an abundance of meat and vegetables. Suddenly Mattie's head was stuck in the door, and in a voice of consternation, with terror written on her face, she fairly yelled: 'Plaze, mum, the shtable's on fire!'

"In an instant the dining-room was deserted. Our guests sprang to their feet, and, headed by my husband, rushed from the room. Sure enough there were volumes of bluish smoke pouring out of the stable door and through the cracks in the boards. There was a frantic rush for water-buckets and the well, and a long chase out to the barn. But somehow Mattie was there first with a bucket of water and had the fire nearly extinguished by the time the others arrived. It took fifteen minutes to get order restored and by that time Bob had arrived with the bread. Mattie had started the fire in an old vinegar barrel with some straw. It was a risky piece of business, I thought, until the sharp-witted girl told me that she had dampened the straw so that it would make a heavy smoke, and afterward had covered the barrel with pieces of loose boards thoroughly dampened."

Are They a Failure?

Are labor organizations a failure? This question is asked by many within the ranks this hot weather when slim attendance and a backsliding membership is a feature of the hour. If by the question is meant will all men eventually enroll themselves solidly in the organization of their trade, craft or economic opinion the answer must be yes. And when we ask whether the labor organizations have caused a great revolution in thought, law and custom, we must answer, yes. Laboring men do not now join organizations because times are better. An unerring indication of the increase in national prosperity is found in the falling off of interests and attendance in labor unions and assemblies. With each rush to a common center of organization comes eventually better wages and more consideration for the employed. The masses of the workmen always send forth a small, powerful contingent of intelligence; who, by their better lights learn that radical political changes are necessary to the bettering of the condition of society, and that result was the outcome of the great wave of organization that reached the height of its existence in 1885. Behind it have come the labor philosophers,

who have delved into the politics of the day and made an army of independent voters, who threaten the old political organizations with extinction if they do not produce corrective legislation. It is the revolution that is directing the fight against the tariff to-day and compelling both of the parties to legislate seemingly in labor interests. Labor organizations are not a failure.

Potential Power of Wage-Earners.

[Chicago Daily News.]

A striking showing is made in a recent number of the *Financier* of the potential power possessed by the wage workers, but not utilized, in the financial concerns of the country. Throughout the north the wage-workers are the heaviest depositors in all the larger cities. It is their money—the slow, steady accumulation of surplus earnings—that, under the control of able men, moves the wheels of trade and commerce.

In Boston the deposits of wage-workers runs up into the millions; in all the manufacturing towns of New England and the Middle States it is shown that there are vast sums invested by wage-workers bringing them in returns of from 3 to 6 per cent., but yielding the financiers who handle these investments still greater profits. Philadelphia has its banks filled from the pockets of 300,000 wage-earners, and Pittsburg has \$25,000,000 loaned to its monetary managers by the toilers in mills and factories.

There is no natural or insuperable obstacle to the owner reaping this benefit, which now goes to the support of the middleman. With the advance of education and the development of intelligence this great army will take the control of this enormous financial power into its own hands, and will then be able to compete on something like equal terms with the monopolists, trusts and syndicates now living largely upon the use of the money of the wage-earner.

In Comparison Vanderbilt Shrinks.

It is remarked in connection with the Vanderbilt charitable bequests that Stephen Girard left the bulk of his \$7,500,000 estate to charities in and around Philadelphia, and for other good purposes. The Astors gave to the Astor Library \$1,000,000; Johns Hopkins gave \$3,000,000 to found a great school; Leland Stanford \$10,000,000 for a similar purpose; Ezra Cornell \$2,500,000 to Cornell University; Asa Packer \$3,000,000 to Lehigh University; J. C. Green \$1,500,000 to Princeton College; James Lick \$4,000,000 in the name of benevolence, and James H. Roosevelt spent \$1,000,000 in founding Roosevelt Hospital in New York. The Peabody fund, the Slater fund and Peter Cooper's gifts are well remembered.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

SEPTEMBER, 1891.

Assessment Notice for September.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., September 1, 1891.

ASSESSMENT No. 23, \$2.00.

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 470. Lester S. Brown, of Red Mountain Lodge, No. 339, died from injuries received in Collision, May 18, 1891.

CLAIM No. 471. Dwight M. Mitchell, of Grand River Lodge, No. 265, was run over and killed, June 15, 1891.

CLAIM No. 472. John Long, of Hinton Lodge, No. 236, was declared totally disabled by loss of hand, June 17, 1891.

CLAIM No. 473. Martin McNertney, of Three Bros. Lodge, No. 235, died of Typhoid Fever, June 17, 1891.

CLAIM No. 474. Wm. J. Kelly, of Red River Lodge, No. 8, was killed by falling under train, June 19, 1891.

CLAIM No. 475. John B. Welty, of Emporia Lodge, No. 33, died from injuries received by Railway accident, June 23, 1891.

CLAIM No. 476. Roland J. Bruce, of Midland Lodge, No. 147, died of Malignant Carbuncle, July 1, 1891.

CLAIM No. 477. Max Zelle, of Charter Oak Lodge, No. 285, was killed in Collision, July 2, 1891.

CLAIM No. 478. Robert Martin, of Saratoga Lodge, No. 209, died of Inflammation of Bowels, July 5, 1891.

CLAIM No. 479. Everett McCormack, of West End Lodge, No. 18, died of Congestive Chills, July 8, 1891.

CLAIM No. 480. Wm. Griffiths, of Fairmount Lodge, No. 333, died of Pneumonia, July 12, 1891.

CLAIM No. 481. Michael Flaherty, of Sprague Lodge, No. 133, died from Injuries received in a Wreck, July 13, 1891.

CLAIM No. 482. Wm. S. Dye, of West End Lodge, No. 18, was run over and killed, July 14, 1891.

CLAIM No. 483. John H. Selby, of Vigo Lodge, No. 16, was declared totally disabled by Progressive Spinal Sclerosis, July 15, 1891.

CLAIM No. 484. August Preckwinkle, of Federation Lodge, No. 122, was declared totally disabled with Pulmonary Hemorrhages, July 15, 1891.

CLAIM No. 485. Alex. Roberts, of Mineral King Lodge, No. 129, was declared totally disabled with Locomotor Ataxia, July 15, 1891.

CLAIM No. 486. Thos. E. Kelton, of Washington Lodge, No. 13, was declared totally disabled with Cerebro-Spinal Irritation, July 18, 1891.

CLAIM No. 487. Jno A. Hudson, of Friendly Hand Lodge, No. 201, was declared totally disabled by burns sustained in a wreck, July 18, 1891.

CLAIM No. 488. Lucius J. Hammond, of Albany City Lodge, No. 230, was declared totally disabled with Chronic Asthma, July 20, 1891.

CLAIM No. 489. James Damant, of Star of The East Lodge, No. 118, died of Consumption, July 23, 1891.

CLAIM No. 490. Louis T. Marold, of Deer Park Lodge, No. 1, was declared totally disabled by Anchylosis of shoulder, July 25, 1891.

CLAIM No. 491. Chris. Ketterer, of Falls City Lodge, No. 103, died of Typhoid Fever, July 29, 1891.

CLAIM No. 492. Geo. C. McKinley, of Old Kentuck Lodge, No. 104, was killed in Collision, July 30, 1891.

CLAIM No. 493. Wesley G. Browne, of Congaree Lodge, No. 427, was killed in Collision, July 31, 1891.

CLAIM No. 494. Fred L. Eaton, of Vandalia Lodge, No. 405, died of Typhoid Fever, August 6, 1891.

CLAIM No. 495. Charles Colborg, of Border Lodge, No. 32, died of Consumption, August 6, 1891.

CLAIM No. 496. Asher N. Hicks, of Hoboken Lodge, No. 354, was killed by being Crushed Between two Cars, August 11, 1891.

CLAIM No. 497. Thomas Brown, of A. G. Porter Lodge, No. 141, was killed by Railway Accident, August 11, 1891.

CLAIM No. 498. Joseph J. Hicks, of Three Branch Lodge, No. 304, was killed by Pistol Shot August 18, 1891.

CLAIM No. 499. Edwin B. Messick, of R. R. Center Lodge, No. 31, was declared totally disabled with Anchylosis of Hip Joint, August 19, 1891.

*NOTE.—\$750 allowed on this claim by Second Biennial Convention.

An assessment of Two DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership SEPTEMBER 1ST, 1891, also for all members having taken a withdrawal (limited or final) after AUGUST 1ST, (and for all members who died or were totally disabled since that date,) said remittance to reach the Grand Lodge not later than SEPTEMBER 30TH, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all benefits of the order, as per Section 52 of the Constitution.

Your fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Bound Volumes.

We still have on hand a few bound volumes of the Magazine for the years 1887, 1888 and 1889, which can be had, postage paid, at \$1.50 per volume. Every wide-awake fireman should have these volumes in his library. Address *Locomotive Firemen's Magazine*, Terre Haute, Ind.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., Aug. 1, 1891.

To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement of the Beneficiary Fund for the month of July, 1891:

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all use? Nearly all Brotherhood men wear overalls, and I am making overalls that can't be beat. It won't cost you a cent and will help make a great deal if you'll ask your dealer for the "Brotherhood Overalls" and insist upon getting them. He will handle them if you insist, and when you get them you will be getting overalls as good as can be built. Every garment warranted not to rip. Look for "Brotherhood" on the buttons.

Manufactured by H. S. PETERS, Member Lodge, No. 3, and F. A. E. Division, No. 419, B. L. E. Office and Factory, Hinesdale Street, BROOKLYN, N. Y.

AGENTS WANTED AMONG FIREMEN.

Price List," with illustrations and directions for self-
measurement, mailed on application.
L. E. SEELEY & CO., 25 South 11th St., Phila., Pa.

Alexander's Ready Reference.

For Engineers and Firemen. Broke Down.
What I Should Do.

This book contains all of the items that were in all previous editions,
some of which have been greatly improved. Two pages have been
added to the time and speed tables, also forty-five pages of new items
have been added. Two very fine and costly engravings of the Wes-
tinghouse Automatic and Air Brake Gear have been substituted for the
old cuts, one of which is 9 by 34 inches, showing on one sheet the
whole brake arrangement from the pump on the engine to the rear end
of a passenger car. The new QUICK ACTING TRIPLE VALVE, and the
NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explana-
tions of the operations of all its parts as well as the manner of han-
dling them are given. A diagram of SLIDE VALVE MOVEMENT, 16½ by
18½ inches, accompanies each book, the explanation of which is made
so clear that any person can understand it. It shows EVERY PART OF
VALVE MOTION, from the eccentric to the steam chest, as well as the
manner in which steam is admitted to and discharged from the ports
in the cylinder. It shows the piston also and everything connected
with it. There are also three large engravings of engines, making five
in all, in a pocket in each book. The whole work without doubt con-
tains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier un-
derstood by railroad men, than any other book now in print, because it
is written in the same manner that railroad men talk to each other, and
by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE.
KNOWLEDGE FOR BREAKING DOWN AND REPAIRS OF EVERY KIND THAT IS
LIKELY TO OCCUR on the road are given in language familiar to
every engineer or old fireman, also the BEST PRACTICES FOR REPAIRING.
A careful study of the principle items of the old editions has qualified
very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their in-
terests to me say in substance, "I would not have been promoted without
it," or, "It put me on the right side." The book is very valuable to
MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive
FIREMEN ASKING FOR PROMOTION. Every CONDUCTOR and BRAKEMAN, as
well as Engineers and Firemen, should become acquainted with the
workings of the Air Brakes now in use. One hour careful study of this
description of the operations of the Westinghouse Automatic and Air
Brake will qualify any interested person for examination on that sub-
ject. This item has been recently added to the edition. No books sent

CUSHMAN'S MENTHOL INHALER CURES CATARRH.

Endorsed by the Highest Authority of England.

DEAR SIR:—The Inhaler came in due course of mail, and I am enthusiastic over it. I am satisfied that it will effect an ultimate cure in my case of catarrh and asthma. I shall recommend it to all my friends. Since ordering the Inhaler I have received a copy of Browne's great work, "Diseases of the Throat and Nose" (3d ed.), and I find on p. 558, that he discusses quite fully different remedies for catarrh, etc., and closes by giving Cushman's Menthol Inhaler his unqualified preference in terms of highest praise. He says that he has used it for several years in the Central London Throat and Ear Hospital, and has achieved better success with it than with all other remedies combined. Such an endorsement is worth more than a deluge of old-lady certificates of cure, etc.

DR. W. W. GATEWOOD.

DEL RIO, TEXAS, Dec. 30, 1890.

From the Hon. Ira Mayhew, Detroit, Mich.

DEAR SIR:—I have been a sufferer from catarrh for twenty years. During this time I have consulted a number of physicians (some of them specialists), and tried various remedies, with only partial relief for a time. About two months ago your Menthol Inhaler was brought to my notice. From the benefit I have received from it I consider it an efficient catarrh remedy. It also improved my hearing which had become dull.

IRA MAYHEW.

Head Colds, Hay Fever, Sore Throat, Asthma, Bronchitis, Headache and Facial Neuralgia, as well as Catarrh, yield like magic to the soothing and antiseptic properties of inhaled Menthol. The Inhaler in a neat pocket case costs 50 cents and lasts a year. 1,000 treatments for 50 cents and every one a pleasure to take. Try an Inhaler a week and if not entirely satisfactory return it to me and I will refund your money. At druggists or sent direct by registered mail—same price.

PRICES REDUCED.

**BAKER'S
TRIPOLINE**

THE BEST METAL POLISH IN THE WORLD.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Bed rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

THE MATCHLESS METAL POLISH CO.,

38 MARKET STREET, CHICAGO, ILLINOIS.

**\$1,000
FOR AN
OLD COIN.**

and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since, a Lynn, Mass., shoe dealer found a coin worth \$1100. Recently a Scotchman in an Illinois town came across a coin worth \$700. Others have done even better. The *New York World* says: "Many people have become rich by looking after coins wanted by collectors." The *Home Journal* says: "Collecting coins is a very profitable business now-a-days, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices. Write at once for further particulars enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune to you. **W. E. SKINNER, Reliable Coin Broker, 325 Washington St., Boston, Mass.**

IF YOU HAVE ANY COINS dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1808; dates of half dollars before 1804; quarters of all dates before 1808; all dates twenty-cent pieces; all dates dimes before 1809; silver five-cent pieces before 1807; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1837 and 1837; all half-cents; foreign coins, fractional and Confederate currency, etc. For above we **PAY BIG AMOUNTS** over face value, if in required condition. This is a comparatively new business,

**RAILWAY
OFFICIALS AND EMPLOYEES
ACCIDENT ASSOCIATION**

INDIANAPOLIS, IND.
WM. K. BELLIS, SEC.

**THE
WHEEL**

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION**, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Railroaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION** is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroaders longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

The above or engineering book will be sent by mail, postage prepaid, to any address in the world at the publication price. Complete catalogue of new and important engineering books sent by mail free of postage on application.

FREDERICK KEPPY,

Scientific Book Publisher, Bridgeport, Conn.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

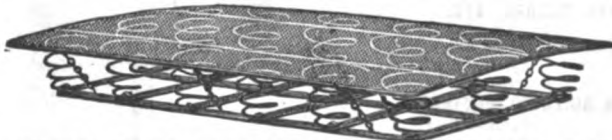

TO THE PUBLIC.—Cleanness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written in the interest of Locomotive Firemen.

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

SOLE PATENTEES AND MAKERS OF

Self-Acting Injector of '87

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the steam or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam, and vice versa.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in.

Descriptive Circular and Price List sent on application to Office and Works.

PHILADELPHIA, PA.

BRIGHT! CLEAR! BEAUTIFUL!

Can there be any reason assigned why a man whose Business brings him in contact with Oil and Dust should not return to his home at the close of his day's labor With Face and Hands as Clean as Those of His Neighbor, the Merchant? No! is the answer to this question, if he uses

Glenn's Sulphur Soap.

One cake of this Efficacious and Harmless Remedy for removing Dirt and Every Species of Discoloration, will perform its work, leaving Hands and Face the perfection of

HEALTH AND PURITY.

Before the healing influences of GLENN'S SULPHUR SOAP, Abrasions of the Skin, Pimples, Sores, and all Unsightly Eruptions vanish, and in their stead appears a skin as

CLEAR AS ALABASTER.

For Sale By Druggists Everywhere.

ARTIFICIAL HUMAN LEGS AND ARMS,

(MARKS' PATENTS.)

WITH RUBBER HANDS AND FEET.

DURABLE IN THEIR CONSTRUCTION,

NATURAL IN THEIR ACTION,

NOISELESS IN THEIR MOVEMENTS,

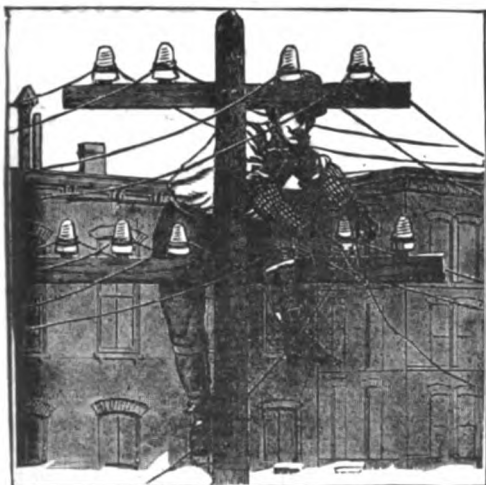

and the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman plying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

ALVAH YOUNG is a living example of the remarkable degree to which rubber feet restore lost members. He is a lineman employed by an electric light company. He lost one of his legs some years ago in a railroad accident. He had a Marks' rubber foot artificial leg applied and since then has engaged in active manual labor earning his livelihood. He will climb a pole as dexterously as any of his associates, hold himself on the cross bar with his artificial limb and place the wires in a thoroughly workmanlike way.

Artificial legs and arms with rubber feet and hands can be constructed from measurements and sent to the wearer in any part of the world. A Treatise of 400 pages with a thousand testimonials and full instructions for home measurements will be sent without charge. Established over 37 years. Over 11,000 artificial limbs with rubber hands and feet in use. U. S. Government manufacturers.

A A MARKS,

701 Broadway, NEW YORK CITY.

ments will be sent without charge. Established over 37 years. Over 11,000 artificial limbs with rubber hands and feet in use. U. S. Government manufacturers.

Good morning

Have you used
PEARS' SOAP?

"I have never come across another Toilet Soap which so closely Realizes my ideal of perfection;

Its purity is such that it may be used with perfect confidence upon the tenderest and most sensitive skin—EVEN THAT OF A NEW BORN BABE."

Dr. REDWOOD, Ph. D., F. C. S., F. I. C.

Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain.

Insist on having Pears' Soap. Substitutes are sometimes recommended by druggists and storekeepers for the sole purpose of making more profit out of you.

Taking a Pill
is often a
happy thought.

Beecham's Pills

are the most wonderful antidote yet discovered for ALL BILIOUS AND NERVOUS DISORDERS.

A Box of these pills, costing only twenty-five cents, constitutes a family medicine-chest. Wind and Pain in and Weakness of the Stomach, Giddiness, Fullness, Swelling after meals, Dizziness, Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Blistches on the Skin, Disturbed Sleep,

Sick Headache, Derangements of the Liver, and all nervous and trembling sensations are cured by using these Pills.

The First dose often relieves in 20 minutes, and apprehension and sickness can be avoided by having a box always at hand wherever you are—in the house, on the train, on the steamer—ready for immediate use.

Prepared only by **THOS. BEECHAM, St. Helens, Lancashire, England.** **B. F. ALLEN CO.,** Sole Agents for United States, 365 Canal Street, New York, will mail **BEECHAM'S PILLS** on receipt of price, 25 cents. Correspondents must mention this paper. Inquire first of your druggist.

Children
always
Enjoy It.

SCOTT'S EMULSION

of pure Cod Liver Oil with Hypophosphites of Lime and Soda is almost as palatable as milk.

Children enjoy it rather than otherwise. A MARVELLOUS FLESH PRODUCER it is indeed, and the little lads and lassies who take cold easily, may be fortified against a cough that might prove serious, by taking Scott's Emulsion after their meals during the winter season.

Beware of substitutions and imitations.

VAN HOUTEN'S COCOA

"Best & Goes Farthest."

"Cap'en Cuttle Knows a good thing, I tell ye; and when He hails a better Drink than VAN HOUTEN'S COCOA He'll make a note On it."

CAP'EN CUTTLE.

PERFECTLY PURE.

VAN HOUTEN'S PATENT PROCESS

increases by 50 PER CENT. the solubility of the flesh-forming elements, making of the cocoa bean an easily digested, delicious, nourishing and stimulating drink, readily assimilated even by the most delicate.

Ask your grocer for VAN HOUTEN'S and take no substitute. If not obtainable enclose 25cts. to either VAN HOUTEN & ZOON, 106 Reade Street, New York, or 45 Wabash Ave., Chicago, and a can, containing enough for 35 to 40 cups will be mailed. Mention this publication. Prepared only by the inventors VAN HOUTEN & ZOON, Weesp, Holland.

SANITARY SCIENCE vs. SANITANIC POLICY.

A writer in the *Iron Age* discussing "Sanitary Science and Industrial health," remarks that "the sanitary conditions of industrial life are of vital and of deepening importance. They are in touch with the health of society and the vitality of the nation. We perpetuate or vanish, develop or die, in ratio with our progress in science. Pure air and a clean skin, enough of oxygen and no stint of soap are among the conditions of longevity, physical vitality and general freedom from vice, discontent and the devil. Civilization inhaling sewage aromas, forgetting to wash its cuticle and loving a dirty shirt, becomes a feast for microbes and bacteria, and is distinguished for its invalids, its demons and its dead."

Sanitary science is not to be derided, or its value underestimated. Soap is in affinity with sanitary science, and opposed to dirt, whatever may be said of the devil—indeed, we are not aware that the devil is an

enemy to soap, or the special advocate of dirt—unless in either or both cases, he can the more effectually establish his kingdom and carry forward his enterprises.

Our readings lead to the conclusion that the devil is quite as much at home in the palace of the millionaire, where hot and cold water is always on tap and soap is abundant, as in the homes of the industrial classes, where such conveniences are not to be found. True it is, that the methods of the devil, when operating in the palace with his millionaire coadjutors are different from those employed when dealing with the victims of squalor who inhale "sewage aromas," the "dirty shirt" brigade, the breeders of "microbes and bacteria" and who because they are the victims of studied injustice, are compelled to live beyond the boundaries where "sanitary science" operates.

In dealing with the victims of millionaire robberies, there is a deal of scientific slush. There is any quantity of toploftical philanthropy which expends itself in the discussion of ways and means to mitigate the sufferings of the poor, but there is never a word said about paying fair wages for work; never a word said about fewer hours of toil. We are told that "modern intelligence and humanitarianism have rightly estimated the ominous significance" of the dangers arising from "sewage aromas, "dirty shirts," "microbes and bacteria," etc., and that unless we are to have a wider application of "sanitary science," more cleanliness, more soap, more fresh air, we shall have more burials, more suffering,

more work for doctors and undertakers, and a more active demand for space in the Potter's fields of the country.

In this connection, it is noticeable that there is great activity, in boards of charity, legally organized, and others that are self constituted, the latter being responsible to themselves, while the former are nominally responsible to the state, but in both cases nothing, or to be strictly just, very little transpires of any practical value. In the self constituted charity organizations, money in sums more or less important, is collected, offices hired and furnished, and several positions are provided with salaries of no little liberality, and the balance sheets show that when the poor receive a dime, the manager obtains dollars, while society at large receives large installments of wind. Nor are matters much improved by the operations of State Boards of Charity. These boards meet, and dissertations are read, in which the various phases of poverty are deplored, but if conditions are thereby improved the fact is not visible to the naked eye.

The one underlying truth, that poverty and its attendant ills are owing chiefly to the ceaseless piracies of the rich, is totally ignored, and as a result a class of subsidized philanthropists are constantly telling American working people how much better off they are than their fellow toilers in lands where they are simply "dumb driven cattle," or, they are putting science to the task of informing the wretched victims how three square meals can be gotten up on an expenditure of *ten cents*, and these bills of fare are practically the outcome of the whole shameful business.

No self respecting man or woman, can read these papers, in which there is a studied effort to reconcile workingmen to cut throat charity, scientifically treated, without feelings of supreme disgust.

Says the writer from whom we have quoted, "Human life is precious, no matter how poorly fed or thinly clad." Who esteems it precious? What evidence have we of such estimates? Where is the solicitude? In what way is it manifested? As a proposition human life ought to be precious, but if men will consult statistics re-

lating to wages, it will be found that there are few things so cheap as human life. So little is it regarded in multiplied thousands of instances, that when wages are demanded sufficient to keep a healthy soul in a healthy body, the demand is denied and human life not only becomes cheap but a ceaseless horror. Says the writer, "Profits are no offset to public health, nor can dividends replace the dead." In theory, profits are not an offset to health, but practically, they are. To make profits wages are reduced; with wages down to a starvation point, little protection can be given to health; there will be poor food, poor shelter and poor clothes. It is not required that dividends should replace the dead workingman, or woman, or child. For every one that goes two stand ready to take the vacant place, and perish in the regulation way. If there is a revolt, a strike, the dead increase, but the methods of destruction, like Tennyson's brook, go on forever. We are told that "Anarchy spawns in bad air," and bad air comes of the methods by which labor is robbed. If the robberies continue, anarchy is inevitable.

A man rearing a family, receiving one dollar a day or less, is almost certain to find shelter where he breathes *bad air*. Hence it is that the robbers of labor, rob men of good air, rob them of health, dwarf and deform their souls and make earth a living hell. Sanitary science is powerless. There is one remedy: pay honest wages. Money lifts—lifts from beastly surroundings into the realms of pure air. Talk is well enough, it is important, but let it be, when poverty, squalor and degradation are the topics, practical. Gush, soft, flabby sentimentality, does not answer the purpose. It has been tried and found wanting in elevating power. It is often nothing more than senile drool, the product of flatulent cranks, who go forth, like christian science doctors, with Ohs! and Ahs! and other exclamations to relieve human suffering but who, in fact, expedite death.

There is a panacea for poverty, a redeeming remedy, pay honest wages and let labor have its rightful share of the wealth it creates. All else is illusive; jack-o'-lanterns, which if followed will lead to disaster.

SLEEP.

Whatever may be said of others, the question of sleep is one of special importance to men engaged in the railway train service of the country. That too little attention is given to it by the men themselves, we do not doubt, and that employers ever consider the subject as one of vast consequence to the public at large, it would be, we think, difficult to establish.

Our attention is called to the subject of sleep by the question, "What really is sleep?" which is going the rounds of the press. Some one says, "What sleep is, no one knows." That is not exactly true, because it refers, we conclude, more to what causes sleep than to a simple definition of the term. Webster says, sleep is "a natural and healthy, but temporary and periodical suspension of the functions of the organs of sense;" or to be still more concise, sleep is "temporary unconsciousness." Hence, we know what sleep is, but the whys and wherefores of sleep is quite another subject. Physiologists have not been idle with reference to investigating the subject, and "many hypotheses have been advanced to account for the phenomena of sleep." And it may be interesting to the reader to read them in this connection. "According to some investigators, sleep arises from mere exhaustion of the sensorial (nervous system), the brain ceasing to act because it is fatigued, and cannot act further until restored by rest. Others, again, refer sleep to a change of the cerebral (brain) circulation, regarding it as arising from congestion or a retarded movement of the blood in the cerebral vessels, especially the veins, or, according to some, from a diminished flow of arterial blood to the brain." Again, it is held that "refuse matter accumulates in the nervous centers in such quantities as to bring about insensibility, which continues until the brain has been relieved of the waste matter by its absorption into circulation." Such theories could be indefinitely continued, but it would not help the reader to arrive at a conclusion more satisfactory than that the brain ceases to act because it is fatigued.

Referring to the approach of sleep it is

said that "it is announced by diminished activity of mind and loss of the power of attention. The senses become blunted to external impressions and we feel an unconquerable desire for stillness and repose. Our ideas grow confused, our sensations become more obscure, our sight fails us, and if our ears still perceive sounds, they are indistinct and seem as though distant. The eyelids close, the joints relax, and we instinctively assume an easy position and fall into a sleep."

Such statements regarding the approach of sleep are known to be absolutely true by every man engaged in the railroad train service in the country, and yet there is not a day of the year that men in charge of railroad trains are not kept at work long after their brains are "fatigued," long after they feel the benumbing approaches of sleep; until they experience the unconquerable desire to sleep.

Is it required to say that at the instant the train man feels the approaches of sleep dangers arise, and that they multiply with fearful rapidity? Is it too much to say that an astonishing per cent. of the railroad wrecks and disasters which horrify the world, should be charged to the account of loss of sleep, to brain fatigue, to the refusal of the brain to act? We do not doubt it in the least, and we feel assured if railroad engineers, firemen, conductors, brakemen and switchmen were interviewed upon the subject, their statements would startle the country. Nor would we omit the testimony of railway telegraphers, in fact, it is quite possible that their testimony would cap the climax of horrors and compel society to demand a reform.

As we write we recall a conversation with an engineer who stands high in the craft, in which he detailed his experience and in which a wreck was directly attributable to a loss of sleep.

He said: "My run was between L. and C. on the ——. I had made forty-six consecutive days work. I had slept as I could catch time, an hour or two at a time. I was utterly worn out; making a home run I registered 'worn out, must rest twenty-four hours,' and went home. I told my

wife I was completely exhausted and would not go out again for twenty-four hours. I went to bed. In two hours I was called to go out. I refused. In less than two hours I was called again, and again I refused, tell the caller I would not go. Again I was called, and unconsciously replied, 'all right,' but I did not get up. My wife aroused me and told me I had agreed to go out on my engine. I was totally oblivious of the fact, but, having given the caller to understand that I would go, I dressed, took my place on my engine, started her, after which I knew nothing until aroused by a crash. Cars piled upon cars, and while I escaped, my fireman was frightfully injured." "What else?" we inquired. "This," rejoined the engineer: "Notwithstanding I had registered 'worn out and must have twenty-four hours rest,' I was called within two hours, and finally, more asleep than awake, I took charge of my engine, and, though my eyes may have been open, I was asleep. The penalty was sixty days suspension."

Does the world require more testimony with regard to what sleep really is, or what it must inevitably lead to when forced upon men in charge of railroad trains? Is not the subject of sufficient importance to attract the attention of railroad officials? Is it not a supreme question? Does it not involve the question of life, not only of trainmen but of passengers? In a word, is it not a question that demands legislative interposition? If not, why not?

It is said that "whatever feats of endurance men may accomplish, they cannot live long without sleeping. Under every condition of bodily and mental suffering, men sleep. Those condemned to die, although they fear their fate, generally sleep the night before execution. Soldiers have been known to sleep when on a long and wearisome march while walking in the ranks, or lying in a bed of stones, or in the mud and water." Certainly, and railroad train men, as conscientious as any class of men in the world, will sleep on duty when the brain is so fatigued that it refuses to act, though every life in the land were in peril. It is the law of man's physical and mental organism and no power can revoke it. It will be obeyed.

"The question," we quote, "is often asked, 'How long can a man live without sleep?'" And the answer is given that "the victims of the Chinese 'walking torture' seldom survive more than ten days. Those condemned to die by the walking torture are given all they wish to eat and drink but sleep is denied them." But are they awake, though they walk? As much so as the soldier who marches in his sleep.

The subject, in connection with the moving of railroad trains, expands to commanding importance. It is worthy of great consideration. Who is to blame, need not here be discussed. Railroad officials should at once inaugurate a needed reform, even though train men, in some instances, might be willing to place life and property in peril to increase their bank account.

PRINCE BISMARCK owns a brewery, a paper mill and several distilleries. He has an income of \$100,000 a year. The government has given him, besides his regular pay for services, the sum of \$1,100,000. He tells beggars of all classes that it is useless to ask him for money. This man of "blood and iron" is of the opinion that education unfits men for service as workmen, lifts them out of the old ruts, makes them independent, etc. He says that "over education had led to much dissatisfaction and disappointment in Germany, but in Russia it had led to disaffection and conspiracy. There were ten times as many people educated for the higher walks as there were places to fill. Further, education was making pedantic theorists and visionaries unfit for constitutional government. It would be madness to put such men in authority. Russians do not know yet what they want. They must, therefore, be ruled with a rod of iron." Referring to the labor question, the Prince ridiculed the idea that workmen would ever be contented, because, he said, "the rich are never contented." One of these days the workmen of Germany will teach such men as Bismarck that they are stronger than standing armies, and though they may not be contented, they will have three square meals a day, with sundry trimmings.

WE notice going the rounds of the press, reference to a few rich men of antiquity, and their style of living. It is said that "Cræsus possessed, in landed property, a fortune equal to \$8,500,000, besides a large sum of money, slaves and furniture, which amounted to an equal sum. The philosopher Seneca had a fortune of \$13,000,000. Lentulus, "the soothsayer" had \$18,000,000. The Emperor Tiberius, at his death, left \$118,125,000, which Caligula spent in less than six months. Cæsar before he entered upon any office, owed \$5,000,000, yet he purchased the friendship of Curio for \$2,500,000 and that of Lucius for \$1,500,000. He gave Servilia, the mother of Brutus, a pearl of the value of \$40,000. Apicus spent in debauchery \$1,500,000, and finding on examination of the state of his affairs that he had no more than \$200,000 left, he poisoned himself because he considered that sum insufficient for his maintenance. One single dish cost Æsopus \$400,000. Caligula spent for one supper \$400,000 and Heliogabalus \$100,000. The usual cost of a repast for Lucullus was \$100,000. The fish from his ponds were sold for \$175,000. Scaurus's country house was destroyed by fire and his loss was estimated at \$4,250,000." There may have been a time when American youth, in reading such statistics would be filled with wonder and amazement, but that was "befo' de wah." Since that little unpleasantness was arranged, facts convince the average census taker that his occupation is perplexing when estimating the wealth of American millionaires. Referring to the figures, it will be noticed that Cræsus, Seneca, Lentulus and Tiberius all combined, were worth only about \$166,000,000, a sum which a Vanderbilt or an Astor could duplicate without inconvenience. As for Cræsus, there are a hundred men in the United State, who, in a game of "draw" could make him, were he alive and disposed to play, take water. As for Senecas, men worth \$13,000,000, all of our great cities have them. California could turn out a dozen or more Lentuluses, and even Tiberius, were he a citizen of New York, would be some millions below first place. Cæsar, it seems, was liberal in purchasing friend-

ships, but Jay Gould, long ago learned that if he wanted a legislature or a judge, to do his bidding, the way to proceed was to go out and buy one or the other, or both, as exigencies might require. As for luxurious living, it may be that the ancients were the greater gluttons, and gave more attention to eating than our modern free livers, but it is safe to say, Vanderbilt's \$10,000 a year chef fixes up dainties for the railroad king's palate that Æsopus never dreamed of. The point is, that in wealth, luxury, snobbery and a' that, there is no occasion for going outside of the United States, for examples that take the cakes.

THE EIGHT-HOUR LAW IN CHICAGO.

The employés of the city of Chicago are required to work only eight hours a day, but it appears that certain employés are permitted to draw their pay on five hours a day, and even for the time named, manage to do a great deal of lounging. These favored gentlemen are, we infer, the clerks in the various departments of the city government. If the city has other work to be done, those charged with its performance do not get off with five instead of eight hours work. It is stated that it is an easy matter to enforce the law, and that if eight hours were demanded of the force, about one-third of the employés could be dismissed, thereby saving money for the city, and the reason why this is not done, it is claimed, is "political influence"—that it would not be popular nor politically healthy to enforce the eight-hour law. But it is safe to say that, were mechanics and laborers to reduce their time to five hours, the power to enforce the law would be applied in a hurry.

The labor world, at least the United States part of it, is demanding the eight-hour day, and it follows, if by increasing the hours of work from five to eight a large number of employés could be dismissed, that by reducing the hours from ten, twelve and fourteen to eight, a demand would be created for more men. The proposition is axiomatic, and the universal eight-hour day is coming.

THE BACCARAT PRINCE OF WALES.

Kate Field's *Washington* deplores "poverty in purple," and says:

Government Civil List, \$500,000; Duchy of Cornwall, \$200,000; Total, \$700,000. That's the income of the Prince of Wales. Then the Princess, whose father, the King of Denmark, was too poor to endow her with worldly goods, was voted by Parliament \$130,000 a year. Good natured John Bull also allows her five children \$30,000 apiece, which makes \$150,000 over again, so that the heir apparent and his family cost the Empire \$1,000,000 annually, or the interest at three per cent—the British borrowing rate—on more than \$33,000,000.

This would seem to be enough to meet the requirements of the Prince of Wales; but, after all, think what is required of him. Divide \$1,000,000 between three residences and seven people, and see how much is left. Marlborough House, London, Sandringham in Norfolk, and Abergeldie in Scotland are enough to deplete a far more plethoric purse than that of England's future King. Review the army of servants and the stables! There are, also, more functionaries and officials than you can shake two sticks at. Here are a few:

- Comptroller.
- Treasurer.
- Equerries-in-Chief.
- Supplementary Equerries.
- Private Secretary.
- Librarian.
- Superintendent of the Household.
- Assistant Superintendents.
- House Chaplain.
- Three Honorary Chaplains.
- Three House Doctors.
- Five Honorary Doctors.
- Three Surgeons and a substitute.
- Dentist.

Such an array of impediments is enough to make one content with love in a cottage. The Prince of Wales is expected to play the part of royalty while the Queen draws the salary. No monarch in Europe, except his brother-in-law, the King of Greece, has so limited a civil list, yet from no monarch is so much asked.

I have not the least doubt that if the Prince turned over a brand new leaf and went in for economy, the very people who proclaim his extravagance would be the first to denounce what would be called the niggardliness of advancing years. Who has a good word to say for the Duke of Edinburgh? He is called "mean"; that settles him even in the estimation of the British beggar. Charles Surface always was a favorite character with John Bull, and whether he be Prince or subject, will have the sympathy of the people. It means what is known as good fellowship, and until human nature changes its skin, the good fellow will be forgiven his debts and everything else—if he be a *royal* good fellow.

Here it is seen that this royal "Baccarat" gambler, this good-for-nothing fellow called the Prince of Wales, this exceedingly me-

diocre spawn of royalty who is born to rule by "divine right," costs the workingmen of England \$2,740 a day, and taking the whole royal breed, \$10,000 a day would not foot the bills. What is true of England is also true of every king cursed country of Europe. It is not surprising, therefore, that the victims of such governments are trying to get away from them, and that those who remain discuss dynamite as a remedy.

Kate Field is of the opinion if the Prince of Wales should become economical and squanderless cash, the English people would denounce him for "niggardliness." Not the people but the snobs, the aristocracy who think of the people as the priest did of his flock when he said, "I am your shepherd and ye are my mutton."

A GRAPHIC PRESENTATION OF THE ISSUES.

In the *Farmer's Voice* we note the following appeal:

Ho, ye Marshall'd Band of Apparitions! whom do ye accuse?—and through the starry silence millions of shadowy lips whisper the same reply:

We accuse a civilization that defies material progress, and forgets God's justice and man's right.

We accuse a scientific savagery—that mouths the atheistic formula of "The survival of the fittest!" and thereby justifies every crime against lowly humanity.

We accuse a nation that scoffs at the Divine moral law which inculcates mercy from the strong to the weak, and help from the wise to the simple.

We accuse a wealth dominated Christianity which banishes the reign of universal charity and justice to an unseen world.

And finally we accuse an order of society that by its practice repudiates the Fatherhood of God and the Brotherhood of man.

Friends! Embattled millions of American toilers are now determined on securing far-reaching national reforms.

This they can only do through a new party of the great plain people, and that party is now in process of rapid organization.

This great popular movement received its first impulse through the needs and personal interests of large masses of oppressed producers.

It was born of the material, but it must be vitalized by the spiritual, if it achieves a high and permanent success.

All class lines between toilers must vanish.

A sympathetic solidarity, where the well-being of each one is the concern of all, must obtain.

The wealth creators of America, "though many as the billows must be one as the sea."

The broad foundation of this new popular party must be a recognition of the Fatherhood of God and the Brotherhood of man.

The day has come in our republic when the governing power in the nation must either ascend to higher ground and sublimer policies than were ever known in the past, or else our entire social, commercial and political fabric will topple down to tumultuous ruin.

The conquering party of the future must first merit triumph—and it can only do so by planting itself on the divine moralities of charity, mercy, mutual helpfulness and brotherly love.

Sordid self-interest, either on the part of men, classes or political organizations, must be kept in a subordinate place, or the new party of the masses will go down in overwhelming defeat.

Such are the ringing words that are caught up on ten thousand times ten thousand tongues and repeated throughout the land. Are they idle words? Are they false or true? Are the people required to heed them?

They are in the nature of seed. They are being sown in soil where they will take root and produce fruit. Is it too soon to inquire what the harvest will be?

SOME years ago the union was in peril. It was saved by union soldiers. Saved by those who survived, not by those who were killed; not by those who were wounded or imprisoned or got sick, but by those who escaped such misfortunes, and marched and fought and conquered. Every time a measure is proposed in Congress to pension soldiers who saved the union the country is reminded of the *value* of the union, the *cost* of the union. When men boast of the union, the flag of the union, the boundaries of the union, the blessings the union confers, they may prudently remember who saved the union. Not the generals, colonels, majors and captains, but the men who carried the muskets. To pension them is simply to pay them, and when they are all dead the country will be so rich that mathematicians will find it difficult to compute its wealth.

We notice that the government does not hesitate to retire officers on pay which enables them to live sumptuously; the hue and cry is set up only when the private soldier is to be pensioned. One of the great daily newspapers of the country, in discussing the subject, remarks: "If when the workingman came home each Saturday night with his wages of \$12.50 for a week's

service the agent of the government stepped up to him and collected 50 cents as his share toward paying the present great pension donations, how long does any one suppose the present pension payments would be continued? The injustice of such immense appropriations would then be brought home so directly to the people that in less than a month's time there would be a revolt against them all over the country. They are tolerated now, not because our people are so insanely patriotic that they are willing to squander their money in this way, but because there is not one man in a thousand who appreciates what the tax is that is imposed upon him." We are not authorized to speak for the workingmen of the country, but assume if they could be assembled in one vast meeting and the question was put, "Shall the private soldier, who saved the union, be pensioned?" it would be carried with such a storm of applause as would demonstrate their patriotism and their appreciation of the services of the private soldier who saved the union.

It is stated that machinery is producing 90 per cent. of the manufacturing labor of the country, the remaining 10 per cent. is performed by men and women and children. In spinning cotton, one machine to-day can do as much as 100 operatives could do two generations ago. A man in Boston, discussing the power of the machinery says that "a little shoe shop in Brocton, Haverhill or Lynn can with its improved machinery turn out more in one day than the 30,000 shoemakers of Paris can by hand. One planing machine can do the work of 50 men with hand tools." The machine is what gives overproduction, and when that occurs the machine stands still until the surplus is disposed of. It is in testimony that during the depression of 1885-6, caused by overproduction, the reduction of wages was 20 per cent. The aggregate daily wages of 1886 was \$8,000,000; 20 per cent. reduction resulted, equal to \$1,600,000 a day. With this amount, if the wages idlers would have earned but for overproduction, the daily loss in wages was not less than \$2,000,000 a day.

INCUMBRANCE OF FARMS AND HOMES.

The eleventh census of the United States will disclose conditions which will tone down the exuberant joy experienced when contemplating the growth of the country in wealth during the last decade, from 1880 to 1890, which is set down at \$22,000,000,000. The census reports have it that there are in the United States 2,491,930 farms and homes occupied by owners and incumbered by mortgages. It will be some time before the actual sum total of mortgages on farms and homes will be known, but preliminary results indicate that the average debt for a farm in Iowa is \$1,283; home, \$719; average for farm and home, \$1,140. If these averages hold good for the union the incumbrance on the farms and homes of the United States occupied by owners is about \$2,565,000,000. The question arises how many families live on farms and in homes that are incumbered, and the statement is made that of the 12,500,000 families in the United States, 2,250,000 live on and in incumbered farms and homes. Again, estimating the mortgaged farms at \$10 per acre, then it is seen that 255,500,000 acres are under mortgage, an area equal to the area of the following states:

Illinois	35,464,900 acres
Indiana	21,637,700 acres
Iowa	35,228,800 acres
Kansas	51,770,240 acres
Michigan	36,128,640 acres
Minnesota	53,459,840 acres
West Virginia	14,720,000 acres
Vermont	6,535,680 acres

254,946,000 acres

The foregoing shows that an area equal to eight sovereign (?) states is mortgaged, with 554,000 acres, which is about equal to the state of Rhode Island, surplus, sufficient to tempt an English syndicate. As has been remarked the outlook is not *rosy* for the men who have got to pay off these mortgages with big interest, or lose their farms and homes, and if paid, the sum is to be taken from the surplus earnings of labor.

In plug, fine cut, cigars and snuff, the people of the United States manage to consume, annually, 310,000,000 pounds of tobacco. And that's one of the ways the money goes.

A NEW YORK paper is moved almost to tears because the poor of that metropolis, when dead, are buried in "unhallowed" Potter's Fields, and asks, "Can anything more melancholy be imagined than the sight of a public burying ground for the paupers of a great city?" Yes. We think vastly more melancholy sights can not only be imagined, but found, in any of the great cities of the country, and nowhere in greater number than in the city of New York. No Potter's Field, where "outcasts are buried," awakens reflections half so horrid as some of the New York tenement houses, where the poor live, work, starve and die, the victims of man's inhumanity. Such places are more repulsive and loathsome, hateful and abominable than any Potter's Field in the world. They are tombs in which the living are buried in filth, where children are born to breathe pestilence and die, places fit only for rats and vermin, as much more disgusting than any Potter's Field as Potter's Fields are more repulsive than Jay Gould's Hudson river parks and play grounds. It does not matter where prince or peasant is buried. Death is a great leveler, and in the banqueting halls where loathsome things feed upon corruption, the pauper is as delicious as the millionaire. What is wanted is not senseless croakings about the dead, any place will do to go back to dust, but ceaseless protests against dens into which the rich force the poor and exact rents, the injustice of which cries to heaven for redress.

STRANGELY paradoxical as it may appear it is nevertheless true, as the *Laster* states, that "people go barefoot because there are too many shoes; naked because there is too much clothing; hungry, because there is too much food; cold, because there is too great an output of coal." Over production closes shops, men cease working, earning and buying. The few who control commodities and products grow rich while workmen grow poorer. When accumulated stocks grow sufficiently reduced to begin work again, workmen are sufficiently reduced to accept any wages they can get, and thus the processes of degradation to the Chinese level go steadily forward.

Money and Its Functions.

AN we say that money is wealth? Let us see. Gold and silver are wealth like every other labor product. Money *per se* is, anyhow, a contrivance with which to facilitate the exchange of wealth. It happens that the production of gold and silver implies a great deal of concentrated labor, and appeals to the mind as the most convenient labor product with which to embody the reality of wealth in the exchange of all other forms of wealth or labor products. Humanity clings with great tenacity to its first impressions, often independent of their merits or demerits. Even in our days many minds can not disassociate those two ideas, wealth, and a contrivance with which to exchange wealth with the least possible trouble. It happens, also, that gold and silver, apart from their adaptability to serve as the reality of wealth in the exchange of wealth, are among the few least useful products in nature. They hardly meet a single absolute need or comfort in life except as mere ornaments, and outside of instruments in exchanges. A long grain of gold and silver dust all over the earth, or of \$5 gold pieces, if we prefer, would not increase the general comfort of humanity by a single atom. A long shower of cotton, wool, or any other useful product of labor would very materially increase human comfort, for some time, anyhow. The illustration is rather silly, but such illustrations are often good to carry certain truths into minds of a certain order.

The fact that money *per se* is not wealth has been proven again and again in the course of human history. Take France in 1796, when she had over \$250 paper money per capita of population. Instead of being prosperous France was then commercially and industrially wretched because of too much money. In 1780 this nation had about \$70 paper money per capita, besides \$4 gold money per capita, and still the nation was far from wealthy. And so with the Southern Confederacy, and many of the nations of South America, etc.

We don't need to object to the circulating medium being sufficient in quantity, only, the quality is at best as indispensable as the quantity. All in human life is more or less subject to a code of morality, of honesty, of ethics.

We can choose between two monetary systems, one consisting of a circulating medium resting on positive wealth, and one resting simply on national credit. The latter requires higher moral perception than the former, on the part of the rank and file of nations. If we want a circulating medium embodied in coins of precious metals, then the face value of each coin should approximately correspond to its intrinsic market value. A silver dollar worth but 80 cents in metal and labor coinage, for instance, is

a dishonest dollar which shall invariably rob and victimize labor, because it will buy only 80 cents worth of bread or shoes.

If we prefer a circulating medium resting on national credit, that is, exclusively paper money, then the volume should be fixed for a certain number of years, to be increased at the end of each specified term, in proportion to population, but not to be increased above that proportion except by a majority popular vote, and then not less than two years should elapse, it seems to me, before that increase takes place, so as not to produce any sudden disturbances in prices and industrial activities conducive to the special interests of any set of men at the expense of the rest. Under such conditions an exclusive paper currency would be strictly honest, strictly ethical. It would give us a fixed measure of values and so a complete commercial and industrial stability.

The price of money is, of course, regulated by the supply and demand, just like every article of commerce. But money is not subject to consumption, like articles of commerce, and appears and re-appears again and again for years and years. That is the only advantage we derive from money. The supply of money being fixed, as per above plan, its demand would adapt itself to its supply. To be sure, under monopoly rule the demand for money is always fixed by the monopolists, because, independent of quantity and quality, money flows where wealth flows, and wealth flows where monopolists make it flow. Without monopoly the demand for money would be fixed by labor, and both wealth and money would flow where labor wanted it. But while monopoly can afford to have an unhealthy monetary system, labor requires a healthy one. Only the spirit of evil can thrive under evil conditions.

Now, let us ask to ourselves, "Can we conceive of any great monopoly exclusively resting on money?" Imagine for a moment an island inaccessible from all other lands. That island contains a Peter, a Paul, and ten Johns. Peter owns all the land in the island. Paul owns all the money, and does not want to bother about any land. The ten Johns own neither money nor land. Who shall control the labor of the ten Johns? My impression is that Peter shall control that labor. And my impression is, also, that Paul's money shall gradually be drained in paying for the needs of life. He will have to buy from Peter, who, through his ten Johns, will raise all the needs of life to be had, and control the markets, and fix prices for all products, since he controls the land, and hence the labor market, too. It is simply a question of time when Paul, himself, shall be at the mercy of Peter, as long as Paul insists upon not controlling any land

with his money, or Peter insists upon controlling all the land himself alone.

Outside of the miser, men only want money for the purpose of obtaining something else to supply human needs, comforts or vanities. The miser alone derives any joy from the mere fact of keeping money in large quantities. It is only when financial disturbances are feared that clear minds try to keep much more money than they may require for their weekly or monthly payments in their business transactions.

Any special surplus is used for the purpose of increasing our revenues, and hence our capacity for additional payments in exchange for additional joys.

From all the above conceptions we can see the fallacy of what some call Money Power.

Money is powerful for good when used in developing healthy industries. Money is powerful for evil when used in evolving some form of direct or indirect land monopoly. When locked up, money is inert. Inertia means incapacity for good and for evil. As an ultimatum land monopoly is the only means through which men can oppress each other. Money can only be an instrument of oppression when used to foster monopoly on land or on land products, and so always land monopoly! Money left unused is just as useless to the monopolist for purposes of oppression as a plow left unused is useless to the farmer for the development of his farm. It seems to me, then, that we are justified in saying that there is no such thing as Money Power apart from its connection with land monopoly. Suppress the latter and the money power, for evil, vanishes like a morning fog under the rising sun of a July day in the tropics!

A monetary system resting on the precious metals is always more or less connected with land monopoly, those metals constituting a very valuable land product. A monetary system resting on credit, on paper money, is subject to the dangers we have mentioned in the historical experiences of many nations, when left to the caprice of legislators. But that system can become perfect, ideal, under the conditions already suggested of a fixed volume for a fixed period, with no proportional increase above that of population every few years, but through a majority popular vote, not to be enforced for two years after, for instance, and thus give time for all industrial relations to adapt themselves to the measure of values. Such a system would lie above all partisan caprices, above any gambling aspirations of any set of men!

As for international balances, we know that they are settled on the basis of the market price of bullion, and our mines contain an abundance of bullion. International commerce, like home commerce, aims at the

exchange of products to be used and consumed for human comfort. In the commercial battles the victory belongs invariably to the nations possessing the greatest amount of intelligence and enjoying the greatest amount of freedom from all petty or paternal governmental interference.

The only solid gift that labor—the people—can derive from human governments is Industrial Freedom. Give them such a gift, and all other gifts and all other joys the people shall receive direct from the Divine Government of the Universe.

José Gros.

Bear It In Mind.

The "power of money to oppress" is its unrestricted power to draw interest while owned by individuals or corporations.

HERE seems to be, in some quarters, an utter miscomprehension or lack of knowledge as to what is the real vital issue between the people and the plutocracy. Many editors of reform papers even seem to be considerably "mixed" in this regard, and are continually clamoring for an increase in the volume of money, who either say nothing about a reduction in the rate of interest, or else contend that in making money more plentiful they will effect a lowering of the rates of usury. In this contention they are wrong, and then again, they are right.

An increase in the volume of money begets an increase in both legitimate and speculative enterprises, which in its turn begets an increased demand for money, which *per se* causes an advance in the rates of interest. Then again, the money lenders or capitalists must themselves, for self protection, increase their rates of interest in the case of an increase of the volume of money. The reason for this is plain—the value of money is its *purchasing power*, and as an increase in the volume of money decreases its purchasing power, i. e., raises the price of labor and its products, the rate of increase must be raised to correspond with the increase in the price of commodities. Six per cent. interest with labor at one dollar per day is better than eight per cent. interest at one dollar and a half per day.

But there is a class to whom an increase in the volume of money means a reduction of interest charges, and not only of interest charges but of principal also. This is the debtor class, or those already in debt for certain fixed sums, at a fixed rate of interest. As an increase in the volume of money means increased prices for the product of their labor, it takes a less quantity of such products to pay both interest and principal than formerly, and this is equivalent to a reduction in the rate of interest and in the principal also.

But the Alliance has in view not only the

rectifying of past abuses and the ameliorating of present evil conditions, but also the building up of a just, humane and equitable system of social and political economy for future posterity; for coming generations. And in the financial features of the grand plan for the emancipation of the human race from industrial servitude, the volume of money is but a secondary consideration. The primal object is to rob money of its power to enslave and oppress, and make of it the beneficent friend and ally of labor, instead of the weapon used in the hands of avarice and oppression to strike industry to the earth.

I wish now to formulate certain propositions, which I earnestly hope every Alliance man and reform editor who reads, may study, comprehend, assimilate and commit to memory.

1st. The American people are suffering from the blighting effects of an all-powerful factor, the Bible name for which is usury, but which, in our more modern nomenclature, is known as interest. This factor is bounded, defined and governed by certain axiomatic and immutable laws, a knowledge concerning which at once suggests the means of escape from its baleful influences.

2d. Eminent political economists, by means of more or less carefully kept tables, have arrived at the conclusion that in the absence of the disturbing influences and ravages of war, pestilence and famine, nations increase their material wealth in a certain fixed progressive ratio. This ratio is generally conceded to be about 3 per cent. per annum for England and European countries, but it is claimed that for the period between 1870 and 1890 in the United States such ratio of increase has been just about *four per cent.* This increase has been called by political economists the "residual increment."

3d. This increase in material wealth, amounting to only 4 per cent., represents both the savings of labor and the earnings of capital. Now interest stands in the same relation to capital as do wages to labor, so that if the rate of interest in America has been equal to 4 per cent., labor has had to be content with a "bare subsistence," while capital has absorbed the total net earnings of both.

4th. If the rate of interest has been more than 4 per cent., then whatever it amounted to above that rate must have come out of the wealth owned and possessed by labor at the beginning of each successive year. When we fully grasp the vast significance of this immutable law, we can clearly perceive why it is that those who own and control the money of the country, under the present system, must sooner or later own everything else.

Let us see if the propositions will "prove out." In 1870 the wealth of the United States was, approximately, thirty-four and a half billions of dollars. At that time labor owned and possessed three-fourths of the nation's wealth, or, in round numbers, twenty-five billions of dollars. In 1890 the nation's wealth had increased to sixty-two billions of dollars and labor owned only one-fourth of the same, or, in round numbers, fifteen billions of dollars. We thus see that labor during the period of twenty years lost two and a half per cent. of the wealth owned by it at the beginning of each successive year, or for the whole period, forty per cent. of the wealth owned by it in 1870.

I have already stated that this net annual product, or residual increment, included

both the earnings of capital and the wages of labor. But it also includes more than this, and in new countries, like the United States especially, it includes very considerable of an uncertain quantity which is neither the earnings of capital nor the wages of labor. I refer to the increase in the value of land, much of such land being unused and unoccupied, so that such increase in value is in no sense the result of labor either aided or unaided by capital. In England where the value of land is much more nearly stationary this *net* annual product, or residual increment, is not nearly in so large a per cent. as in the United States and consists almost entirely of material wealth produced by labor aided by capital. Rates of interest in England, although probably not averaging one-fifth as high as in the United States, are yet just high enough to attain the ends of plutocracy, being just high enough to absorb for capital the total net product of the nation's efforts. It has been many decades since labor in England has possessed any wealth to be absorbed, so the efforts of the plutocrats are simply directed to keeping labor in the same condition of hopeless impoverishment.

In the absence of any reliable statistics to consult, I am unable to say how much of the net increase of our national wealth since 1870 consists of increased value of real estate and so I cannot make the proper deductions on that account. We may, however, reasonably assert this much; if the net increase in our wealth from June 30, 1890, to June 30, 1891, should be 4 per cent., it would amount to \$2,444,837,339. Two thousand four hundred and forty-four millions of dollars. The question to be solved is this: How much of such increase can fairly be said to represent the increase in the value of land and other elements which cannot be said to be the result of labor, either aided or unaided by capital? I have before me a table which gives the *assessed* valuation of all the property, real and personal, in June 1888 at \$22,637,383,298. Of this amount, real estate represented \$15,000,000,000—as nearly as I can determine; some of the states assessing real and personal property in a lump without separating them.

This assessment for taxation was upon a 40 per cent. basis, which makes the actual value of the real and personal property of the United States in June 1888, \$56,600,000,000 in round numbers, and the value of real estate alone, \$37,500,000,000 in round numbers. Now add two thirty-thirds of the sum of \$37,500,000,000 to such sum and we have \$39,772,727,272 as the value of the real real estate in 1890. Four per cent. of this amount would be the annual increase in real estate values, amounting to \$1,590,909,090, leaving as the increase in the value of personal property, the sum of \$853,928,249.

It is impossible for one to tell, without access to elaborate statistics, just how many states assess *buildings* as real estate or how many include them in personal property assessments. However this may be, it is probable that any over estimate in increase of real estate values from that direction is more than balanced by the notorious under valuation of valuable real estate as compared with the value put upon personal property. And then there are millions of acres upon which little or no valuation was put in 1870, that in 1890 are assessed as valuable lands. It is likely that the increase in real estate is under, rather than over estimated. In any event, I am only illustrating a principle. Real estate, however, is popularly supposed to increase in value as fast as money increases at the current rate of interest, or investors would invest their money in other channels. Six per cent. is more nearly the correct ratio of increase in real estate values than is 4 per cent.

Our next inquiry is this: What amount of money invested at 4 per cent. will yield a revenue of \$853,928,249? The answer is \$21,348,206,225. Can we locate that much money loaned out at interest? Let us see. 1st, there is five billions of railroad bonds; 2d, at the very lowest estimate four billions of farm and city mortgages, and the several state, county, and city municipal debts amount to another billion. Then the national banks show two billions of dollars loaned out upon chattel and personal security. It is difficult to tell just how much money at interest upon other than real estate security the state, savings and private banks and loan and trust companies have loaned out, but we are safe in putting the amount at another two billions. Then there are the building and loan associations and various other institutions of that kind. But it is a conservative estimate to put the entire sum of interest bearing securities represented by the foregoing enumerated institutions at fifteen billions of dollars. Then we have water gas and electric light company bonds, all of which represent interest exacted from the people, above the cost of operation and profits to the owners or stockholders. Even the stocks may be said to represent interest bearing securities, as they pay large dividends above the cost of operation, including all large salaries paid to managers, superintendents, attorneys, etc. So also do the express and telegraph companies, and the various trusts and monopolies, including the Standard Oil company and the sugar trust. Yes, it is easy enough to count up twenty-one billions or more of interest bearing securities, upon which people pay an average of—how much? Just 6½ per cent., because 4 and 2½ make 6½. The 4 represents the net annual product of the nation and the 2½ represents the per cent. paid by labor out of the wealth

owned at the beginning of each successive year since 1870. Usury is the leech that is sucking the life blood of the nation's toilers. A short mathematical calculation will prove that in a few more years less than two per cent. of the population, who now own three-fourths of the wealth, will acquire possession and legal ownership of the entire landed and material wealth of the United States.

"The power of money to oppress" consists of its unrestricted power to draw interest while in individual possession and ownership. The only method by which this "power to oppress" can be destroyed is for the people, community or "government" to enter into competition with the individual money lender, and establish a national, legal, current rate of interest by standing ready at all times to loan the people's credit (money) to the individual at a rate of interest so low as that labor shall be left in possession of the wealth produced by it. *No other remedy will suffice.*

And, in this connection, it must be remembered that interest paid by the individual to the community, people, or "government" is not really interest at all, where considered in its relation to the *whole people*. If we pay interest to ourselves as a people, or community, such interest enriches no one individual or corporation, or any set of individuals or corporations, because it is paid to the whole people. Such interest, or all of it above the amount necessary to defray the expenses of the people's banking system, would be used to defray the expenses of the national government, and would relieve the people of just that amount of other taxation. To be brief, a system of government loans direct to the people, means *money at cost of issue—FREE MONEY*. Under such a system labor would get the product of its efforts, and would find itself, at the end of each year, in possession of the product of the nation, less the amount consumed during the year.

Let us then destroy usury, by establishing a system of free money. Transport our own products at cost, upon railroads operated by ourselves. And having accomplished that much, let us destroy land monopoly and equalize the burdens of taxation, by levying a heavy tax upon unused and unoccupied land—graduated and cumulative—and raise the residue of our revenue by a tax upon *net incomes*. Neither of these taxes could be shifted, but must be paid by those upon whom they are levied.

Geo. C. Ward.

Going Back to the Wilderness.

THAT portion of New England, known as Massachusetts, was given to emigrants from England for settlement, about A. D. 1625, or two hundred and sixty-six years ago.

After the discovery of America by Columbus, Spain was the greatest land grabber the world had ever seen, but later, England came to the front and has distanced all the nations of the earth, and her policy is still the same as when under Henry VII.

1496, she authorized the Cabots, "to seek out, discover and find whatsoever isles, countries, regions or provinces of the heathens and infidels, whatsoever they be, and in what part of the world soever they be, and take possession in the name of the King of England, and his vassals, to conquer, possess and occupy," etc.

Under this sort of roving commission England secured her share of the area of the earth and her possessions included Massachusetts, which after many changes of boundaries, now includes 7,800 square miles or 4,992,000 acres.

Massachusetts has always boasted of being the most civilized, the most enlightened, the most advanced, and the most educated land on the western hemisphere, and Boston has been termed, not only the "Hub of the Universe," but the "Athens of America."

It is not required in this paper to controvert such stilted boasting, since only the codfish aristocracy of Massachusetts treat it as anything of more consequence than buncombe—our object being to show from such high authority as the twenty-first report of the Bureau of Statistics and Labor of Massachusetts, that the land of the state is going back to a wilderness condition, in which it was two hundred and sixty years ago.

In the year 1890 there were 1,461 abandoned farms in Massachusetts. Of these farms there were 689 without buildings and 772 were supplied with buildings, all going to ruin, given up to weeds and brambles, coverts for beasts and reptiles, and having an area of 126,509 acres.

It is held that in New Hampshire and Vermont, the showing of abandoned farms to area is still greater than in Massachusetts, but assuming it is the same, then it will be seen that in Vermont and New Hampshire these 3,690 abandoned farms, having an area of 320,210 acres, which with the showing in Massachusetts, gives for the three states 5,151 abandoned farms with an area of 446,719 acres. The average of these farms is about 86 acres, showing that 5,194 farmers and their families have abandoned their homes, their lands and have given them back to the wilderness. Omitting Maine, we have five New England states absolutely without the ability to feed their population, amounting in 1890 to 4,039,659. Assuming that they could supply the required food for one-half of the population, then we have 2,019,829 inhabitants of the states as dependent as England for imported food.

As an indication of the sterile and worn out condition of New England farms, it may be stated that while this decay is proceeding, population in the States named is increasing—the increase being for ten years, 1880 to 1890, 668,066.

Already efforts are being made in some quarters to colonize foreigners upon these

abandoned farms and rescue them from jungles, since the native population regard them as practically valueless and prefer to abandon them rather than occupy them and starve.

The lessons such facts teach are serious or otherwise, as political economists and statesmen may regard them. It is worthy of remark, however, that the states going to decay are appealing to Europe to send out some of their surplus population to stay the wilderness march of portions of New England, and the subject is well worthy of the consideration of men who discuss "land for the landless."

The one fact however, stands forth telling the world that decay has set in from Maine to Georgia. The desert is moving west, and while statisticians are deploring short crops in Europe it is well to note the increasing demand of our own country, when land no longer supplies food for the people.

While this gloomy condition of things exists in the east, the farmers of the territory west, who must supply the deficiency in food, complain that the plutocrats and millionaires of the foodless states, by the use of their money and money power, are reducing them to bankruptcy and beggary.

The subject is eminently fruitful of reflection, and well worthy of consideration by "single tax" advocates.

Horatio Manning.

Indian Corn.

JUST now, the scarcity of food is up for debate throughout Europe. It is a grim question, productive of alarm. In every European country the corn crops are vastly below the average. By "corn crops" is meant wheat, rye, oats and barley. In the United States we add maize—Indian corn, and the probabilities are that during 1892 large quantities of this bread grain will be exported to Europe for bread.

Already statistics relating to the bread crops of Europe have been compiled from sources of information believed to closely approximate correctness, and it is affirmed, if errors exist in the estimate, they will be found in placing the product of the countries named too high rather than too low.

Hitherto Russia has been relied upon to make up a large per cent. of the deficiency in the food crops of other European countries, but now Russia, unable to supply her people with bread, must be an importer of bread grain; indeed, about 39,000,000 of the population of European Russia are already confronted with famine conditions, the statement being that even now, before the ordinary date for the harvest, famine prevails in the provinces of Kaluga, Kazan, Kostroma, Kursk, Moscow, Nijni-novgorod, Orel, Penza, Ryazan, Samara, Saratoff, Simbirsk, Tamboff, Tula, Vladimir, Vorenej, Vyatka and the northern Don Cossack coun-

try; indeed, in a few of these provinces famine has already existed for some months. It is most significant that eighteen of the most populous and productive of the fifty-one provinces of Russia proper, containing a population of 30,000,000, or 45 per cent. of the empire, should be reduced to a state of famine before the harvest season. It shows conclusively that the grain reserves of this great exporting country have been completely exhausted, and the rich black earth region has oversold itself. It also goes far to prove that notwithstanding the fact that the world's wheat crop of 1890 was 50,000,000 bushels above the average, the world is to-day the possessor of less wheat and rye than for many years, and that population has so increased that current production is less than current needs. Such facts intensify the danger that now threatens Europe, and when all the facts available are grouped the outlook is most disheartening.

The question of famine anywhere excites the sympathy of the Christian world, and when confined to some one district, a modification of its horrors is possible, but when millions, inhabiting vast districts, are within its grasp, the situation becomes appalling. No calamity within the range of facts or fancy approaches the direfulness of famine. To indicate conditions, the following conservative estimate of requirements to be met, and a most liberal one as to possible supplies, results as follows, wheat and rye being treated as one, since the world has come to that pass that the hungry will be glad to get either:

REQUIRED IMPORTS OF RYE AND WHEAT.

	Bushels.
United Kingdom	162,000,000
France	165,000,000
Germany	111,000,000
Italy	44,000,000
Spain	26,000,000
Belgium	40,000,000
Holland	20,000,000
Switzerland	15,000,000
Portugal, Greece, Scandinavia, etc.	20,000,000
Tropical Islands, Cape Colony, Brazil, Central America and Eastern Asia	25,000,000
Russia	250,000,000
Total	878,000,000

PROBABLE EXPORTABLE SURPLUS.

North America	150,000,000
India	45,000,000
Roumania and Bulgaria	25,000,000
Austria-Hungary	10,000,000
Australasia	6,000,000
South America	6,000,000
Servia	3,000,000
Turkey	2,000,000
Asia Minor, Syria, Persia, Cyprus and North Africa	12,000,000
Total	259,000,000
The apparent world's deficit of wheat and rye	619,000,000

It will be observed that Russia, having hitherto about 120,000,000 bushels surplus, is omitted from the countries which are set down as exporters this year, and therefore it is said that, eliminating Russia from the

problem, either as a source of supply, which she cannot be, or as an importer, the remainder of Europe will still be short 369,000,000 bushels of wheat and rye after the outside world has sent to that continent every bushel of grain that can be spared. What does this portend? Is it possible to conceive the unutterable misery and distress, disease, desolation and death which a famine of such proportions is likely to bring in its train.

Is not Europe face to face with a state of want such as has never threatened so great a population since the dawn of history?

Has man ever witnessed starvation upon the scale which is probable as the result of this continent-wide destruction of crops?

On all the earth there is but one substitute possible for the deficient rye and wheat; but one means of preventing, even in part, the devastation threatened, and that is by the use of American maize, should we be so fortunate as to harvest a full crop.

If there are ships enough on the sea to transport it, Europe will take not only the 150,000,000 bushels of wheat which we may squeeze out, but hundreds of millions also of our corn. The distaste for such food will disappear in the presence of famine, and we may command any price for our products that we have the heart to exact.

The reader, in contemplating the foregoing will, doubtless, feel sensations of pride or gratitude as he reflects that his own great country is exempt from the dangers of famine—death, wide-spread and horrifying, by hunger, and yet, the fact is, that in this God-favored land there are deaths from starvation, and that thousands who work are ceaselessly the victims of hunger pangs, the result of *starvation wages*, eked out to them by a gang of piratical employers, who coin the life-blood and the souls of their helpless victims into cash, live sumptuously, dress in purple and fine linen, and who, though they may finally wake up in hell and plead for a drop of cold water to cool their scorched and protruding tongues, in no wise help their victims who, like the coral insect, work and die, with this difference, the coral does not starve.

Nevertheless, there may be, and should be, we think, sensations of satisfaction in the reflection that we have Indian corn in such vast abundance as will make up, in some measure, the deficit in wheat and rye, the indications being that the crop for 1891 will reach 2,000,000,000 bushels, which ought to enable this country to export at least 800,000,000 bushels.

Should conditions in Europe teach the people that Indian corn makes good bread, and thereby overcome a prejudice to this grain and increase its future consumption, such results will be of incalculable benefit to the poor of Europe.

Frank L. Hesson.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Current Notes and Comments.

W. B. Baldwin asks: 1. What should I do in case a side rod of a locomotive break; the eccentrics are on the forward axle and the main rod connected to the middle drivers?

Answer. Whenever one side rod is disabled it is the rule to take both of them off as in the case of a slip taking place just as the single rod goes over the dead center it might wrench that pin off too and do further damage. In considering the question as asked it is evident that if the least slip occur, or if there is any difference in the size of the driver it would soon disarrange the movement of the valve and piston if they were free to move independent of each other. The question being to get the engine out of the way with as little delay as possible it would be best probably to run the risk of slipping and leave the one rod to keep the valve and piston motion in unison. By starting carefully and running with reduced pressure it might be possible to get her in and even to bring a light train along.

2. What should be done if a trailing driver axle break outside the box?

Answer. Take the side rods and the loose wheel down. Place a block in the cellar under the broken axle to keep it as level as possible. In some cases it might be possible to carry some of the weight of the missing wheel by using a piece of rail as the bearer and the tender or tender truck as the carrier.

3. What should be done if a main driving axle on an ordinary locomotive break?

Answer. If broken outside of the axle block up the broken end, take off the wheel and disconnect on that side, and by running slow and taking no train, being very careful at frogs and switches the engine may be taken to the shop, by working the one driver only. Of course in all cases provision has to be made by blocking or chaining to keep the weight distributed as equally as possible under the circumstances.

Crazy Again. There are 30,000 locomotives in the United States, that if strung in a straight line would be 300 miles long. They cost \$450,000,000 to build. The largest locomotive works is at Philadelphia, the Baldwin, and they turn out three engines a day when pushed. It takes 1,000 men a whole day to build an engine, on the average. — *Virginia Manufacturer.*

The average total wheel base of our largest loco-

motives with their tenders is about 58 feet; putting it at 60, and allowing that all the locomotives in this country are full length, the 30,000 would not cover 35 miles of track, and would doubtless go inside of 30 when all collected in the general round-up.

The above clipping and comment is from the *Locomotive Engineer*, John A. Hill, editor, and we reproduce it here for a double object. The first is to see who is "crazy again?" Mr. Hill is ready to give 60 feet as a good size wheel base and then makes it only 30 to 35 miles, while if we assume a wheel base of only 52.8 feet as an average, it is evident that it will take 528 feet to place 10 locomotives or 5280 feet (a mile) for 100 locomotives. According to this it would take 10 miles for 1,000 locomotives and 30 times 10 miles or 300 miles for the 30,000 locomotives under consideration. Mr. Hill must have dropped an 0 somewhere in his calculation, and as an 0 is often of no account he did not stop to pick it up.

Col. Davy Crockett, of famous memory, was once appealed to for a text to ornament a Sunday school banner and gave them this: "Be sure you're right, then go ahead." This is as good a motto for a railroader as it is for a Sunday school, and hence let us try to be sure of our position. On first reading the above in the *Locomotive Engineer* I came very near accepting the comment as correct, because Mr. Hill, who has certainly earned for himself the fame as an authority on locomotive mechanics, said so, but what would have been the result? Only another disciple led into error by false teaching and acceptance without consideration. Now the point is just here: If Mr. Hill can make mistakes and fall into error, does it not become a matter of some moment to all to closely scrutinize every statement, and see whether the facts will bear the test of reason, and not accept things as thus and so because some one whom we have a right to expect to be posted has said so?

Since writing the above the September number of the *Locomotive Engineer* has come to hand, and in it Mr. Hill explains that he made the above mistake "on purpose," as the boys say, and wanted to try the credulity of his readers. While a man may once in a while tell an untruth which, by the very telling, he does not expect his hearers to believe, it is far different when such things are put into print, where the intonation of the voice, the glance of the eye that nullifies it is not reproduced, and while it may have satisfied the curiosity of the editor to know how far his statements will be accepted and quoted as the truth, it is at once apparent that hereafter the readers will have to be on their guard about anything stated in the paper, for the whim to try their faculties may again seize upon the editor and he may impose upon them in the same manner. On the whole it is probably the

best course to abstain from such trials and twistings of the truth, for there are errors enough in the world without wilfully introducing more of them. It has been said that a word spoken cannot be recalled; how much worse must it be with a word printed which may have reached thousands where the other was only heard by a few.

Wm. Weiler.

The Wheel and Lever.

MR. EDITOR:—The September *Magazine* is at hand, and in it "Amboy Division," after a long silence, comes to my help on the wheel question, by sending a clipping from the *Scientific American*, which he thinks fully supports the ideas heretofore advanced by him and me in these columns. But the very next article to "A. D.'s" is contributed by Mr. Lockwood and by a strange perversity of human nature the very same paragraph is used in support of his theory. It has been very aptly said that none are so blind as those who do not wish to see, and it does seem that Mr. Lockwood has arrived at such a state of determination that he does not wish to see, or he could not try to make Mr. Knisely's article fit his theory. Now what is there in Mr. Knisely's to afford any satisfaction to a man who has repeatedly said that "the bottom of a wheel stands perfectly still and the top moves four times as fast"? Perhaps Mr. Lockwood is glad to find another man who is willing to admit that the bottom of the wheel does stand still, but beyond that the two propositions do not agree. I cannot understand why Mr. Lockwood would want that article quoted, as it just as flatly contradicts him as any of us unbelievers ever have.

As the lever in the wheel question has had a good rest, I have complied with "A. D.'s" request and have carefully read over both of his articles in the volume for 1888, and find nothing but truthful statements in them. Nevertheless a statement built upon the most substantial truths can be warped and twisted if the plumb and rule are not constantly applied, as may be seen in the case of the celebrated "hammer blow champion." I look upon a locomotive from an engineman's point of view and the only point that I can find about the locomotive that fully meets the definition of a fulcrum in the language given by "A. D." in his article is the centre of the axle, and I think that "A. D." himself admitted that in a stationary engine that is the fulcrum. Now why must there be a radical difference in the engine? The stationary engineer starts his engine and it does its work while he is sitting and watching it and at the end of the day's run the fulcrum is in the same relative position that it occupied all day. The locomotive engineer starts his machine

in the same manner, sits down and watches it in the same manner and the fulcrum as located by me never loses its state of rest so far as the machine and the engineer are concerned and they arrive at the end of the day's run in the same relative position. Much as I would like to agree with all men, and especially with so good a fellow as "A. D.," I cannot yet see how I am to acknowledge my errors, being as yet unconscious of them.

Vulcan.

NEW ORLEANS, LA., August 26th, 1891.

MR. EDITOR:—I would like to have some of the firemen give their experience in firing, and think if they would all give an account of their experiments in firing different kinds of engines and coal it would help a great many brothers. I have fired seven years or more and can learn yet. I have found in firing soft coal, such as Pittsburg or Alabama, that the best result is obtained by firing light. Some will say you can't fire it light, but I say you can, for I have tried it and proved it. On an engine with small nozzles, if you will shut your front damper tight, and hook up your back damper, you will find she will steam just as well and burn less coal. I am firing an engine now which shows a difference of eight barrels, or 1,640 pounds, in a run of 100 miles, between both dampers and the back one only, and the saving is in favor of the back damper. Will some of the "boys" tell me the reason? In firing soft coal if you carry from four to eight inches of fire, (eight inches at the most) you will have a white flame which you can keep up by one and two shovels of coal at a time and have more steam and make better time than you will by keeping a heavy fire. A heavy fire means grate shaking and that means ash pan cleaning, which is unnecessary work and can be avoided by keeping a light fire and firing regular.

M. J. L.

A WONDERFUL story of growth is told in the following figures showing the railway mileage of the United States by decades for the past sixty years:

In 1830	23 miles.
In 1840	2,818 miles.
In 1850	9,021 miles.
In 1860	30,636 miles.
In 1870	52,922 miles.
In 1880	93,296 miles.
In 1890	166,817 miles.

In the last ten years the increase was 73,521 miles, or more than 78 per cent.—an average of 7,350 miles each year. If the increase in the next decade is only 5,000 miles per year our railway mileage in 1900 will be about 217,000 miles.—*Railway Age*.

Kerrunt Noats and Komments.

MISTER EDDITER:—I haint had much time on mi hands laity, but in reedin over September Magazeen it sort ov struk me it was time ter chip in agin, ez fur ez it war in mi line. Willyum Wiler, ses he dont no as to the speed ov steem, and it aint sartin ez the riter duz, but in reedin sum ov the books it is found to be lade down, and the book sez, that if steem eskapes inter eny presure less'nthre fifths ov the inishul, that it goze at the rait of ate hundred an aty ate, feat in a secunt, an ez that amownt iz tu b multiplied by the sekunts in a minit, it sorter looks like an ezy wun? az 888x60, maiks 53280 feat in a minit, or if he wants it in milez, he kan divide 53280 bi 5280, the feat in a mile, and he gits up inter a ten mile gait or huslin, but what I spoze iz wanted iz the speed of Steem in wurkin kondishuns, or whar it kums inter kontakt with a a pistun hed, or an old blokked like mine, then it is fownd that the extreme spead it travils and duz effishunt work is not much risin ov SIX THOWSUN feat in a minit, and not the saim kind ov feat sum ov us wair, but a twelve inch fut, Now I dont spoze eny of the old boys kare eny grate for thes pints, but your old unkle finds it ezier to look up this kind ov stuff than to be foolin away my time on the Hy Siuns of whether a felly or a hub or the turnpike is the fust ter git thar, an I aint shure if steem haint got az much ter du with my old kole chewin Barker, as the foldyrol, ov sum sich kwestun as I'm tawkin on. If it don't take eny branes tu run a barker, how meny braines duz a Dewd need to be a fust klass phool? Av koars it aint none ov mi bizness ter kriticize, but sumtimes it strikes me that a man doant looze nothin if he tucks sum little lernin under his skull, as sum da he ma be asked if he noze whether steem is runnin off or inter the silinder, and it ma be if he duz no, that he will git moar pa for a weeks workin, or he may git fired into the ole junk of the sweat bi & bi, an be huntin stuffin, an not fool kwestuns, I sort ov hait to see a good sized man set down & throw awa so much time, on the size of a muskeeters leg, when he haint got nothin to mezhur any neerer than a pare of tongs, but I'm an old fool, and kant thro awa eny time, for it is aisy to lurn, yit, I wunder sumtimes why the boys, dont git inter Mekanikle to sum extent, and not argy, but git rite down to bizness, and try'n lern, insted of argying on sich funny no use topicks, Dont mind it and then yu aint sorry?

I've lawt fore firemun in two yeers, tha tride tu larn suthin, and now Im tryin to git number five so to klime in on tother side, so I'll say "So long" and git my old girl redy to make her run and have my smook before the kondukter yells at me "to Git."

"Uncle Silus."

That Motionless Bottom.

Those of the *Magazine's* readers who believe in the absolute immovability of the bottom of a rolling wheel, seem to have had their faith confirmed in what is to them, no doubt, an all-sufficient manner. Mr. Knisely's article, quoted in the September number, essays to put the proposition everlastingly at rest by declaring that "the bottom of the wheel is as motionless as the cornerstone of Bunker Hill monument," and that's "pretty motionless," isn't it? That is relatively speaking. But here I wish to submit a proposition which I would like to have Mr. Knisely or any of his disciples explain in harmony with the foregoing statement:

Take an engine at Chicago headed for New York, note the relative position of top, bottom and sides of the wheel in question, and let her proceed to New York. On her arrival we inspect her and find the same old wheel, same old sides, same old top and the same old bottom that we had in Chicago. Now, for the benefit of a doubting "Tucker," please tell me how that bottom got from Chicago to New York, at the same time remaining as motionless as the celebrated monument? This seems to me a hard question, but to those who dwell on the dizzy heights of an "inconceivable something above nothing," I presume the answer is apparent.

To my obstinate mind there are but two ways in which the change could be made. First, by the bottom moving from Chicago to New York. Second, by New York moving to Chicago. In the light of passing events and comments, does anyone imagine that New York could be induced to go to Chicago except under an assumed name?

A. H. Tucker.

A Funny Definition of a Locomotive.

MR. EDITOR:—The definition of a locomotive, page 695, August issue, as "a wheeled machine, driven by boiler and one or more steam engines," hardly holds water. A traction engine, or road engine, or a self propelling steam fire engine is "a wheeled machine driven by a boiler and one or more steam engines," yet it is not a locomotive. Further, an electric railway motor car, is "a wheeled machine driven by a boiler and one or more steam engines," acting through the conducting cable and the motor, yet it isn't a locomotive. And yet further, a cable grip car is "a wheeled machine driven by a boiler and one or more steam engines," yet it is not a locomotive. And further yet, the press which prints this issue of the *Magazine* is "a wheeled machine driven by a boiler and one or more steam engines," yet it is not a locomotive.

Some definitions do not define!

NEW YORK.

Robert Grimshaw.

The Rolling Wheel.

MR. EDITOR: For "Vulcan's" kindly consideration to have something further to say to me on the rolling wheel question, many thanks. August *Magazine*, 1891, page 693.

I regret that "Vulcan" did not receive his invitation in time to ride with us from Harrisburg, in the train pulled by the "Shaw Locomotive." What is a fellow to do who only knows him by the name of "Vulcan," and his only address through the *Magazine* office?

One part of "Vulcan's" article above alluded to I must take exception to, and ask for the following correction: "At which time Mr. Lockwood insisted on making several of us the proud owners of a number of shares in a cemetery association."

The truth about this matter is, while the Locomotive Firemen's convention was in session in the main hall of the association building, 15th and Chestnut streets, Philadelphia, Pa., 1885, there was in a smaller hall in the same building, making with the convention common use of the same lobby, an election pending of the Central Transportation Co.—the first sleeping car company in the world—controlling all access to the seaboard. This company was leased to the Pullman Company. To-day, under that lease, the Pullman Company is running one hundred and nineteen of the cars of the Central Company, and owe them nearly two millions of dollars of rental, which they decline to pay, and for which equity proceedings are pending. It being a most important meeting of a thousand stockholders, many of them ladies, a proxy was prepared which required two witnesses to the signatures. No doubt "Vulcan," as many other of the brotherhood did, kindly consented to sign as such witnesses.

In correction of "Vulcan" I have admitted an error of statement in this wise:

"Not twice nothing, or even four times nothing," as "Vulcan" had it, but

"Not two times nothing, but four times something," and that something is not a phantom, but is well located, and well defined. In the *Locomotive Engineers' Journal* for July, 1891, the subject is treated from the standpoint of an interview with Mr. N. Forney, Esq., the celebrated railway and locomotive expert, for many years the editor of the *Railroad Gazette*, now publisher and editor of the *Railroad Engineering Journal*. It was while I was preparing and demonstrating an answer to Mr. Forney's inquiries, that I found out the fallacy of "two times nothing," and that what seemed substantially "two times nothing" was twice as great, or "four times something" next to nothing, or rest.

"Vulcan" says, using the rack-rail and guard wheels, "I find the bottom at rest."

On this we agree. We also agree "that the top moves twice as fast as the center."

"Now (says "Vulcan,") if Mr. Lockwood wishes to know the exact spot whose motion is to the top as four to one, he will find it, not at the tread, but just half way between the tread and the center of the axle," &c., &c., &c. In this I can not agree with "Vulcan," because he says the bottom is at rest. Then the movement must be between the center to rest in the wheel on the rail, and not at a point one foot above the point of rest, between the center and rest. Certainly if the top moves twice as fast as the center, then from the center to the rail, rest must be in the same proportion. Again says "Vulcan," "for as all well know, the locomotive does not carry its load on top of the wheel like this rail, but on the axle." I have always supposed the drivers carried all the weight above it, it resting on the rail; "Vulcan" seems to think it is carried on the axle. This is true in a stationary engine, but not in a locomotive. Again, we have this further proposition, "the wheel rolling on the rail and the rail on the wheel create no friction." I have always been taught that frictional contact was necessary in both cases, for the wheel to move over the rail, or the rail to be moved on top by frictional contact with the wheel. The material difference between "Vulcan" and myself is, is the fulcrum at the axle and in the axle box, or is it at the point on the driving wheel at rest, and in contact with the rail. "Amboy Division" has always agreed with me that this last proposition is correctly stated, and that the first of these was where "Vulcan" erred.

In August *Magazine*, 1891, page 695, you have editorially referred to me the question of "G. E. R.," Westown, Pa., to which I make reply. The fulcrum is at the point of the driving wheel in contact with the rail; in a four foot wheel the least leverage is when the crank-pin is on its lower limit, one foot from the rail. This is a pushing leverage, and at fifty miles per hour at the center, the crank-pin is moving at twenty-five. The greatest leverage is on the upper limit of the crank-pin, which is a pull as contra-distinguished from a push, and is three feet from the fulcrum; in addition the speed at that point is seventy-five miles per hour as compared with twenty-five at the lower limit of the crank-pin. This question resolves itself into this inquiry: A wheel being a lever, can you get as much leverage with a lever one foot in length pushing, as you can in a lever three feet long pulling? When you can, then "there is no difference in the leverage when the pin is above or below the axle." "G. E. R." might try this experiment with a pair of drivers on a rail.

"Amboy Division," September *Magazine*,

page, 797, is fairly answered in this article, so far as it relates to myself and "four times" and "times nothing." For further particulars I beg to refer him to December *Magazine*, 1888, pages 893 and 896: "Not two times nothing, but four times something." As I remember, this article is especially addressed to "Amboy Division."

"Amboy Division" asks me to "let the 'rolling wheel' have a rest at both top and bottom, for awhile." I have no objection that the bottom shall remain at rest, as that is what I have been contending for, but the top of the rolling wheel must be kept moving four times as fast as something next above this point of rest until it is settled beyond controversy.

William E. Lockwood.

One Hundred Miles an Hour.

MR. EDITOR:—The following from the *Philadelphia Record* of September 9th is in the line of the application of *correct mechanical principles to locomotive practice*, and is also in the line of that for which I have been contending since 1872, "steam counter-balancing." There can be in a locomotive so constructed, no dead centre, no hammer blow, no centrifugal lift and tangential throw of counter-balances, no rocking, thrusting, rolling forces. The full text of the article is as follows:

"If the new engine I am about to have constructed is not capable of making one hundred miles an hour I'll give her a way to the first person I meet."

This astounding statement was made yesterday by Mr. Jackson Richards, the master mechanic of the Philadelphia and Reading railroad, who was exhibiting to a party of deeply interested persons the drawings for a locomotive which, if successful, is almost sure to revolutionize the construction of the high-speed locomotives of the future. Mr. Richards, who is recognized all over the United States as having no peer in knowledge concerning locomotives and railroad machinery, has been working on his latest invention for the past ten years, and a few days ago the drawings were completed and the patent was applied for.

The new invention will enable a gigantic stride to be taken in the matter of high-speed locomotives, and, if the new flyer is as successful as experts predict she will be, it is more than likely that the time between Philadelphia and New York will be made in less than an hour. A specimen engine will be built for exhibition at the World's Fair, and the trial trip will be made between here and that city.

A LOCOMOTIVE WITH FOUR CYLINDERS.

In outward appearance the new locomotive will not differ materially from the speedy engines now used on the Philadelphia and Reading Railroad between this city and New York. The peculiarity of construction lies in the fact that instead of the two cylinders as used at present there will be four. One cylinder will be located on each side of the locomotive frame as at present, and the other two will be cast in what is known as the cylinder saddle. The inside pair of cylinders are to be in one piece, and will lie on an angle. The outside cylinders are to be horizontal as at present. The four cylinders will entirely overcome what is known to engineers as the dead centre, and the engine will be perfectly balanced without any counter-balance in the wheels. This later improvement will, to a large degree, do away with the vicious pounding, which has proven so destructive to modern road-beds. The perfect balancing of the engine will be largely due to the

working of the two cylinders so near her centre, and these same cylinders, working as they do, from such a central point of vantage will help out in the matter of speed to a great degree.

A PERFECT VALVE MOTION.

According to the experts who have examined the drawings, the valve motion is perfect. There will be four valves—one to each cylinder—and they will be operated by two links, the same as now used for two cylinders. The engine is designed to be built on the Wootton fire-box, the same as is now used on the famous "206," which made a mile in the remarkable time of 39.45 seconds on August 27. The ordinary speed of the destined world-beater will be eighty-five miles an hour.

William E. Lockwood.

What the Man from Tennessee Said.

"Ten years ago," said a Tennessee machinist, "I had a little machine shop, with four journeymen, and 'Sim' for an apprentice. In the spring rains I took a severe cold, and didn't go out of the house for four months. I worried a good deal, for I expected my little struggling business would go to the wall soon, but most of the time I was too sick to think much about the matter. Finally, when I got so as to get out, I wandered down to the shop. Instead of four journeymen I found nine, and Sim was busy in the little 7x9 office closing a contract with a rich inventor to build a steam road wagon."

"It seemed," said this machinist, "that during my sickness Sim had been in consultation with my wife, and that she, with a woman's intuition, had let him go ahead about as he pleased, and his way—with only his three years' experience—had been a better way than mine. He always had money to pay off Saturday night, and there was a little standing to my credit."

"The old shop had a brighter look than ever before. The windows were clean, and some tons of old junk had gone to my neighbor's foundry in payment for good castings. Sim had ordered a new lathe, fixed the old engine, lined up the line shaft, and had the floor swept out and the walls whitewashed."

"Sim and I," concluded the narrator, "are partners now, and the only thing that I really miss is the little old shop that he made look so homelike."—*American Machinist*.

At the late convention of the National Association of Railway Surgeons one of the speakers, in referring to the importance of ventilating passenger cars, asserted that "fifteen million people are moving on cars every twenty-four hours in the United States." Another speaker challenged this statement, saying that it could not possibly be true that one quarter of our population was on railway cars every twenty-four hours. To this the maker of the original statement replied that his authority was a civil engineer who was employed by the Chilean gov-

ernment to look up statistics of the number of people who travel on railway cars, street cars, ferry boats and vessels of various kinds in this country, and that his report showed that in New York city alone five hundred thousand people move to and fro daily on wheels, and that fifteen millions in the United States travel every twenty-four hours on the conveyances described. Even with this explanation and modification of the original statement the figures seem excessive, although, as one speaker suggested, we must take into consideration the fact that in our large cities a great many passengers are counted several times a day in traveling on public conveyances. Of course such figures must be largely estimates, but when the vast number of railway passenger trains, including those in the suburban service, that are daily moving back and forth in this country is taken into consideration, it is evident that a very large fraction of the population spends some of its time in railroad travel, and from this fact appears the importance of good ventilation and a cleanly condition of the cars in which they are confined for longer or shorter periods.—*Railway Age*.

TACOMA, WASHINGTON, Sept. 1. 1891.

MR. EDITOR: In August issue of your *Magazine*, Wm. Pierce, of New Alger, Iowa, writes in reference to Alexander's rule for setting a slipped eccentric.

I think he must have been in too great a hurry to give himself time to think, as his experience proves Alexander's rule to be correct and both his eccentrics to have been in place. Now suppose his forward eccentric had slipped. After he had placed his engine on forward center and marked valve stem with reverse lever in full back motion, and thrown her ahead he would have looked for his mark in vain, as it would have been hidden in gland of stuffing box, providing he had made his mark snug up against the gland, as I presume he did. Then he could have advanced his eccentric until his mark appeared in its former position, when his eccentric would have been in place.

In intermediate connected engines, such as Taunton builds, I have always heard the rocker arm he refers to, called the intermediate rocker.

It would not be necessary to take down the intermediate connection, as when engine was disconnected its function would be only to tie two idle rocker arms together.

I am not a member of your order but am a subscriber to and a careful reader of your *Magazine*.

Yours truly,
Northern Pacific.

THE rolling stock in railways in the United States aggregated by Poor's Manual from the company returns for their fiscal years, ending at different periods in 1890, was represented as follows: Locomotives 32,241, passenger cars 22,958, baggage, mail and express cars 7,253, freight cars 1,061,970; total number of cars 1,092,241. These figures indicate an increase of 1,200 locomotives and 11,134 cars of all kinds in the preceding year. As many of the company reports from which this statement is made are now from six months to more than a year old the present equipment of our roads is considerably greater than the totals show (provided the latter contain no duplications) and it may be said that, in round numbers, there are now in the United States at least 33,000 locomotives and over 1,100,000 cars.—*Railway Age*.

It is stated that "the St. Paul road is building two engines at its Merrill Park shops, Milwaukee, which promise a revolution in locomotive building. The new engines consume their own smoke and have no smoke stack. They are fitted up with an electric headlight, which is placed on a stand immediately in front of the boiler, thus giving the engineer an unobstructed view of the line ahead. The drive-wheels are larger than the ordinary locomotives and intended for greater speed. The new engines are particularly designed to furnish power for lighting passenger trains with electricity and for furnishing steam heat. These engines will be used on the track between Milwaukee and Chicago, and it is intended to reduce the best time now made by one hour at least."

ILLINOIS still keeps the lead, as for many years, as the state of greatest railway mileage. The order of precedence in this respect among the states having 4,000 miles or more at the commencement of 1891, was as follows:

1. Illinois	10,129	9. Missouri	6,112
2. Kansas	8,900	10. Indiana	6,106
3. Texas	8,710	11. Wisconsin	5,615
4. Pennsylvania	8,700	12. Minnesota	5,545
5. Iowa	8,416	13. Nebraska	5,407
6. Ohio	7,988	14. Georgia	4,593
7. New York	7,746	15. California	4,436
8. Michigan	7,106	16. Colorado	4,291

It seems hard to realize that the great "Empire state" has now taken seventh place, while young Kansas has become second, and thinly populated Texas has already climbed to the third place, with a vast territory still calling for railways.—*Railway Age*.

"I NEED my Sunday for rest, and I know of no reason why every engineer, conductor, brakeman or other employé of the company does not want the same."—*Pres't Ledyard*.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

WOMEN AND THE WORLD'S FAIR.

There will be no subject more talked and written about during the next two years than that of the Columbian Exposition at Chicago. That it will surpass all previous efforts of this kind is fully conceded and it is already evident that it will be a World's Exposition, as all of the civilized nations of the earth will contribute to its exhibit. The one class of all others, however, who have a right to be especially interested are the women of the United States. For the first time in history we have the spectacle of a legal body composed of women, created by national legislation, and engaged on an equality with men in a great work of public importance. This fact in itself should thrill every woman's heart with joy, just as, in the years to come, the results of these labors will inspire all woman-kind with pride for their sex. The Board of Lady Managers will occupy a considerable part of the public attention for some time, and it will, perhaps, be a matter of interest to understand something of its origin, scope and purposes.

Two years ago when the World's Fair was first taking definite shape, Miss Susan B. Anthony, Mrs. Isabella Beecher Hooker, Mrs. Lucy Stone, and a number of other prominent and progressive women agitated the subject of giving women a representation in the management of the great exposition. At the first appointment of the Commission it seemed as if they were to be unsuccessful, but a sense of justice prevailed and Congress passed an act providing for a board of women, but leaving their control entirely in the hands of the National Commission. This simply gave to such a body a legal existence, and to their extended authority and influence they are indebted to the National Commission. At the first meeting of this body, in June, 1890, it declared this Board of Lady Managers to be officers of the exposition. At its second session, the following September, it prescribed the number of this Board, conferred upon it power to organize, placed in its hands full charge of the Woman's Department

of the exposition, and decided that it should be called together at such time and place as the head of the National Commission should designate.

The members of this Board were appointed by the National Commission and convened for the first time in Chicago last November. It consists of two women from each State and Territory and the District of Columbia and nine from the city of Chicago, 115 in all, and their alternates. Mrs. Potter Palmer, of Chicago, was elected President. This meeting did little but organize, as the Commission seemed undecided in regard to the powers and privileges that ought to be conferred. Last April, however, the Commission met and came to a definite conclusion in regard to all of these questions, granting all the authority that the women possibly could desire. The Board of Lady Managers was given full control of the Woman's Building and the choice of a site. The number of women authorized to award prizes is to be in proportion to the percentage of woman's labor represented in the exhibits. The Board is granted general charge and management of all the interests of women in connection with the Exposition. It is to be the official channel of communication through which all applications for space shall be made and all arrangements for the exhibit of woman's work conducted. All matters relating to woman's interests must come under the direction and approval of this Board of Lady Managers.

In brief, they have been invested with full authority in the Woman's Department which they are to manage without interference or hindrance. The plans for the Woman's Building have been selected, only women architects being permitted to compete, and the building is under way. This building is not, as many suppose, intended for the woman's exhibit, but is designed to be a headquarters for women during the Exposition. It will be the meeting point for all women exhibitors, committees, clubs, etc. In its immense hall congresses and conventions of women will be held, and lectures, musicales and entertainments of various kinds in which women are concerned, will be given. There may be some special display of women's work here but the regular exhibit will be placed side by side with men's productions throughout all the departments of the Exposition. This question was carefully considered and there was an overwhelming sentiment in favor of the latter plan. In this way the work of woman will be put upon an absolute equality with that of man, and the Board of Lady Managers can extend its influence into every department of the great Fair and have an infinite power compared to that which it would have if confined to the nar-

row limits of one separate exhibit. The work of woman also is dignified by taking its place upon the same plane with that of all the world.

The members of the Board in the different states are already organizing their territory, and their efforts are supplemented in some places by the appointment of a state board by the governor to coöperate with them. An extended and careful examination will be made into all the avenues of labor in which women are employed. This has already progressed far enough to show that there is scarcely a department in the arts, sciences and manufactures in which is not found their work. This will be a grandly developing field for women. The advance they will make in executive ability, in knowledge of business, in general information, in self-reliance, during the next two years will be greater than that of the past ten. Every woman of the thousands who will attend the World's Fair, will be encouraged and stimulated by the examples she will see of the industry, energy and ability of other women. It will be an object lesson that will impress the young with the splendid possibilities that await them, such as their mothers never dreamed of. Women everywhere are to be congratulated upon the magnificent opportunities that are to be extended through this great World's Exposition.

LORD SALISBURY, Premier of England, has announced that woman suffrage may be made a feature of the government programme at the next general election. A majority of the English Parliament has long been known to be in favor of granting the right of suffrage to women but its opponents have been able to prevent the question from coming to a vote. It is now proposed by the party in power to carry it into a general election. A number of influential papers in this country have commented favorably, among them the *New York Press*, which says:

We do not doubt that in time the justice of allowing women to vote in the election of those who handle the taxes that are collected with a beautiful impartiality as to the sex of the taxed, will be as generally recognized as the justice of allowing a woman stockholder of the New York Central Railroad to vote or give a proxy on her shares when the managers are elected.

It seems very strange that any other view can be taken of this question. The conferring of the suffrage upon the women of England would hasten the same action in the United States.

W. F. COPENHAVER, Hope, Idaho, your letter was forwarded, as requested. Cannot you furnish the information contained therein, for publication in the *Woman's Department*?

We said last month that the warm weather would check the ardor of our correspondents and we would have an opportunity to find space for all waiting communications. The month of August brought us sixty letters, the largest mail of any month since the Department was opened, nine years ago. We are glad to know that the state of the thermometer does not affect the interest of our friends and we trust they will have patience until room can be made for their letters.

L. S. R. WRITES from Montpelier, Idaho, and compliments the "women-folk" of the firemen in the brotherhood at that place.

THE editor returns thanks to John Tierney, Jr., for his popular song, "Boyhood's Happy Days."

"DAISY," of Des Moines, Iowa, sends a kindly greeting to the *Magazine*.

G—, ARK., July 30, 1891.

Editor Woman's Department:

The chief problem of my married life has been not the management of husband, children or finances, though all these have had their share of attention, but how to obtain an abundant supply of good water for domestic purposes.

In my girlhood's home each house had a cistern. I still think a good cistern, frequently cleaned, is the best way of supplying water. When first married we lived in Central Illinois, and everybody there depended on wells. But the well water was hard. I knew lye in some form was necessary to cleanse or "break" the water. My hands suffered terribly while I was learning just how much lye to use. If just the right amount is used the hands will not be hurt at all. If enough is put in to turn the water white at once, it is too strong. If the water begins to turn white in half an hour, it is all right. My method was to draw a barrel full of water and soften it ready for use. A little borax added to hard water will make it nice for bathing purposes. If you have lye in the house by all means keep vinegar on hand also, for in case of an accident vinegar is the best antidote. In my opinion all the washing and cleaning compounds are a weaker and more costly form of lye.

We next moved to the Republic of Mexico, and had to buy our water. Strictly speaking the water is free, and people pay the carriers for bringing it to the house. The carriers have a wooden yoke across their shoulders, from each end of which is suspended by a short rope an earthen jar with a capacity of from one and a-half to two gallons. The price is merely nominal, but to one unaccustomed to obtaining water in that way it is often annoying to calculate the exact amount required for a day's work and order it when the carriers are around in the morning. In large cities, where the yoke and swinging jars would be in the way, one large jar is carried on the back, held in place by a leather band passed across the forehead. The drinking water is kept in unglazed jars, and evaporation keeps it cool as ice water. All the jars have rounding bottoms, and many are the accidents necessary to teach an American woman that they won't stand alone. It is all very well to prop them up with stones and blocks of wood, but I learned by sad experience that the average American baby has no idea of allowing those stones and blocks to stay there. There are a great many wells in the farming districts, the old-fashioned sweep being used to draw the water. I saw one comical method of drawing water from a

hillside well. Two men were needed to do the work. An upright post on each side of the well supported a windlass, over which was thrown the rope. One man, holding the rope, would run down hill. When the jar came to the surface the other man called halt and emptied the jar. The runner would then walk up hill and when he reached the well of course the jar was in the water again. The process looked very funny, but was it any harder, after all, than turning a crank to wrap the rope around the windlass?

After living nearly two years in that country we moved to Pine Bluff, Ark. There we had a limited supply of hard water, obtained from bored wells. These wells are about six inches in diameter. The bucket has a valve in the bottom which admits the water. When the bucket is full the weight of the water holds the valve down. A little peg in the spout pushes the valve up and allows the water to run out.

We next moved to the southern part of the same state. The well water here is as soft as rain water, but we had no well and had to carry the water so far. In the winter we depended on what we caught in barrels. But that is too warm to drink in the summer, and it breeds mosquitoes. But I have learned how to avoid that. If I have more than one barrel full I pour a tablespoonful of kerosene in the ones I am not using out of. That spreads over the surface and no mosquito ever goes beneath it to deposit her eggs. When ready to use the water it is not much trouble to skim off the oil. But now we have a good well at our own door. It has been completed about a week and I am happy: not perfectly so, however, for I have come to believe that I am not to have good water long at a time, and if nothing happens to our well I suppose we will move again.

If the editor says "Come again," I will tell you some of my housekeeping experiences in the "Land of the Sun."

Traveler.

[This experience will seem almost incredible to the average housekeeper. We shall be glad to hear further from our new correspondent.—Ed.]

HOPE, IDAHO, August 12, 1891.

Editor Woman's Department:

In Woman's Department in the August number of the *Magazine*, there appears a very sweeping argument against novels and novel reading from the able pen of Emma E. Smith. Being one of the many that are so fond of reading, whether it be novels or works of greater merit, I cannot help believing her denunciation of writers and readers of fiction rather severe. There are good and evil contained in almost everything and novels are no exception to the rule. There are few joys and pleasures of this life that may not be indulged in to excess, and instead of their becoming as they should be a never ending source of joy and comfort they become by an over indulgence a bane and a curse. When civilization takes a step in advance there are always a few who take an especial delight in trying to keep us on the ragged edge of anxiety and doubt as to what the ultimate end will be; whether the evil resulting from such efforts and changes will not be far in excess of the good; who take pleasure in denouncing rather than praising; who love to show their dislike and antipathy to any great and growing change and, when it better serves their purpose to sustain their argument, they overestimate the evil and understate and belittle the good of such movement. It is useless to try to persuade these people that they are wrong. They need medicine, their case is not for a philosopher but a physician. Like the slave on the triumphal chariot of Scipio riding in triumph through the streets of Rome, lest he should enjoy the honors and praise that a grateful people bestowed upon him his enemies endeavored to make him feel miserable by having the slave whisper in his ear, "Remember thou art but a man." While the renowned lawyer, the able statesman and the great orator may not have attained their eminence by reading novels, there are numerous instances, not only among this class but including eminent divines, the greatest scholars, the greatest

scientists, the most advanced thinkers and people occupying the highest and most exalted positions in life, who have written novels and works of fiction. Moreover many of them can be bought for a dime—would that they could be printed and sold for a cent. It is among this class where we find those whose names are household words and whose works are to be found in every library and in every home of refinement and culture in every clime where civilization exists in its most advanced form, made famous by their works of fiction. It is among this class where we find the most noted writers of novels and literature, the greatest admirers and strongest supporters of writers of fiction and their works. Look into the columns of any of our great journals under the heading of "Literary Notes," for comments and notices of the latest novels and literary productions from this class of people and we find they praise more than they denounce, which should convince us without argument that novels are popular among our most eminent men and the reading of novels was no hindrance to them in attaining the high position they occupy in life. It is no ordinary brain that writes novels and fiction. Many eminent and learned writers and scholars give us their theories and ideas through the medium of a novel knowing as they do that is the best way of bringing their views before an intelligent public.

Truth is mighty and will prevail; whether we receive it by aid of a novel or more sober works the result is the same. It should be gratifying to all who like to read and be entertained by a story well told that the good class of fiction is far in excess in point of numbers of the evil and pernicious, easier to be obtained and the demand for them is greater and they are becoming cheaper in price. In many of our school books and works on recitation, readings and elocution, we often find selections that are taken from works of fiction as literary gems. Man does not toil for pleasure. Labor is the primal curse of man. There are many lowly homes and firesides that are made bright and cheerful by the reading aloud of a good story. There are many overworked and toiling persons whose existence to them seems to be almost a burthen, whose thoughts are detracted from the cares and toils of the day, whose minds are lost in happy seclusion, refreshed and entertained, by reading a good story. For this reason alone novels should receive our warmest approbation. Those who are fond of reading do not always like to read dry and sober works. We often find ourselves in a frame of mind when we like to read for entertainment and pleasure rather than instruction. On such occasions the good and wholesome story is a boon. Sometime ago in a certain state prison the convicts gave out through a paper they printed and edited themselves the direct and indirect causes that led them to commit crime, and there was not a case that attributed his downfall to reading novels. It is not ungenerous to suppose that the few who languish in prison and howl in lunacy from reading novels would have landed there just the same had they never seen a novel. The wrong of reading vile and pernicious literature and the evil resulting therefrom is a mole hill when compared to other mountains of sin and evil that are Himalayan in height and extent that surround us. A wife whose brain is mellow enough to neglect her loved ones and her household duties, and a husband who allows weeds to grow in his potato patch and devote their time to reading novels, need a guardian placed over them, they are not safe to run at large. It is gratifying to know that such instances are few and far between. That there are novels where the scenes of the plot begin and end as they should in the dens and slums of vice and crime, that familiarize the reader with such scenes, that teach that the perpetration of crime is a laudable calling, that parental control is a bondage, that the school and church are mild sorts of prisons gotten up to especially pamper the youth, that give us false and overdrawn ideas of life, I will admit. But there are many evils that can be bought in quantities of a dime's worth and for less that will do more harm than a dime's worth of fiction ever can. Instead of holding up our hands in horror and lifting the finger of warning at this mild sort of evil which can never assume proportions large enough

to cause any general alarm, we should, by our individual efforts, endeavor to meet it more than half way. The place to begin is the fireside and home circle, the mother is the one to bring about the greatest change. Good books and good reading matter of all kind are cheap and within the reach of all. Get a variety to suit all tastes, from the youngest to the oldest member of the family, the greater the variety the better is the result, and the more interest is taken. By so doing the dawn of the day will soon appear when all vile and pernicious literature, that barnacle-like clings to all great movements, will be scraped off and literature will be purged and purified of all evil, and the art of reading in every case will prove a universal blessing to all mankind. In conclusion I will say I have been helped instead of harmed by reading novels. Hoping the editor will pardon me for taking up so much space and with a kind wish for all, I am

Bystander.

[An able defence of novels and novel reading.—Ed.]

TROY, N. Y., August 8, 1891.

Editor Woman's Department:

It is more than a year since I wrote you before, and then you bade me "come again," so here I am.

The *Magazine* has improved very much and the Woman's Department is getting to be such a pleasure. The letters are interesting, and it is so helpful many times to sit down and read of others who have just such trials as we are having, and yet have lived through them. The old saying, "Misery likes company" is illustrated there.

Did any of the sisters ever try apple sauce as a filling for layer cake? For the benefit of those who have not I will say, stew the apples as for sauce, then run them through a strainer to get all the lumps and stringy parts out, add sugar and nutmeg, and spread between the layers. It is very good, and so simple.

I have a recipe for cookies I am certain somebody's John would like if he would only try them. Two cups of sugar, 1 cup of butter, $\frac{3}{4}$ cup of sweet milk, 2 eggs, 5 cups of flour, 2 teaspoonfuls baking powder. Roll thin and bake quickly.

When we were first married we had a great many callers, often perhaps, on the point of leaving when my husband came home and they wishing to see him, too, he would wash up a little and come right in, for his train did not arrive here until 6:55 P. M., and often later, so often it was quite late before he would come. I soon found his clothing was soiling the furniture, so I devised a means of remedying that. I bought Butcher's linen and made tidies for back, seat and arms of the parlor furniture. Then, being somewhat of an artist, I sketched out designs on the tidies and worked them with Tambour cotton in Kensington stitch. Everyone likes them, and it is so little work to keep them clean, and yet they are such a saving to the furniture. I fringed the edges, and on some I knotted the fringe. I fancy I hear someone say, "Humph! guess she is a married old maid. I am going to take the good of my furniture, and shall use it without cover." I have some very pretty fancy tidies I put on when I am expecting company, and then my furniture is clean to put those tidies on, and not so worn that I am obliged to keep them so closely covered all the time.

Why do we never hear from Troy City Lodge, No. 315? According to all accounts it seems to flourish, or, at least, so the members say, for they do not allow us there, you know. When we ask if we may go to meeting with them, they say yes, if we will sit out on the back steps and wait until meeting is over. Aren't they very hospitable? The only objection I have is on account of their day for meeting being on Sunday. They plead as an excuse that they cannot get many of them together on a week day evening, as their trains get in so late, or they are delayed, or they are so tired. I think if a very great effort were made it might be held during the week just as well.

Have you heard of our new monument to the memory of the soldiers and sailors of Rensselaer county, State of New York? The cost is \$50,000. It

is on Washington Square and as you come up from the New York boat you get a fine view. It is to be unveiled September 15. They are raising funds also for the erection of another monument, in honor of one of America's noblest women, Mrs. Emma Willard; the monument will cost \$15,000, and will be placed in the Seminary Park fronting the Seminary, the scene of her labors. She was born in Connecticut in 1787, and died in Troy in 1870. It is almost seventy years since she established the seminary. She was a historian and poet as well.

The third monument to be erected while the fever is on, is one to the memory of Chief Lane of the fire department, but that will be placed in Oakwood Cemetery. Will try and tell you more about Troy sometime if no one else ventures.

I just wish you might see our garden; the flowers are at their best now and are beautiful. We took a beautiful bouquet to the cemetery, yesterday, where our baby lies buried. He stayed with us but a few days, and yet we loved him so. It seems even now as though we must have him back, and yet we know it is well with him, for he has returned to Him who gave, and now hath taken away. We know our little one is waiting for us to come, and may we so live that we shall meet our babe in heaven. I will close now with best wishes for you all, from

Troy.

[Was it not Mrs. Willard who founded the first girl's seminary in the United States? Thanks for the pansies, every color was perfectly preserved.—Ed.]

LEADVILLE, COLO., August 17, 1891.

Editor Woman's Department:

Here we are, around the curve, across California Gulch and steaming in at Colorado Midland depot, in the City of the Clouds. Our city lies at the headwaters of the Arkansas river and California Gulch, surrounded by the sunny peaks of mountains Massive and Elbert to the west and Bald Mountain, Sheridan's Peak and Mosquito Range to the east, and other small mountains too numerous to mention, where we take from Mother Earth the precious metals, gold, silver, iron and lead.

We also have our smelters with which we smelt our ore into bullion. Our smelters are the Arkansas, American and Harrison Reduction works, which are situated in the famous California Gulch, where such large quantities of gold were discovered in 1861. Silver, iron and lead were discovered on Carbonate Hill in 1877. Our mines are producing a large amount of minerals and the people of Leadville are anticipating more than has ever been produced here before.

We have three railroads running in here, the Denver and Rio Grande; Denver, South Park and Pacific, and Colorado Midland, on which I suppose Bro. Patsy is a tallow pot. Well, Patsy, I am very thankful to you for upholding poor M. I. P. in the mistakes made by me in my poor but well meant letter. I was a little bit discouraged, but with the kind editor's encouragement I will make one more attempt. I have drifted away from my subject, and as it is most time to quit I will just say a few words.

The population of Leadville is about 16,000. We have a delightful climate in the summer time, but have had considerable rain this summer, more than usual. We have about six or seven months of cold weather in winter. We have five fine school buildings, the two largest being the Ninth street school and the Central, the latter in which we graduate for a second class certificate for teaching. We have eight churches, all fine buildings, and a fine hotel, six stories high, called the Hotel Kitchen. We have five railroad orders and all are in a flourishing condition. New members are joining the B. of L. F. most every lady's night.

Wishing the B. of L. F. and Woman's Department success, I remain,

A Fireman's Friend and Daughter, M. I. P.

[That was a very fortunate criticism which resulted in bringing us so interesting a letter. It shows what our correspondents can do when they try.—Ed.]

PRAIRIE DU CHIEN, WIS., July 31, 1891.

Editor Woman's Department:

After a long summer vacation busily, yet pleasantly spent both at the quiet "Prairie" and amid the hustle and bustle of Milwaukee, I come again to the *Magazine* for a short visit with its readers. Other people and papers may take one's time and attention, yet there are moments of quiet when one turns instinctively toward the *Magazine* for a friendly chat with some of the dearest mothers and sisters and truest sweethearts whom this country knows. These friendly chats, although they do come through the silent medium of the pen, are of more benefit than many think. To know that we are thought of and sympathized with, to know there are others that feel as we feel, and to know that perhaps we are of help to others, are thoughts which brighten many a woman's life. Although they be small they are like the little round spots of sunshine which find their way through the leaves and light your pathway through the woods.

I had occasion this summer to travel quite a distance on a freight, or accommodation, as it is called, and during the ride the brakeman jumped down from his seat and took out a large dinner basket. Now this dinner basket was his only material reminder of the dear little wife and cosy home he left behind. Is that not all the reason in the world why it should be "perfection," if such a thing is to be had? Well, it was. There was a napkin of snowy whiteness lying over the top and beneath it were viands such as to make any mouth water. Another brakeman soon came in to eat his dinner, but there was a marked contrast between the two. The napkin of the latter looked as if he had used it for a towel for a week, and his bread was dry, black and hard looking. The meat which he gnawed from a large chunk was evidently tough and under done. I did not see all in either basket, for I was afraid they might think I wanted part of it if I watched them too closely. I was thinking only of the *Magazine*. Now let me suggest some nice things for a dinner pail: Veal loaf is a dainty "fit for a king," therefore let it sometimes find its way into the dinner of a "knight." Another very nice article is cherry batter balls. To make them, stew the cherries partly soft in a small amount of water and add some sugar and cinnamon; canned cherries can be used. For the batter take five eggs, leaving out the whites of two, and cream and flour enough to make a batter thick as pancake batter. Let your own judgment determine the amount of baking powder. Some put in a little white wine, but this can be dispensed with. Stir batter and cherries together, then drop this from a large spoon into hot lard. Drop quickly and evenly so they will be round and evenly shaped. Fry till light brown and when done sprinkle with powdered sugar and a little cinnamon.

Above all things have a good supply of good bread and butter and at least one kind of meat nicely done and seasoned to his taste. If your fireman has a "pie mouth" I would suggest a liberal piece of his favorite pie. Pains should be taken to make his dinner look as well as taste good, and you will be well paid by his enjoyment of the same.

To change the subject, one of the features of the *Magazine*, which I greatly admire, is the sermons of Rev. Emory Pollisher, Dee Dee. There is so much encouragement and sound sense in them and it is so simply told that one cannot but admire the author. There! there! Mrs. Pollisher, I really have no designs on Mr. P. I am an old (?) maid school teacher, love cats, and write for two weekly newspapers, so you see I positively have no time for your fireman in particular.

A word to "Minnesota" before I go. A number of months ago "Minnesota" wondered if I was the "Nora" she had known since I was a baby and knew my mother years before. Since "Minnesota" has aroused my curiosity, I too would like to know. It has been twenty years since I was a baby, and my mother's initials before marriage were M. T.

Hoping that the *Magazine's* oldest and best writers will not let their pens grow rusty, I bid all adieu with best wishes for the Woman's Department and its readers.

Nora Bull.

[A good letter.—Ed.]

DUBUQUE, IOWA, July 28, 1891.

Editor Woman's Department:

The editor having said that receipts and suggestions were welcome, I will take the liberty to send several I know are good and that our railroad boys like for lunches. A nice fruit cake is made as follows: Butter and lard mixed, 1 cupful; sugar, (dark brown is best) heaping cupful; 2 eggs, 1 cup of sour milk or water, 1 pound of raisins and currants mixed, half teaspoon of soda, and any or all kinds of dark spices. I also put in lemon peel or citron, if I have it handy. This cake keeps nice and moist for quite a while if put in a box and covered close.

A nice white cake is $\frac{1}{2}$ pound butter, 1 pound sugar, 1 pound flour, 4 eggs, 1 cup water, $\frac{1}{2}$ teaspoon of soda, 1 cream tartar, or 1 teaspoon of baking powder. A pinch of maize is very nice in this, or you can take the half of the mixture when all put together, and add raisins or currants or both, and have two kinds at once, or the half of this rule will be enough for two lunches or teas. Raisins are much more easily stoned if put on the stove to boil for half an hour and they keep the cake more moist. In mixing my cake, after the butter and sugar have been beaten together, instead of beating the eggs all together or dividing them (except for sponge cake), I break one at a time in with the butter and sugar and beat well up. It is just as good a way and saves lots of time and "elbow grease," and we need to save the latter for other work. I hope these receipts will be of use to some of the readers of the Woman's Department, and if this is not too long, will send others sometime.

I have read the *Magazine* for a number of years and enjoy every part of it. I have two brothers and two brothers-in-law and my father who work on the railroad, so, of course, I have a decided liking for the "greasy railroaders," and many a time I have a black face myself, when the boys come home. I am waiting with patience for the August number, to see how the courting question will be settled. My idea is girls should always be neat and clean, and if the meals are not ready, get them as soon as possible and have them good and hot, "if it is winter and you live in Canada." Also be pleasant and quick in serving them; you will find it as good a way as any to win the "boys' good will. With best wishes for the B. of L. F., I remain an

Engineer's Sister,

Sliver.

NORWALK, OHIO, Aug. 23, 1891.

Editor Woman's Department:

I knock for admittance to your charming circle this rainy afternoon. I am afraid if you should knock at my sitting room door I would cry out, "not at home," for in one corner is a chair turned over for a buggy, in front of it is a rocking horse, here are some childish dishes and broken crockery, there is dolly with one or two sisters, a book and a number of other toys to show that the babies are at home, while the clock tells us that "papa" will be here in one hour. I am afraid if we retained his affections by keeping a tidy house they all would be lost. He says, "The children are not one half the trouble if they are busy and they must do something."

Miss Smith, in August number, tells us that novel reading is wrong. Now, did you ever feel so tired after the babies were put to bed that you could not read anything that required any amount of mental exertion? If you have, then take one of Mrs. Henry Woods' "The Duchess," or some good writer's novels and it will rest you. Your mind is taken from the cares of the day and you are at rest. I think that there is wrong in all things carried to excess. Intemperance in all things should be guarded against. There are those who are intemperate in dress, eating or reading, as well as drink, and it often leads to as unhappy an end. The same with card playing; when we are master of ourselves and do not carry it to excess, "all is well." When it is master then the trouble begins. It depends on our own will whether we will be slave or master of our desires. If you find any amusement gaining control of you, give it up entirely until you feel that you can indulge yourself without excess. Sometime I will tell you of our pretty Maple City, but for now, Adieu.

Jennie.

A FACT.

It was on an English summer day,
 Some six or seven years ago.
 That a flagman before his cabin paced
 With a listless step and slow.
 He lit his pipe—there was plenty of time,
 In his work was nothing new.
 Just to watch the signals and shift the points
 When the next train came in view.

He leaned 'gainst his cabin and smoked away,
 He was used to lounge and wait.
 Twelve hours at a stretch he must mind those points
 And down trains were mostly late.
 A rumble—a roar, she is coming now,
 She is truer to time to-day.
 He turns, and not far off, between the rails,
 Sees his youngest child at play.

Not far, but too far, the train is at hand,
 And the child is playing there,
 And patting the ground with crows of delight
 And not a moment to spare!
 His face was dead white but his purpose was firm,
 As straight to his post he trod.
 And shifted the points and saved the down train,
 And trusted his child to God.

There's a rush in his ears though the train has passed,
 He gropes, for he cannot see,
 To the place where the laughing child had played,
 Where the mangled limbs must be.
 But he hears a cry that is only of fear,
 His joy seems too great to bear,
 For his duty done, God saw to his son,
 The train had not touched a hair!

FREEDOM, KY.

Mrs. Mattie Eubank.

A WORD ABOUT NOVELS.

BY IRENE.

What a load of sin is laid at the door of novel readers and writers by Emma E. Smith in the August number. I thought it had long since been conceded by the intelligent public that the greatest reforms known to the world had been the outcome of novels in more than one sense. To-day the surest and most approved way of reaching the ears and hearts of men, both small and great, is through the pages of an eloquent, well written novel. "Uncle Tom's Cabin," from the pen of one of America's famous daughters, was the indirect cause that led to the emancipation of millions of black slaves. Where is there a person that can read at all that has not perused its pages with heart and sympathies made more tender for so doing? Bellamy's "Looking Backward" has been read and commented upon by the learned and great everywhere and is having an effect upon the civilization of to-day equal to that of the former in its time. Who knows but "Looking Backward" will be said in years to come to have been instrumental in liberating millions of white slaves, or redeeming from misery the lives of the poor and oppressed everywhere by freeing them from shackles cast upon them by unjust laws and libelous law makers. E. E. S. asks: "Is it by reading novels that the renowned lawyer, the able statesman or the great orator has attained his eminence?"

Perhaps, we know of no lawyer, statesman, or orator more renowned or eminent than Robert G. Ingersoll, and he says, speaking of "Robert Elsmere," a novel that any one at all conversant with the times would blush to acknowledge they had not read: "A good man, living in England, drawing a certain salary for reading certain prayers on stated occasions, for making a few remarks on the subject of religion, putting on clothes of a certain cut, wearing a gown with certain frills and flounces starched in an orthodox manner, and then looking about him at the suffering and agony of the world, would not feel satisfied that he was doing anything of value for the human race. In the first place, he would deplore his own weakness, his own poverty, his inability to help his fellow-men. He would long every moment for wealth, that he might feed the hungry and clothe the naked, for knowledge, for

miraculous power, that he might heal the sick and the lame, and that he might give the deformed the beauty of proportion. He would begin to wonder how a being of infinite goodness and infinite power could allow His children to die, to suffer, to be deformed by necessity, by poverty, to be tempted beyond resistance; how He could allow the few to live in luxury and the many in poverty and want, and the more he wondered the more useless and ironical would seem to himself his sermons and prayers. Such a man is driven to the conclusion that religion accomplishes but little—that it creates parasites. Such a man would be forced to think of the millions wasted in superstition. In other words, the inadequacy, the uselessness of religion would be forced upon his mind. He would ask himself the question: 'Is it possible that this is a divine institution?' Is this all a man can do with the assistance of God? Is this the best? The moment a man reaches this point where he asks himself this question he has ceased to be an orthodox Christian. It will not do to say that in some other world justice would be done. If God permits injustice to triumph here, why not there? Robert Elsmere stands in the dawn of philosophy. There is hardly light enough for him to see clearly; but there is so much light that stars in the night of superstition are obscured."

That Gladstone, the peer of statesmen, the acknowledged "Grand Old Man of the Universe," has thought fit to read, answer and comment upon a popular novel is an established fact.

Everyone who has read "Robert Elsmere" has also read "John Ward, Preacher" and "An African Farm," or wished he could do so. Having read these three novels, which together throw into concrete form three distinct attitudes of current thought, they find themselves upon a sea of profound religious unrest that will eventually cause them to do something, be it ever so little, towards bettering the condition of humanity in this world. Therefore the speculations of these novels are the seething flow of religious opinion, which is such a characteristic of modern christian thinking.

Leaving modern novels, let us speak of those written in the dim and misty past, those that have gone down on record side by side with the history of the times in which they were written as portraying even a truer record of the scenes, manners, and customs of the times than can be gathered from the history of hard facts.

Who is not the better for having read Scott's "Ivanhoe?" that wonderful novel that will enlarge the feeling of patriotism and benevolence in every heart when they read of the feats of Ivanhoe or Richard Coeur de Lion.

What heart is not filled with veneration for pure womanhood at the matchless life of Rebecca, "Annie of Gherastine," "The Lady of the Lake," with her sweet filial love and affection for dear old Douglas, to the last tender and true? There is much to learn by the reading of those beautiful, tender lives. While from the bold and handsome Rhoderic Dhu one may learn a lesson of hospitality that in these days seems to be needed.

My letter is already too long and I have not begun. What a rare, sweet pleasure we would miss without reading the story of "Little Nell." If Dickens had left nothing but "The Old Curiosity Shop" behind him his life would yet be fuller and the good done to the world far more than thousands of the lives of some have been who have never read or written a novel. But besides this we have so many more from his pen that are in themselves sermons, prayers, praise, and salvation almost to the poor and unfortunate. "Our Mutual Friend" with its dear, quaint Mr. Boffin and Mrs. Boffin. I wish E. E. S. would tell me how she likes "The Literary Man with the wooden leg." Poor, old selfish Webb, how many there are like him, and how many "Pod-snaps" we have to-day, to be sure. Ah, my experience in novel reading has been that the colors are drawn too true to life even. "Tim Fagan," "The Artful Dodger" and "Claypool," as well as "The School Master," are still abroad in the land, while all the poor little "Oliver Twists" have not found a safe refuge.

Who has not learned lessons of hope and endurance from "David Copperfield?" What have we lost

by our sympathies with him in his early struggles and final success; by weeping with him over the loss of dear, bright, sunny little "Dora," and rejoiced with him on gaining the peerless "Agnes," whose example and life, pure and simple, should be placed in the hands of all our girls, with a word of interest for rugged "Aunt Trotwood" and honest "Peggy." Even "Micawber" with his pathetic belief in "something turning up" and the smiling "Barkis" is willing; are friends we would not willingly lose.

Then the sneaking, thieving, "Umbie Uriah Heep" and the too confiding "Wickfield" are characters met with almost every day. The sad, sweet story of "Little Emily" is one that would soften a heart of stone toward the Marthas of to-day. Ah, never say that novels are but the idle fancy of a chimerical brain, while some of the purest aspirations of life, some of the holiest impulses are born of their perusal.

"Cast a glance at the books that the young collegian has to study and you will readily see that the novel is not among them," says E. E. S.

This may be true, yet methinks it quite likely that there will be found "Milton's Paradise Lost," "Pope's Essay on Man," "Lallah Rookh," and others that cannot be called less than fiction, and yet are considered the best classics. There will also be found probably Homer's "Iliad," another poetical novel, read by scholars grave and gay.

There are hundreds of other novels that I would like to mention if I had space. There is "Little Lord Fauntleroy" and Miss Alcott's "Little Woman" that have performed a miracle of good already. And "Dora Thorne" and the "Scottish Chiefs" and so many more, but to come directly to a close, did not our own Editor acknowledge that she had read "Dr. Jeckyl and Richard Hyde?"

[We fear our correspondents on the other side will not find it easy to answer the arguments in this very convincing letter.—Ed.]

OMAHA, August 15, 1891.

Editor Woman's Department:

Now, Sister Emma, do you think it liberal to execute poor Mr. Novel without a chance to defend himself? Bear in mind we should respect old age and not forget past favors. I am a very dear acquaintance of his, therefore am inclined to be lenient. To say the least, he possesses many good traits, many a pain he helps us forget, many an hour passes quickly by his entertaining, and we could all always profit by his visit. You say, "put a novel in a novel reader's hand and all else is forgotten." That may be, but take the same man or woman, deprive him or her of their novel and put liquor within their reach, and they will become drunkards. Let them have cards, and they are gamblers. Why? The only reason I know is they must have been launched into this life bereft of a limit bump. Think a minute, sister, and you will see that by carrying any of our pursuits in life too far we are monomaniacs.

True, our great statesmen did not attain their greatness, nor our mechanics master their trades by reading novels, but I have no doubt when their bodies and minds were tired Mr. Novel was not excluded. I don't think we read novels to imitate the characters therein. We may see where they made their mistake, and profit by it. By reading other people's ideas it helps our own. I am aware there are degrading novels, but we don't have to read them. Good ones are just as easily purchased and just as plentiful, and as we are all able to discern right from wrong before we can read, there is no excuse for those who read a degrading one. When my hands and feet are tired I rest myself by reading, first the daily papers, after those, if I have time, whatever fancy dictates, as I am blest by having much from which I can choose. It may be something historical, one of my old school books, just as often it is a novel. It may be one of Dickens, Thackeray, a trifle more sensational, such as Queenie's Secret. No doubt many of you, dear readers, will close your eyes and say I am past redemption when I tell you I crossed the plains with Deadwood Dick, and went abroad with Muldoon, admire the keen wit of the author, laughed heartily at his ludicrous situations, then perused the cablegrams and sincerely wished

America could boast of fewer Muldoons. I see no harm in a slight acquaintance with Mr. Novel or Mr. Card either. It never does to get too intimate with any person, and those are very agreeable and entertaining men if kept in their places. The happiest family I know, and I may add, as good as the best, play cards frequently. When they asked their mother her reason and she said, "I know they are with their sisters and at home, I know they are with good company. You see we always amuse each other."

I see one of my city brothers suggesting to write of the future. Bless you, child, where is the sense in writing of what may never be? If you wish a happy and prosperous future, be earnest in the present, let your days be happy remembrances, where you give a kind word or helping hand to a fallen sister or brother, keep pace with our enterprising city, and I predict for you a great future, and as you reach the top of the ladder, towards where our city is making such rapid strides, don't forget there is some poor fellow below and give him a helping hand.

A. B. C.

[A good letter. Come again.—Ed.]

MILWAUKEE, WIS., August 8th, 1891.

Editor Woman's Department:

An article entitled "Novel Reading," in the August number of the *Magazine*, prompts me to say a few words in friendly criticism on the same subject.

In the first place the writer assails novels and novel-readers with a string of adjectives quite wonderful.

She makes no distinction between the writers of *flimsy productions* and such writers as Scott, Dickens, Black and dozens of others who have attained eminence as great as most of our renowned lawyers, statesmen and orators. If our correspondent will study the good novels and not the "trashy" sort, she will find them instructive and entertaining and will also see that in not even one of them are the refining virtues underrated and vices palliated.

"Les Miserables," one of Victor Hugo's greatest works, is a novel written in the spirit of justice, purity and truth. This work, as we all know, had a wonderful influence in favor of the poor and oppressed people of France. If our modest young lady of to-day would imitate the example of William Black's heroine, Yolande, she would be a noble woman and perfect daughter.

A book, because it is sold for a dime, is not necessarily a dime novel and injurious to the mind of the reader; "Life and Letters of Thomas Carlyle" has been sold here in our city for a dime. "Robert Elsmere" is a novel; is there anything contaminating about it? Would its influence ever send one to prison? Is the author of "Robert Elsmere" one of those who write for bread? If so, I wish we could all earn bread in the same manner.

The true novelist portrays human life and character, ennobling always the better side of both.

Hoping that this side of the question will be discussed by some one more able to do it justice,

I am sincerely yours,

Dithie.

ELDON, IA., August 5, 1891.

Editor Woman's Department:

Well, Maggie Miller, you think we have some bad men on the railroad. Perhaps we have, although I am not acquainted with any such; I think our good ones outweigh them. Where do you find nobler men than those belonging to the Grand Brotherhood? I am sorry you are not acquainted with some of them. I am sure you also would have a word of praise for them. As my hubby is a fireman, also a B. of L. F. man, I am a little partial to railroad men.

About novel reading, I would say I have read several good ones, and as long as we do not neglect our household duties, or the welfare of our family, I don't see any particular harm in reading them. If I, Elizabeth will correspond with me I will exchange some very nice lace patterns with her.

With best wishes for our railroad boys, I remain their friend,

Edith Wilson.

PALESTINE, TEX., August 5, 1891.

Editor Woman's Department:

Will you please be so kind as to allow me space in your worthy and appreciated *Magazine*? Words are inadequate to express the feeling I have toward you and your valuable *Magazine*. If admitted, I would like to give you a description and location of the holy land, Palestine. It is situated 150 miles north from Houston, 100 miles south from Dallas, 100 miles east from Waco, 100 miles west from Marshall, Tex. It is on the divide between Trinity river on the west and Neches river on the east. Its altitude is 480 feet above sea level; free from malarial influences and settled by 10,000 thrifty, honest, law-abiding people.

Palestine has excellent schools and churches; a court house costing \$45,000; jail, \$22,000, and to-day untenanted, not a criminal nor a suspect within its walls; good school buildings costing \$30,000; and several factories from \$20,000 to \$50,000. At Palestine a splendid field for manufacturing industries presents itself and the citizens through this association will extend to all legitimate enterprises material aid and valuable assistance. Anderson county, of which Palestine is the county seat, was organized in 1846. It has 10,000 square miles.

As "Fannie" says, card playing seems to be the principal subject now. What harm can there be in having a pack of cards in the house? They say it will lead people to the gambling den, make drunkards and murderers out of them. I will just say in behalf of myself and others, my father and mother played cards; always had a pack in the house. They never made a drunkard or gambler out of me. Others say don't let your children see you take a drink of beer or whiskey, if so it will be ruination to them. Parents, why go behind their back? My father takes a drink whenever he wants it (I have never seen him drunk in my life); he smokes and chews tobacco, he plays cards in the house when he feels like it. Now they say children will follow their example. I neither smoke, chew, drink and seldom play cards; only with a friend in the house, and I'm a young man of 23 summers, in the market. My occupation is that of a fireman and I'm proud of it. All I regret to say is I don't belong to the Brotherhood, because I have not been firing long enough.

As "Kicker" has gone to the happy hunting ground, why can't we get up a debate? A subject like this: Which has more influence over man, women or money?

Wishing the *Magazine* and all railroadmen success in every aim in life. Yours.

Somebody's Darling.

[The Woman's Department is willing to discuss this subject.—Ed.]

EAST ST. LOUIS, ILL., August 6, 1891.

Editor Woman's Department:

I look with much anxiety to the coming of the dear *Magazine*, in which my husband and I are deeply interested, especially the Woman's Department, which I take great pleasure in reading.

My husband is a fireman and we have only been married two months. I do all of my own housework except the washing, although not being very familiar with it before I was married, but it comes very handy to me now. I can make nice cake and pies and manage to keep my house as neat and clean as possible. In our own pretty little cottage which my husband owned before we were married. It is situated just outside of the town, where everything looks so pretty and green. In my description I might select just two lines from the song entitled "Annie Rooney."

"In a little cosy home,
No more from home I'll care to roam."

I need not venture to say any more in regard to that just now, but those dear railroad boys do hold a warm space in my heart. They are just as good as they can be. The brave boys; when they leave in the morning or in the evening little do they know what their fate may prove to be. Nevertheless, I am proud to think I captured a railroad boy for my husband.

But I must not take up too much of your valuable space, for this is my first attempt, but I sincerely

hope you will regard this missive worth publishing. Now I wonder if my hubby will guess who wrote from the Queen City of Egypt.

*Mertie.***TO MY SISTER.**

[Dedicated to my sister, Mrs. Anne Pugh, Rose Cottage, Wales.]

Sister, let us drive away sorrow awhile.
Let us exchange our cares for the old-time smile;
Let us think we are girls again just once more,
And be happy and gay as we were of yore.
With never a care—our minds were free—
In those bygone days, you, Sister, and me:
Do you mind the old house with its kitchen and hall,
Do you mind the garden and moss grown wall,
And the little bedroom beneath the sky,
Where we slept together—you and I?
Let us take a run thro' the fields again,
Pick the clover from midst the waving grain,
Shall I catch the pony and ride away,
That you said would be the death of me *sure* some day?

Ah, now we have reached the Aberlath stile,
Where 'neath the shade we can rest awhile,
And everything seems so hushed and still,
Save the stream that turns the old mill wheel.
Shall we go to the river and sing a song,
As we watch the pure waters rolling along,
Then on to the farm where the apples grow?
In our girlish pranks how many we throw
At each other, then laugh and shout so wild,
(Ah me, for the joys of an innocent child),
But the shadows are falling, we hie to the road,
While with apples and plums we each have a load,
There's the 'bus—let us give it the signal to stop,
And board it in fun with a skip and a hop:
Then ride to the village, of mirth have our share,
For the driver as usual forgets to take fare,
And he laughs as the lash o'er the horses he twirls,
Saying—"Boys will be boys, and girls are girls;"
Now we near our home and there by the gate
Stands our father exclaiming, "Why girls you are late!"

You've been up to some mischief I very well know,
Your mother must scold you—I do not know how."
But mother has ready the costliest tea,
In that old-fashioned kitchen for you and for me:
Now we'll think it is Sunday, we hear the church bell

As it bids us make haste to the place loved so well,
I will play on the organ, you sing in the choir,
As we list'to the anthem grow higher and higher,
And sometimes from behind the red-curtained pew,
Sly glances we throw at the folks—I and you—
Then up at our pastor who tries hard to frown,
As from his seat above us he often looks down,
And 'Squire Morris comes in, his features a smile,
And the family following each one in file,
The dear loved 'Squire long ago lies at rest,
Of this family it was hard to tell which we loved best.
Now the services over and out on the street
We hear a discussion of—Where shall we meet
On the morrow?—and oh, how we hope it won't rain.
For we are going to a picnic ten miles on the train.
Where a nobleman lives with a great honest heart,
In the frolics and fun he always takes part,
And his Castle Dynevor, whose towers reach the sky,
What fun we will have there, dear—you and I.
Those were halcyon days and these were not all,
Could I only keep on much more I'd recall,
But just as I am meandering in sweet days of yore,
I hear a gruff voice calling out at the door—
"Please get in your copy in good time to-night,"
You look as from earth you have taken a flight,
And my visions of childhood that gruff voice has
quailed.

And my fancies of long ago days are dispelled.
I return to the fact that between you and me
There are miles of broad lands and oceans of sea.
So it will be when you read the lines I have penned,
For a moment you'll dream and then comes the end,
In that beautiful land just beyond the blue sky,
Sometime we'll recall those sweet days—you and I.

Mrs. Henry B. Jones.

WASHINGTON, IND.

[The Woman's Department appreciates this very readable poem.—Ed.]

NOVEL READING.

Webster defines a novel as a fictitious tale or narrative intended to exhibit the operations of the passions, and particularly of love.

Edward Eggleston says in one of his prefaces: "Doubtless I shall hopelessly damage myself with some good people by confessing in the start that, from the first chapter to the last, this is a love story. But it is not my fault. It is God who made love so universal that no picture of human life can be complete where love is left out."

"Love is our highest word and the synonym of God," says Emerson.

I have heard that even the men read this Department first, and every correspondent expresses great interest in its pages. Is it not because on every page they find living examples of the happiness love brings into a life, and the misery consequent upon its absence or decadence?

Compare the feeling of indifference with which you peruse a history with the intense emotional interest that you feel in a tale of love and adventure. The former you read from a sense of duty, unless you have cultivated a taste for that kind of reading, while the latter takes hold of you with such power, that you can hardly lay it down until it is finished. Adding to this the testimony of such high authority as Henry Drummond, who tells us that love is "the greatest thing in the world," can anyone conclude that the novelist errs in choosing a theme of such universal interest?

Your correspondent seems to be particularly severe upon "dime novels." Every one knows that the expiration of copyrights, the cheapness of paper and printing inks, together with the demands of the people, have made it possible for us to obtain, not only foreign books, but the works of our own authors at an exceedingly small expense. Many of the classics of our language are sold for ten and twenty cents. I once purchased a volume of "Emerson's Essays" for a dime, but their influence upon my life and character has been of inestimable value.

Have I not established the right of the novel not only to be, but to be cheap?

An historian says of Garfield: "After he had been six or eight months at college, and had devoured an immense amount of serious reading, he began to suffer from intellectual dyspepsia. He found his mind was not assimilating what he read, and would often refuse to be held down to the printed page. Then he revised his notions about books of fiction, and concluded that romance is as valuable a part of intellectual food as salad of a dinner." He chose the best, however, and limited the quantity.

I would not, for a moment, be understood to uphold the reading of trash, or to encourage the neglect of a duty for the sake of reading any book whatever. The remark is trite that nothing is so intrinsically good that it may not be made evil. It is surprising that we are sometimes willing to vitiate our tastes and lessen our self-respect by the perusal of unworthy books, when even with our best efforts we could not scan one-half of the books bearing with them ennobling and refining influences. I have no place on my program for the bad novel. Through well selected fiction we may become acquainted with the everyday life of the people in other times, other lands, or different phases of society than our own. In this line the novelist is the true historian. We owe much to those authors who undertake long journeys and severe labors that they may adequately represent scenes and eras of paramount interest.

Every inexperienced young person harbors many "false ideas" about the great unknown world of beings. By means of judicious reading he might be placed on guard and saved much unhappiness. "Experience is the best teacher," you say, but that old saying is not altogether true. We know many things to be the truth which we pray daily we may never experience.

I doubt the sanity, or at least the intelligence, of any one who would expect to adopt into his own life the deeds of an imaginary hero. If we can choose daily the good from the evil, the right from the wrong, what becomes of this intelligent discrim-

ination if we fail to discern the evil and the good because we find them between yellow covers?

I have heard that reading fiction made people too "romantic." Perhaps that is what your correspondent means by "false ideas." It seems to me that in freeing ourselves from excessive sentimentalism we have gone to the opposite extreme, so that, with most people a slight cultivation of the sense of romance would be desirable.

"The story of any true life is wholesome, if only the writer will tell it simply."

WATERLOO, IOWA.

E. M. S.

[Our correspondent will please accept thanks for this excellent article, one of the best we have ever published. We hope to hear from her again.—Ed.]

SAN ANTONIO, TEX., August 1, 1891.

Editor Woman's Department:

Although I'm neither the mother, sister, wife nor sweetheart of a fireman, and consequently will be excluded from the B. of L. F. Auxiliary (when there shall be one of those delightful organizations here), I am pleased to know that I am not deprived of the pleasure of either reading the *Magazine* or giving you a little piece of my mind occasionally if I like. I believe we are taught by St. Paul that women should not be heard in public, but if they have anything to say, tell their husbands and let them make it known. Not being the unfortunate possessor of such a valuable "mouth-piece," I have the pleasure of doing my own talking.

Charlie suggested in the June number that we should not let the married people monopolize these columns, and I think that a commendable idea. Now, Charlie, I am as bitterly opposed to monopolies as you could possibly be, and shall give you my hearty cooperation in the attempt to break this one. Please excuse me if I compliment you just a little. I am not much given to that sort of thing, but I must say, I admire your letter very much, and echo every sentiment you expressed. According to the theory that 'a man's writing is the outward expression of the inward man,' if we had more young men of your character, we would have fewer unhappy wives, and fewer girls becoming more frightened at married life every day. You ask how to judge a wife. I should say, judge the girls according to the standard you have set up for the boys. Find one that is perfectly frank and truthful, generous, a true Christian, finding her greatest pleasure in making others happy; study her disposition, teach her to love you because you are worthy of that love, and then you have a wife; not a mere advertisement for milliners, dress-makers, hair dressers, cosmetic peddlers, and "finishing" boarding schools, but a life companion after God's own model. If you are what I judge you to be you deserve one like that, and I trust you may be fortunate enough to get her. But I must not consume all my time with you as I want to say something to some others.

When I read Mr. Richmond's letter some time since, I almost lost my temper at first, and thought I'd write at once in defence of our sex, but after thinking the matter over, I decided that it was only done to arouse the ladies to argument, as no man who ever had a mother could believe all he said. Since I've read Mrs. C. R. R.'s letter and viewed Miss Grace Cutler's pen picture of the gentleman, I feel more real sympathy than contempt for him, for if his motive was argument he got it; if that was his real belief Miss C. has left nothing unsaid that would benefit him. Thanks to Miss C. I sincerely trust he will improve by her pen picture.

I think the letter from a Fireman's Mother, W. L. W., is just splendid and there are several good hints in it which older married people might take to themselves, as well as prospective brides.

I agree with Olive in almost everything she said, only she didn't say quite enough.

I intended to say something about novel reading, but having already made my letter too long will leave that for another time.

Best wishes for the B. of L. F.,

"Butterfly."

MONETT, Mo., August 9, 1891.

Editor Woman's Department:

For the first time I will ask for admittance into the Woman's Department, and if welcome, may in future call again. We have had the *Magazine* in our home only about six months, and I take great pleasure in reading the Woman's Department, the rest I don't care so much about. I have never seen but one letter written by any of the ladies living in Monett. I really do think that more of the B. of L. F. boys' wives ought to write and give Cherish Lodge an abundance of praise, for I don't think a more noble or braver set of men ever constituted a lodge than does Cherish Lodge, No. 440. Of course I am partial, I must admit, to Cherish Lodge, for my own dear hubby is a member of that lodge. The lodge has prospered very fast ever since organized, and I sincerely hope it will still continue to do so until it is one among the largest.

I was so glad when the subject of managing husbands was disposed of, for I do think it was one of the silliest questions I ever heard discussed. It made me so tired reading some of the letters written upon that subject. Such an idea, that any husband would need the management of a woman! I think that if he is really capable of being a husband, he surely is capable of managing himself.

I think, of all the recipes given for pie or cake, those given by a "Fireman's Mother" are the best, none can equal them.

May God bless the noble firemen and protect them from all danger, and may His choicest blessing ever rest upon the dearest one of all to my heart from the time he is called to go until his return home. With much pride I sign myself

A Fireman's Wife, Jennie.

[We believe the discussion on the "Management of Husbands and Wives," or rather the domestic relations of the two, was productive of much good. All women are not so fortunate in their husbands as this correspondent seems to be and many wives also make mistakes. It is beneficial sometimes to talk these things over, compare experiences and listen to suggestions.—Ed.]

SOUTH CHICAGO, Aug. 7, 1891.

Editor Woman's Department:

I am a constant reader of the *Magazine* and have never attempted to write on any subject before. In the August issue I noticed an article about "Tramps" which interested me very much. Every one has had more or less experience with "tramps;" no one will hesitate to say they are a regular nuisance, and still when one comes to their door they will feed him and the result is, in a short time they have another and so on. It is only your kindness brings them there; refuse them and in a very short time you won't be bothered with tramps. It may seem unkind to refuse, and as Prue has said, "What little they receive seems poor enough," but giving them even a little encourages tramping, which is a nuisance to the community at large. Tramps in general are a lazy, degraded set of men who would rather live like a dog than work like a man. I know several cases where tramps have had the chance of making a few dollars besides three square meals a day, and as soon as the first meal was devoured the tramp would sneak off satisfied rather than work any more. Where you will find one who will thank you for your kindness, you will find one hundred who will give you impudence if their fare don't exactly suit them. And again, how many poor creatures have been murdered or assaulted in a most brutish manner by some tramp they were kind enough to feed. Of course we know not what has caused their downfall, but even though a man has trials and troubles in abundance, if he has any manhood in him at all, he will keep from anything so low as tramping. My motto is "help the poor and needy," but "beware of tramps." Hoping I have not intruded, I will close with best wishes to the *Magazine*.

An Engineer's Wife.

SYRACUSE, N. Y., August 9, 1891.

Editor Woman's Department:

The August number of the *Magazine* is at hand, filled with interesting letters, and in one I see a fireman's Annie would like a recipe for pickling fruit. Here is one that has never failed me in the ten years I have used it, and can be used for pickling most any kind of fruit: Seven pounds of fruit, three pounds sugar and one pint of vinegar; spices to suit the taste. Annie, if I lived near you I would rub the clothes and let you write for me. The firemen and their wives here in Syracuse are as dumb as an oyster. Plenty of them could write a much more interesting letter than I, but I suppose they are so afraid of being criticized by their friends they are fearful to try. Now about that fuchsia: Water all your plants twice a week with warm water; be careful when watering them to get it on the dirt and not the stalk. This will make them bloom if they are in the right kind of dirt, without fail.

I am going to send all the firemen's wives a recipe for making washing fluid. I believe there are more clothes rubbed to pieces on the board than there are worn out, but some of these old-fashioned folks wouldn't use anything to make washing easy if you made it and gave it to them. They are afraid it would spoil the boiler. They seem never to think it hurts them to rub five or six hours on clothes they could get out in half the time. One can Rabbitt's potash, one-half ounce salts tartar, one-half ounce dry ammonia. Dissolve the potash in one gallon hot water, when cold add the ammonia and salts tartar. Soak the white clothes over night, in the morning add two-thirds of a cup to a boiler of clothes. Put in the fluid when the water is cold; when it gets good and warm, have the clothes soaked, put them in, let them boil up nicely, then proceed in the old-fashioned way. Put the "pets," as I call those terrible overclothes, in a pail and fill with the boiling suds, and let them stand until you want them, or rather until you are obliged to take them. The dirt and grease will roll down the board in a way that will surprise you and the overalls as well.

I am almost afraid to send this for publication. Perhaps the Editor will think it more suitable for a recipe book, but I am sure this last recipe will bring joy to more than one fireman's wife. With best wishes for the brave firemen and still braver wives who write for the *Magazine*, I bid you good night.

Belle.

[The Woman's Department gladly publishes well-tested recipes. The one given here for pickles should have described the process of making.—Ed.]

NO MORE TO ME.

Alone and silent I sit in my room,
When the garish light has fled,
And wait to hear, through the gathering gloom,
The footsteps of my dear.
But no sound I hear and no sight I see
For my love comes back no more to me.

How soft the light of his tender eyes
As he smiled in the sad, sweet way.
As we stood beneath the glooming skies
At the close of that blissful day.
That smile when I close my eyes I see,
But my love comes back no more to me.

Too fond for kisses or warm embrace
What could we do but stand
And give and take with tender grace,
The thrill of a clasping hand.
That hand in mine no more may be,
For my love may never come back to me.

If love and pity go hand in hand,
How quickly they may learn
What grief remains for those who stand
And wait their love's return.
That grief in my heart may always be,
For my love may never come back to me.

Poetry.

TUSCUMBIA, ALA., Aug. 3, 1891.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

CONSOLIDATED.

The Unification of the Brotherhood of Telegraphers and the Order of Railroad Telegraphers Consummated—A result in the Highest Degree Satisfactory. Evidencing the Largest Comprehension of the Welfare of Telegraphers.

THE OUTLOOK FULL OF CHEER.

On September 14th the Brotherhood of Telegraphers met in annual convention in the city of St. Louis, Mo. The attendance was large and the delegates brought to the tasks before them as large a share of intelligence as has fallen to the lot of any convention of railroad employes within our knowledge.

There were two organizations of telegraphers, viz.:

The Brotherhood of Telegraphers and the Order of Railroad Telegraphers.

The best judgment of the membership of these organizations was that there should be but one organization.

To harmonize conflicting interests, real or apparent, was the desideratum—something easy to talk about, but most difficult to secure—requiring always the highest order of diplomacy. It is a case in which rights are to be maintained and when anything is surrendered it is because a greater good can be secured.

In such giving and taking there are opportunities for the exhibition of broad gauge views; non essentials give place to practical requirements, and when the work is accomplished men are amazed at the simplicity of their achievements.

They discover that there were a hundred cogent reasons for unification, where there was something *less than one* for isolation.

The B. of T., from the first, was a protective order, and at the convention of the O. of R. T. held in June, 1891, protection was decided upon.

This action opened the way for consolidation, and during the convention of the B. of T. at St. Louis this unification of the two

orders was consummated and the organization will be known as the Order of Railroad Telegraphers.

There is no more important class of railroad employes than the telegraphers. The trains of the continent, on all of the 162,000 miles of track, are run by the telegraphers.

A moment's reflection suffices to demonstrate in the mind of any man at all able to comprehend the problem, that no class of railroad employes are subjected to greater burdens of responsibility, and it is true, all things considered, that their compensation has been shamefully meager—indeed, so small, as to excite universal comment.

The consolidation brought about at St. Louis puts an entirely new phase upon the matter.

Protection is not a vagary, it is not a visionary theory. It means *protection*, and protection simply contemplates right and justice to a class of men whose rights hitherto have not been protected.

We hail the consolidation of the orders of telegraphers with more than ordinary satisfaction. We see in it a movement in the right direction, because in securing rights no wrong is done, while in perpetuating a wrong, not only the victims upon whom the injustice falls are made to suffer, but society at large feels the outrage.

In due time the Order of Railroad Telegraphers will apply for admission to the Supreme Council of the federated orders of railroad employes.

Under the new regime, the order will grow in membership and power, and is destined, we doubt not, to become one of the most influential of the orders of railway employes.

The *Magazine* wishes the new order the largest possible measure of success. In the next issue the matter will be more fully presented to our readers.

MRS. H. B. JONES.

The various orders of railway employes have no warmer friend than Mrs. H. B. Jones, and it affords us special satisfaction to notice that recently her devotion to the welfare of "the boys," was recognized by the presentation of a beautiful and costly silk dress and elegant kid gloves to match. We congratulate Mrs. Jones, not so much on account of the beautiful presents she received, as that her services are appreciated by those upon whom they have been so lavishly bestowed. May her good services continue to be rewarded as they deserve.

UNION MEETING.

A union meeting on a large scale is to be held at Martin Opera House, Albany, N. Y., on Sunday, November 1st, 1891. A grand time is expected and all members of the order are invited.

AN ANONYMOUS SLANDERER.

We violate an established rule to give space to the following anonymous communication:

ARKANSAS CITY, August 15, 1891.

Mr. Debs:

DEAR SIR:—Please answer through the *Magazine* if you received any subscription fee for non-Brotherhood men for 1889 or 1890 from W. S. Ballou, as there was a good many of us gave him a dollar and received no *Magazine*, and he said you were none too good to keep the money.

A Subscriber.

Upon receiving the foregoing we mailed a copy thereof to W. S. Ballou, the *Magazine* Agent referred to, and here follows his answer:

ARKANSAS CITY, September 10, 1891.

E. V. Debs:

DEAR SIR AND BROTHER:—Your letter came to hand on the 9th, and I can say that I did not collect a dollar for the *Magazine* in 1890, and I have handed your letter to the Secretary of Division 255, and I am sure they will investigate the matter. I will close, hoping to hear from you in the near future.

I am yours fraternally,

W. S. Ballou,
Magazine Agent.

Next follows the letter received from the Secretary:

ARKANSAS CITY, September 19, 1891.

Eugene V. Debs:

DEAR SIR AND BROTHER:—In regard to Bro. W. S. Ballou case on complaint of Subscriber we will say we know nothing in regard to it, as we have no grounds to work on as there has been no complaint made by anyone to this Lodge.

Yours, fraternally,

Jas. Wallace.

By order of 255.

For the information of Mr. "Anonymous," alias pole cat, we append the names of subscribers received from Canal City Lodge, No. 255, Arkansas City, Kan., for 1889 and 1890, as follows:

1889.

W. M. Chase, Arkansas City, Kan., $\frac{1}{4}$ year.
I. Kiser, Arkansas City, Kan., $\frac{1}{4}$ year.
A. O. P. Nickelson, Arkansas City, Kan., $\frac{1}{4}$ year.
Sam Bennett, Arkansas City, Kan., $\frac{1}{4}$ year.
O. Davis, Arkansas City, Kan., $\frac{1}{4}$ year.
C. M. Stuart, Agent.

1890.

Jas. Bennet, Arkansas City, Kan., 1 year.
Ivan Kiser, Arkansas City, Kan., 1 year.
C. M. Stuart, Agent.

It will thus be seen that Br. Ballou was not agent for 1889, nor for 1890. If "Subscriber" paid for a *Magazine* and didn't get it, why didn't he say so like a man? Why wait two years and then play assassin by shooting from ambush? If upon reading this "Subscriber" is not convinced that he has acted the part of a sneak, then he is even more destitute of decency than we had thought him to be.

The Robinson Monument Fund is increasing. Every railroad man in the country ought to have his name on the roll of honor.

RECIPROCAL.

At the last biennial convention of the B. of L. F., held at San Francisco, it was announced that the grand officers of the Brotherhood had been made honorary members of the Associated Society of Locomotive Engineers and Firemen of England. The high compliment was reciprocated by the convention, and Thomas G. Sunter, General Secretary, and Thomas Ball, Assistant Secretary of the Associated Society of Locomotive Engineers and Firemen, were unanimously made honorary members of the Brotherhood of Locomotive Firemen, and as a further recognition of the honor conferred upon the grand officers of the B. of L. F. by the great English Society, the following resolutions were ordered:

WHEREAS, In a spirit of fraternity, which is now more than at any previous period animating and influencing labor organization, the Associated Society of Locomotive Engineers and Firemen of England have made the grand officers of the Brotherhood of Locomotive Firemen honorary members of the Society, and

WHEREAS, The great honor thus conferred, is esteemed by this convention as an expression of good will on the part of our English fellow-workers in the cause of labor and a compliment of the highest value, therefore

Resolved, That this Biennial Convention of the Brotherhood of Locomotive Firemen recognizing and appreciating the generous expression of friendship, which animated the membership of the Associated Society of Engineers and Firemen of England, hereby expresses its thanks, and offers the wish that uninterrupted prosperity may attend the Society.

Resolved, That it will be the earnest endeavor of the B. of L. F. to cultivate fraternal feelings with the Associated Society of Engineers and Firemen of England, and to aid, as it may have opportunity to advance the interests of all railway employees.

Suitable certificates of honorary membership have been executed and forwarded to Messrs. Sunter and Ball, as also a certified copy of the foregoing resolutions. The *Magazine* expresses the wish that the time may come when mutual kindness may be the distinguishing feature of all labor organizations in their relations with one another.

ORGANIZATIONS of railway employees should labor with the one object in view of making their services indispensable to their employers. If it were known that the brotherhoods would guarantee from their members first-class service, attention strictly to duty, sobriety and a readiness at all times to submit to a majority rule of the organization, how long would it be until the companies would refuse to employ any but members of the orders? Not one month. It is the inattention to rules of the order which make the corporations antagonize them, not because they do not like their principles. Moral: Stop it.—*National Federationist*.

A GRAND monument worthy of the "grand old man" must be erected where W. D. Robinson sleeps.

THE NATIONAL FEDERATIONIST.

We have on our table the *National Federationist* for September, and a superb number it is from cover to cover.

It is brim full of matter and the matter is brim full of common sense.

The *Federationist* is on the alert for items of interest, and nothing seems to escape its vision. Without being an alarmist it gives forth warnings based upon facts. As, for instance, in the August number it had an article captioned, "Approaching a Crisis." Following up the warning, it says, "We are now ready to speak other words on the same subject," and adds:

The time has come when it is absolutely imperative that organized railroad labor throw aside all notions of dissension, of whatever nature, and get together. The actions looking toward harmonious proceedings in the future, if taken at once, will be at best, but tardy, but probably in time to prevent any more harm than has already been done. The publication of facts regarding the intention of certain railroad managers may have the effect of causing them to change their plans, but they will not forego the attempt to crush out the orders, for the large sum of money which has been raised, and is now in the hands of the person appointed for that purpose, must be used, under the agreement made when the first steps were taken. The corporations realize that the exposure of their plans has detracted considerably from their usefulness, but it is reasonably certain that they will only be changed to meet the recent developments. This makes the necessity for united action the more imperative.

Strife and dissension have done as much harm as should be allowed. The hatchet should be—must be—buried, and a solid front created with which to meet the attack. We have confidence that the railroad men will see these facts as they are presented, and act accordingly. If this is done, well and good, but mark our words, if it is not done a total undoing of organizations will be the result.

Manifestly, railroad employes cannot be too thoroughly aroused or too watchful of their interests, and in calling attention to the subject, the *Federationist* is performing a duty of incalculable value.

OUR FRIENDS.

The world looks askance at those who boast of their possessions, their prowess, their lineage or endowments, and listens with indifference, if not with disgust, at recitations of egotism and self-laudations, except in the one instance of friends and friendship. These are treasures of which a man may speak as he may of the flowers he has planted, of the fruits his garden supplies, and of the birds that come at his call to bless his home with their melodies. Long-fellow says:

Friends my soul with joy remembers!
How like quivering flames they start,
When I fan the living embers
On the hearthstone of my heart?

It is natural, we conjecture, for one, in counting his friends, to wish that they, in addition to being his friends, should be the friends of each other, and if such is not the case, he is often perplexed in seeking for an explanation for the quasi hostility. Knowing them to be congenial, he finally con-

cludes that the difficulty grows out of the circumstance that they do not know each other, have not been brought in friendly contact, and therefore are unaware of the fact that they are the possessors of generous natures, of noble impulses and purposes which, if known to each other, would enable them to achieve splendid results, all the more important, if they happen to be engaged in the same line of endeavor.

Knowing this, we are anxious that our friend Dan. Honin of the *Railway News Reporter*, published at Omaha, and our friend Charley W. Martin of the *National Federationist*, should be acquainted with each other, and become friends and therefore, it affords us the greatest pleasure imaginable to introduce them to each other, as our friends, because we know that once acquainted, their lives would flow on in parallel channels, accomplishing for their fellow men all that their high ambitions could demand.

With the hatchet buried, and the bugle no more calling to arms, the war drums hushed to silence, we can fancy our friends, Honin and Martin, marching under the banner of peace, friendship and good will, everywhere hailed as they pass, as the champions of labor, as the exponents of advanced thought and as avants couriers of the emancipation of workingmen.

Dan, allow us to introduce to you, Charley, and vice versa.

CAVNER'S INVENTION A SUCCESS.

We took occasion some time since to call attention to Mr. A. R. Caver's invention, for which it was claimed, "First, greater economy in the consumption of fuel. Second, the entire abolishment of the smoke nuisance. Third, reducing the back pressure on pistons to the lowest possible minimum. Fourth, reducing the vibration on flues. Fifth, making the locomotive available for an incandescent electric lighting system at a small expense and without material change in construction or appearance of the engine."

In referring to the subject, a contemporary says:

Perhaps one of the most noteworthy inventions of modern times is the perfect smoke consumer, which was patented by Mr. A. R. Caver, a well known scientist, who occupies a high position among railroad men. He was ably assisted in the constructive work on Chicago and Alton engine No. 34, by Mr. A. W. Quackenbush, Master Mechanic of the Chicago and Alton road, at the company's great shops in this city. A reporter for this paper has seen this wonderful engine, and to all intents and purposes it is a grand success.

The result so far secured from this device, since placed on engine 34, has been remarkable, and fully sustains the claims of the inventor, and the judgment of Mr. Quackenbush, Superintendent of Machinery of the Chicago and Alton railroad, who from the first inspection of the principles employed, was convinced of its merits.

As nothing succeeds like success, the *Magazine* is pleased to state, for the benefit of

its readers, that Mr. Cavner has conquered every obstacle, and the road is clear for him to realize expectations which, like his locomotive, are not obscured by smoke.

The paper from which we have quoted, says:

The inventor of this device, Mr. A. R. Cavner, of Chicago, is also the inventor of an entirely new type of locomotive—compound-condensing—with full weight of engine as traction. This engine will soon be in service on one of the suburban trains in Chicago, and from performances of the engine already secured, this design of locomotive bids fair to mark a new era in locomotive construction.

In Mr. Cavner locomotive engine men are permitted to see vividly outlined the possibilities for close students of the machine, the opportunities afforded them to obtain a place on top, where there is room for all whose energy and indomitable will enables them to climb. The paper from which we have quoted contains the following readable sketch of Mr. Cavner, which is worth preserving. It says:

Mr. Cavner is a practical locomotive engineer and mechanic of twenty odd years service, and is well known in railroad circles from ocean to ocean and from Old Mexico to Manitoba. He was for many years second grand officer of the Engineers' Brotherhood, and was the gentleman selected by the Richmond convention to settle the famous C., B. & Q. R. R. strike, after Arthur, Hoge & Co. had been in charge for over a year and hopelessly abandoned the field. Mr. Cavner at that time was in the service of the Southern Pacific railroad company, at Oakland, Cal. After the affairs of the brotherhood were turned over to Mr. Cavner and his committee, it took them just four days to settle the strike to the entire satisfaction of all concerned. The shrewd diplomacy and executive ability displayed by Mr. Cavner caused his name to be prominently mentioned as Mr. Arthur's successor. But he positively declined to be a candidate for that or any other office in the organization, and at the Denver convention following the C., B. & Q. settlement he resigned his office and withdrew from all participation in brotherhood affairs.

Mr. Cavner is an intelligent, broad-viewed progressive man; has traveled extensively, and is familiar with railroad matters and men. As a grand officer he was opposed to the C., B. & Q. strike, and was always fearless and pronounced in his opposition to the methods of Mr. Arthur, preaching one doctrine to the order and an entirely different one to the public. This bigoted boasting of the brotherhood's strength, influence and invincibility was the direct cause of the C., B. & Q. strike, and others as well. His sympathies were always with the C., B. & Q. engineers, as he claimed openly and repeatedly that the men were misguided and misled, inflamed with the idea that they could secure almost any demand. Facts were misrepresented to them. They were told the fight would be won if it culminated in stopping every wheel in the country. With this assurance they struck, and were left to their fate in forty-eight hours, after men deserted and left without a source of authority to direct and meet the emergencies of the hour, in their foolish desperation resorted to unlawful acts.

Instead of placing the brotherhood's seal of condemnation upon such acts, men who in their individual efforts endeavored to stay these unlawful acts are to-day being blackmailed and persecuted by the hand that should be extended to thank and assist them to an honorable and honest livelihood. We are informed that these were the causes that prompted Mr. Cavner to permanently retire from any official position in the brotherhood. Since then he has been quietly but steadily working at his present enterprise, developing the devices and securing patents, and has succeeded in not only working out the problems of his inventive genius but

has also organized a powerful company of prominent business men in Chicago to push the business. The company is organized for \$200,000, fully paid up capital, and consists of the following well-known gentlemen: A. R. Cavner, President and General Manager; P. S. Hudson, Vice-President, of Baker & Smith Heating company; Jas. P. Graner, Secretary, of Graner Tank Line company; C. H. Vehmeyer, Treasurer, banker and capitalist; A. A. Turner, Superintendent of Works; J. R. Branden, Mechanical Engineer.

THE ROBINSON MONUMENT FUND.

The following subscriptions to the Robinson Monument Fund have been received since our last report:

J. H. Cunningham, Pan Handle, Texas . . .	\$1 00
J. L. Smith, Pan Handle, Texas . . .	1 00
James Dewey, Clarendon, Texas . . .	1 00

ASIDE from the financial and benevolent advantages which it is designed to secure by means of the O. R. T. when once its house is fully set in order, there are many little pleasures which its members enjoy that are worth all the effort and expense incurred. One of these is the acquaintances and friendships formed. We can call to mind several particular cases where some forcible writer two, three or four years ago, attracted the attention of an admirer of sound thought, who would write to us asking the name of the writer. We, of course took great pleasure in giving the same, and introducing the two. A correspondence arose between them, and to-day they are bosom friends; each tracing their present relations to the influence of our order. The above described case is only one of more than a hundred which ye editor has been personally interested in. There are perhaps several hundred very similar. We are glad to do some good even in this way.—*Railway Telegrapher*.

WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the *Magazine* we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground
where heroes sleep?
'Tis not the sculptured
piles you heap!
In dews that heavens far
distant weep
Their turf may bloom,
Or gentil twine beneath the
deep
Their coral tomb.

"What's hallow'd ground?
'Tis what gives birth
To sacred thoughts in souls
of worth!
Peace! Independence!
Truth go forth.
Earth's compass round
And your high priesthood
shall make earth
All hallowed ground.'"

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

WM. D. ROBINSON.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died in poverty,

that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine*, *Terre Haute, Indiana*, all of which will be acknowledged in its columns.

THE LABOR PRESS.

Chicago & Northwestern Annual Report. The report of the Chicago & Northwestern for the year ending May 31, 1891, was published yesterday.

The earnings were published at the time of the annual meeting in June. Briefly, gross earnings were \$27,793,647, an increase of \$628,837 over the previous year. Operating expenses, taxes, and interest on bonds increased considerably, and net earnings reached \$3,680,563, a decrease of \$390,402 as compared with the previous year. The funded debt is \$112,580,500, an increase of \$7,585,000 over the previous year's statement. The increase was caused mainly by the issue of bonds on account of construction and permanent improvements.

"On all the lines of the company," says President Hughitt, "the requirements of train service called for many additions and improvements of permanent character, and much new work has been done in the construction of new sidetracks, extensions of industrial works, for station buildings, yards, shops, bridges, and culverts, fencing, gates and crossings, and for maintenance and betterment of the railway track and equipment, all of which are in good condition, and will, it is believed, take favorable rank in comparison with other first-class railroads."

All things considered, the report is a very fair one, and speaks well for the Switchmen, under whose management such a creditable showing was made.—*Switchmen's Journal*.

Read, Educate. Every railway employé should read and obtain all the information he can on every subject. We wish it were possible for the *Gazette* to impress upon every railway employé one great truth, after which we feel nearly all would become readers, and the effort to obtain information would be general. There have been very few young men in railroad employ of average intelligence who were persistent readers, that have not risen to positions of influence and profit. There are few who may not still do so.

However expert one may become in his work through practice; however faithful he may be in his position, it is still exceedingly difficult for him to advance to higher places if he is sadly deficient in all general knowledge of the affairs of the world. Many a faithful, competent railroader has no doubt been at a loss to understand why his promotion has been so slow when he has undoubtedly been held back by the narrow, contracted and prejudiced opinions he entertains and expresses, and which can only be corrected by a wider and more general knowledge of the world. Education is the lever that moves the world. There is no

other power that can raise the masses of struggling humanity to better position. Organization will do much, for organization educates.—*Railway Service Gazette*.

Organization as an Educator. Much has been written as to the advantages of organization from an educational standpoint and the discussion of economic questions among the laboring world has indeed resulted in much good and organized labor has made wonderful progress in this line. Among no class can you find men who better understand the condition of our country than a very large number of organized workmen. The questions are discussed at the meetings, they are discussed in private, in fact the usual conversation of the organized workman of to-day is the discussion of these great questions. Here is an opportunity for each and every lodge of carmen throughout the country. Let individual members read. Be sure you have at least one good daily paper and as many more as you can get hold of. Read them carefully, post yourselves on the issues of the hour, discuss them at every opportunity and you will soon see where you can help your cause. Another form of education that demands your attention is in regard to your particular branch of work. Post yourselves on the interchange of cars, the kinds and quality of materials. Why not make a school of your lodge room. Set aside a certain time at each meeting or give one whole meeting per month to the discussion of these matters and whenever any particularly good point is raised give your entire membership the benefit through the columns of the *Journal*.—*Journal of the Brotherhood of Railway Carmen*.

We deem it advisable at this time to inform our contributors that articles sent to the grand office for publication in the *Journal*, touching upon the subject of general federation will in the future be consigned to the yawning waste basket. The Pittsburgh convention provided a law whereby those who desired it might enter into a system of federation. We believe the space devoted during the past to this subject can be utilized in the future to other matters of greater fraternal interest.—*Locomotive Engineers' Journal*.

The report elsewhere published shows that the Robinson Monument Fund has reached \$102.60. This is doing very well for a beginning but we shall not abate in our zeal to build a monument to the "grand old man" until the Fund has reached the thousand dollar point.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the fifteenth day of each month.

"ONLY A SWITCHMAN."

[Dedicated to the *Yardmen of the Nashville Yards.*]

As the midnight hour tolled from the bell,
'Twas sounding for one a dying knell;
Another soul was passing away
With the dawning of a new born day.
Just then passing a motly throng,
Mingling jest with merry song,
One chiding another with friendly chaff,
Now breaking into joyous laugh.
Ah! had they known how sad a scene,
How different would their actions be,
For at that moment their dearest friend
Was fast approaching to the end.
In upstairs room, with gasping breath,
A man was struggling with grim death.
'Twas only a switchman that was upstairs dead,
Only a railroad man some one said:
Aye: 'twas true, he was one of that class
Who during each day many dangers must pass,
And have escaped such dangers by merest hair-breadth
That they think not of danger, not even of death.
And how many lives in their very hands lay
On the numerous trains which pass every day,
And the least deviation from the right to the wrong,
Many souls to their Maker he'd hurry along.
Such was the man in the upstairs room
With fast glazing eyes and cold as the tomb.
Surrounded by friends, and such friends too,
Who in sickness or health are always friends true,
As they gazed on the form with sorrowing heart,
They knew 'twas the day for his soul to depart.
They were not dressed in broadcloth or gaudy attire,
They were brakemen and firemen, just from the fire,
The switchman, flagman, and brave engineer,
Who were in workclothes and grime pressing so near.
Then all stood in silence, all with bowed head,
As they listened the words "It's all over, he's dead."
Then they looked once again on the form that there lies,
Through the thick flood of tears that flow from their eyes,
They are tears that are precious, more precious than gold,
For they express more than words can, a thousand-fold.
He had made his last coupling, he had thrown his last switch,
He was on that long journey traveled by poor and by rich.
To that "great," "great" tribunal, the judgment bar,
And there with the multitude await the pay car.
When the pay roll is signed and each has his share,
Each face a different expression, one joy, the other despair.

In the little church just 'round the corner,
Where for two score and ten years he's spent,
The preacher in his pulpit that morning,
His old form trembling and bent,
He turned o'er the leaves of his bible
And tremulously reading his text
Turns to his hearers and asks them,
Friends, do you know "Who'll be next?"
Then knelt down on the rostrum
And in quivering voice did pray
For the soul of poor Charley Ludlum.
Who had gone to his long home that day.
It mattered not to that old parson
What be his kith or his clan,
He prayed with just as much fervor,
Although he was but a switchman.

Edward O. Easley,

Plan for Federation.

MR. EDITOR:—Having read considerable in the different railway journals about federation, and as no one has thus far advanced my idea in regard to federating the labor organizations, I have taken the task upon myself to make public my idea. It may or may not be feasible or practicable, although I think it is both, still there may be thousands who may disagree with me, and for that reason I ask you kindly to give publicity to my plan, as I should like to see what comments or controversy may arise therefrom.

My plan is as follows: Let the O. R. C., B. R. C., B. R. T., B. L. E. and B. L. F. elect delegates next year for a grand joint convention to be held in 1893, all to meet at the same time and place, and then and there organize a new organization by which these five organizations become extinct and combined in one grand organization of train and engine employes, by which the four avocations retain their individuality but still are combined in one grand, strong combination. I believe such an organization could be created, and that it would do away with all the friction, petty strifes and jealousies that we now have between the different occupations. The organization to consist of four degrees, one degree to be assigned to each of the four associations. For example, we will say degree one be assigned to locomotive firemen, degree two be assigned to railroad conductors, degree three be assigned to railroad brakemen, degree four be assigned to locomotive engineers. No one to be eligible to membership in any one of these degrees except such as are following or have followed the occupation of fireman, brakeman, conductor or engineer, a certain length of time.

The subordinate lodges to have a joint meeting place where all four degrees meet at one and the same time and place, to be governed by one president, four vice-presidents, one secretary and treasurer and such other officers as may be needful for the proper administration of the affairs of the lodge. Each degree to be entitled to and elect by ballot one vice-president and he to be elected from such degree only. For example, any member of degree one in good standing in the lodge is eligible to hold office as vice-president of degree one, and can be elected to that office only by members of degree one. The president and all other officers of the lodge to be chosen by popular ballot in the lodge irrespective of what degree the candidate may be a member of, thus a member of any one of the four degrees is eligible to one of the popular elective offices. The president to be presiding officer of the meetings with the vice-presidents to assist him. Should he be absent one of the vice-presidents shall

act as presiding officer. In event of more than one of the vice-presidents being present when the president is absent the one to act as president to be the oldest in age of the vice-presidents present, irrespective of the degree of which he is a member.

The president and vice-presidents to constitute the board of control before whom all grievances or troubles should come for adjustment, the president to act as presiding officer of the board. All grievances and troubles which may come before it to be acted on by ballot, and in the event of a tie vote the presiding officer to have the deciding ballot. If they are then unable to adjust the difficulty they be authorized to call on and request the grand board of control to adjust the trouble or grievance for them.

Each degree to be entitled to and elect by ballot one delegate to the grand lodge, thus each subordinate lodge would have four delegates.

The grand lodge to meet annually, elect officers and transact such business as may come before it, the officers to be elected by ballot and hold office for two years, but suggest that at the first convention held two of the vice-presidents be elected for a term of two years and two for a term of one year. By doing thusly in case of a change in the administrative offices there would always be a sufficient number of experienced officers in office to hold the newly elected vice-presidents level, or until they become accustomed to the work required of them in their new official position. Then we would have two vice-presidents to elect at each annual convention, and one president, secretary and treasurer, *Journal* editor and manager and auxiliary officers to elect at every second annual convention.

The president to be presiding officer of the grand lodge with the four vice-presidents to assist him. All officers to be elected by ballot, and of the four vice-presidents one to be elected from each degree and by ballot in such degree only. For example, any member of the grand lodge in degree one, and of good standing, is eligible to hold office as vice-president of degree one, and can be elected to that office only by members of degree one.

The president and other officers of the grand lodge to be elected by popular ballot, and any member of the grand lodge in good standing is eligible to hold one of those offices irrespective of the degree which he may be a member of.

The president and the four vice-presidents to constitute the grand board of control before whom all grievances and troubles should be carried that cannot be adjusted by the board of control of the subordinate lodges. All grievances and troubles brought before it to be acted on by ballot, and in

event of a tie vote the president to have the deciding ballot. The decision of the board to be final. It and it only to have the power to authorize a strike. It is also to have the power to adjust any and all difficulties between the railroad employes and employers, and to have the power to contract with any railroad or system of railroads to furnish and keep them furnished with employes in the different branches of train and engine service.

The president, vice-presidents, secretary and treasurer, editor and manager of the *Journal*, and other officers of the grand lodge should be paid a sufficiently large salary so we can command the services of the very best material amongst us to fill these important offices.

I have proposed an organization of only four degrees, for the reason that as a starter it would be amply sufficient, but additional degrees could be created to take in other branches if so desired.

By my plan, subordinate lodges could exist of one, two, three or all four degrees, and each subordinate lodge would be entitled to representation in the grand lodge by one delegate for each degree it may have; that would cover localities where it would be impossible to have a four degree lodge.

I advocate this plan of federation, as it would be a union of the men in the branches I have proposed, and such a union in which there would be a wonderful amount of strength. Strikes would be almost unheard of. There would be no petty strifes and wrangles amongst the organizations as a whole nor petty jealousies amongst the individual members thereof, such as there are now, by one organization feeling that they have been imposed upon, their rights trampled or trespassed upon, and in retaliation making trouble for each other, because there we would be one grand organization of brothers, and an injury to one would mean injury to all, whereas we now have in these four branches five distinct organizations and frequently find one pulling against the other, and making enemies amongst each other, which is just what railroad corporations want, because just so long as one organization is pulling against another just so long are the employes at their mercy, but once union is established on a firm basis we can demand our rights, and unless unreasonable, we can expect to get them, because we will have means by which we can compel them to give us our reasonable rights as wage earners.

By my plan the secret work should be alike for all four degrees, so that a member of degree one can hail a member of degree two, three or four, as the case may be, the only distinguishing feature to be a card on which is to be written, printed or officially

stamped the degree and division number to which such member may belong.

I also advocate such an organization on the score of economy, as by my plan for the four avocations there would be only one set of grand officers, one journal, one convention for the grand lodge, and one meeting place for subordinate lodges. But as we are now situated, we have five sets of grand officers, five separate conventions, five separate journals, and five separate meeting places for the subordinate lodges. It is reasonable to suppose that my plan would save thousands of dollars to the train and engine men, besides give them a strength and service from their one organization that never could be obtained from the five separate ones as they now exist. Would not this plan virtually be system and general federation combined? Some may have objections to this plan, on the score of insurance being interfered with. Of such I ask, could not the insurance feature for the different organizations be incorporated in the new organization and could it not be carried out more safely, cheaper and more satisfactorily than is now being done?

Some might think that such a powerful organization should have more officers in control, so as to assure a more conservative management of affairs. If such an idea should prevail it would be an easy matter to substitute eight for the four vice presidents, thereby making the grand board of control consist of nine instead of five.

In regard to transportation, would we not be in a position to ask that our cards of membership should be honored by the railway corporations over their lines, and would we not have an organization that would make it necessary for every honorable train and engine man to seek membership therein?

I should like to hear from my co-laborers in regard to such a plan as I have proposed.

Yours for federation.

G. F. Habernigg.

JIMULCO, MEXICO. Div. No. 159 O. R. C.

Shun Them.

MR. EDITOR:—In a late issue of the *American Machinist*, under the caption "To be Shunned," appears the following timely article:

We have frequently warned our readers against "Companies" and "Organizations," Loan Associations and the like, that propose to give them returns that can be only described as enormous for money that is deposited with them. As we have before said, there must be, in the course of things, something wrong about such proceedings. Workmen are generally honest, and are not looking for dishonest traps and pitfalls. We are glad to note that the daily press is beginning to take hold of this matter. The following from the *Evening Post* is illustrative of the point we have been making. The extract from the *Post*, which we give below, follows an allusion to a Western concern with a high sounding title:

A clerk in a distant city was induced to buy

twenty-five of its shares at \$1 each, paying \$25 down and agreeing to pay an assessment of twenty-five cents a share monthly. Section 14 of the by-laws provided, in somewhat ambiguous terms for withdrawal from the society at the expiration of six months. The clerk after paying his fourth assessment, wrote saying he would like to withdraw and receive back his money. He received a reply from the "secretary," who quoted the 14th section of the by-laws, and told him after he had been a member six months he could withdraw by forwarding a formal application therefor, and one dollar in cash to the society, but he would not be entitled to any dividend. The clerk waited for the expiration of the six months, and then did as directed. In reply, he was informed that the "directors" would consider the application at their next meeting. After waiting in vain for some time to learn the result of the "directors'" consideration of his application, the clerk placed the matter in the hands of a friend in this city for collection, offering to take \$50 in full discharge of the \$82.50 he had invested in the society. This friend happened to be a pretty well informed man in such matters, and he succeeded in collecting the \$50, but not until the "secretary" had first offered him \$6.25 (one month's assessment) in full discharge of the claim, and eventually increasing the offer to two months' assessments, and finally offering \$25. He, however, at last paid the \$50, but with a very bad grace.

This "clerk" mentioned by the *Post*, succeeded much better than men generally succeed with such associations; he had a streak of luck—just as if he had been struck by lightning, for instance.

On general principles, a workman should set it down as a fact that any one who offers him an abnormally high rate of interest cannot give him good security for his money.

The writer recalls a case in an Eastern town, where the members of one of these "endowment" orders were to receive \$100 at the end of six months, but the six months still lacked some twenty days of being filled, and the members had already been taxed \$119 each by the frequent and heavy assessments, thus making it probable that each would have to pay about \$140 for their \$100, but when the fact is noted that the officers have to be paid to "manage" the business, it surely ought to be apparent to the "partners" that they must take less than they pay in.

Vulcan.

IN MEMORIAM.

Lines written on the death of Edward Paley, of Lodge No. 238, B. of L. F., Paducah, Ky.

He is gone from the heart-cherished hopes of his friends

And deep are the sighs that deplore him,
But vain is the grief that around him extends,
For alas, it will never restore him.

His pure soul from its mansion of clay
Has bounded o'er life's troubled ocean,
And now in the high radiant glory of day,
It joyfully sings its devotion.

But still is the heart that was constant and true,
And cold is that bosom once warm,
And dead is each thing that flushed on his mind
And bent every feeling to charm.

He was gay, he was kind, he was noble and brave,
He was all that his friends could endeavor him,
So perfect, so pure, so guileless to see
That all who once knew did revere him.

Then peace to his soul, good, gentle and brave,
And long be his memory undying;
And green be the grass that grows on the grave
Where our faithful comrade lies lying.

Lloyd H. Hutchinson.

Acknowledgments.

SULLIVAN, IND., Sept. 20, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—We wish to express our sincere thanks for the prompt payment of \$1,500 due us on the policy of our dear son, Fred. L. Eaton, through Mr. A. Underiner, Receiver of Vandallia Lodge. We also desire to express our thanks for the beautiful flowers presented by Vandallia Lodge, No. 405, and to those who so kindly assisted at the funeral. Dear Fred often spoke of the advantages of being a member of your noble order, but we certainly never appreciated its value before his death. We can scarcely express our gratitude for the kindness shown us by the Brotherhood. God grant that trouble may never come near you, but if Providence appoints it your lot, we earnestly hope you will have friends who will be as kind to you as you have been to us during our great affliction. Our appreciation of kindness compels us to especially return our heartfelt thanks to the members of Lodge No. 405, of Effingham, Ill. We assure you that the Lover of Charity whose power is unlimited and whose mercy is unbounded, will liberally repay you for your kindness to us. From the depths of our hearts we wish you prosperity, health, and all earthly happiness. We earnestly pray that when this painful exile is ended you will enjoy the vision of God.

Your sincere friends,
MR. & MRS. T. B. EATON.

KANSAS CITY, MO., Sept. 9, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—I earnestly desire to express my sincere thanks to you for your prompt payment of Fifteen Hundred Dollars, the full amount due me on policy held by my son, Lorin S. Lightner, whom the Allwise Providence saw fit to remove from our midst by an accident on the K. C. O. & S. R. R. near Osceola, June 20. Also my most heartfelt appreciation and gratitude to the Big Four Lodge, 337, for their kind sympathy and assistance at the time of our sad bereavement. Especially do I thank Messrs. John Leonard, John Richards, Charles Largent and Homer Howard for taking charge of and preparing for the funeral. May your prosperity be as great as you deserve in return for your many acts of kindness.

Respectfully,
MRS. HENRIETTA E. LIGHTNER.

FLORENCE, KANSAS, Sept. 20, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—I wish to extend my heartfelt thanks for the draft of fifteen hundred dollars (\$1,500) due me on the death of my beloved husband, J. B. Welty, who met his death in the discharge of his duty on the H. T. & S. F. R. R. I also extend my thanks to the brothers of Emporia Lodge, No. 53, for their heartfelt sympathy to me in my great trouble. May God bless and prosper your noble order in my prayer.

MRS. FANNIE WELTY.

SLATER, MO., Sept. 5, 1891.

To the Officers and Members of Lodge No. 18, B. of L. F. :

GENTLEMEN:—It is with sincere thanks that I acknowledge through the columns of the *Magazine* the receipt of a draft for fifteen hundred dollars (\$1,500), the amount due on the policy held by my late husband, Wm. S. Dye, who was killed July 14, 1891. May God ever bless and protect your noble Brotherhood in my earnest prayer.

MRS. ELLA DYE.

ESCANABA, MICH., Sept. 7, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—I have this day received from M. A. Harring, Master of Mineral King Lodge, a draft for \$1,500 in settlement for my claim for total disability for which accept my thanks. With best wishes for the B. of L. F. I am

Yours Fraternally,

ALEX. ROBERTS.

PHILADELPHIA, Sept. 4, 1891.

To the Members of F. rymount Lodge No. 333, B. of L. F. :

GENTLEMEN:—I have the pleasure herewith to acknowledge the receipt of fifteen hundred dollars (\$1,500) by the hands of Mr. John A. Boehm and Mr. Chas. H. Maul, on behalf of your lodge, which sum was due me on account of the death of my husband, William Griffiths. I also desire to express my thanks for the kind attention shown me during his sickness and at the funeral by your membership. May God be with you and prosper you in the work of your noble order, is the wish of

Yours truly,
LILLIAN L. GRIFFITHS.

BATTLE CREEK, MICH., Sept. 7, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—We desire to extend our most sincere thanks to the B. of L. F. Golden Range Lodge, No. 341, for fifteen hundred dollars (\$1,500) due to my daughter, May, by the death of my dear son, Thomas Irwin, who was killed at Revelstoke B. C. May 2, and to the lodges for their kindness to him while at Donald. We also extend to Huron Lodge, No. 221, our warmest thanks for their kindness. May Heaven's blessing rest on the Brotherhood.

Yours in gratitude,
MRS. IRWIN.

BEARDSTOWN, ILL., September 24, 1891.

To the Officers and Members of the B. of L. F. :

DEAR SIRS AND BROTHERS:—I wish to return my sincere thanks for the kindness shown me during my misfortune and also the draft of \$750.00 for balance due on my disability claim; and furthermore, I wish to thank the brothers of Federation Lodge, No. 122, for their kindness during my sickness, and their aid in getting my claim allowed. May God bless our Brotherhood. With this wish I remain always a Brother.

AUGUST PRECK WINKLE.

RICHMOND, QUEBEC, Sept. 20, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500 due me on the policy of my beloved husband, James Damant, through Mr. John Kelly, Receiver of Star of the East Lodge, No. 118. May God ever bless and protect your noble Brotherhood, is the sincere wish of his wife.

MRS. MINNIE L. DAMANT.

LOUISVILLE, KY., Sept. 8, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—I desire to express my gratitude to the Brotherhood for the prompt payment of \$1,500 on the death of my husband, Chris Ketterer, and to the members of Falls City Lodge, No. 103, my appreciation of the exquisite floral tribute. Trusting that you may continue in prosperity and increase in power for good, I am

Respectfully,
MRS. MARY KETTERER.

KANSAS CITY, MO., Sept. 16, 1891.

To the Officers and Members of the B. of L. F. :

DEAR SIRS AND BROTHERS:—I wish to return thanks to the Brotherhood and the officers and members of No. 31 for their kindness to me during thirteen months of illness, and also for the draft for \$1,500 in payment of my total disability claim. Wishing prosperity and success to the order, I remain always a brother.

EDWIN B. MESSICK.

Address Wanted.

THOS. RATCLIFF—When last heard from was in Fontain, Kansas. Any one knowing his whereabouts will please correspond with B. W. Blue, 736 East Washington Street, Louisville, Ky.

Jeweled Carriages.

The traveler who visits St. Petersburg in the summer time, while the Emperor and his court are absent at Peterhof, is shown, among other curiosities, the wonderful collection of state carriages which is used at the coronation of each one of Russia's rulers. Most of them are relics of the magnificence of Empress Catherine II, but every succeeding reign has added to the barbaric splendor of the jeweled coaches. The first object that strikes the eye is a plain but elegant carriage of modern construction and style, and painted dark blue, the whole wood-work on the back shivered and hanging loose, like the wooden slats of a blind, while the interior is a mass of torn cushions. This is the vehicle in which the late Czar was driving when the first shell destined for his destruction burst, leaving him uninjured, but shattering his equipage. It was not until he stepped out into the street to ascertain the cause of the disturbance that a second shell annihilated the autocrat of Russia and his assassin at the same moment. The next object of interest is a primitive sledge, fashioned by the 'prentice hand of Peter the Great, the worshipped hero of Russia. It is wood, roughly constructed, painted dark gray, with coarse woolen cushions, and poorly lighted with small panes of glass. Alongside of this much prized relic is the sumptuous sleigh, drawn by mimic swans of white and gold, in which once reposed the voluptuous figure of Catherine the Great. The sedan chair of the late Empress, who was for many years an invalid, is another curiosity with its gilded doors adorned by the jeweled monogram of its royal owner, and its cushions of rose colored silk. In the inner departments the display of coaches is superb. About a dozen of these are gorgeously painted in red, and glitter with varnish and rich gilding, from the pole to the old fashioned rocking springs in the rear. The tops of some of them are surrounded by ornamental borders studded with jewels and surmounted by a crown set with precious stones. Diamonds, rubies, sapphires and emeralds outline the imperial monograms on the doors, and even the hubs on the wheels and curving supports of broad doorsteps are set with the same brilliant gems. It seems almost incredible, says a writer in the *Horological Review*, that this vast quantity of jewels should be genuine, but the uniformed cicerone gravely assures his visitors that they are real stones of great value. The doors of one coach were painted by Watteau, and another by Boucher, precious pictures even more costly than old mine stones. Indeed, the guide affirmed that the British government had offered \$75,000 for one small pannel by Watteau, which it wished to place in the National Gallery.

This offer, however, has been refused, and the beauty of the coach thus splendidly adorned, is still intact. For each coronation a new carriage is made, and all, including many in Moscow, are brought out for the grand pageant.

The present Czarina selected for her use at the late coronation a coach presented by Frederick the Great of Prussia to the Empress Catherine II. It is beautifully painted, richly jeweled, and cushioned in embroidered satin with magnificent hammer-cloth and harness inlaid with gold.

Submarine Boats.

[English Mechanic.]

Submarine boats are a much older invention than is generally conceived; but they are now coming prominently forward, because there is a useful field for their employment, and also because modern devices have rendered it possible to construct vessels which can be propelled safely beneath the surface of the water. Who first suggested the idea is not known; but it seems well authenticated that in the reign of James I., a Dutchman named Drebbel designed a boat which was actually propelled by twelve oars under the surface of the Thames, the air being revived by some liquor, the composition of which Drebbel kept a secret.

The Marquis of Worcester, in his "Century of Inventions" (1663), refers to a similar invention, and there is a record that a man named Day sank with his submarine boat in Plymouth Sound in 1774. It is, however, to Robert Fulton that we are indebted for the first definite ideas on the subject, for so long ago as 1801 he descended to a depth of twenty-five feet in the harbor of Brest, and demonstrated the fact that his "plunging boat" could be trusted to take himself and three companions under the water and return to the surface in safety. This boat was named the *Nautilus*, and beneath the surface was moved about 500 yards in about seven minutes, by two men turning the "engine," while Fulton regulated the position of the boat. On one occasion the boat remained beneath the surface for nearly six hours; but nothing in the shape of effective warfare was accomplished when Fulton was persuaded to lend his services to this country, though he did by way of experiment blow up some old vessels with torpedoes. Fulton published his work on the subject, "Torpedo War and Submarine Explosions," in 1810, at New York, in which he shows that a system of harbor defense based on stationary and movable torpedos is the surest and quickest plan for protecting maritime cities against the naval forces of an enemy.

In 1860 a submarine boat was made in France, in which compressed air was utilized for working the propelling device, and

also for expelling the water taken in to produce submergence; but this vessel, too, does not seem to have been a success. A submarine boat has, however, been used for some time by the Pacific Pearl Company in carrying out their fishing operations; but it is not intended to serve as a torpedo boat, being flat bottomed, with "doors" in the bottom, through which the oysters can be collected. Toselli's submarine exploring vessel is a fairly perfect device for diving, but has no means of propulsion; it is, in fact, an elongated diving bell, with reservoirs of compressed air and two or three stories.

Much attention has been devoted to the subject of submarine vessels in Russia, and many experiments were made in that country about twenty years ago; but no practical device of the kind was produced. The inventions of Denayrouse and Fleuse, which disclosed a method of carrying sufficient air to enable a man to breathe either in the ways of an exploded coal mine or beneath the water, gave an impetus to the search for a submarine boat, and modern inventions in connection with electricity have helped to place the scheme on the road to ultimate success. A few years ago two submarine boats were built at Liverpool from designs by Mr. Garrett, who employed chemicals to revivify the air and render it respirable over and over again; but the most successful of these boats was lost off the Welsh coast. Since then Mr. Nordenfelt has turned his attention to the subject, and has lately demonstrated that boats can be propelled for a few hours under water, although not with sufficient accuracy for torpedo work. A large and powerful vessel is being built from his designs, and will probably be ready for trial in the spring. Meantime Prof. Tuck is progressing with the Peacemaker, which we briefly described, and which has since been astonishing those who have witnessed her performances in the Hudson river.

Both Nordenfelt and Tuck employ steam for driving the propeller, the former carrying the heated water in reservoirs, the latter using the Honigsmann caustic soda (or potash) boiler. Recently, further trials were made with the modern Nautilus in the Tilbury docks. That is a cigar-shaped vessel, sixty feet long by eight feet in diameter, with a short raised deck in the center, through which a conning tower projects, and provides access to the interior.

The vessel is built of steel plates five-sixteenths of an inch thick, with 3x3x $\frac{1}{2}$ inch frames one foot nine inches apart, and estimated to be strong enough to withstand the pressure of fifty feet of water. The boat is fitted with two screws, each driven by an Edison-Hopkinson motor at about 750 revolutions, the current being supplied by 104 secondary cells; but owing to the com-

paratively confined space of the dock, no trials of speed were made. The method of sinking and raising the vessel was designed by Mr. A. Campbell, and consists in a simple method of decreasing or increasing the displacement without affecting the weight of the vessel. This is accomplished by means of four horizontal cylinders on each side of the hull, which can be thrust outward into the water or drawn into the hull.

The cylinders work through water-tight sleeves, and can be moved either by hand or by screws worked by gearing from a shaft so arranged that corresponding cylinders on each side are pushed out or withdrawn simultaneously. It will be readily understood that if the vessel with water ballast tanks full and the cylinders within the shell sinks to the bottom, the extra displacement which can be obtained by thrusting out the cylinders will bring her to the surface, while the tanks will enable her trim to be regulated. Besides a rudder of ordinary pattern, the Nautilus has a horizontal fin or rudder for guiding the vessel or preventing a tendency to rise or dive, thus keeping a uniform depth below the surface.

It is said that the air contained within the vessel is sufficient for a two hours' submarine trip with a crew of six; but no doubt if other vessels of the kind are constructed, either compressed air will be carried, or some means will be adopted for revivifying the air, as men engaged in such work as submarine torpedo warfare will need clear heads, and must run no risk from air heavily charged with carbonic acid. A patent has recently been secured in this country by Mr. C. D. Goubet, of Paris, for a submarine torpedo boat in which equilibrium is maintained by a pendulum acting through a horizontal bar on a clutch that actuates one portion of a double action pump, which displaces water from one or the other of two reservoirs at the ends of the vessel. Water ballast tanks assist in the submergence of the boat, and the motor is driven by electricity supplied from storage batteries.

The screw propeller is movable, so as to be capable of giving the vessel an oblique direction in any sense in relation to the vessel's axis while having a regular continuous rotary motion. The vessel can thus be guided without a rudder, and can perform various evolutions. The torpedo is placed at the after part of the vessel, and is connected to an insulated wire wound on a drum. The crew enter an opening at the top closed by a dome, and sit on a compressed air reservoir from which air is taken and moistened by being caused to pass into the water compartments, whence it is discharged by a pipe into the dome. The vitiated air is constantly expelled by an air pump.

The torpedo vessel is fitted in front with

a cutter or spike which can be projected forward several feet; it is worked by a lever, and serves to cut torpedo wires or nets. An obturator tube serves to discharge signal cartridges, which on reaching the surface explode, and thereby give an indication to the ship with which the torpedo vessel is connected. A special arrangement enables this vessel to be propelled also by means of oars. We are not aware that any trials have been made with this vessel, or whether one has been constructed; but we may rest assured that it is only one of many patents which will be taken out for vessels and machines adapted to submarine navigation for the purposes of warfare.

The Tide of Emigration.

[San Francisco Call.]

The tide of emigration from Europe to the United States is rather increasing than diminishing. People are leaving the various ports of Europe for this country at the rate of about 20,000 a week. This would give us 100,000 in five weeks, or 600,000 in the thirty weeks which constitute the emigration season. The average per year has been somewhere near 400,000. There is no apparent reason why the volume of previous years should be increased. Times are not especially bad in Europe nor especially good in this country. The average condition, however, is higher in this country than in Europe, and people who are in a position to make the change do so on general principles. In making estimates of the effect of causes which induce immigration we are inclined to look for too quick response. We expect people to pull up stakes and move upon the show that a better country exists than that in which their lot was cast. While a good year in the United States doubtless stimulates immigration the steady volume is kept up by the fact that one year with another the workingman has a better chance here to improve his condition than in the old countries. The same law will operate to stimulate the tide of emigration from the old states to California. The fact is being demonstrated every year that this state offers better rewards to labor and capital than the most favored of the eastern states. Our industries are not yet sufficiently diversified to give all who might like to come a certainty of employment, and consequently there is a limit upon the number of wage-workers we can accommodate. But the fact of an occasional surplus of workers will tend to the establishment of new industries and the enlargement of old ones. The most beneficial immigration is that composed of men with capital and men whose ability to work is their capital in proper proportion. Capital is about as helpless without labor as labor without capital.

Man's First Chart of Freedom.

"In the beginning of the world, we are informed by Holy Writ, the all bountiful Creator gave to man dominion over all the earth, and over the fish of the sea, and over the fowl of the air, and over every living thing that moveth upon the earth. This is the only true and solid foundation of man's dominion over external things, whatever airy, metaphysical notions may have been started by fanciful writers upon the subject. The earth, therefore, and the things therein, are the general property of all mankind, exclusive of all other beings, from the immediate gift of the Creator."—*Blackstone.*

Our righteous Father—He who changeth not—
In the beginning of our old-world life
Unveiled His majesty in Eden fair.
Ere yet the taint of sin had blanch'd its bloom
Or human waywardness had marred its bias.
In words of inextinguishable love
This primal mandate God enjoined on man:—

"Be fruitful, multiply, replenish the earth;
Subdue it, have dominion over all.
Behold! I give thee each herb bearing seed,
The fruit of every yielding tree for meat;
Fowls of every wing, cattle of the field,
The fish, and every living thing is Mine.
By Me created for the use of man,
And equally and freely given to all."

Such was the first and still-abiding, Chart
Of human rights! Imperative and fixed
By Him who is the only Source of Law.
Chart! old as the world, lasting as our race.

Alas! distrust and disregard of God,
Man's first offense and still enthralling sin,
Is source and origin of all our wrongs.
Man's crave for private ownership in land
Involves rejection of God's first great Chart,
Asks Him to stand aside; man much prefers
A personal, clear title to the soil,
Conferring income, privilege and renown.

How long, O Lord, shall rank injustice reign?
How long shall man prey on his brother man?
Oh! in these latter days arise! Strike forth,
And rid the world of selfish, savage wrongs!
Restore Thy people their lost ancient rights;
Oh! vindicate Thy equity and love,
Rescue Thy fair world from the grasp of greed,
And stop the martyrdom of man by man.
William Forryth.

HUMAN life is estimated to have lengthened twenty-five per cent. during the last half century. The average of human life in Rome under Caesar was eighteen years; now it is fifty. The average in France fifty years ago was twenty-eight; the mean duration in 1867 was 45½ years. In Geneva, during the thirteenth century, a generation played its part upon the stage and disappeared in fourteen years; now the drama requires forty years before the curtains fall.

PROFESSOR Edward Hitchcock, of Amherst College has given to the Connecticut Valley Historical Society a piece of the rock from which the soldiers in the Shay rebellion made their flints 100 years ago. It was not a "one-horse Shay" rebellion either.

Burdette's Advice.

My son, your brow is clouded ; something has happened that didn't and doesn't agree with you. Were you neglected in the invitations ? Didn't you get on any of the committees ? Were you overlooked in the convention ? Hasn't the Secretary written you a personal letter asking your advice upon the campaign ? Have you been coldly passed over for men of less ability ? Do you feel that an intentional slight has been put upon you ? Can you see clearly that everything is going wrong because you have not been consulted ? Have you been directly snubbed by inferior people ? I thought as much. At your time of life such things are likely to occur. They used to happen with me, now and then. You will grow wiser as you grow older, unless you take the other chute ; then you will grow more foolish, and there is only one cure for an old fool, my boy—that is, death. Ordinary death won't cure him, either. "Though thou shouldest bray him in a mortar among wheat with a pestle, yet will not his foolishness depart from him." See how awfully dead he has to be killed ? Smashing him only makes him worse.

But now, if any or all these slights have been put upon you, listen to me, my tender Telemachus. Don't show your sores. Oh, don't show your sores. They are not pleasant things to look at, nobody wants to see them, and they will heal much more rapidly and naturally and healthfully, if you don't expose them. Keep them covered. Don't show them to anybody but your surgeon, and don't show them to him unless you have to. And, don't look at them yourself. Leave them alone under the healing plasters of time and the cool compresses of forgetfulness, and you'll be surprised, some day when you happen to think of them, to find that they have healed by the first intention without a scar. Don't tell people when you are hurt ; don't tell people how keenly you feel a slight when, perhaps, there was no slight intended. Don't get yourself snubbed by people who never see you, and who don't know you and never think of you. And if you really are hit, and hit hard, it belittles your manhood and drives away human sympathy when you lift up your voice and howl on the streets. Keep quiet about it. Don't whine ; don't yell. One day, at the investment of Vicksburg—it was on the memorable 22d of May—during a lull in the desultory skirmishing that preceded the assault, while I was lying close to the great round globe which we inhabit and wishing I could get a little closer to it, we heard a tremendous howling and shrieking, and down the dusty road from the front came a blue jacketed skirmisher on the trot, holding one hand up in the other, and the hand he was holding up had

no thumb on it. It hurt like the mischief, I have no doubt, but it was only a thumb after all, and how the fellow was howling about it. He was a brave man or he wouldn't have been where he could have lost that thumb. But you would think it was the only thumb in the whole United States army and that no one else on the skirmish line had been hit that morning. So the soldiers saw only the funny side of the picture, and a perfect chorus of howls, in vociferous imitation of the man's own wails, went shrieking up from the sarcastic line of the men who were waiting their turn to face death. In a minute another soldier came walking back from the skirmish line. He was walking slowly and steadily, never a moan fell from his compressed lips, though they were whiter than his bronzed face. And he held his hand against his breast. The silence of the death chamber fell upon the line in an instant, as the figure of the soldier moved along the road with the air of a conqueror. Half a dozen men sprang to his side. Tenderly they laid him down in the shadow of a great oak ; his lips parted to speak a message to some one a thousand miles away, and the line was short one man for the coming assault. He died of his hurt ; but he died like a king. Oh, my boy ! don't yell the lungs out of you over a mashed thumb, when, only three files down the line a soldier salutes his Captain before he faces about to go the rear with a death bullet in his breast. You can't help getting hurt. There isn't a safe place in the whole line. There are cruel people in the world who love to wound us ; there are thoughtless, heedless people who don't think ; there are people who don't care, and there are thick skinned people, who are not easily hurt themselves, and they think mankind is a thick-skinned race ; in fact, the air is full of darts and arrows and singing bullets all the time, and it's dangerous to be safe anywhere. But when you do get hit—as hit you certainly will be—don't "holler" any louder than you have to. Grin and bear it the best you may. There are some people so badly hurt they must moan ; do you forget your own hurt in looking after them ?

Good Health.

A gentleman subject to severe attacks of nervous headache relieves them entirely in four or five minutes by the use of the following prescription, and has seen the same successfully employed by many of his friends. Take a dessert spoonful of common soda, such as is used in making bread, and dissolve it thoroughly in a quart of cold water. With this shampoo the head for about five minutes, scratching the skin of the head and back of the neck with the finger nail. Then rinse the head with cold water. This remedy is for nervous headaches and not for those arising from a deranged stomach.

Held Up on a Train.

[Detroit Free Press.]

I saw an editorial in a newspaper the other day roundly abusing the passengers on a train on a Western railroad who allowed themselves to be "gone through" by a trio of robbers, and the editor closed by rubbing them a set of arrant cowards. That's the way it probably looked to a great many others, but let us view the matter from the inside of the train.

Five or six years ago I was booming along over an Arkansas railroad, and the time was 11 o'clock p. m. The one sleeper on the train had every berth taken, and the two passenger coaches were pretty well filled with men, women and children. There were twelve men in the sleeper. Of these eight had their wives along. I had a revolver, and I presume most of the other men had. We were all asleep, and the train had stopped at a water-tank in a lonely spot, when three desperadoes boarded the train. One got on between the two passenger coaches, threw open both doors, and standing on the platform in such a way that he could guard both coaches, he shouted:

"Now, then, the first one who makes a move will get a dose of buck shot!"

He had a double-barreled shotgun, and had he fired into either car three or four or five people must have been hit. The second robber got on between the last coach and the sleeper, and the third on the rear platform of the sleeper itself. Both doors of the last car were thrown open together and the two men entered from opposite ends. We were awakened from sweet slumber by one of them calling:

"Now, gents, turn out your valuables! We don't want to hurt nobody, but if a trigger is pulled we'll open fire on the whole car!"

Well, now, what would the belligerent editor have done under the circumstances? They were desperate men, bent on desperate work, and held human life as worth no more than a pound of dog-meat. His revolver would have been in his pantaloons at the foot of the berth, as mine was. His wife would have begged him for God's sake to give up everything, as mine did, and as all the other wives did. He would have realized, as we all did, that no revolver could be poked out from behind the curtains without being seen in a second, and that one shingle shot from any one of us would have exposed each side of the car to a fusillade of buckshot. It would have been the same had we been up and dressed and in our seats. There would have been a man to face us and another behind our backs. Just take a seat on a chair and see how quick you can pull a pistol from your hip-pocket. Note the movements you have to make, and then assert, if you dare, that you

could get the drop on two men whose hawk eyes were watching the move of every finger.

The conductor and baggageman and brakeman were in the baggage car. They all had revolvers, but they saw at once that a shot from them would be the death of three or four passengers. A bullet may miss by a hair's breadth; buck shot can't help but hit.

The two men came down the car, each with his gun in his left hand, and knife and revolver in his belt, and stopped at each berth. I had \$185 and a gold watch and a diamond pin. My wife hid \$135 of the money and the watch and pin before the fellows got to us. I handed out the other fifty, and as it was crumpled up it looked like a big roll.

"All right—that's business!" chuckled the man as he received it. "Now for your tickers."

"Never had one."

"Oh, you didn't! I'll look for that as I come back!"

In this way the two fellows passed each other, taking whatever was handed out, and as they reached the ends of the car one of them fired a shot which went through the roof, and next moment they were off. No one in the passenger coaches had been robbed, and no one on the train had been injured. Why? Because all had exhibited common sense. That so-called bravery which the editor referred to sighs for, might have tempted some one to fire his pistol. The result would have been the killing of half of us. Those men boarded the train with the determination to kill whoever resisted them, and they probably would have done it.

And let me say that among the "cowards" in that sleeper were five ex-army officers, a Mississippian who had fought three duels, and two or three other men who would have shot down the man who impugned their bravery.

A Mock Marriage.

[New York Weekly.]

Clara—Oh, mother, we had such fun at the party! Young Smith proposed that he and I should go through a mock-marriage ceremony—just in fun, you know—and it was too funny for anything! Afterward some of the older people who heard of it said we were really married, but we're not, are we?

Doting Mother—Of course not. Besides, young Smith couldn't support a wife if he had one.

"Oh, it wasn't that Smith. It was the other Smith, from Gold City, the one who owns a bonanza mine, you know."

"Eh? That Smith! My dear, a marriage like that before witnesses is binding."

All for a Purpose.

[Arkansaw Traveler.]

In a conversation drifting toward the many wise provisions of nature, the Rev. Mr. Maxwell said: "The other day, in my intellectual excursions, I came across a wonderfully sensible paper treating of the use of snakes. The long black snake is especially useful. He goes into the dense swamps, worms himself among the reeds and flags and devours thousands of scorpions and lizards, which, without his timely interference, would become too numerous. So, you see, everything, even the black snake is useful, being created for a purpose."

"That is all very well," one of the reverend gentleman's listeners replied. "We recognize the usefulness of the snake, because he devours scorpions and lizards, but of what use, pray tell me, are the scorpions and lizards?"

"They eat innumerable insects," the minister triumphantly replied.

"All right; but of what use are the insects?"

"The insects? Why, er—they serve as food for the lizards."

"Yes; but of what use are the lizards?"

"Why, you must be blind not to see that they serve as food for the snakes?"

"Of course I see that, but that only brings up the question of what use are the snakes."

"To eat the lizards, I tell you. My dear sir," the minister added, "it is not strange that philosophy advances so slowly when we think of man's narrowness of understanding."

Making a Home.

[Waverly Magazine.]

At a reception in Washington lately a woman, famous in the last generation, fell under the discussion of a coterie of her old friends, one of whom spoke of her wit and fine conversational powers, another of her charity, a third of her keen instinct in reading character.

"To me," said Gen. P., "she was most remarkable for her ability to make a home. Put her—as I have seen done in the West—in a log cabin, with nothing but some wooden chairs, a piece of muslin, an open fire, and the odds and ends which she had stored in her trunk, and she would turn it in a few hours into a charming dwelling place. Of all her gifts that was to me the most attractive and womanly."

An American who saw in his youth an Englishwoman, famed at that time for her learning and genius, was questioned as to his impression of her. "She overwhelmed me with her knowledge; her broad, liberal views and her philanthropy opened a new world to me. Yet the most distinct recollection I have of the visit is the torn and

dirty table-cloth, the greasy carpet and the ashes strewn half way across the floor."

Carlyle, who had been used to coarse surroundings in his early home, was deeply impressed by the refinement, the pretty "bits of plenishing," the gentleness, in the home of the woman he afterward married; and the most pathetic part of his wife's history is her heroic effort to give this dainty charm to the rough, unhomelike dwelling in which he placed her.

There is no trait in the Englishman stronger than his love of home, and hence he is apt to value in a woman the quality of making a home above all others. The sailor's wife makes the hearth clean to show her joy at his return. It is the "household motions" of Wordsworth's ideal women that are "light and free," and all Shakespeare's lovable heroines are domestic women.

"Let me see your home, and I will tell you what you are," the Russian Paulovitch says to his countrywomen. Our American girls, in their zeal for music, art, or it may be authorship, are sometimes apt to forget this. They leave the oversight and the details of housekeeping to servants, forgetting that the soiled tablecloth and greasy carpet tell a tale of character as loudly and emphatically as do neatness and taste. They forget, too, that while their picture or song or story may prove a failure, a dainty, cheerful home is a poem which any woman may give to the world, and one which all men can understand and will certainly take to heart.

It Was Only Acquaintanceship.

[Boston Home Journal.]

He was only a stray waif of a yellow dog with no ancestry to boast of, but, as he sat upon the wooden seat upon one of our city parks with a little child's tiny arm lovingly twined about his ugly, thick neck, and a sweet, cooing voice saying in his ear, "I love you, little doggie," he was as proud as any prize setter in the land. "Is that your dog, little boy?" asked a gentleman as he passed the happy couple. "No, he doesn't belong to me, only I'm acquainted with him," answered the affectionate friend of the little tramp dog.

JOSEPH WIENER has presented to New York city a bust of Washington Irving, modeled by the sculptor Beer. Wiener and Beer ought to be able to get up an eminently satisfactory bust.

"THIS is rather a spiral flight of steps," said a gentleman, as a party of sight-seers were climbing the Bunker Hill monument one hot day. "Yes, perspiral," responded a lady, as she wiped her brow.

A Printer's Success.

[Boston Herald.]

Moses A. Dow's experience in life furnished a singular example of the freaks of fortune, and, perhaps, a not altogether encouraging illustration of the prizes which come to men who cater to the reading taste of the public. Mr. Dow was originally an industrious and hard working printer. I made his acquaintance at this time. He was working in a printing office as a compositor. He was not so swift as younger men, his work was not constant, and he was able to make but \$6 a week. This sum went further then than it does now, for those were not days of extravagance like the present, but it would not support a family. Mr. Dow dropped his composing stick and determined to make a strike for a living in another direction. I met him one day in the street soon after. He had done nothing, and was poorer than ever. But he had then a scheme in his brain which he unfolded to me, and asked my opinion of it. It was to establish the *Waverly Magazine*. I told him it was as wild a project as was ever conceived; that there was no possibility of success in it. He said that was almost the universal opinion among those with whom he advised, and that no one had confidence enough in it to lend him the small sum of money with which he felt it necessary to start. Neither of the prominent type foundries would let him have type on credit, but he had hope of a smaller house which was thinking of advancing type and material and taking a mortgage on them.

It is a singular coincidence in this connection that I conversed last week in St. Paul, Minn., with a gentleman who told me that he loaned Mr. Dow the first \$50 (and probably almost the only one) with which he started this office. For he did manage to get the loan of the type and to start it. He worked himself, and he hired girls at a small compensation and doubtful pay to help him, and, after the most extraordinary effort, the first number of the paper was got out. It proved to be a very handsome paper, typographically. One of Mr. Dow's hobbies was to have a good looking paper, and he was wise enough not to let his poverty be seen in its appearance. By great personal effort he got it into circulation, and obtained money enough from the sale of the first number to print the second. The third was a little easier, and there began to be hopes that Mr. Dow's sanguine views were not so wild, after all.

WITHOUT AN EDITOR.

And now for the reasons why Mr. Dow's scheme had seemed chimerical. They were, first, because he was to make his own field of reading. There was no apparent call for

such a paper. Second, because he was to make the journal double in size and double in expense of manufacture of any existing. Third, because he was to do this without capital. Fourth (though we were shy of telling him this), because he had no literary talent to conduct it. This, on its face, appeared to be alone conclusive against him. It really proved his salvation from early ruin. If Mr. Dow had been a man of literary taste and judgment upon acknowledged standard, his enterprise would have gone the way of so many other literary journals which started with ample capital and bright prospects. It would have failed to find an appreciative constituency in the world of readers. But Dow avoided this fate in spite of himself. He started a paper that had literally no editing. He invited contributions and took everything that was sent him. There were no disappointed aspirants for the honors of type among those who offered matter to his columns. Writers got in there who could get in nowhere else, and hence heartburnings were unknown among the *Waverly* corps. I ought to make one exception, however. He was careful that the paper should not offend good morals. Good English was a secondary consideration, and, as regards good literature, he made no pretensions to knowledge. "I just print the pieces they send me," he said to me once. "They like to see them in print, and their friends are interested in their appearance. So they take the paper and their friends take it, too. I give them a good looking paper, also, which people think more of than is generally supposed." Mr. Dow was always proud of the typographical appearance of the *Waverly Magazine*. He thought the name a good one for a paper, as it undoubtedly was. It was not long before the paper began to be very profitable and there was the prospect of a fortune in it. At this time Mr. Dow listened to advice, and made an effort to improve its literary quality. He engaged an editor at \$20 per week to take the editing off his own hands. This movement proved to be, financially, a failure. This editor, who was an English gentleman of some talent and not a little experience in journalism, began to reject communications right and left. The result was that the circulation of the paper fell off by the hundreds. "I looked into the matter," said Mr. Dow, "and was soon convinced that I could better pay my editor to stay away than to remain in the office. My readers know what they want better than any editor does."

JUST BEFORE THE WAR.

The change was made, and the paper was restored to its original basis. Its prosperity steadily increased. Just before the war broke out Mr. Dow's income from it was large. It was netting him \$60,000 a year,

and he described his business as the smoothest and most satisfactory possible. "I have no subscribers and no exchanges," he said. "I would not exchange with the best newspaper in the land, for it would be of no use to me. I do not copy from other papers—my matter is all original. As regards subscriptions, I think my system is better. The news company take my entire edition each week. It gives me a check for it, which I at once cash, and thus my accounts are settled every seven days, and I know just where I am. The news company distributes the paper."

The *Waverly Magazine* was one of those papers which one knows to have a large circulation, yet which life is too short for many of those of us who have access to general literature to seek, and which we seldom see without seeking. It was never sent into a newspaper office. The singular fact is, that in this literary city of Boston it was the most successful appeal to the reading public ever made.

In the factory towns of the state it was large, and through the west it went by thousands. There was a great deal of reading in it; it had a handsome and inviting appearance to the eye; it appealed to an immature taste as no other periodical before it had done. I don't think Mr. Dow reasoned out its success because of this latter quality, though on that success it was founded. The difference between his success and that of the large number of successful papers that have followed, was that the latter have depended on advertising or an agent, while Mr. Dow spent no money for either. He constituted his first issues a nucleus, and they drew around them the immense circulation he afterward gained.

A Story of Two Words.

[The Quiver.]

"Oh, if I were lucky enough to call this estate mine, I should be a happy fellow," said a youth. "And then?" said a friend. "Why, then, I'd pull down the old house, and build a palace, have lots of fine fellows around me, and keep the best wines and the finest horses and dogs in the country." "And then?" "Then I'd hunt, and ride, and smoke and drink, and dance and keep open house, and enjoy life gloriously." "And then?" "Why, then, I suppose, like other people, I should grow old and not care so much for these things." "And then?" "Why, then, I suppose in the course of nature I should leave all these pleasant things—and—well—yes—die!" "And then?" "Oh, bother your 'thens!' I must be off." Many years after the friend was accosted with, "God bless you! I owe my happiness to you?" "How?" "By two words spoken in season long ago—'And then?'"

The Man for the Emergency.

[N. Y. Sun.]

We were humping along down toward the Gulf on a trunk line road less than a year ago, when we stopped at a small station thirteen minutes late. We had been reported as late from the last, and expected orders here to change the run. A brief investigation disclosed the fact that the station master, who was also the operator, was drunk. He had felt a chill coming on, and had downed about a pint of redevye to keep it off. He sat in a heap in his chair, his strength all gone, and his eyes blinking, and all the reply he could make to the conductor was:

"Shay, ole feller, whazzer mazzzer wis you?"

The conductor pondered a minute. The side track there was full of freight cars. It was six miles ahead to the next station, but did the north bound express have orders to let us make it? He suddenly grabbed the operator, hauled him out of the office upon the platform, down upon the earth and then carried him to the water in a ditch and dumped him in. There were three feet of water, and it was cold as ice. He hauled the operator up and down for two minutes, dragged him out and stood him on his pins, and then said to him in a voice as menacing as the point of a dagger:

"Go in and telegraph for my orders!"

The man walked in all dripping, sat down to his table and sounded his call, and in fifty seconds our train had orders to make six mile siding, and make it like —!" The engineer got the word, and away we went, and five minutes later were at the switch. Just then old north bound tooted, and our last car was in and the switch thrown over not a second too soon. She came past us at the rate of fifty miles an hour, flinging dust and gravel over every car, but we had saved our bacon. Two months later I met the operator in New Orleans and asked him if his cold water bath left any ill effects.

"Not the slightest," was the reply. "The only trouble was the company objected to my way of taking a bath, and fired me out."

WHAT LACK WE YET?

When Washington was president,
As cold as an icicle,
He never on a railroad went,
And never road a bicycle.

He read by no electric lamp,
Nor heard about the Yellowstone;
He never licked a postage stamp,
And never saw a telephone.

His trousers ended at his knees,
By wire he could not snatch dispatch;
He filled his lamp with whale oil grease
And never had a match to scratch.

But in these days it's come to pass,
All work is with such dashing done,
We've all these things—but then, alas!
We seem to have no Washington.

How Horses Act in Battle.

[San Francisco Chronicle.]

"It is remarkable how quickly horses adapt themselves to the military service," said Capt. Cox to a reporter. "Every artilleryman knows that they learn the bugle calls and the evolutions quicker than the men, as a rule. For one thing they soon acquire a uniform gait, which is about the same as the 'route step' or the usual marching step. If the horses did not acquire the same gait as the infantry there would be varying distances between the different arms of the service—that is, between the infantry and the cavalry, artillery and the commanders and their escorts.

"In the drills in the artillery service the horses will themselves preserve their alignment as well as the infantry. I shall always remember one illustration of this trait which I noticed at an exciting and critical period of a battle. In order to save some of our infantry from being surrounded and captured I quickly mounted the cannoners on the guns and put the whole battery at a dead gallop across a stretch of meadow about half a mile wide. I was quite accustomed to such sights, but when we were half way across the field I noticed the array, and for a moment I was lost in admiration of the magnificent picture. Every driver was plying whip and spur, and the great guns were rocking and thundering over the ground, and every horse reeking with foam and full of animation and excitement, was straining every muscle as he galloped forward; yet it seemed to me that a straight line drawn along in front would have touched the heads of the lead horses in front of the six guns. That was an artillery charge, one of the most thrilling sights in the evolutions of war.

"It is surprising how quickly they learn the bugle calls. After we had been in service some time my first sergeant once asked me what call that was, as the bugle blew some command. 'That's a pretty question for you to ask,' I said. 'How in thunder do you know how to march?' 'I don't know,' he said, 'but my horse knows.' Let the first note of the feed or water call be blown and there will be a terrible stamping, kicking, and neighing. Once, in a terrible storm, our horses and those of several other batteries broke loose, and there was a wild rush among the artillerymen to get horses in the morning. All was excitement, and the horses were hard to get, but when I ordered the bugler to mount a stump and blow the feed call, the horses all made such a mad rush for our battery that the men could hardly get out of the way quickly enough.

"When it comes to a battle a horse seems to know everything that is going on, but he does his duty nobly and seems to be in his

element. He enters into the spirit of the battle like a human being. He shows no fear of death, and it is singular that if his mate is shot down he will turn to look at him and seem pleased. A horse in my battery was once struck by a piece of shell, which split his skull so that one side was loose. The driver turned him loose, but he walked up by the side of the gun and watched the firing, and when a shot was fired would look away in the direction of the enemy as if to see the effect of the shot. When a shell would burst near by he would calmly turn and look at it. When he saw his own team going back for ammunition, he ran to his own place and galloped back to the caisson with the rest. When the lieutenant pushed him aside to put in another horse, he looked at the other one sorrowfully while he was being harnessed up, and when he seemed to realize that there was no further use for him he lay down and died. The lieutenant strongly asserted that he died of a broken heart.

"At the time that Adams's, Jackson's and Preston's brigades charged me at Murfreesboro some officer was killed and the brigades were driven back. But the fallen officer's horse had not been taught to retreat, and he did not. He just came at full speed through the battery, and I tell you he looked simply grand. He was a large, fine animal, his nostrils were extended wide, his eyes fairly blazed, and he clutched the bit with his teeth as he came on. He came like the wind, and with his saddle flaps flying he looked as if he were flying himself, instead of running. Everybody gave him a wide berth, and I called to the infantry that I would give \$100 to the man who would stop him, but no one tried it, and he is running yet for all I know of him."

Politeness in Poverty.

[Detroit Free Press.]

"I wish to propound one simple interrogatory to you, provided you do not regard as presumptuous my venturing to address you without the empty conventional formality of the introduction prescribed by social etiquette," said a seedy looking person yesterday, who found the pavement of Brush street a world too narrow. "Is it quite consistent both with your policy and principles to advance to a fellow creature, suffering from temporary financial embarrassment, the small sum of ten cents, when with entire frankness he tells you in advance that the same is to be applied to purposes of imbibition, rather than falsely asserts, as is so commonly done, that it is required for sustenance?"

He got it.

"WHAT an uneven publication *Punch* is!"
"I don't know; I think it is flat enough."

A HAUNTING MEMORY.

BY STANLEY WATERLOO.

It is little I think of the old oaken bucket,
The old oaken bucket which hung in the well,
Though on tiptoe I've stood and endeavored to
suck it,

And could of its moss and pollywogs tell;
For my own recollection an object persistent
More often encounters with sentiment dire,
An object with form-life as truly consistent—
The old oaken woodbox that stood by the fire—
The old oaken woodbox, the never-full woodbox,
The terrible woodbox, that stood by the fire.

What visions of long, weary days in the winter
When the boy chopped away that old woodbox to
fill;

Now rubbing his hands, now extracting a splinter,
And envying other boys sliding down hill;
Or at the creek skating and tempting him, rather,
Though seldom he dared to fulfill his desire,
For an earnest and muscular man was his father
And the woodbox was waiting for wood by the
fire—

The wide-open woodbox, the ravenous woodbox,
The yawning old woodbox that stood by the fire.

What visions of summer days—schoolboys in swim-
ming—

While he in the woodyard was chopping away,
Tears of rage and annoyance his eyesight half dim-
ming,

For he didn't like work and he did like to play;
But the farm hands were hungry and dinner was
cooking,

And heavy the strap that was used by his sire.
The hired girl for fuel to him would be looking
When empty the woodbox that stood by the fire.
The ghostly old woodbox, the fiend of a woodbox,
The hobgoblin woodbox that stood by the fire.

Most memories old Time in his kindness will mellow,
As man becomes gray-haired and placid and old;
Forgotten the trials of summer days yellow,
Forgotten, the troubles of winter days cold;
But clear to the vision stands out the grim picture
Through life, and the memory still provokes ire,
Of that grisly old woodbox, containing the mixture
Of grief for the youth and of wood for the fire—
The ghost of the woodbox, the old oaken woodbox,
The boy-haunting woodbox that stood by the fire.

A New Motor.

[Washington Post.]

The public should be charitable toward innovations. Never laugh a thing down because it is new. Cause it not to run the gauntlet of your scorn because, forsooth, you never heard of it before. All advance is made by these cranks, the inventors and discoverers, who make or dig out something you didn't know existed. It did exist, only you were unaware of it. The fundamental laws of the universe are as old as the universe; the life principle, the laws of generation, are as old as life, as fixed and certain. There is a reason why two particles in space will seek each other's company; we don't know why—we merely know the fact and call it the law of gravitation. With all the accumulated knowledge of speculative and material research since man made his first record, mankind, the wisest of mankind is yet a sciolist blindly groping on the shores of knowledge and discovery.

All of which is prefatory to the statement that Dr. Walter M. Jackson, a New York

genius has built a novel craft, the Evolution, which is to be propelled by a jet of water thrown with enormous force from stern beneath the surface of the water. Now, don't laugh. This may be as great an advance over the propeller, as the propeller was over side wheels, or side wheels over sails, or sails over oars, or oars over paddles, or paddles over the hands of the first troglodyte who balanced himself on a floating log drifting down the current of a pre-Adamic river and felt the fire of discovery burning in his brain.

The Evolution is 100 feet over all, 25 feet beam and 33 inches draught, with a maximum depth of 7½ feet. Powerful engines will force 1,000 gallons of water per minute, at a pressure of 2,500 pounds per square inch through a three-quarter-inch nozzle. There will be a nozzle at bow and stern for forward or backward motion. These nozzles can be turned through arcs of 47 degrees furnishing both propulsive and steering power. The inventor claims that 60 horse-power will give a speed of 10 miles, 400 will give 20 and 1,500 will give her 30 miles an hour, the latter figure being her maximum power. to do the same work with a screw 8,500 horse-power would be necessary.

A little figuring shows that to do what the inventor claims calls for a jet with a nozzle velocity of nearly 650 feet a second, which is four-tenths the muzzle speed of a rifle ball. Such a current may seem impossible, but those who have witnessed the enormous power and speed of the jets used in hydraulic mining will know its possibility, and will also know that such a jet will kill fish, man or whatever living thing comes within its range. At the nozzle it will be powerful enough to cut a hole through a whale as if it were a bullet fired from a Hotchkiss cannon.

Protest Against the Japanese Craze.

[New Orleans Times-Democrat.]

Her Von Falke, the custodian of the Vienna industrial museum, protests against the Japanese craze which is flooding the western nations with the productions of Japanese art, and which he asserts is Japanizing even European art. In spite of the unsurpassable technical finish of Japanese art, its essence is that of caricature. Figures and drawings of Japanese men and women, even of trees and ships, are not intended to be representations of real types, but are more or less consciously distorted. It is a mistake to regard Japanese work as a model for European imitation.

"To what do you attribute the curative properties of your pills?"

"Well," answered the proprietor, thoughtfully, "I fancy the advertising I've done has had something to do with it."

Strikes.

[Exchange.]

Workingmen should not go on strikes. Strikes inconvenience the public and make them suffer in consequence. Strikes cause a great loss of money to employer and employé. Strikes are bad, etc., etc. This is what we hear every time a strike is in operation, and, of course, the workingmen who strike are alone to blame. You will always find those who are ever ready to find fault with workingmen for striking for better pay or poorer pay. Yet we hardly ever hear the same persons have a word of censure for an employer who refuses all overtures of his employé to avert a strike. Workingmen are not in love with strikes. They do not quit work for the fun of the thing. In nearly all differences that arise they have no other alternative but the strike to bring employers to understand that they have some rights that should be respected. Arbitration in place of strikes was first offered by the workingmen's organizations, and where both sides of the controversy have been willing to arbitrate, strikes never occur. Yet there are employées who persistently refuse to submit their difference to arbitration, and in dealing with stubborn men of this kind workingmen have to go on strikes. An account of a recent strike in one of the northern cities reports that the men on strikes sought concessions from their employers and endeavored to adjust the difficulty before going out, but their efforts were of no avail. What else was left for the workingmen to do but either submit to what employers felt disposed to give them for their labor or quit work until the price they demanded was paid? They chose the latter course and struck for living wages. As usual they were blamed because they did not remain at work, and the labor agitators, of course, are the whole cause of the strike. The employer who refuses to listen to an equitable adjustment of the differences between his employé and himself has no share in the blame of inconveniencing the public. Oh, no! he is an independent citizen who refuses to be dictated to by trades unions and labor agitators. The trouble with these censors of the working people is that they are all one sided and do not decide impartially. They claim for the employer the right alone to say what labor is worth and to pay whatever wages he deems proper. It never enters the minds of the censors that there is such a thing as equal rights or at least they fail to admit that there is; that the workingman has as much right to say what he will sell his labor for as the employer has in saying what he will pay for labor. All fair-minded people concede to labor an equal right with capital in regulating the price which shall be paid for work.

While capital regards labor as a commodity to be purchased at the lowest market rate governed by the law of supply and demand, workingmen are compelled under this system, to organize, combine and strike to keep up the price of their commodity, labor. Strikes, are bad. Yes; but until capital recognizes labor as an equal partner, entitled to an equal share in the profits, until each recognize the rights of the other and endeavor to adjust differences and disputes by arbitration, there will be strikes and strikes to the end of time.

The Workingman.

One of the great advocates of the rights, liberties and welfare of the laboring classes was Charles Dickens, the immortal novelist. Read his books from beginning to end and there is not one of them but what its picture of the humble side of life tends to elevate and benefit the poor man. The following extract from one of his books is unparalleled in its tender pathos and eloquence:

"Cant as we may and as we shall to the end of time, it is very much harder for the poor to be virtuous than it is for the rich, and the good that is in them shines the brighter for it.

"In many a noble mansion lives a man, the best of husbands and fathers, whose private worth in both capacities is justly lauded to the skies, but bring him here upon this crowded deck, strip from his fair, young wife her silken dresses and jewels, unbind her braided hair, stamp early wrinkles on her brow, pinch her pale cheeks with care and much privation, array her faded form in coarsely patched attire, let there be nothing but his love to deck her out, and you shall put it to proof indeed. To change his station in the world that he shall see those young things who climb about his knee not records of his wealth and name, but little wrestlers with him for his daily bread, so many poachers on his scanty meal, so many units to divide his every comfort, and further reduce its small amount. In lieu of the endearments of childhood in its sweet aspect, heap upon him all its pains and wants, its sickness and ill, its fretfulness, caprice and querulous endurance, let its prattle be not of engaging infant fancies, but cold and thirst and hunger, and if his fatherly affections outlive all this, and he be patient, watchful, tender, careful with his children's lives and mindful always of their joys and sorrows, then send him back to parliament and pulpit and quarter sessions, and when he hears fine talk of the natural depravity of those who live from hand to mouth and labor hard to do it, let him speak up as one who knows, and tell those holders forth that they, by parallel with such a class, should be high angles in their daily lives, and lay but humble siege to Heaven at last."

THE CHILDREN OF THE POOR.

Down in the depths of the factory gloom,
 They gather at early dawn,
 Where the ceaseless whirl of spindle and loom
 Goes on and on and on;
 And the god of gold in the tainted air
 An invisible Moloch stands,
 As he watches the fabrics woven there
 By the toil of childish hands.

Over and over and over again
 The shuttles fly out and in,
 Weaving the web of an infinite pain
 Of want and care and sin.
 Gay are the colors, indeed—ah, me!
 But what of the somber strands?
 Think of it, then, that this all should be
 The work of children's hands.

Backward and forward and over and up,
 Steadily still they go;
 But they hold to the lips a bitter cup,
 Whose dregs are the dregs of woe:
 For the hopes of youth grow faint and die,
 Held fast in these iron bands,
 And the cold, hard world, has never a sigh
 For the patient, childish hands.

Oh, ye whose darlings in flowery ways
 Know naught of grim despair,
 Think of the sweltering summer days,
 And your children working there!
 Where never a cooling zephyr comes
 Through the factory's stifling breath,
 Where the loom weaves on and the spindle hums
 In a tread-mill round of death.

And onward—onward—and up and back
 In the close and crowded rooms,
 In a dizzy race on an endless track
 Go spindles, shafts and looms.
 Till the angel of death with fateful glass
 Shakes out the dusky sands,
 As the merciful longed-for shadows pass
 Over worn out, childish hands.

Old Trade Unions.

The first organizations of laboring people known took the shape of trade unions, and 3,000 years has, in all probability, proved it the best possible form of organization. As one of our caustic labor editors tersely remarks: "Theories rise and theories fall; trade unions go on forever." Trade unions are the foundation upon which have been built every reform movement for the amelioration of the working class, not excepting even the religion of Jesus Christ, and behind the bulwarks of trade organizations have rallied the shattered battalions of many revolutionary movements when all else has failed them.

The red flag itself is an emblem of trade unions, and was carried by the Mechanics' Union (the "Eranoi" of the Greek) 1,000 years before Christ, when workmen were followers of Zoroaster, fire-worshippers, "Children of the Sun," the color of which was emblemized in their scarlet banner. At one time it was unlawful for working people to wear any color but red and black, or a combination of these—brown. Then for some reason the laborers were forbidden to wear red. This latter law operated so injuriously upon one organization—the dyers—that the secret of their peculiar brilliant dyes is now lost.

Removing Paint.

The ordinary process of scraping old paint, or burning it off, is hardly expeditious enough for general purposes, and is also laborious. Soda and quicklime are far more thorough, and the paint is more quickly removed. The solution of half soda and half quicklime is thus made: The soda is dissolved in water, the lime is then added, and the solution can be applied with a brush to the old paint. A few minutes is sufficient to remove the coats of paint, which may be washed off with hot water. Many preparations are sold for the removal of paint, all of them having some basis of alkali. A paste of potash and strong lime is far more effectual in operation, and the oldest paint can be removed by it. Afterward a coating of vinegar or acid should be used to cleanse the surface before repainting. One authority on the subject recommends the gasoline lamp, a quart of oil being sufficient to last three and one-half hours. The method is considered superior to gas, as the flame is stronger and the cost less, besides which the lamp can be carried to any part, which cannot be done conveniently with a gas jet. But the use of flame of either is dangerous and to be avoided when possible. Many a house has been burnt to the ground from using jets of flame. For removing varnish, spirits of ammonia is used, but it is a slow process, and several applications are necessary. Scraping and sandpapering can be employed, but it must be done carefully by experienced hands, or the surface of wood will be injured. The chemical process of removal has the advantage of leaving the surface in a better condition than burning off or scraping, and for large surfaces of paintwork is to be preferred.

An Old Mother's Pride.

[Chicago Herald.]

"I am reminded of an incident which I witnessed a few days ago on an outgoing train," says a writer in the *Indianapolis News*. "A plainly-dressed old woman and a tall, awkward young man, evidently her son, had been in the city and were going home. There was an uncertainty in the boy's step as he came into the car which indicated that he was considerably intoxicated. They sat down together and he at once began to talk in a loud voice. His words were driveling nonsense, without a tinge of humor. His mother, however, seemed strangely insensible of her son's disgrace. She laughed freely at the incoherent remarks and replied to them, though in so low a tone that her words were inaudible to the passengers.

"People exchanged surprised glances and began to talk of the unusual scene. Some thought the mother indifferent to her son's

condition and therefore little better than he herself. Others were more charitable and did not believe she realized his condition.

"As I listened it seemed to me the woman's tones were not natural. There was something that sounded strained and affected in her laugh. Her old bonnet was drawn down so that her face was entirely hidden, and I observed that she kept it so, carefully. Then I began watching her closely, for I wanted to see her features. I felt that a glance at them would assure me whether her cheerfulness was real or feigned.

"The train hurried along, and I began to think my watchfulness was to go unrewarded. The young man rambled foolishly on with his talk, and his mother continued to laugh at his pointless wit. Then the engine whistled, and the couple prepared to get off. I leaned forward and saw the woman fumble about searching for a package. The hand she put out trembled like an aspen. As she arose from the seat she turned her head and I caught a glimpse of her face. Her eyes were dimmed with tears and her furrowed cheeks were wet. The expression of her countenance was so sad that it rises up before me day and night. The poor woman in her pride had preferred to appear unconscious of her son's disgrace, hoping the strangers who witnessed it might not comprehend."

Funny Incidents About Authors.

[Lillian Whiting's Letter.]

My half hour's chat with an experienced publisher like Mr. Osgood brought out a number of funny incidents of authors. He told me of a well known contemporary to whom the United States postal service is a perpetual reign of terror, bringing down upon his defenseless head an avalanche of amateur MSS., which he is coolly asked to read, criticise, correct and bring up to a literary standard, who has recourse to sending them on to publishers, returning to the author the formula: "I have taken the liberty to send your MSS. to ———, the publisher."

To distinguished authors the mail has really become a terror. Dr. Holmes has regaled the public with many inimitable chapters from his experience, and has given many a useful hint to his brethren who are similarly afflicted. Mr. Longfellow was a saint and took the trials imposed upon him by people who certainly revered him, if they were not up to the level of appreciating him, in an angelic fashion that we all marvel at rather than follow. But to reconcile courtesy and candor is a more difficult undertaking than any other form of sailing through the modern Scylla and Charybdis. Dr. Holmes says that he has one unvarying form for the acknowledgement of the first books of young authors sent him, something to the effect that "I do not wait to open the volume

before I take my pen to thank you," after which obviously he is saved the trouble of opening it at all.

Look at the matter as one will, there is little excuse in all this. It is not genius, nor talent, nor even tenth-rate ability that imposes itself with such relentless audacity. Among all the sufferers no one is, perhaps, more diligently imposed upon than the editor. It seems to be in the nature of a popular belief that his mission in life is to engage in the personal service of literary adventurers. Not a day but that brings him more or less letters in which the "unknown and struggling" woman—for 99 times out of 100 it is a woman and not a man who is the imposer and relentless "devastator of a day"—in which the woman sets forth her autobiography and her aspirations in equal length and in equally appalling dimensions.

He was a Man and Took the Consequences.

[Lafayette Sunday Times.]

It is not so many years ago since ex-President Spencer of the B. & O. was a poorly paid station agent on the Metropolitan Branch of the Baltimore & Ohio road. One night there was an accident a few miles below his depot. A passenger train had crashed into a freight train, and the track was blocked with smashed cars and one shattered locomotive. Spencer went down on a hand car to help clear up the wreck. John W. Garrett, then President of the road, happened to have been on the passenger train, and stood by the side of the track watching the work of clearing away the wreck. The young station agent was strong and a hard worker. He slung the broken wood work and smashed iron off the track with careless quickness. "Look here, my man," said Mr. Garrett, near whom some of the pieces had fallen, "you had better be careful where you throw those things; I might get hurt." Spencer glanced up at him and answered: "Well suppose you get out of the way." Mr. Garrett was evidently annoyed.

"Young man," said he, "I am John W. Garrett, the President of this road, and I will not have any of its employes talk to me in that way; do you hear me?" "Yes," replied the doughty Spencer, "and if you stay where you are there will be a broken axle or a smashed board tumbling on you. I don't care who you are; this track has to be cleared." He went home to his little rooms over the station that night and told his pretty young wife that their \$40 a month was in danger. But he was mistaken. That night was the turning point in his life. John W. Garrett remembered the young man, gave him a chance in better places, recognized his worth, and he went from one position to another until he became President of the great railroad system that he had served so faithfully and so well.

IMMORTALITY.

Whate'er begins must end. So say
Philosophers both old and new,
And nature's round, birth, fruit, decay,
Doth prove the adage true.

Snug in the unripe acorn's coat
A fallen oak tree alumbereth;
The new born infant's lusty throat
Must rattle soon in death.

And so, whatever hath no end,
Never began and ne'er was born:
Its origin and finish blend
As night fades into morn.

Infinity was by a ring
In former ages signed and taught,
Surely a plain and simple thing,
Yet food for grandest thought.

God is the end and final cause,
The Alpha and Omega He,
Before beginnings, more than laws,
He was and is to be.

And if our souls are plumed to flit
Through being's circle, near and far,
They lived before the sun was lit
Or heaven had a star.

Oh listen, Brothers, listen well;
It was a cheerful thing to hear
An angel harp or shriek from hell
To rid us from this fear.

For we are brutes or prisoned gods;
And there is none of us can guess
What life we passed before these clouds,
This vile forgetfulness!

George Horton.

Private Drinking Glasses.

[Pittsburg Chronicle.]

"Heah, bahkeeper, this is not my glass," said an eighteen carat dude in a fashionable Sixth street restaurant the other afternoon, petulantly pushing back the diluted julep before him and stroking his little moustache with an aggrieved look.

"Beg pardon sir, beg pardon," said the bar keeper, as he hastily withdrew the offending glass. Opening a little cabinet in the side-board he brought out a pretty cut goblet, in which he carefully mixed the dude's "pizen," saying apologetically as he pushed it across the marble: "So many people coming in here I clean forgot it."

The dude felt too much hurt to reply, but sipped his beverage and then faded away.

"That's the last fool notion of them ducks," said the drink dispenser, with a backward jerk of the thumb toward the retreating young man.

"What's that?"

"Why, each of them has to have his own glass now. You see this case? Well, I've got eighteen sets of private glasses in there, five different kinds of glasses in a set, and when one of them comes in I've got to get his own little cup to mix his liquor in. They are good trade, though, and I can't afford to object."

The glasses were very pretty, of fine cut ware and shaped like those used for ordinary every day customers. The sets, the

barkeeper said, cost \$5 and can be purchased at only one or two places in the city.

"They pretend," continued the man of mixed drinks, "that they're afraid of drinking out of the same glasses as the mob, as they might get some disease. They've been going it about two months now and they'll go clear across the city without a drink before they'll take a drop out of anything but their own glasses. I hear they've got the same wrinkle at one or two of the clubs here. They're daisies."

Government Clerkships.

[Chicago Herald.]

What profiteth a young man to spend his time and money in obtaining a Government clerkship at Washington which pays only enough to support him during the few years he may hold it? He is oppressed with a sense of insecurity every day of his tenure of place, for political appointments are ever uncertain. A hundred others are after his shoes, and should he chance to incur the disfavor of superiors, or if the superiors conclude that policy requires his displacement, he is set aside. But even if he retains his position, whether by real merit or by fawning at the footstool of power, the average department clerk is no better off after ten years of this service than when he entered it. Every community in this country offers better home opportunities to an enterprising man than any Washington clerkship affords. Ask the homeward bound Democratic ex-clerks if this is not true.

As between political clerkships and base ball playing, the latter is the thing. Indeed Congressional seats and salaries are tame and small in comparison with the honors and incomes of experts at the "diamond." What twenty-five United States Congressmen making a round of the globe would have received such welcomes from royalty as did that number of our professional base ball players, just returned from that tour? The arrival of the entire National Congress in a body would not have created such a *furor* in New York as did the landing of the twenty-five leaders in our National game. Why aspire to be a beggarly Congressman?—get you a bat and ball and become a \$10,000 "Slugger."

An Advanced Five-Year Old.

[Cincinnati Enquirer.]

A professional friend has two children, a girl of seven and a boy of five. The former is just convalescing from an attack of measles, and, of course, the boy was expected to have a dose of them. One evening last week the boy came in and spoke as follows: "I'm feeling tough, and darned if I don't believe the measles have tackled me."

"Resistance to Tyrants is Obedience to God."

[Exchange.]

When oppression springs up there is the seed of revolution planted and its development is as certain as the growth of oppression. The exigencies of the time, the increasing population, and the increasing inequality in distribution of wealth demand a remedy and that speedily. A broad charity and lessons of self-restraint are wholly adequate. They are questionable even as a partial remedy. Charity lowers the moral of the individual. For whatever destroys the self-respect shakes the very foundation of true manhood. Couple this with lessons of prudence and self-restraint to individuals smarting under injustice and you arouse all the demons in their natures; and opportunity and a show of success is all that is wanting for them to strike. Then the innocent as well as guilty will suffer. All that can be done is to educate that they may act intelligently and collectively. Philanthropists must learn that whatever truly benefits mankind must conform to nature's laws. The complexity of the human organism is such that whatever effects the physical reacts upon the moral and intellectual, and vice versa. The earth is capable of sustaining the increasing population of another century if her natural resources were properly distributed and the poor were given equal opportunities with the rich. The exact measures that shall be settled upon as best for all are matters for discussion, and to meet all the demands of an enlightened civilization the work of education must go on.

The Newspaper Man.

[Palatka Herald.]

The more a newspaper man exerts his ability to please a whimpering public, the more good he does for a town, the more charitable he becomes the more he is criticised. Speaking of this, a writer has said: "The man who can run a newspaper without being criticised, censured and threatened has never been found. He is a barren ideality, beautiful to think about, but incapable of talking on morality and associating with vulgar humanity. It is as impossible for him to please everybody as it is for everybody to please him, and the sooner he makes up his mind to this stubborn fact the better for everybody concerned. If he works hard for the public good, he receives private censure; if he compliments merit, he is censured by jealous demerit; if he approves morality, he is cursed by immorality; if he tries to be fair, he is censured by the unfair; if he makes a mistake, few are found to overlook it or apologize for him. No matter how good

his motive may be, how innocent his purpose or how studied his writings, he is picked to pieces, misrepresented, maligned, ridiculed, sometimes licked and seldom defended. He works from twelve to fifteen hours per day for a bare living, while other men get rich around him. He works up a marriage notice, many yards long, to the queen's taste for nothing, and is threatened with a libel suit or duel if he records a drunken spree of the groom six months afterward. Yes, it is impossible, we repeat, for a newspaper man to please everybody. As well attempt to chain the wind or stop the fury of the lightning."

The Working Girls of New York.

[New York Mail and Express.]

If any person has a desire to know just how much human nature can endure, and yet live on, he has but to investigate the actual condition of the working girls of New York, and by that time it will seem wonderful that the rivers are not full of despairing suicides. In one house live twenty-two working girls, not all of one family nor all of the same trade, and yet all belonging to one sisterhood of suffering, so that the song of the shirt might with equal propriety be sung of them all, as far as their misery is concerned.

The younger girls of families, or sisters of those who work in the harder trades either go to learn trades or else work at paper box making, at which they earn about \$1.50 per week, or making pills for druggists, which pays about the same, or else as cash girls in stores or capping and labeling medicine bottles and packing proprietary medicines. The labor in all these different businesses is light, with the exception of that of the cash girls, which is a strain that few strong men could bear under the most favorable conditions, and when taken into consideration the fact that these girls are just passing the most critical period of their lives, when good, wholesome food, outdoor exercise and tranquil minds are needs imperatively demanded by the system, it is the cruelest burden to lay upon them. The constant nervous strain, the hurrying to and fro in heated, crowded places, the scoldings and fear of fines, and the improper food they get, let alone its insufficiency, makes it a wonder one of them lives through it.

A FAIR and buxom widow who had buried three husbands, recently went with a gentleman who in his younger years had paid her marked attention, to inspect the graves of her dear departed. After contemplating them in a mournful silence, she murmured to her companion: "Ah, James, you might have been in that row now if you had only had a little more courage."

The Influence of Verbatim Reporting.

[Ben Perley Poore.]

We may not have the equals of Patrick Henry, Samuel Adams, John Rutledge, Webster, Clay, Calhoun or Prentiss, but as a whole the congressional orator of to-day is far superior to that of the near or distant past. Verbatim reporting has proved a great injury to congressional oratory. In the olden time the senators and representatives would listen to those who were speaking with the attention of assemblages of trained critics.

When verbatim reports of the debates were made and printed, these congressional listeners were no longer to be found.

A senator or representative who had carefully prepared himself would, as he commenced his speech, see his audience engaged in every other way than listening to his accents. Some would be in groups chatting, others would be reading newspapers or books, and the rest inditing epistles or directing public documents to their constituents. It would be difficult for him to say what he had intended, were there not another stimulus by which his tongue and his patience were rendered inexhaustible—the reflection that although his words were falling lifeless upon the ears of his ostensible audience they would be read by attentive constituents at home. It is to them that speeches in congress have been addressed since the introduction of verbatim reporting. Congressmen who were noted for their eloquence upon the home stump have flourished through written platitudes at the Capitol, often prepared for them by some journalist for a stated compensation.

Superstition in New York.

[New York Star.]

On the upper part of Broadway is a hump-backed Italian bootblack, who, although he dresses poorly, and will give you a patent leather shine for five cents, has accumulated an ample fortune by his deformity and the superstition of his customers. If you watch him at work, you will see the person whose boots are being polished lean over slyly and touch the hump with the tips of his fingers. Light as is the touch, the bootblack feels it, looks up grimly, and is silenced by a quarter or half a dollar. That touch of the hump is supposed to bring good luck to gamblers, stock brokers, business men and holders of lottery tickets. Sometimes when the superstition is verified by a coincidence, the customer gives the bootblack a \$5 or a \$10 bill out of the profits, and then the magic touch is repeated more openly. I know of a theatrical manager who keeps a humpback in his employ to bring him good fortune by this touch. Many otherwise sensible speculators never go down town with any confidence in their operations unless they have touched the old Italian in the morning.

Mr. Gorman's Nutmeg.

[Baltimore Sun.]

Senator Gorman was in the city to-day, looking after certain departmental matters which he desires to arrange before going away on his summer vacation. Mr. Gorman tells the following story on himself: For many years he has been a sufferer from regular attacks of neuralgia. On some occasions he has been confined to his home a day or two, so intense was the pain. An old lady friend once called upon him while he was suffering from one of his attacks. She displayed so much sympathy that she almost forgot to name the request she came to make—but she did not. Upon learning that the Senator was troubled with neuralgia, she volunteered to give him an infallible remedy, provided he would promise not to laugh at her or accuse her of being a believer in conjuration, spells, etc. The Senator, in a good natured way, informed her that he was under treatment of an eminent physician who sometimes afforded him temporary relief. The old lady finally prevailed upon the Senator to give her remedy a fair trial. Whereupon she suggested that he should get an ordinary nutmeg, such as is used in cooking, drill a hole through it, attach it to a piece of string or ribbon, and wear it around his neck continually.

The senator, while suffering one day, determined to give the nutmeg remedy a trial. He followed the old lady's directions, and in a few hours felt greatly relieved. He has worn the nutmeg ever since, and is seldom troubled with neuralgia. He has consulted several physicians on the subject, and they state that the nutmeg possesses certain virtues which may have effect on neuralgic pains.

The New Generation in Virginia.

A great deal of nonsense has been written about these "first families." They are usually represented as thriftless, vain and scornful to all outside the magic circle of their society. They lack, it is true, much of the go-aheadiveness of the northern man, but it must be remembered that most of those yet living were brought up under conditions that paralyze energy. With large estates and hundreds of slaves they had no motive for exertion, and now that the war has swept away all their wealth they must change their very natures before they can become the pushing business men who build up communities. The new generation is growing up quite different, and it is more than likely that when they come to the fore the Virginia farmer will no longer let his acres lie idle or half cultivated. The fact is that the landholders in Stafford county are yet in a dazed state over the result of the war. They can hardly realize the change, or if they have they think it is too late in life to start out afresh.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.
Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.
Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

OCTOBER, 1891.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F., }
 TERRE HAUTE, IND., October 1, 1891. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 130, of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their quarterly dues for the quarter ending January 31st, 1892. The names of said members must be reported to you by the Collector of your lodge not later than November 2d, and by you reported to the Grand Lodge, in the prescribed form, immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold subordinate lodges liable for their assessments, as per Section 53 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F., }
 TERRE HAUTE, IND., October 1, 1891. }

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 54 of the Constitution, that no beneficiary assessment is required for the month of October, 1891, and that therefore none has been levied for said month. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Bound Volumes.

We still have on hand a few bound volumes of the *Magazine* for the years 1887, 1888 and 1889, which can be had, postage prepaid, at \$1.50 per volume. Every wide-awake fireman should have these volumes in his library. Address *Locomotive Firemen's Magazine*, Terre Haute, Ind.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F., }
 TERRE HAUTE, IND., October 1, 1891. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 129 of the Constitution, you are hereby notified that the dues for the quarter ending January 31, 1892, (such an amount as may be determined by the several lodges, provided in no case it shall be less than five (\$5.00) dollars) are now payable, and must be paid to the Collector of your lodge on or before November 1, 1891. This amount will be in full payment of all subordinate dues and beneficiary assessments levied by the Grand Lodge for said quarter, as provided in Section 132 of the Constitution. All beneficiary members now enrolled, and all those admitted prior to December 1, 1891, are liable for the full amount of quarterly dues for said quarter. All members initiated during the months of December and January are exempt from payment of quarterly dues for said quarter, as provided in Section 129 of the Constitution. Any member failing to make payment as above provided will be expelled from the order, as per Section 130 of the Constitution, said expulsion taking effect November 2, 1891, and the Secretary is required to make due report thereof to the Grand Lodge.

Very fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Columbus Drank It.

Or, at least, so they say! "It," refers to cocoa. There is a legend none too well authenticated it is true, but of sufficient interest to make it in point just here, to the effect that when Columbus had landed and sufficiently secured the confidence of the native American, he one evening approached the camp fire of a party of Indians, and found them drinking. To show their good will for him, a dusky maiden presented him, in a cocoanut bowl, with a liquid now so well known to people of refined tastes, and he, fearing that something might have been mixed with it to cause his death or serious sickness, at first refused to drink it; whereupon the maiden, to induce his confidence, seized the bowl and drank its contents. Filling it again she presented it to him with all the grace of a nature taught refinement, and without hesitation he drank it and liked it.

Well, whether this be true or not, certain it is that Spain, the country from which Columbus sailed, very soon learned to drink more cocoa (as it does today) than any other country in the world; and this is not remarkable, since Van Houten & Zoon have so perfected the manufacture of pure soluble cocoa as to make it not only delicious but thoroughly digestible and nourishing. They are a Dutch house, but they supply cocoa for almost all the world. Mr. C. J. Van Houten was the original patentee of powdered cocoa, and his unapproachable method of manufacture is still in the possession of the firm of C. J. Van Houten & Zoon, Weesp, Holland, as its most valuable secret; for the Van Houten process by eliminating the excess of fat, increase by 50 per cent. the solubility of the flesh-forming elements of this wonderfully nutritious article of food, thereby highly developing the digestibility, strength and natural aroma of the cocoa.

GEORGE W. HURLBUT, a member of Midland Lodge, No. 147, B. of L. F., has the agency for Kinne's Guide, Time and Pocket Book, which, owing to its merit and value, is having a wide sale among engineers and firemen. Those purchasing the book will not only receive full value for their money but will be assisting a brother who on account of impaired health, is unable to follow his usual occupation. The price of the book is \$1.00, invariably in advance. Address, George W. Hurlbut, 433 East Commercial street., Station A., Springfield, Mo.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., Sept. 1, 1891.

To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement
of the Beneficiary Fund for the month of Aug. 1891:

Health is Wealth! FAT PEOPLE

DR. E. C. WEST'S NERVE AND BRAIN TREATMENT, a guaranteed specific for Hysteria, Dizziness, Convulsions, Fits, Nervous Neuralgia, Headache, Nervous Prostration caused by the use of alcohol or tobacco, Wakefulness, Mental Depression, Softening of the Brain, resulting in insanity and leading to misery, decay and death.

Each box contains one month's treatment. \$1.00 a box, or six boxes for \$5.00, sent by mail prepaid on receipt of price.

WE GUARANTEE SIX BOXES

To cure any case. With each order received by us for six boxes, accompanied with \$5.00, we will send the purchaser our written guarantee to refund the money if the treatment does not effect a cure. Guarantees issued only by

J. & C. BAUR,
Druggists, Terre Haute, Ind.

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all use? Nearly all Brotherhood men wear overalls, and I am making overalls that can't be beat. It won't cost you a cent and will help me a great deal if you'll ask your dealer for the "Brotherhood Overalls" and insist upon getting them. He will handle them if you insist, and when you get them you will be getting overalls as good as can be built. Every garment warranted not to rip. Look for "Brotherhood" on the buttons.

Manufactured by **H. S. PETERS**, Member Lodge, No. 3, and F. A. E. Division, No. 419, B. L. E. Office and Factory, Hinsdale Street, BROOKLYN, N. Y.

Desiring to reduce their weight, can do so at home without starving or injury, 10 to 15 pounds a month. Permanent results. Send for proofs.

DR. CLARKE,
186 South Clark St., Chicago.

HIRES
ROOT BEER
THE GREAT HEALTH DRINK

25c. Pkg. makes 5 Gallons. DELICIOUS, SPARKLING, APPETIZING. Carry a bottle of it to work with you. It is better than liquor. Send for beautiful book and pictures Free. **C. E. HIRES CO., Philada.**

HAWKINS' HAND BOOK OF CALCULATIONS

Engineers, Firemen and Machinists

A work of instruction and reference 226 pages, with 150 diagrams and illustrations, 9 inches x 6, printed on heavy paper, sold in 10 monthly parts at 25c each, or in one handsomely bound volume for \$2.50; postpaid.

THEO. AUDEL & CO., Publishers, Room 3,
31 Liberty St., New York City.

Note.—This work teaches practical men how to advance themselves to the highest positions. "He who reads (this work) must learn," All Collins, Inspector. "I would not part with the H. B. C. for five times its cost." Jno. J. Jennings. "I have found it to be the best ever put before the public," Chas. Spies, Chief Engineer.

AGENTS WANTED AMONG FIREMEN.

Money to Loan

At 6 per cent. on policies by this first-class fraternal Order. Anybody can act as an agent. Active farmers do well; ladies also. \$200 to \$4,000 in from 3 to 7 years during life, and \$7 to \$48 weekly in sickness. Mention this paper and write at once to (Big Pay.)

S. GLENSOR,
8 Union Square, New York.

Lady agents do well also. Address **MRS. K. F. MILLER**, General Agent, Ladies Dept., 8 Union Square, New York, for particulars. Send for list of 500 claims paid in '91.

TO EVERY READER OF THIS REBUS.

1200 of these beautiful Watches given absolutely free to each of the first 1200 persons who will read this advertisement and send us the correct answer to this rebus.

The publishers of American House and Home make this magnificent & princely offer to advertise & introduce their mammoth illustrated News & Story paper into new homes at once. It is beautifully and profusely illustrated, (established 1880), 8 pages, same size Harper's and Leslie's Illustrated Weeklies, and for years has been a conspicuous Metropolitan Journal. We have paid out over \$100,000 for prizes and premiums, and by our liberality secured 500,000 readers. Experience has taught us it pays to give costly and useful premiums. We guarantee satisfaction, and fulfill every promise we make promptly. The rebus is composed of four words. The names and address of those giving correct answers will be published weekly. With your answer send 10 cents in silver, or 15 cents in stamps for a three months' trial subscription to above described paper, and to help pay packing, postage, etc., and it will be sent by return mail. If you want watch sent by registered mail send 10 cents extra. Address **American House and Home**, New York City, unconditionally Free, and that according to above conditions, every one gets a watch by sending at once.

P. O. Box 2252.

N. B.—Remember we are the first and only firm ever to give a genuine Watch absolutely and unconditionally Free, and that according to above conditions, every one gets a watch by sending at once.

**BICYCLES
Given Away
FREE.**

FREE TO BOYS AND GIRLS UNDER 18 YEARS OF AGE.
WITHOUT ONE CENT OF MONEY.

If any boy or girl under 18 wants an elegant High Grade Safety
Bicycle they can obtain it free without one cent of money. We
shall give away, on very easy conditions, 1,000 or more.
DESCRIPTION OF BICYCLE: The wheels are 26 inches with cres-
cent steel rims and molded rubber tires, and run on hardened steel
cone bearings, adjustable to wear; geared to 46 inches; detachable
cranks; four to five inches throw; frame finely enameled, with nickel
trimmings. Each machine is supplied with tool bag, wrench and
other. Equal in quality to those sold on the market for \$45.00. We
have both boys' and girls' styles. We deliver the bicycle free
of all charges anywhere in the U. S. If you want one write at once
to WESTERN PEARL CO., 334 Dearborn St., Chicago, Ill.

STRUCK IT RICH!

" F. S. BENNETT,

President Missouri & Illinois Lead & Zinc Mining Co.

Galesburg, Ill.:

Struck Lead and Zinc in drill hole, this afternoon, at sixty feet and getting better the further they go.

J. M. O'BLENIS, General Manager."

This is indeed good news for all the stockholders of the

Missouri & Illinois Lead & Zinc Mining Co.

as this will increase the dividends from 16 per cent. per year to 2 to 10 per cent. per month.

The Stock of the Company is being rapidly taken. When the 50,000 Shares are all subscribed, it will be advanced.

This great strike is upon the 120 acres owned by the Company, which, at the time the Company's advertisement was written, was undeveloped ground.

The Stock of this Company is better than Government Bonds.

Lose no time in sending in your order, even if for a few shares only. Address as above for further information.

CUSHMAN'S MENTHOL INHALER CURES CATARRH.

Endorsed by the Highest Authority of England.

DEAR SIR:—The Inhaler came in due course of mail, and I am enthusiastic over it. I am satisfied that it will effect an ultimate cure in my case of catarrh and asthma. I shall recommend it to all my friends. Since ordering the Inhaler I have received a copy of Browne's great work, "Diseases of the Throat and Nose" (3d ed.), and I find on p. 558, that he discusses quite fully different remedies for catarrh, etc., and closes by giving Cushman's Menthol Inhaler his unqualified preference in terms of highest praise. He says that he has used it for several years in the Central London Throat and Ear Hospital, and has achieved better success with it than with all other remedies combined. Such an endorsement is worth more than a deluge of old-lady certificates of cure, etc.

DEL RIO, TEXAS, Dec. 30, 1890.

DR. W. W. GATEWOOD.

From the Hon. Ira Mayhew, Detroit, Mich.

DEAR SIR:—I have been a sufferer from catarrh for twenty years. During this time I have consulted a number of physicians (some of them specialists), and tried various remedies, with only partial relief for a time. About two months ago your Menthol Inhaler was brought to my notice. From the benefit I have received from it I consider it an efficient catarrh remedy. It also improved my hearing which had become dull.

IRA MAYHEW.

Head Colds, Hay Fever, Sore Throat, Asthma, Bronchitis, Headache and Facial Neuralgia, as well as Catarrh, yield like magic to the soothing and antiseptic properties of inhaled Menthol. The Inhaler in a neat pocket case costs 50 cents and lasts a year. 1,000 treatments for 50 cents and every one a pleasure to take. Try an Inhaler a week and if not entirely satisfactory return it to me and I will refund your money. At druggists or sent direct by registered mail—same price.

THE BEST METAL POLISH IN THE WORLD.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Red rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

**THE MATCHLESS METAL POLISH CO.,
88 MARKET STREET, CHICAGO, ILLINOIS.**

**\$1,000
FOR AN
OLD COIN.**

and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since, a Lynn, Mass., shoe dealer found a coin worth \$1100. Recently a Scotchman in an Illinois town came across a coin worth \$700. Others have done even better. The *New York World* says: "Many people have become rich by looking after coins wanted by collectors." The *Home Journal* says: "Collecting coins is a very profitable business now-a-days, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices. Write at once for further particulars enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune to you. W. E. SKINNER, Reliable Coin Broker, 325 Washington St., Boston, Mass.

IF YOU HAVE ANY COINS dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1869; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1893; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half-cents; foreign coins, fractional and Confederate currency, etc. For above we **PAY BIG AMOUNTS** over face value, if in required condition. This is a comparatively new business,

**RAILWAY
OFFICIALS AND EMPLOYEES'
ACCIDENT ASSOCIATION**

**INDIANAPOLIS, IND.
WM. K. BELLIS, SFC.**

**THE
WHEEL**

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION** of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Railroaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION** is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroaders longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS :

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

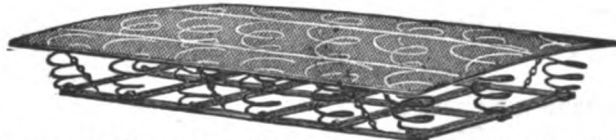

TO THE PUBLIC.—Cleanliness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written in the interest of Locomotive Firemen.

H. A. LUTCENS,

Box 131 PATTERSON, N. J.

FIREMEN, ATTENTION!

Why not make your seat in the cab easy by having one of the BUCKEYE CAB SEATS, like above cut? Have been tested and not found wanting. They are cheap and durable, having steel tempered springs and band steel bottom. Save unnecessary jarring. Over 400 in use. Price \$2.00 per seat not over 24 inches long.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 309 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

CLEAR AS ALABASTER.

For Sale By Druggists Everywhere.

ARTIFICIAL LEGS AND ARMS.

(MARKS' PATENTS.)

WITH RUBBER FEET AND HANDS.

Durable in their Construction, Natural in their Action, Noiseless in their Movements,

And the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman applying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

SALINA, KANSAS.

Mr. A. A. Marks:

DEAR SIR:—After having worn one of your artificial legs with rubber foot for more than fifteen years, I have no hesitation in saying it is the best leg in use, as it is simple and the most durable of any I have seen. I have examined and worn five different makes since 1862, and find none as useful as yours. I can heartily recommend the rubber foot as the most durable and easy to handle. I am a blacksmith and shoe horses. I have dug wells and quarried stone and other heavy work. I can walk faster in a given time than any man can on any other kind of a leg with the same length of stump as mine; it is only three inches from hip joint.

Yours, etc.,

E. LINCOLN.

Over 12,000 artificial limbs of the Marks' Patent in daily use. Established over 38 years. Endorsed and purchased by the United States and many foreign governments. By our copyright formula applicants can supply us with all the data necessary to secure a fit while they remain at home. One half of the legs and arms furnished by us are made from measurements and profiles without our seeing the wearers. Fit always guaranteed. A treatise of 430 pages with 200 illustrations and a thousand indorsements and testimonials sent FREE. Address

A. A. MARKS,

701 Broadway, NEW YORK CITY.

Good morning

Have you used
PEARS' SOAP?

"I have never come across another Toilet Soap which so closely Realizes my ideal of perfection;

Its purity is such that it may be used with perfect confidence upon the tenderest and most sensitive skin—EVEN THAT OF A NEW BORN BABE."

Dr. REDWOOD, Ph. D., F. C. S., F. I. C.

Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain.

Insist on having Pears' Soap. Substitutes are sometimes recommended by druggists and storekeepers for the sole purpose of making more profit out of you.

Taking a Pill is often a happy thought.

Beecham's Pills

are the most wonderful antidote yet discovered for ALL BILIOUS AND NERVOUS DISORDERS.

A Box of these pills, costing only twenty-five cents, constitutes a family medicine-chest. Wind and Pain in and Weakness of the Stomach, Giddiness, Fullness, Swelling after meals, Dizziness, Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Blisters on the Skin, Disturbed Sleep,

Sick Headache, Derangements of the Liver, and all nervous and trembling sensations are cured by using these Pills.

The First dose often relieves in 20 minutes, and apprehension and sickness can be avoided by having a box always at hand wherever you are—in the house, on the train, on the steamer—ready for immediate use.

Prepared only by **THOS. BEECHAM, St. Helens, Lancashire, England. B. F. ALLEN CO., Sole Agents for United States, 365 Canal Street, New York, will mail BEECHAM'S PILLS** on receipt of price, 25 cents. Correspondents must mention this paper. Inquire first of your druggist.

Bermuda Bottled.

"You must go to Bermuda. If you do not I will not be responsible for the consequences." "But, doctor, I can afford neither the time nor the money." "Well, if that is impossible, try

SCOTT'S EMULSION

OF PURE NORWEGIAN COD LIVER OIL.

I sometimes call it Bermuda Bottled, and many cases of

CONSUMPTION, Bronchitis, Cough

or Severe Cold

I have CURED with it; and the advantage is that the most sensitive stomach can take it. Another thing which commends it is the stimulating properties of the Hypophosphites which it contains. You will find it for sale at your Druggist's but see you get the original SCOTT'S EMULSION."

VAN HOUTEN'S COCOA

MR. PECKSNIFF.

"Best & Goes Farthest."

"Thank heaven, I Am quite well. May I be permitted to say: Thank heaven and VAN HOUTEN?"

"Is it not his Cocoa That makes me feel so Well?"

PERFECTLY PURE.

VAN HOUTEN'S PATENT PROCESS

increases by 50 PER CENT. the solubility of the flesh-forming elements, making of the cocoa bean an easily digested, delicious, nourishing and stimulating drink, readily assimilated, even by the most delicate.

Sold in 1-8, 1-4, 1-2 and 1 lb. Cans. If not obtainable, enclose 25 cts. to either VAN HOUTEN & ZOON, 106 Reade Street, New York or 45 Wabash Ave., Chicago, and a can containing enough for 35 to 40 cups, will be mailed. Mention this publication. Prepared only by the inventors VAN HOUTEN & ZOON, Weesp, Holland.

Under the auspices of the Vanderbilts there is a publication issued once a month, and known as the *New York Railroad Men*, specially devoted to the interests of railroad men, or, more properly, railroad employes on the N. Y. C. & H. R. R. R.

The *N. Y. R. M.* is an organ of the "Railroad Branch of the Young Men's Christian Association."

The *N. Y. R. M.* is, to all appearances, profoundly interested in the welfare of railroad employes. It would have their powers of "intuition" up to the highest standard of mental and physical perfection, so that they can in an instant do the right thing when perils threaten.

The *N. Y. R. M.* points out that there is "room on top," and that now good men are in great demand for "on top" positions.

The publication wishes it were in its power to arouse the ambition of every railroad employé to strive for the "next place

above him." It says that the "men whose range of knowledge of railway affairs is not limited to the department in which they labor for the time being; whose concern for the success of the company with which they are connected is such as to call forth their utmost endeavors; whose reliability in critical times can be counted upon; whose honesty is beyond question; who are sober, industrious and thrifty, polite, but not too forward and familiar; firm, but not obstinate; obedient to orders, yet possessing tact in their execution; men with ideas, not mere automatons; men with pride sufficient to stimulate neatness; with dignity enough to prevent lax discipline in case they are promoted to positions of trust, but withal a quiet, manly cordiality which lasts after advancement has come. There is room for such men at the top."

Turning from such very rational reflections we find in the *N. Y. R. M.* an address delivered by one Mr. Colby, to railroad employes, on the occasion of the eleventh anniversary of the Railroad Branch.

Mr. Colby addressed his audience as "capitalists."

Words are said to be "signs of ideas," but this is not true in Mr. Colby's case, unless it be they convey the idea that he is a first-class donkey. The terms "Capital" and "Capitalist" have a certain sharply defined meaning everywhere accepted, and about which there is no controversy, and nowhere are railroad employes classed as "capitalists" except by Mr. Colby, whose utterances are regarded of sufficient importance to be put

in print as the teachings of the Young Men's Christian Association in matters pertaining to finance. Mr. Colby starts off as follows:

I speak to railroad men, and I speak to you as capitalists. Every one of you is a capitalist—perhaps not a bloated bondholder, but a capitalist. There is probably not one man in this room but what is possessed of some kind of capital. Money is not the only kind of capital in the world, nor is it the best or most remunerative. Anything is capital which you possess beyond the requirements of your immediate necessities, which you husband, invest, put out to use where it can bring to you returns in accumulated wealth, in additional power, or in the increase of your happiness. Some of the most important and valuable kinds of capital are money, houses, lands, stocks, bonds, muscle, health, brains, leisure hours, opportunities for improvement. The man who has the most of these is the biggest capitalist, and the man who hasn't any is a beggar, while the man who has but one is poor enough.

Quite likely the railway employes who listened to Mr. Colby concluded that he was some graduate of a feeble-minded institution, who had advanced so far as to distinguish a clothes-pin from a lightning-rod, and his vagaries, being harmless, provided his audience was not idiotic, he was permitted to announce to them that they were all capitalists. "As capitalists" they were not "on top" by several millions. And here Colby stuck in one of those reconciling propositions designed to make seventy-five cents swell to seventy-five millions. He told the Vanderbilt employes that "money is not the only kind of capital in the world, nor the best, or the most remunerative."

In this Colby spoke by the card. In railroad affairs water is found to be quite as remunerative as money, and, all things considered, by far the most remunerative.

It is not an easy matter to raise, say, \$10,000,000 in money. It requires a deal of hustling to get that much money together, but once raised it requires only the stroke of a pen to inject \$10,000,000 of water, and collect dividends on the \$20,000,000. This being true, it is strange that Mr. Colby, the orator of the Young Men's Christian Association, in cataloguing the various kinds of capital, omitted *Water*.

We take special interest in Mr. Colby's comprehensive views of what constitutes capital, as, for instance, "money, houses, lands, stocks, and bonds," and here Mr. Colby remarks that "anything is capital

which you possess *beyond the requirements of your immediate necessities*," and then he says "muscle, health and brains" are capital—that is to say, if a railroad employé has more muscle, health and brains than he has any immediate requirement, he is a capitalist in proportion as he has a surplus of such things as "muscle, health and brains."

We suppose in Mr. Colby's audience there were some locomotive firemen, some engineers, conductors, brakemen, switchmen, and telegraphers, but we don't suppose any of them concluded that they possessed a surplus of "muscle, health and brains,"—not a dollar's worth in excess of their "immediate necessities," and, therefore, according to Mr. Colby's scientific analysis of what constitutes a capitalist, are poor men.

In furnishing a list of things constituting capital, it is surprising that Mr. Colby omitted bowels, digestion, eyes and ears. It was Josh Billings who said he would rather have a "good set of bowels than a good set of brains," and of how little value is capital of any description if a man is deaf or blind!

Mr. Colby mentioned "money, houses, lands, stocks, bonds, muscle, health, brains, leisure hours and opportunities for improvement," ten in all, as "the most important and valuable kinds of capital," and wisely adds that "the man who has the most of these is the biggest capitalist, and the man who hasn't any is a beggar, while the man who has but one (say money) is poor enough."

It would be impossible, we conjecture, for an escaped lunatic to excel such jargon, and yet it is the kind of stuff that the Vanderbilt Young Men's Christian Association has injected into the ears of railroad employes to persuade them that if they have muscle, health and brains, leisure hours and opportunities, they are capitalists, the same as the Vanderbilts.

Mr. Colby tells the Vanderbilt employes that "health is the most remunerative form of capital there is, that brains comes next," and if one other "form" of capital is desired he advises the employes to "select leisure hours, or the opportunities for improvement."

Just think of a railroad employé capitalist whose sole possession is health. Mind

you, Mr. Colby's idea of a capitalist is a man who possesses capital "beyond the requirements of his immediate necessities." He says "health is the most remunerative form of capital," but health is not capital until its possessor has more of it than his immediate necessities require, and the employes, whom he addressed with such a wealth of *dampfoolism* must have felt very tired. What is true of health is also true of brains, though brains play second fiddle in the list to health. A man, above all things, that is a railroad employé, who wants to be regarded as a capitalist, should covet health—brains is a secondary consideration.

What good health is worth without brains Mr. Colby should tell when next he orates.

Having told Vanderbilt's employes that the most valuable capital is (1) health, (2) brains, and (3) opportunities, he launches at them the following thunderbolt:

Now, I would ask you, as capitalists, one of the most important questions of your lives: As the possessors of this property (health, brains and opportunities) what are you going to do with it, how are you investing it?

We apprehend that the engineers replied, mentally, "We are going to run our engines;" the conductors said, "We are going to punch tickets;" the brakemen, "We are going to brake and take the chances," and the switchmen said "We will switch, and keep the yards clear," and the firemen said "We will keep her hot." The employes invested their capital—their health, brains, and opportunities—not surplus health and brains, which, according to Mr. Colby, constitute capital, but all they had.

Take a locomotive fireman; if his health fails, his capital disappears. If he is required to work over hours, so that his brain gets weary, away goes all his capital; and if the opportunity to earn \$2.00 a day ceases, regardless of health and brains, his capital, for the time being, is gone.

Mr. Colby's high purpose was, evidently, to make the Vanderbilt employes entirely satisfied with their condition. Much had been said and written about capitalists, their greed, arrogance and injustice, how often they had oppressed workingmen, and had grown rich by robbing toilers. Now, Mr. Colby makes them feel serene by telling

them they, too, are capitalists; that money is not the best kind of capital, nor the most remunerative; that anything is capital which they possessed beyond the requirements of their immediate necessities, and that health—that is to say, so much health that their immediate necessities did not require it *all*, was better capital than money; that an *excess* of brains was also valuable capital, as also an excess of muscle; and that in proportion as they possessed these things beyond the requirements of their immediate necessities, they were capitalists.

Does it seem possible that any man with as much brains as a cockroach could be persuaded to make a fool of himself in the presence of intelligent railroad employes by reciting such stuff? and is it not still more surprising that such stupidity is permitted and indorsed by the Young Men's Christian Association and published to the world?

Mr. Colby having pointed out to Vanderbilt's employes that their wealth consisted in *surplus* health, brains, muscle and opportunities, said he wants to talk to them about those "who know how to handle their capital," and is particularly anxious to know how young men with more health, brains, muscle and opportunities than their necessities require, handle their capital. He then proceeds to tell them how "wise capitalists," who have a surplus of money, houses, lands, stocks, bonds, merchandise, etc., do. They go in for the biggest interest, dividends, etc., but have to take what they can get, because the laws of commerce compel them to, and he reconciles the employes to their lot because the money lender must take such interest as the laws of commerce determine, and that the employé must accept such remuneration as the laws of commerce fixes; and thus he proceeds with his rice-water logic to show railroad employes that they are capitalists.

Mr. Colby asks the Vanderbilt employes, "Why didn't the savages develop the mines in our country long before the white man came? Why didn't they build cities and establish a great nation?" At once Mr. Colby grasped the recondite interrogations and the mystery disappeared when he replied, "Because they didn't know how!" and then he makes the startling announce-

ment that "toil without brains is valueless and idle."

Mr. Colby should be taught by some kindergarten savant that an address on capitalists, "without brains," is of far less value than "toil without brains"—in fact, while it is not possible to conceive of "toil without brains," Mr. Colby demonstrates that it is possible to deliver an address "without brains."

Here, again is one of Mr. Colby's axioms:

The man who thinks, no matter how humble he may be, that he can go along without brains is going to be at the bottom of the heap all his life.

Just how a man can "think" without brains is a conundrum which Vanderbilt's employes are, doubtless, still pondering.

Mr. Colby finally found a place for eyes and ears as items in a railroad employe's capital, for he says, "And in these days when the procession is moving along with such a rush, the man whose eyes and ears are not open is going to be left behind, and will have to take what others leave," and this too, though he may have health, muscle, brains and opportunities.

Mr. Colby started out by telling the Vanderbilt employes that health was the kind of wealth most to be desired, then brains, but as he proceeds he puts brains in the lead; and to everlastingly rivet the fact on the minds of the men who were listening to him. He wants the Vanderbilt employes to make the most of their brains, and he tells them how it can be done. He says:

Now, here is one thing, and that is, when a man brings his brains and puts them over his labor [his health, muscle and opportunities] he has something which he can multiply. [What is it?] For instance, here are four or five men working together, all more or less skilled, and each receiving three dollars a day for his work. (Suppose we say five men, just to make it easy.) One of them studies, and he finally brings out a plan by which with one day's labor he can make some article for which he can secure five dollars. At the end of the day, then, he has an article worth five dollars. [A dinner bucket, for instance.] The value in that article is three dollars for labor and two dollars for brains. [Raw material costs nothing.] He finds the market demands more than he can make by his labor, and so he says to his fellow workmen, "you work for me and I will pay you three dollars a day, the same as you are getting now," and they go to work for him, and they work on the line of his brains, and so every day they make each one of them one of these articles [dinner buckets] for which he receives five dollars apiece. Then

he receives three dollars a day for his own labor, and two dollars a day for the brains which he puts into his own labor, and two dollars a day for the brains which he puts into their labor, and so he receives ten dollars for brains and three dollars for labor—thirteen dollars for the day where he had only three dollars before.

It is to be presumed that the man with a surplus of brains invented a double-turreted, smokeless, self heating and self-cooling dinner bucket, with hash cutter, sausage stuffing attachments; just what every railroad employe needs. The only things entering into the great North American heating and refrigerating dinner bucket are labor and brains. The five men, including the inventor, place on the market five a day. The demand is active and Mr. Mac Hine is on the high road to fortune by putting two dollars' worth of brains into his own work and eight dollars' worth of his brains into the work of his four hired men, his brains netting him ten dollars a day.

Here is where the surplus of brains comes in, the idea being that only one man of the five skilled workmen had a surplus of brains.

Such miserable twaddle would not be worth considering were it not for the fact that it is deemed worthy of being put into cold type and published as an argument to reconcile workingmen to their lot.

That such balderdash was an insult to their intelligence will not be questioned in any lodge of railroad employes in the land. The rigamarole is beneath contempt. The address, from first to last, was a steady stream of stupidity, of disgusting wish-wash, without one redeeming common sense idea.

Mr. Colby having told the Vanderbilt employes that they are bound down by "commercial laws," that these laws regulate his pay, fix the dividend upon his surplus health, brains and muscle, turns square about, and knocks all the fat into the fire as follows:

Now, I am glad that I live in an age when there are so many people who believe that there are values higher than commercial values, that there are laws that are stronger than commercial laws—that there are laws of humanity which bind man to man. I am glad that I live in a land where there are so many men who believe they can invest their capital in hospitals and manual training schools and academies and in such buildings and organizations as this.

Having knocked out "commercial laws"

and thus upset his cob house, Mr. Colby deplores the ignorance which he sees on every hand. He sees men "born into this world" whose "doors of knowledge are closed." Poor devils, "who live and die without ever knowing anything about the world in which they live." They are not capitalists, they have no surplus of health, brains and muscle. Like the four poor men who worked for "three dollars a day" making the double action and back action, smokeless dinner buckets, they "never lift the corner of the curtain that hides from their vision the wonderful beauties of created things," and therefore "never see anything beyond the range of their natural vision." Just think of these miserable unfortunates. They have no telescopes and can't read the stars, they have no microscopes and can't see the infusoria playing hide and seek in a drop of water. They are not geologists and can't read strata from the azoic to the pleistocene formations. They don't know where the earthquakes have their lairs, or how they tramp along their subterranean pathways on their world-shaking mission. Says Mr. Colby: "He who lives only for his body leaves but a slab to mark the place of his decay, but he who *cultivates and builds up his soul and his mind* is fitting himself for the companionship of the blessed and rearing for *himself mansions* that are eternal!" And having thus exploded, Mr. Colby asks: "Take brains away from a man and what have you left?" We answer, Colby. Mr. Colby says he "never felt so insignificant" as when he has "stood in the shadow of a great mountain." If Mr. Colby ever saw a mountain in labor bringing forth a mouse, he might say: "Gentlemen, in delivering this address, I realize the pangs of that mountain."

We now come to Mr. Colby's grand peroration. To say it is worthy of a place in the English classics is a feeble eulogium. He said: "My friends, don't live without brains. If you have them bring them out and enjoy them. Cultivate them and make them pay you all the income you can." And he should have added, "My friends, don't kick, because if you do, H. Walter Webb, sanctioned by Mr. Chauncey M. Depew, will call out the Pinkertons, and with

their Winchesters, they will speedily take the last kick out of you, and make you as limp as so many dish rags." Vale Colby

MAKING CRIME PAY.

One of the great problems of the age is, how criminals can be utilized so as to pay all the expenses incident to incarceration and at the same time create a revenue for the State. In some of the States the problem has been solved, and crime has been made to pay its way, and add materially to the revenues of the State.

According to the census report there were in the penitentiaries of the United States in 1890, 45,233 criminals of all grades, from the sneak thief to the defaulting cashier. In 1880 there were 35,538 convicts in the penitentiaries of the country; an increase, in ten years, of 9,695.

Of the 45,233 convicts 1,791 are females, leaving 43,442 males. If we deduct 10 per cent. from the males because of incapacity for work, we have 39,098 robust cut throats, burglars, thieves—in a word, criminals of high and low degree, at work in various employments, producing wares, in competition with honest, law-abiding working men, making crime pay, and earning a revenue for the State.

To accomplish this end, penitentiaries are being transformed into great industrial institutions. The State equips them with the most improved machinery, then assigns men to various contractors, who grow rich off of criminal muscle and skill, and from the same source the State secures a small revenue.

The States, at least some of them, exercise toward their convicts the greatest possible consideration. The penitentiaries are palaces, such as poor men, who obey the law, cannot expect to inhabit. The inmates of these palatial institutions are provided with an abundance of wholesome food, well cooked, and served at regular hours. They are in many instances supplied with books; the most skillful physicians are employed to look after their health, and ministers of the gospel are called to attend to their spiritual wants. Regular hours are observed, cleanliness commanded, and sanitary science is

called upon to protect the criminals against disease. It may be interesting for the reader to know some of the various crimes the men have committed for which their liberty is restricted. We give thirty of them, as follows:

- Abortion.
- Arson.
- Assault and battery.
- Assault and battery with intent to murder.
- Assault and battery with intent to commit rape.
- Assault and battery with intent to commit robbery.
- Assault and battery with intent to commit felony.
- Blackmailing.
- Bunko steering.
- Bigamy.
- Burglary.
- Conspiracy.
- Counterfeiting.
- Embezzlement.
- Entering house to commit felony.
- False pretense.
- Forgery.
- Felony.
- Grand larceny—Petit larceny.
- Highway robbery.
- Incest.
- Kidnapping.
- Manslaughter.
- Murder.
- Mayhem.
- Obtaining goods under false pretense.
- Obtaining money under false pretense.
- Perjury.
- Rape.
- Seduction.

We have on our table the reports of two penitentiaries, having 1,319 prisoners. Of these, 1,230 are employed in various manufacturing enterprises, and the wages the contractors pay for their labor are given as follows:

In the manufacture of hollow ware 250 men were employed, 100 at 60 cents a day, 100 at 55 cents, and 50 at 40 cents a day.

In the manufacture of saddle trees 100 men were employed, at 55 cents a day.

In the manufacture of brush and wire goods, 130 men were employed at 43 cents a day.

In the manufacture of cooperage, 125 men were employed, at 60 cents a day, and 25 at 55 cents a day.

In the manufacture of chairs, frames and furniture 150 men were employed at 60 cents a day, and 50 at 58 cents a day.

In the manufacture of boots and shoes 150 men were employed at 58 cents a day.

In the manufacture of knitted fabrics 200 men were employed at 48 cents a day.

In the manufacture of harness 25 men were employed at 45 cents a day, and 25 men at 43 cents a day. There are seven different prices paid, ranging from 40 cents to 60 cents a day, as follows: 60, 58, 55, 48, 45, and 40, the average being 49½ cents per day.

The cost of maintaining the convicts is set down at about 32 cents a day. Hence, the profit per day for each man is, say 17 cents a day for the State. It will be seen, therefore, that the profit to the State would be \$60,700 a year.

Assuming that the labor performed by these convicts, at 40 cents a day, is worth outside of prison walls, \$1.25 a day, it is seen that the contractors obtain convict labor at 76 cents a day less than honest labor is worth. It follows, therefore, that while those who employ honest workmen, equal to the number of the employed convicts of the penitentiaries referred to, viz: 1,230, at \$1.25 a day, each, or \$1,537.50 a day for the whole number, the prison contractors would pay 49 cents a day, each, or for 1,230 \$502.70 a day, a clear gain to the contractors of \$1,034.80 a day, and for a year of 300 working days \$310,400.

With such a margin of profits it is seen how prison manufactured wares can be placed upon the market in competition with goods manufactured by honest men, and while making a profit for the contractors, utterly destroy the trade of honest men and force them into idleness.

Here it is seen that the State and the contractors make a clear profit off of convict labor in one year, amounting to \$371,100—the State receiving \$60,700, and the contractors \$310,400—the total representing a profit resulting from the reduction of wages.

In support of this policy a variety of reasons are assigned, (1) that the State needs the revenue to lighten the burdens of taxation, (2) that the health of convicts demand that they should be employed.

Manifestly, the State needs revenue, but there can arise no contingency which warrants the manufacture of goods by convicts, which forces honest workmen into idleness, want, beggary and crime, which is just

what a State does when it hires out its convicts at 49 cents a day to perform labor worth to an honest man, to put it low, \$1.25 a day.

A State that pursues such a policy, multiplies criminals and populates its penal institutions. It is a policy that wrecks honest homes, breaks up families, makes tramps of husbands and fathers, and creates conditions for mothers and children worse than death.

We are not unmindful of the floods of sympathetic gush bestowed upon criminals—relating to their health and spiritual condition. We are not unmindful of what pseudo-philanthropists say and do for the reformation of criminals. Nor are we unmindful of the fact, humiliating as it is, that while weak eyed and weak kneed philanthropy expends itself upon criminals, it is seldom heard advocating the rights of honest men who are the victims of heartless employers and who are compelled to work for wages which afford them less comforts than fall to the lot of criminals.

If the question is asked, who should be idle, the convict, or the honest workingman who is trying, amidst the sacrifices which poverty entails, to rear his family, as becomes an American citizen? we say every time, and a thousand times, the convict. If some one is to be kept healthy by work, in the name of justice let it be the honest man.

We do not object to reforming criminals but we object to a reforming policy which creates more criminals than it reforms. There is little hope for a criminal, but there are boundless possibilities in this favored land for honest men, and the State should do nothing which directly or remotely places obstacles in the way of an honest, law abiding career. To do this, to "make crime pay," is economic infamy, an exhibition of mercenary greed that blotches to detestation a civilization forever boasting of its Christian adornments.

Suppose, by some inscrutable decree, the 45,233 criminals in the penitentiaries of the United States should all die in a day, would the nation mourn? Would flags float at half mast? Would gloom, like a pall, cover the land? We do not surmise that such would be the record. Just so many enemies of society would be dead and out of the way.

Society would breathe easier, and feel more secure. On the other hand, suppose 45,233 honest, law-abiding workingmen should die in a day? What pen so graphic as to describe the scene? What fancy so fervid as to depict the consternation?

The State ought to feel profoundly interested in the welfare of honest workingmen, and adopt no policy unnecessarily increasing their anxieties or calculated to reduce their wages or jeopardise their employment. To pursue a policy in any regard antagonistic to the welfare of labor, is in itself a crime and can be fruitful only of calamities.

DO THE BEST YOU CAN.

Occasionally the muse strikes a philosophically business gait, in the highest degree commendable, as the following, captioned "Do The Best You Can," demonstrates:

When things don't go to suit us,
Why should we fold our hands
And say "No use in trying—
Fate baffles all our plans."
Let not your courage falter,
Keep faith in God and man,
And to this thought be steadfast:
"I'll do the best I can."

If clouds blot out the sunshine
Along the way you tread,
Don't grieve in hopeless fashion
And sigh for brightness fled.
Beyond the clouds the sunlight
Shines in the eternal plan;
Trust that the way will brighten,
And do the best you can.

Away with vain repinings;
Sing songs of hope and cheer,
Till many a weary comrade
Grows strong of heart to hear.
He who sings over trouble
Is aye the wisest man,
He can't help what has happened,
But—does the best he can.

So, if things won't go to suit us,
Let's never fume and fret;
For finding fault with fortune
Ne'er mended matters yet.
Make the best of whate'er happens;
Bear failure like a man;
And in good or evil fortune
Do just the best you can.

The verses are from the New York *Ledger* but the name of the author is not given, which is a matter of regret. We should like very much to give him a boost. He's got a level head, and the world stands much in need of his style of rhyming.

THE LESSONS TAUGHT BY LABOR DAY.

September 7th was very generally celebrated throughout the country by wage workers as Labor Day. In several states the 7th of September is made, by statute, a holiday the same as the 4th of July, the 22d of February, or Christmas.

The more thoughtful men of the country, regardless of membership in labor organizations, are inquiring the significance of Labor Day. What does it mean? What lessons does it teach? What great fact in the history of the times is made prominent by Labor Day celebrations? Is some truth long since "crushed to earth," rising again, proclaiming that "the eternal years of God" are pledged to its triumph over error?

All civilized nations have their holidays designed to commemorate something of great national importance.

This is true of the United States. We have our 4th of July, "Independence Day," when in various ways, by parades, orations, picnics, pyrotechnics, and by a thousand and one other methods, the people seek to commemorate the announcement made July 4th, 1776, that the American colonies had set up business for themselves, and no longer recognized the authority of a king.

We celebrate the 22d of February, the birthday of George Washington, and as the years go by, the day grows in importance. As the nation grows in population and power, the people learn to appreciate the sublime character of the man who was "first in peace, first in war, and first in the hearts of his countrymen."

Labor day, so far, selects no one individual as illustrative of events which brought workingmen into prominence as a force and a factor in all things calculated to advance civilization and give prosperity to republican institutions.

It is well that such is the fact. Labor Day, above all things, voices a new departure in moral, social, economical and political affairs.

Labor Day is a new Independence Day. The declaration is that "in the course of human events labor is to take commanding rank in controlling human affairs."

It is an announcement that from this time

forward, Labor, with form erect, comprehending its rights and prerogatives, its independence and high purposes, will walk abreast with all the armies of progress and pitch its tents on lofty elevations, and fortified by intelligence, integrity and courage, will hold the fort against all who would seek to degrade it.

The Chicago Post referring to Labor Day in that city, said:

Those simple citizens who affect to fear the "dangerous masses" had a fine opportunity to observe the object of their dread yesterday. Some twenty thousand wage-workers paraded the streets for several hours. They were not all, but a very important part of the "masses." Each belonged to that class of the community in which the fashion prevails to eat the bread that is earned by the sweat of the brow. It is a large branch—the largest by all odds—and, in the mercy of providence, it will never grow smaller. It includes, it is, "the masses."

Very dangerous, too, those 20,000 intelligent, self-reliant and cheerful philosophers of toil. Dangerous to corruption in high places; dangerous to political quackery; dangerous to sanctimonious humbug and to humbug of all kinds, especially when it masks in a thin veil of pretended sympathy, stupid distrust or blind hatred of the working "masses."

Sympathy is not exactly the nostrum for these 20,000 specimens of robust manhood. They don't ask it, don't need it, won't have it. They want no "protection" of hypocritical men or silly women. They want room according to their strength. And, under the benign workings of "the laws of nature and of nature's God," they manage very comfortably to get what they want.

Else they might, indeed, be "dangerous"—to somebody.

Labor Day will eventually sound the death knell of plutocracy in the United States.

The era of robbery and of degradation is drawing to a close. It will at no distant day appear that the "dangerous masses" are not workingmen, but those who use their money power to filch from labor its just rewards.

Labor Day is to grow in importance and in significance. The number of workingmen who are to parade on Labor Days in the near future will startle the country. The time is near at hand when there will be millions in line, with music and banners. The time is not remote when workingmen will exact and receive their full share of the wealth they create, and then Labor Day will be Emancipation Day.

When that auspicious time shall come,

workingmen will cease to be known by "numbers," and names will be reinstated. The hut will give place to habitations such as are becoming American citizenship, and though the rich will grow richer, it will not be as now, and in the past, by a series of robberies, entailing poverty, degradation and death upon the poor.

THE AMERICAN PRESS.

There are those who take special pride in lauding and magnifying the press. It is sometimes referred to as the "palladium of American liberties," and is made to take rank with the ballot-box as a safeguard of the rights of citizens. The time was, perhaps, when such eulogiums were warranted—when the press was independent, bold, fearless, and unpurchasable. Is it so now?

It is stated that not long since a dinner was given the members of the New York press, and at the proper time the toast programme was introduced. One of the toasts was "An Independent Press," and a New York journalist was called upon to respond. He declined, because he knew such a thing as an independent press did not exist in the United States. But being urged to respond to the toast, he finally complied, and said:

There is no such a thing in America as an independent press, unless it is out in the country towns. You are all slaves. You know it and I know it. There is not one of you who dares to express an opinion. If you express it you know before hand that it will not appear in print. I am paid \$150 per week for keeping honest opinions out of the papers I am connected with. Others of you are paid similar salaries for doing similar things. If I should allow honest opinions to be printed in one issue of my paper, like Othello, my occupation would be gone. The man who would be so foolish to write honest opinions would be out on the street looking for another job. The business of a leading journalist is to distort the truth, to lie outright, to pervert to vilify, to fawn at the feet of Mammon, and to sell his country and his race for daily bread, or for what is about the same, his salary. You know this and I know it and what foolery to be toasting an "independent press." We are the tools and vassals of rich men behind the scenes. We are jumping jacks. They pull the string and we dance. Our time, our talent, our possibilities are all the property of other men. We are intellectual prostitutes.

It is not to be understood that there are no exceptions, the speaker simply stated the rule. The press is no longer independent—men no longer look to the press for

those bold utterances which point out dangers. Partisan utterances there are, indicative of courage, but they lose much of their force because they are known to be partisan, and have in view simply partisan aggrandizement, and not the public good.

The times are degenerate—"spoils" is the shibboleth, and the press is prostituted to base purposes.

It is this that has created a demand, on the part of workingmen, for a Labor Press, capable of championing their rights, and here the question arises, Is the labor press of the country free from the contaminating influences which have sapped the independence of the press of the country?

Is it not true, that there are instances which demonstrate that the labor press has been debauched to an extent that it comes forward as an apologist of wrongs as flagrant as any that have disgraced the age?

A CONSTANT effort is being made to transform the old White House at Washington into a palace, and it is said that a million dollars have already been expended for repairs and decorations, but reports have it that the old house was never so beautiful as it will be when the workmen engaged upon it shall have finished their task. Twenty thousand dollars is now being spent, chiefly in decorations of the vestibule, the state dining room, the red, blue and green parlors, and in new furniture for the great east room. Official snobs and the aristocracy who visit Yurup are constantly turning up their noses at the White House, and the old "death trap" will have to go at no distant day. As a presidential residence it lacks style.

THE Trade and Labor Assembly of Chicago in investigating the clothing industry of Chicago found women "sewing pantaloons for 6 cents a dozen," and other women working "for 75 cents a week." A girl was asked, "How much do you receive, Lena?" She replied: "Forty cents in three days." And when asked, "How long do you work?" she said "From 7 in the morning until 6 in the evening."

And the Star Spangled Banner continues to wave O'er the millionaire's palace and the hut of the slave.

FAMINE IN EUROPE.

Steadily the mills of the gods grind on, and they were never more active than now throughout all Europe. The great powers of Europe are having grand military exhibitions. Germany, Austria and France indulge in magnificent spectacular parades. There is all the pomp and circumstance of preparation for glorious war. Royalty, on horse back, reviews the armies and chuckles over the slaughtering capacity of the weapons which our Christian civilization has produced for the maintenance of peace.

Back of all this are scenes which tell how near is the approach of famine, and the world is startled, as never before, with the announcement that already the ravages of starvation have begun.

Russia, a country that has hitherto had food, and to spare, is now confronted with the fact that famine exists within her borders, and that conditions will inevitably grow worse instead of better for at least two years to come.

Germany, Italy, Austria, France and England must import vast quantities of food to prevent famine—in fact, all Europe is in the grasp of conditions which presage hunger pangs.

Such conditions forebode revolution, and Europe is ripening for revolt.

It is well. Europe stands in need of nothing so much as successful revolutions—revolutions that will uncrown and dethrone Kings and scatter dynasties pulverized so fine that omnipotence would require a microscope to find the remains.

Some one says, "It was famine which precipitated the French revolution." If so, all hail famine. It finally broke the fetters of the French people and made liberty possible. If only famine can create revolutions that will emancipate the downtrodden King cursed millions of Europe, then in the name of liberty and independence, let famine do its work.

THE Belgians, being anxious to civilize Africans, have recently shipped to the west coast of the dark continent fifteen missionaries, 460 tons of gunpowder and 10,000 casks of rum. The Belgians are determined to Christianize the poor heathen.

In this age of divorce, estrangement, marrying and separating, it is pleasant to read an old-time estimate of a wife as written by Chapman in one of his plays, "The Gentleman Usher," being the address of Strozzi to his wife, as follows:

Come near me, wife; I fare the better far
For the sweet food of thy divine advice,
Oh! what a treasure is a virtuous wife,
Discreet and loving; not one gift on earth
Makes a man's life so highly bound to heaven.
She gives him double forces to endure
And to enjoy, by being one with him;
Feeling his joys and griefs with equal sense;
And like the twins Hippocrates reports,
If he fetch sighs, she draws her breath as short
If he lament, she melts herself in tears;
If he be glad she triumphs; if he stir
She moves his way; in all things his sweet ape,
And is in alteration passing strange.
Gold is right precious; but his price infects
With pride and avarice; Authority lifts
Hats from men's heads, and bows the strongest knees.
Yet cannot bend in rule the weakest hearts;
Music delights but one sense, nor choice meats;
One quickly fades, the other stirs to sin,
But a true wife, both sense and soul delights,
And mixeth not her good with any ill;
Her virtues, ruling hearts, all powers command:
All store without her, leaves a man but poor.
And with her, poverty is exceeding store;
No time is tedious with her, her true worth
Makes a true husband think his arms enfold
With her alone, a complete world engold.

To write such encomiastic words of a wife now-a-days would be regarded as irony of unusual force and point. In our advancing civilization the nuptial bonds have the strength of ropes of sand, and "divorces made easy" is the shibboleth which rings out from the courts.

JOHN D. ROCKEFELLER has concluded to invest some of his surplus on the northern Pacific coast. Mr. Rockefeller's scheme, it is said, involves the building of a sort of belt railway around Lake Washington and also the construction of a canal from that lake to tidewater in Puget Sound. This canal would be about twelve miles long and with a fall of only about sixteen feet. It is to be a ship canal, the idea being to admit ocean steamships from the salt water of the Sound into the fresh water of this lake, thus making an absolutely land-locked harbor of sufficient size to float all the commerce of the Pacific. Mr. Rockefeller may finally conclude to absorb the continent.

Rent and Single Tax.

FROM the September number of the *Locomotive Firemen's Magazine*, I clip a portion of a tract entitled, "How to increase profits," by A. J. Steers, which reads as follows:

Listen, then, how we propose to diminish expenses.

What is your largest single expense? The rent of your store, is it not? Well, we propose to lower that rent. Is that practical enough for you? How? Well, thus. The rent you now pay is of two kinds: one on the store building you occupy and the other for the land that building stands upon.

The first it is perfectly just you should pay; but the last, that paid for the land, is not just—at present.

Now, if you and others like you would join with the other workers of the city or town or village where you live and labor, and instruct your legislative representatives in congress and in the state legislature to so modify the present methods of taxation that all the taxes should be placed upon the values of land irrespective of improvements, you can easily see that values of land would fall.

No one who held land would continue to hold it without using it; for if he did the tax upon its values would soon eat him up.

Land would under such a condition be a useless thing to the holder unless he used it. Every owner of land would either put it into use himself, or perforce, dispose of it to somebody else who would.

New buildings, new dwelling houses, new stores for selling and dealing in, would go up wherever they could be put up—and coming into the market and competing with the stores and dwellings now built and in use would cause rents to fall. And as this would be a general state of affairs it would affect all buildings and every neighborhood. So we should diminish your main expense—rent.

I must confess that I do not exactly comprehend what single taxers are driving at when they say that the single tax would reduce rent. I have never seen a consistent or logical argument offered in defense of the assertion, while for my part, I conclude that while the proposition may appear upon its face, at first blush, to be plausible and possible, yet, upon examination we find that it is sophistical and fallacious, not only being improbable, but being in fact impossible. Let us analyze the argument of Mr. Steers. One of the favorite tenets of the Single Taxers is that the single tax would render land of no value free to all, while for all land possessing value there would be found individuals ready to pay as a tax, the "economic rent," which is defined to be that amount of value for use the land possesses above land that can be obtained free—i. e., for nothing.

But that is exactly the condition of affairs now. There are always men ready to pay for land that amount of money upon which the "value for use"—"economic rent"—etc., of such land will pay the legal, current rate of interest. Under the present system, men who want to buy the sole right to use and occupy land, or hold it for a raise in price, simply pay out a certain lump sum of money for it. If the land is improved, they expect the rent and any increase in value that may accrue, to pay the legal cur-

rent rate of interest upon the investment. As a rule, they must pay the money down for the land, although there are many instances where those who wish to occupy and use land, pay as *ground rent* the interest upon what it would sell for, with a progressive increase for rent for a term of years. Under the single tax system an individual need not invest any cash money, but must simply agree to pay the current rate of interest, upon a larger sum of money than any one else is willing to pay the interest upon for the use of the land. As no cash capital is required to be invested in land, rents would have a tendency to be raised instead of to be reduced.

But the fact that Mr. Steers seems to entirely overlook, is that the desirability or value for use would be determined under the single tax, just in the same manner as desirability is determined at present. The rent is the same, or perhaps higher, and it makes no difference to a tenant who he pays his rent to. Under the operation of the Single Tax, all alike would be tenants, and goods would not any the more readily sell from a store well out in the suburbs of a city, than they sell at present under such conditions.

The truth is that Mr. Steers must move or shift the center of business before he can reduce rents, and even then he will raise rents at the point he establishes his new center of trade. The value of a location depends upon certain contingencies and surroundings that the single tax is powerless to affect, and Mr. Steers' "new stores" would not be built unless there was a prospect of doing a profitable business therein, just as under the present system; new stores are not built by land owners until the business demands seem to guarantee a tenant and prosperity to such tenant, to insure his ability to pay his rent. The trouble *even now*, is not too few, but too many buildings, both store and residence. Hundreds of buildings are lying idle and are offered for almost any rent in all towns and cities, and just now, land owners are, of all men, to be pitied—with an exception—the exception being those who own land where the principal industry is that of robbing the people by farming out the people's money at ruinous rates of interest.

Go into any of the larger cities, where scores of store buildings and hundreds of residences are vacant and idle, and offered at a rental not much above fair interest upon cost of improvements. Go to the office of Recorder of Deeds and notice the millions of dollars of mortgages that have been released by a sheriff's deed, and then ask an old resident the cause of all these things. Will he answer, *Land Monopoly*? No, indeed! He will tell you that the establishment of a single gold standard by the de-

monetization of silver, has wiped out and destroyed one-half of the values existing in 1873, thus destroying the margin between loans and security values and wrecking all confidence. He will tell you that there is no money obtainable or available with which to transact business, and that all businesses are conducted at a loss. And Mr. Steers would remedy this by building more store buildings, thus reducing rent. Nonsense. Let him go into the crowded business centers and try to find vacant ground upon which to build his store buildings. Failing to find ground upon which to build, he must go and build in a portion of the city wherein there are already plenty of vacant stores. How will that help matters? The single tax is fully equal to the present rent, and rent is no more burdensome than the single tax. Why should applicants for store buildings multiply under the single tax system, if under the present system the buildings now existing are empty?

Mr. Steers is respectfully informed that he cannot reduce the rent of desirable locations by multiplying buildings upon undesirable locations. He cannot move the business center of a town by simply building quarters for it to occupy.

Geo. C. Ward.

Words.

IT is claimed that the number of words in the English vocabulary reaches about one hundred and fifty thousand, and therefore, if words are the signs of ideas, the English language voices more ideas than any other language can boast of.

Included in the English vocabulary are the numerous words employed in the sciences, in law, medicine, art and philosophy, words gathered from a number of dead languages, anglicized and half-anglicized, tortured out of shape, tongue-terrifying, throat-swelling and jaw-breaking words seldom used, and when employed are signs of ideas only to the select few.

The unabridged dictionaries of the times, with their multiplied thousands of words as monuments of the growth and stateliness of the language, may excite the admiration of lexicographers and polyglot students, but as a general proposition they could be reduced one-half or more, without marring the structure or materially detracting from the power of the English language. It has been well said, that "the great books of the world are not to be measured by the variety of words to be found in them. On the contrary, the two pillars of the world's literature—the Bible and Shakespeare—are marked by simplicity in the use of language. In the whole of the

Old Testament it is estimated that there are not more than 5,000 words. Milton in his epics used 8,000 different words, and in all of Shakespeare's wonderful dramas it is estimated that there are about 13,000 different words. Cultivated people in conversation will be satisfied with 3,000 words, or thereabouts, and their talk will embrace not only all subjects, but will be polished and scholarly." Accepting the statements as true, why should we have, say, 150,000 words, when 25,000 would answer every demand? Why attack all the languages of the nations, dead and alive, to capture and adopt words, and force them into idleness, to be employed so seldom that the idea designed to be conveyed is obscured rather than made clear? Again says the writer from whom we have quoted: "It is interesting to search for the source of human speech. In one of his writings Dr. Oliver Wendell Holmes penned this thought: 'Language is a solemn thing; it grows out of life—out of its agonies and ecstasies, its wants and its weariness.' In this eloquent definition of the origin of language, every mind finds satisfaction. And analyzing it yet further we find the cause and the effect. Language at first was undoubtedly a series of incoherent utterances in which nature directed the use of analogical sounds." We take little stock in the theory of evolution, the prehistoric monkey tail-dropping period, when the monkey became man, since when man has grown and developed and expanded until his mind faculties grasp the universe to its uttermost "flaming walls." Nor do we take any stock in the theory that there was a time when language was nothing more than a series of grunts or screams, the language of apedom, nor are there any rational grounds for such conclusions. The fact, as stated, that 3,000 words are all that are required for "polished or scholarly" conversation is indicative that 150,000 words are quite unnecessary, and if Shakespeare could manage with 13,000 words to write his immortal poems, and the Bible required but 5,000 words, the conclusion is inevitable that junk-shop dictionaries might be abridged without especial peril. It may be true, as is said, that "the English tongue is to-day the leading tongue of the universe. It is rapidly becoming universal. It knows no obstacle in its growth. It is ever changing and assuming new shapes. Its complexion varies like the chameleon in color. Every day brings some new phase or odd word coined to meet some emergency. These words are engrafted upon the trunk of the language, and as these emergencies are constantly occurring the resources of the language seem to be well-nigh inexhaustible. There is no defining the power of the English language or its flexibility. Other languages seldom change. But every year sees much of new material

in the English tongue. There are no bounds to its expansion." English speaking people are the colonizing people of the world, and it may be the universal language. It may conquer and subdue all tongues and at some far away epoch re-establish the one-tongue time, as when the tribes in the plains of Shinar concluded to build a tower that would reach to heaven. Such ideas are utopian, but suppose they were not the wildest vagaries, why continue to multiply words? The conquering power of language does not lie in unabridged dictionaries. Simplicity, directness, gives power to speech, not polysyllables. Indeed, words of one syllable are capable of doing more effective work than is usually believed, as for instance: Words are the signs of thoughts, light or strong, as the wish may be. If so, why seek for long words, when short ones serve as well? Short words, like balls or shot from guns, do their work best, make less noise and are sure to hit. They kill, they wound, or, they wake men up and set them at work, while big words oft fall short of their aim, make much sound but bring down no game.

We have seen this and know that it is true, and it is this fact which leads us to tell the man who reads this to con the facts and seek for the right choice of words when he writes or speaks.

If he turns his eyes to the sky to read the stars, or to the earth to find a theme for thought; if he views the sea to hear what the wild waves say, he may tell what he has seen or heard in small words. In joy and in grief, with tears in his eyes or smiles on his lips, he will find that his tongue can tell all he knows in small words, and thus it will be found that big words, long words, are not in need when he wants to voice a thought.

It may be that when time was young, men had but few words to tell their wants, or to cheer them when sad, and the fact that things have changed is not proof that man is in need of words of more sound if they have not more sense.

What the world wants is words clean cut, sharp, keen and to the point. When men write or speak it is thought to be the thing to find big words, which they think give force to their theme. In this they err, since the small word will be found, if they look for it, which will give their theme a tone and point that will bring them the praise they have earned.

For a time the task will tire them, and they may look on it as time lost. But such is not the fact. In the choice of words, small things ought not to be left out. They are just what we want, and those who write and speak should bear the fact in mind.

F. J. Grogan.

Reading of Novels.

A NOVEL is a fictitious tale or narrative, intended to exhibit the operation of the passions, and particularly love.

Fiction is that which is feigned, invented or imagined; a fable; novel literature.

If novels and fiction are used interchangeably then there are novels and there are novels. Some people condemn fiction entirely, others are so allured with it as to read nothing else. Neither extreme is to be commended. Many of the novels which are circulated through the press and news companies ought to be consumed in one huge bon-fire. Yet it is extravagant and not over-sensible to utter an anathema against *all* novels on this account.

It is unwise to suppose that we can ignore all writings of this kind, or that works of fiction will not be read, despite all the spicy articles and reasonings in the world against them. It is a kind of literature, which, like poetry, to which it is akin, has found place among all nations of any culture in ancient as well as modern times; it has frequently proved itself one of the most effective means and agencies ever discovered, for conveying lessons of deep and lasting moment to all classes of readers; and it is a certain fact, that young people, especially, *will* read novels and stories and it cannot be prevented. Out of 5,000,000 volumes circulated in five years by the Boston Public Library, four-fifths were classed as "Juveniles and Fiction."

The novel is an instrument, and just as it has been impossible to confine other inventions to the service of virtue, so vice as well as virtue has availed itself of the novel form. It is no easy matter to draw the line with precision or to pronounce upon what are the novels or writings of fiction which ought to be, or may safely be read at all. There is no accounting for tastes or varieties of opinions here any more than elsewhere; and as *amusement* or *pleasurable excitement* is the end almost always sought in reading novels, it is not at all surprising that people should differ as to what works they should read in order to most readily gratify this desire.

Among the books which everybody should read are Goldsmith's "Vicar of Wakefield," DeFoe's "Robinson Crusoe," and "Bunyan's Pilgrim's Progress." The last, certainly not a novel or romance, in the ordinary sense of the word, but is a work of imagination unsurpassed by anything of its kind. To these should be added Cervantes's "Don Quixote," Dr. Johnson's "Rasselas," and Irving's "Sketch Book," and "Tales of a Traveler."

The historical novels of Sir Walter Scott are not only very interesting to read as sto-

ries, but are full of instruction. To this class belong Bulwer's "Rienzi," "Last Days of Pompeii," "Last of the Barons," Lockhart's "Valerius," James's "Richelieu," C. Kingley's "Hypatia," Scott, Cooper, Dickens and Thackeray need no special mention. They are among the very best works of this kind.

B. Disraeli, Lever, Marryatt, C. Reade, M. Reid, Trollope, Oliphant, George Eliot, O. W. Holmes and Mrs. Stowe might be added as among the higher class of novelists. For a good presentation of pernicious literature read not only Miss Emma E. Smith's article in August number of the *Locomotive Firemen's Magazine*, but "Vampire Literature" by Anthony Comstock, in *North American Review*.

W. F. Stevens.

Mr. Ward's Conundrum.

MR. GEO. C. WARD does not think that labor with free access to land, that is, the raw material of the earth, can build houses, clothe nakedness or feed the hungry. Let me ask him how labor does all these things at present and has done in all past ages, and at the same time pays idlers enormous prices for land or material to work on. Labor is like a man who lived in monopoly-land, who had a meter on his wind-pipe and the air lord syndicate collected their bill every month at so much per 1,000 feet. Under such conditions which remedy would Mr. Ward advocate, to abolish the monopoly or issue more money that he could pay the bill easier?

Mr. Ward seems much exercised over the consumer paying the full cost of production. Let us revert to first principles. Labor is the sole producer. The earth is his workshop, and the consumer (i. e. his appetite and desires) is his employer. We take for granted that the consumer is the universal employer. Should not the employer pay all wages and cost of production? This is evidently just. Who else should pay? Would Mr. Ward expect the delivery boy to pay part of the cost of his groceries?

Now, we will look into the reason why the merchant would or should not be taxed as such. Let us take, for example, why does Mr. Ward refrain from charging his servant girl up for rent for using part of his house? Because she would say that she was not there for her own health or pleasure, but at her employer's service, and he would have to increase her wages equivalent if he did so. This applies to the merchant or manufacturer who is not in business for his health, who does not consume the site value, but instead uses it in the service and for the convenience of his customers, he being simply their commissioned agent. He must

charge all taxes to his employers, so it is useless to cut a piece off one end to add on to the other.

I don't mean to say that some merchants do not get more than the consumer should give for selecting and distributing goods. I will now consider the remedy. Under the single tax men will be free to buy and sell where and how they please, so the merchant, after he pays his ground rent, will have to compete with agents and peddlers who have no rent or taxes to pay. The consumers can either individually or collectively employ purchasing agents on commission and force the merchant to be satisfied with a just recompense for his services to the consumer. These are not legal questions, but things that must be settled by the consumer intelligently obtaining justice for himself.

Even Mr. Ward's wheel of fortune man acts as agent for his customers, retailing them excitement and experience.

G. M. Russell.

Taxation and Wealth.

IN the course of an article in the September number of the *Locomotive Firemen's Magazine*, Mr. B. C. Stickney expresses himself as follows:

"Laws cannot create wealth. The Single Tax will not transform houses into palaces. It will not transform dimes into dollars. It would, however, relieve the workingmen from the burden of contributing six hundred millions of dollars a year in taxes. They are now paying taxes to the government, and also paying ground rents to landlords. Under the Single Tax they would continue to pay the ground rents, but would discontinue paying the taxes. The government would take the ground rents to use for public purposes. Mr. Marshall seems to contend that the people should be relieved from the payment of ground rents, as well as taxes. But, as observed in a former paragraph, this cannot be done. Ground rents will forever continue to be paid; the only question is, to whom shall they be paid?"

It appears to me that Mr. Stickney is laboring under a misapprehension, or else is quibbling for a strict definition of terms. Will he affirm that laws do not create orders for wealth? Money is not wealth, it is true, but it is an order for wealth. Is Mr. Stickney prepared to say that laws cannot legislate money into the pocket of favored classes? Let him investigate the results of the funding bill, the credit strengthening act, the National Banking system, and the law which demonetized silver. The latter law, if it did not "transform dimes into dollars," did at least reduce a dollar in silver, or wheat, or labor, to seventy cents. At the same time it "transformed" a dollar investment security into a bond worth one dollar and a half.

Mr. Stickney, in the foregoing paragraph, makes a very important admission. He admits that labor pays all taxes. He also ad-

mits that under the Single Tax system, labor would continue to pay all taxes—or rent. So that under the Single Tax system, as under this, the *exploiters* of labor, the coupon clippers, the merchant princes and bankers, would all go scot free, while labor paid for the privilege of being fleeced by them.

There is a better way. It lies in this direction: Levy upon unused and unoccupied land, upon all land occupied for income producing businesses, and upon all personal property used as capital, or for purposes of gain or income producing, a *graduated-cumulative tax*. Exempt entirely from taxation all dwelling houses and sites and personal property kept for personal use, but not for gain. What is a graduated-cumulative tax? It is called *graduated*, because, commencing at a basis rate upon a certain valuation, it increases in rate in a progressive ratio to the value of the property to be taxed. It is called *cumulative*, because, where an individual owns more than one piece of property in a taxing district, each separate piece is taxed at the rate that applies to the valuation of all the pieces of property valued together.

Having levied the above kind of a tax during the lifetime of all, extend its operations beyond the grave, so to speak, and levy a graduated *succession tax* upon the estates of dead persons, so graded and adjusted as to rates, as to take back for the people all above a certain amount for each heir.

The graduated-cumulative tax would lack but little of equalizing wealth, conditions and opportunities of all persons during life, while the succession tax would restore to the people all wealth stolen from them by the deceased person during lifetime. *All wealth not earned by honest labor, is stolen from those who did so earn or produce it.*

KANSAS CITY, MO.

Geo. C. Ward.

Land Values the Result of Communal, Not Individual Effort.

ABSENCE from home and pressure of other duties has prevented me from answering Mr. Marshall's July article until the present time. I hope Mr. M. will excuse any apparent neglect on my part.

Passing over Mr. Marshall's opening remarks in the July article as not pertinent to our argument, let us consider his axioms. It is quite true, as Mr. M. says, that "Labor pays all revenues." It is also true that "to lighten taxation is to reduce revenues," but it is not true that "to lighten taxation is to relieve labor of its burden." Nor can it be true, under social conditions which compel the individual laborer to give up to persons separate and distinct from the government,

any portion of the fruits of his industry for the bare privilege of living upon the earth. The condition precedent to the elevation of labor is higher wages, a more just distribution of the wealth it creates. How will any mere lightening of taxation accomplish this? A moment's reflection will convince Mr. M. that his deduction is not sound. It is true that to lighten taxation might enable the employers of labor to pay higher wages, but can it be shown that it would *compel them to do so*? What matters it to the poor denizens of the slums of New York, or London, or to the Ryots of India, and peons of Mexico, whether taxation is light or heavy? To lighten taxation would not relieve them from their struggle for a bare existence; an increase in taxation could not make their lot worse than it is, as one step lower in the scale of living is out of existence, and beyond a certain point men can not be forced. No, Mr. M., to lighten taxation is *not* to relieve labor of its burdens, but to abolish private property in land through the single tax is to relieve labor of its burdens, and to allow our civilization to expand into forms as yet undreamed of. Labor creates all wealth, and so far as I have any knowledge, neither Mr. George nor any single tax advocate has ever asserted that the single tax would not be a tax on the wealth which labor creates; such a declaration would be extremely illogical, and a contradiction in terms. What single tax advocates maintain (and the position has been logically demonstrated) is that the single tax would divert the wealth which is created solely by the increase in population to its proper uses, leaving individual effort free. Right here is the point which opponents of the single tax fail to grasp, and which not to take into account is to never fully understand the theory. Labor is of three forms; that is, labor exerted individually, labor exerted in the form of capital, and labor exerted communally. The manner in which capital aids the individual laborer in production needs no illustration. The manner in which the community as a whole aids the individual in production is by permitting greater division of labor, thus enabling each individual to employ himself in the (to him) most profitable form of labor, affording greater facilities for exchanges of the products of individual labor, and by permitting closer associations and the more varied forms of industry enabling each individual to satisfy his own wants at the minimum of cost. The extent to which the individual profits by these aids to production is, of course, dependent upon his exertions, but without those aids the individual might work his hands off and still be unable to create the wealth which those aids permit. Now, the community as a whole, in thus aiding the individual pro-

ducer, renders the produce of certain individuals greater than that of others equally industrious and equally skillful, by giving to the lands and locations which they possess, a value which other locations do not possess. This extra product of the possession of these valuable locations is rent, and it does not depend upon extra individual exertion. Thus, the community as a whole, or labor in the aggregate, creates a definite part of the total product of the community by the special aid which it gives to the individual producers. Now, it can be easily seen that by appropriating this extra product (rent) to public uses, and abolishing all other taxes, a just distribution of wealth must be the result, for each individual would then get what he produced, and no more.

Proceeding now with the minor points in Mr. M.'s article, he says: "It is not the theory of government that land values are created solely by the growth of the community, since it demands \$1.25 an acre for its land where no community exists." Seriously, now, does it not strike the reader that such assertions are devoid of argument? Reduce this country to the sparseness of population of one hundred or even fifty years ago, and does Mr. M., or any other person, believe that there is a syndicate upon the face of the earth that would pay \$1 250,000 for 1,000,000 acres of land in the wilds of Montana or Dakota? The benefit that would be derived from taxing the syndicate land instead of its steers would be this: Under our present system the more steers the more tax, thus we virtually discourage the raising of steers. Under the single tax the tax would be the same whether the syndicate had one steer or one million on its land; thus instead of a discouragement there would be an incentive to the raising of steers, and if the syndicate should attempt to shift the tax by increasing the price of steers, the ease of acquiring land and freedom from taxation would induce so many others to go into the business of raising steers that the price would soon be brought back to the normal rate, and the syndicate's attempt amount to nothing.

Referring now to the worthless land of which I spoke in a former article, Mr. M. says: "A syndicate might purchase these valueless lands and fence them in, create parks and hunting grounds, and await the process of nature to rebuild the forests. After a few years it might be discovered that pine trees were springing up, and that nature herself was really at work creating value without the slightest regard to the growth of the community." Now, if Mr. M. will reflect a moment he will undoubtedly see how fallacious are such arguments. Such a thing as nature *per se*, creating value in anything, is an *absolute impossibility*. The

value inherent in all natural products is latent. It does not develop or become tangible, nor can it do so until a community arises to utilize it. Take the lands of which we speak. At the time of the discovery of this country we have every reason to believe that they were covered with pine forests of primeval grandeur. Of what value were they at that time? and what created their subsequent value? Or take the coal fields of Pennsylvania, now valued at countless millions of dollars. Nature created these coal deposits aeons ago, but of what value were they at the time King Charles granted the territory to the great and good William Penn? and why are they now so valuable? When Mr. M. answers these questions correctly he will have effectually disposed of his own argument.

Now, take the case of the nitro-glycerine factory. Mr. M. says "the *profits* of the first factory created the competition and the competition created the land values." Very true; but what rendered possible the profits of the first factory? Manifestly, that portion of the community which demands nitro-glycerine; thus in the ultimate analysis the land value depends entirely upon the growth of the community. Now, when the assessor goes forth to levy the tax it is not necessary for him take any account of either competition or profits, all that he would be required to take into account would be the pure *land values*. Mr. M. is disposed to make a great difficulty about arriving at such values under the single tax, and seems to think that it would be impossible to separate land values from improvement values. This difficulty is more fancied than real. Under the present system there is no difficulty about arriving at true land values, and assessors habitually separate such values from improvement values when making assessments, although uniting them with improvement values again under the heading of real estate. Does Mr. M. imagine that land owners in Chicago experienced any difficulty in arriving at the value of their land at the time their improvements were totally destroyed by fire? A very clear and definite value remained in this burned district, and this value was certainly not the result of improvements, since improvements were at one stroke annihilated. As a matter of fact the value of land is much more easily and certainly determined than that of either houses or personal property. Mr. M. is of the opinion that because I made a general statement to the effect that no person could be absolutely sure of a theory until it had been put to a practical test, that I am "groping in the dark," and that "such admissions give doubts, conjecture, and fancy the entire field." To this I can only say that the same might be said of Copernicus, Galileo

Stephenson, Morse, Watt, and numberless other avants couriers of new ideas.

W. P. Borland.

Philury's Artemisias.

WELL, upon my word, child! Do you mean to say, you've come out in such a storm as this, to hear another story," said Miss Rebecca. "Let me hang up your waterproof to dry, an' I'll take your overshoes out to the kitchen.

"It's an awful storm, an' when it clears off I expect we shall have frost. That's why I took up my artemisias yesterday, an' brought 'em in. They keep so well, in the house, an' I couldn't bear to lose 'em.

"Settin' here this afternoon, lookin' at 'em, an' listenin' to the storm, I got to thinkin' 'bout a story my mother used to tell—I don't s'pose you ever heard o' the loss o' the 'Anna Louisa,' or Cap'n Zeke Marvin? No, you wouldn't be ben likely to. But my mother knew 'bout it—that is, much as anybody knew, for she was well acquainted with Philury Marvin, an' all the Warrin's. She lived down to Black Point, my mother did, till she was married.

"Come close to the fire, child, an' get warm an' dry. I wouldn't have you to take cold for the world—O yes, I was speakin' 'bout the 'Anna Louisa.'

"Mother was but a child when she was lost, but she remembered what a talk there was 'bout it at the time. 'Twas such a fine new vessel, an' Cap'n Zeke Marvin was called the *safest* Cap'n that sailed out o' Black Point Bay, an' his crew was all men from right around that part of the country, most o' them from his own town.

"He took his wife with him, that last voyage, 'cause she hadn't ben well, an' he thought it might be good for her to have a trip on the water. They didn't have but one child—that was Philury, an' she wan't but 8 years old; they left her behind to go to school.

"Square Warrin's wife took charge of her—she was cousin by marriage to Miss Marvin, you know, an' her son sailed with the Cap'n—Elliot Warrin' his name was. He was a handsome boy, but dreadful wild.

"Well, they sailed out o' port, with as fair a promise o' a pleasant voyage an' safe return as ever folks had, an' that was the last that was ever seen o' the 'Anna Louisa.'

"Little Philury was left 'lone in the world, without neither father nor mother, an' as Cap'n Marvin hadn't ben one o' the savin' sort, there wan't much of any money laid by for her to fall back on. But, land! she never knew the difference, Square Warrin's wife kept her with her, an' took care of her jest as if she'd ben her own child.

"Course, nobody could take Elliot's place

with his mother, but I reckon Philury kinder comforted her. She used to talk to her 'bout him, by the hour together.

"Philury really was the only one she could talk to 'bout him, for the Square was a stern kind of a man, who kept his troubles to himself, an' expected other folks to do the same. When anything bothered him he didn't want to talk 'bout it. He'd took a deal o' pride in his only son, an' when he come to lose him, I reckon he felt it more'n some who'd made more fuss 'bout it.

"But Mis Warrin' she never could give up the idea that Elliot would come back some day. You see, not knowin' for certain what had become o' the vessel, 'twas a long while 'fore anybody could be sure 'bout it, and folks'll keep on hopin' in such cases, long's they can.

"But the years went by one after another without ever gettin' any news, an' at last they give up expectin' it—all but Mis Warrin'. She never could see a strange man comin' down the read, without watchin' to see if he turned into the gate, an' Elliot's room was always kept ready for him, winter an' summer.

"Well, of course, little Philury got to thinkin' of him as a sort o' hero. If you take a man at his mother's valuation you'll be likely to think he's somethin' more'n common—till you come to meet him.

"There was an old daguerreotype of Elliot in the house that Mis Warrin' thought everything of. You had to twist it, an' turn it, this way an' that, for half an hour 'fore you got it so's you could see any thing. Then all to once he'd start out o' the shadows an' smile at you with his great dark eyes an' handsome, boyish face—but 'fore you'd fairly seen him he'd be gone again. Mother said she wouldn't dare to say how much time Philury spent over that picture.

"Well, the years went by an' Philury grew up. She'd got to be 18 years old, when one evenin' she'n the Square was alone in the sittin' room, 'twas a stormy night, the last o' September.

"Miss Warrin' had stepped out for somethin', an' as I said, Philury an' the Square was sittin' there by the fire, when all to once they heard the front door open an' somebody come into the hall.

"They both looked up, Philury 'cause she thought 'twas strange anybody should be comin' in, in that way, on such a night, an' the Square—praps he thought he knew the foot-steps.

"A strange man was standin' in the door, lookin' at the Square, an' when he met his eye he took a step towards him an' said 'Father.'

"But the Square, he never moved a muscle. His face was stern an' hard as that stone wall out there.

"Who are you that speaks to me in that way?" sez he, 'my son was lost at sea, ten years ago. I have no other children.'

"But the stranger said, 'I am your son—don't you know me, father?'"

"No," sez the Square, 'an' I hold my son's name an' place too sacred to give 'em to any strange man who may happen in out o' the streets an' lay claim to 'em. Oblige me by leavin' the house at once,' sez he.

"Well, Philury was watchin', an' she see the young man's face turn ashy pale. He looked like somebody who was caught in an awful dream an' couldn't wake out on't. He didn't say no more, he was standin' there lookin' at the Square, when Mis Warrin' come in, an' he turned towards her with a sort o' despairin' question in his eyes. But he didn't need to speak. With a cry that rung through the room, she caught him in her arms an' fainted dead away, for joy.

"Holdin' her close, the young man turned back to the Square again.

"My mother knew me," sez he.

"Will you have the goodness to lay my wife on that sofa," sez the Square, lookin' gloomy an' forbiddin' as a thunder cloud.

"The young man did as he told him, an' put her down, careful and gentle as he could, an' then he stooped an' kissed her, though the Square was standin' right there glarin' at him.

"As he raised his head, he see Philury watchin' him, with all her pityin' tender heart in her eyes. He didn't know who she was, but he see she believed him 'fore she spoke.

"Are my father an' mother coming back?" sez she.

"Who are your father an' mother?" sez he, lookin' at her kinder curious.

"The Cap'n o' the 'Anna Louisa,' was my father," sez Philury, wonderin' how the Square could help seein' he was like his picture, except for lookin' so sad, an' his face grew mournfuller still as he answered her.

"All on board the 'Anna Louisa,' exceptin' me, were lost ten years ago," sez he.

"If my son had been saved," sez the Square in his stern voice, interruptin' 'em, 'he wouldn't a let ten years go by withut tellin' us he was livin'."

"But I was picked up by a ship bound for Hong Kong, sez the young man, turnin' back to him as eager, as if he hoped even yet he might convince him who he was, 'an' I wrote, an' wrote to you—I can prove to you that I am your son."

"I won't trouble you for your proofs," sez the Square, seein' his wife was comin' to herself again. 'But I must remind you that it's gettin' late, an' were not in the habit o' keepin' strangers over night.'

"The young man see it wan't nouse, so he give one more look at his mother, restin' with her head on Philury's shoulder—an'

like enough he looked at Philury too. Then he went away, out into the storm.

"An the Square sat down in his chair, afore the fire, an' covered his face with his hands an' never spoke.

"You can guess how Mis Warrin' felt, when she came to herself an' found Elliot was gone. There wan't no pacifyin' her she was like one distracted. She'd gone right after him, if she'd known which way to take, spite o' the Square, who reasoned with her, patient as could be. He told her she was mistaken, it wan't their son, nor nobody like him, but only an impostor who was tryin' to deceive 'em, knowin' how she'd never been able to give Elliot up.

"But it wan't any use for him to talk to her. She said it *was* Elliot, she knew him the minute she set eyes on him, an' she got out his daguerreotype, an' 'pealed to Philury if it wasn't his very image. Her hear was jest broke, that Elliot should come back after all these years o' weary waitin'—come as she'd always hoped an' believed he would, an' ben turned away from his father's house an' downed.

"Turned out o' doors on a stormy night to find shelter as best he could. It made her down sick, and she couldn't sit up next day, an' had to have the doctor, but she got Philury to make inquiries if Elliot, as she called him, was still in the town.

"Philury didn't have no trouble in findin' out 'bout him. He was stayin' at the tavern, an' he didn't make no secret o' who he claimed to be. 'Twas the talk o' the town. There had'n't been such an excitement there since nobody could remember.

"Them that believed the young man's story blamed the Square for his hardness; but said they reckoned he had his reasons for what he did. While them that took up on his side said Mis Warrin' had mourned over her son till her mind was weakened, an' her judgment wan't to be depended on, nohow.

"Folks didn't know what to think, but I guess the main part o' 'em took up for the young man fur enough to give him the name he said was his, and treat him as such; but nobody durst mention him to the Square.

"But when folks talk so much on one subject they're apt to get the facts o' the case used up after a while, an' so have to go rangin' off inter the possibilities, an' probabilities, an' that's a field there ain't no end to. So, from kinder hintin' that there was reasons why the Square wouldn't own his son, they got to guessin' what the reasons might be.

"It 'peared that when the 'Anna Louisa' was lost there'd been a story round that some o' the crew'd mutinied and murdered the rest, an' took command o' the vessel an' gone off on a piratin' trip.

"I don't know what that story was made out of, an' I guess nobody did. But it come up now, an' folks got to sayin' 'praps the Square knew more about that business than he'd want anybody else to know, an' he might think 'twould be safer for his son to be dead 'n for him to be livin'.

"Well, as I said, Philury found out he was still in town, but Mis Warrin' couldn't rest. She wanted Philury to see him, an' speak to him, so she could know what he was goin' to do; an' 'bove all, to tell him not to go away without seein' her again.

"Philury knew the Square wouldn't like it, but she couldn't refuse to do as Mis Warrin' wanted her to, an' there's no tellin', 'praps she didn't mind havin' a chance to speak to Elliot again, herself; an' she got the opportunity one day when she wan't expectin' it.

"She'd gone down to the store for somethin' for Mis Warrin', an' as she stepped inside she see 'twas full o' men, an' somebody was playin' to 'em on a violin. She didn't see who it was at first, 'cause they was all crowdin' round, listenin' as if they was bewitched.

"Nobody come forward to wait on her, nor paid no 'tention to her, any way, an' after a minute she didn't wonder; she jest stopped an' listened, too, with all her ears, for long as she'd lived she'd never heard such music, or dreamed that anything like it could be fetched out o' a common fiddle. Her eyes was full o' tears 'fore she knew it, 'twas so sad, an' yet it 'peared to be a lively tune, too.

"An' then one o' the men moved a little to one side an' she caught a glimpse o' Elliot Warrin's dark, mournful face, an' see 'twas him 'twas playin'.

"'Twas Sam Mosier's violin he had. Sam left it there for some reason or other, an' the men was lookin' at it when they see Elliot comin' an' one o' 'em said how he used to be great on playin', an' proposed they should ask him to give 'em a tune. I reckon they thought 'twould be a kind of a test to put him to.

"Well, they agreed; an' when he come in they arst him. He took it up sort o' careless, an' looked at it, an' tuned it. Then he hesitated a minute, an' begun to play.

"They didn't none of them speak, an' no more did he. When he finished he put it down on the counter an' went off out o' the store, without a word.

"But soon's he was gone they all burst out talkin' at once.

"'No use to say he ain't Elliot Warrin' after that,' sez they. 'Nobody else ever could fiddle that way but him, an' he used to play that very tune when he was here to home 'fore ever he went on the water.'

"Philury didn't wait to hear what they said 'bout it; she followed him out o' the store.

"'Mr. Warrin,' sez she.

"Elliot turned round, an' there she was, her cheeks all flushed, and her eyes still wet with the tears his music had brought to 'em.

"'I'm Philury Marvin,' sez she, fear he'd forgot her, 'and your mother wanted I should see you, an' give you her love, and beg you not to go way again, 'cause she's sure the Square 'll believe the truth in the end.'

"Elliot he thanked her. He seemed kind o' doubtful 'bout the Square, but he said he'd wait awhile an' see, an' he sent his love to his mother.

"Then Philury went on to tell him how Mis Warrin' wan't able to be out yet, but she wanted to hear from him every day, an' would he be willin' to meet Philury somewhere when she was on her walks, so's to get his mother's messages, and send any he liked back to her.

"Well, course he was willin', an' Mis Warrin' come as near to being happy as she had for years. She never thought o' its makin' trouble for Philury, long's the Square didn't find it out.

"'Twas a real quiet spot where they 'rang-ed to meet, not far from Square Warrin's house, in a little lane that led down through a hollow, to the sea shore. A stream run through the hollow, with a bridge on it, pleasant as could be.

"Philury was dreadful shy, at first. She'd give him his mother's message, an' take his in return, an' hurry off, fast as she could. But 'twasn't long 'fore they begun to feel better 'quainted, an' then Elliot's messages to his mother grew longer, an' longer, an' 'twouldn't be strange if there was some word for Philury herself, mixed up with 'em.

"He was a real handsome young fellow, an' course his bein' so sad an' unfortunate, only made him 'pear more romantic an' takin' to a girl like that, an' he'd ben 'round so much, he was real interestin' to talk to.

"I s'pose there wan't no end to what he told her 'bout his life, an' travels, an' Philury had to go over it all again, to his mother, so course she was 'bliged to lay it up an' 'member it.

"They had a spell o' pleasant weather, then for a while, such as we get in the fall, sometimes, when the leaves is turnin' red an' yellow, an' a blue haze lies on the hills, an' the sun shines soft an' warm.

"'Twas dreadful pleasant down in the hollow by the brook, an' Philury's walks took longer an' longer. She always started out 'bout three o'clock, but it got so 'twas after five 'fore she reached home. An' once she stayed as late as six, but 'twas the last time she did it, for Deacon Nicholls come over the hill, through the huckleberry bushes, lookin' for his cows, an' see 'em.

"Course, it wan't none o' his business, but he went straight over an' told the Square. He said he wan't one to stand by an' see a man imposed on, by the members o' his own family.

"I reckon he thought the Square'd be so 'bliged to him he'd tell him all he wanted to know, but he was disappointed.

"Down on the bridge, Philury'd ben tellin' Elliot how the Square was goin' inter town the next day, an' his mother wanted him to come up an' see her. But Elliot he shook his head, an' said no, he'd come any time they liked, when his father was home, but he wouldn't come sneakin' into the house, like a thief, when he was gone, as if he was 'feared o' meetin' him. He said he despised underhand ways, an' dodgin' 'round corners.

"Philury she flushed up red at that, an' said she didn't see as 'twould be any more 'underhand' to come an' see his mother without his father knowin' than 'twas to meet her there on the bridge without askin' his leave.

"Elliot didn't say nothin'; he was jest lookin' at her. I reckon he was thinkin' more 'bout how pretty she was'n he was o' what she was sayin'.

"Philury, herself, didn't know why she felt so put out, an' she went on to tell him there was plenty o' ways he could get word to his mother without meetin' her, if he'd rather.

"'What ways?' sez Elliot, lookin' kinder 'mused.

"'You could write,' sez Philury, catchin' her breath an' feelin' a dreadful sinkin' in her heart, but keepin' straight on. 'You could write—an'—drop it in—in—the artemisias—that grow by the fence, an' I could take it out, an' give it to Mis Warrin'.'—Good afternoon—It's gettin' dreadful late.'

"'Good bye,' sez Elliot, laughin' an' catchin' her hold o' her hand, but Philury snatched it away, an' run off.

"Well, Philury, she was restless as she could be, next day. She couldn't seem to settle down to nothin', waitin' for it to come time for her walk. The Square didn't go to town, as they had expected, after all, but 'peared to be uncommon busy, 'bout home.

"But, as I was sayin', when it come to be most three o' clock, Philury started for her room to get ready to go out, an' she met the Square in the hall.

"Philury,' sez he, 'will you come here, an' help me a minute?'

"Philury felt as if she couldn't stop, but she didn't s'pose he'd hinder her long, 'n she went with him into his room.

"She was disappointed enough when she see what a pile o' bills an' papers he wanted her to go over with him.

"It took 'em till dark, 'fore they was done,

an' all the time she couldn't see nothin' but the bridge, in the hollow, an' Elliot waitin', an' waitin' while she didn't come.

"You may well believe she kept clear o' Square next day, an' she was ready for her walk in good time, but she wan't out o' the gate 'fore up he come, limpin' along, with his gold headed cane.

"'Goin' for a walk, Philury?' sez he. 'Come with me, down to the store.'

"Philury had to go with him, however she felt 'bout it, an' 'twan't no use for her to try to hurry. The Square always went slow, but that day it 'peared to her he never would get nowhere. An' when, at last, they reached the store, she had to stand an' wait while he talked business with 'Lias Green, till she was ready to cry.

"Course, 'twas too late to walk out again, when they got home. There wan't nothin' for it but to go to Mis Warrin's room an' tell her how 'twas, an' she was disappointed enough. She counted so on hearin' from Elliot every day.

"But Philury, she couldn't sleep that night, an' she couldn't eat nothin' next day. You see, if she hadn't been put out with Elliot the last time she see him 'twould a been diff-rent. But she knew he'd think she didn't come cause she was mad at him. an' she couldn't feel no certainty o' ever gettin' a chance to explain.

"She didn't spose 'twould be much use tryin' to go again, 'twant likely he'd be there, if he'd been twice already without findin' her. But she started, all the same. The Square wan't nowhere in sight, till she got to the gate that led to the lane, an' then if you'll believe me, she see him ahead o' her, takin' his time, on his way to the bridge.

"Well, Philury didn't dare follow, but she was perfectly crazy to know if Elliott had come, so she climbed over the fence, an' crept through the bushes, an' looked down, an' there was Elliott, waitin', jest as usual.

"She didn't know what was goin' to happen next, but the Square come up to him, an' they begun to talk. Philury clasped her hands, an' said a prayer, then she turned round, an' run home, fast as she could, to tell Mis Warrin'.

"They was sure if the Square talked with Elliott he'd be convinced. Mis Warrin' wan't fit to be up, but she dressed herself, an' she'n Philury sat by the window an' watched an' waited, poor things, till 'twas most dark. Then they see the Square comin' towards home, his head bent down, an' walkin' slower'n ever, an' he was alone.

"Well, it's no use for me to try to tell you how they felt, but there wan't nothin' they could do.

"The Square didn't interfere with Philury's walk next day. The slantin' sunlight was shinin' through the hollow, an' the trees

an' bushes was all ablaze o' red an' yellow, but Elliott wasn't there. She stood on the bridge an' waited, but he didn't come.

"Every once in a while a little breeze would rustle past, an' Philury would turn round quick, but there was nothin' there, more'n a handful o' red leaves, floatin' away down the stream.

"The shadows grew longer an' longer, an' the sun went out o' sight behind Deacon Nicholl's barn, on the hill, an' Philury knew she might as well give it up an' go home.

"The only thing that give Mis Warrin' an' Philury any comfort 'bout that time, was 'memberin' Elliot had said he wouldn't go 'way again till he'd seen his mother. So though one week after another went by without their hearin' from him, they never for a minute doubted that he would keep his word.

"The pleasant weather broke up after that, an' the fall storms come on. All the bright leaves was blown off, an' the wind sobbed through the old pine tree front o' Square Warrin's as if it knew about the sorrow an' disappointment in the house, an' mourned 'long with the rest.

"The Square always made a good deal of Thanksgiving time. His own family was small now, but there was his brother an' sister, an' their folks, an' all Miss Warrin's connections. Enough on 'em when they got together to make quite a party, and the Square entertained 'em all on Thanksgiving day.

"Mis Warrin' and Philury didn't feel much like celebratin' that year. Mis Warrin', she told him, 'peared to her, she wan't well enough to bother with it. But the Square wouldn't give it up. I reckon he knew his wife's reasons for objectin', an' felt 'twan't best to notice them.

"Any how things had to go on, same as usual, Philury was in the kitchen from mornin' till night, helpin' with the pies an' the puddins'. She was a master hand at cookin', Philury was, an' if her heart was heavy it didn't affect her cake none.

"Mis Warrin' left everything for her to see to, 'cause she wan't any more'n able to be 'round, and Philury was glad to be busy.

"Well, when the day come, Philury see every thing was in order in the mornin' an' the dinner so's it could be left without spollin'. Then she got all ready for church an' went down stairs.

"The others hadn't come out o' their rooms, so she thought while she was waitin' for 'em she'd step out 'n the garden an' see if she couldn't find a few artemisias, to make a bokay to set on the table. She got a real pretty bunch of 'em, goin' from one plant to another, an' pickin' out the ones that had ben kinder sheltered from the frost.

"'Twas a pleasant mornin', the sun

shinin' warm and bright after the storms they'd been havin', an' Philury thought what a beautiful world it would be, if only things could be fixed a little different.

"She come to the brown artemisias that grew by the fence, as she was thinkin', an' parted the faded flowers an' put 'em to one side to find the fresh ones that was left, an' there down in the very center, 'tween the stems, she see somethin' white—leastways it had been white once, 'fore the rains had soaked an' soiled it.

"Philury knew what it was in a minute an' took it out careful as she could. Why, O why, hadn't she 'membered that she told him to write and put it there.

"The direction was most all washed off 'cept part of her name, which was left, so she knew it had been meant for her. But when she tried to unfold it, it come all to pieces in her hand.

"Course 'twasn't possible to read it. The most she could make out was that the word *love* come in pretty often, an' down at the bottom of the page, half a sentence, 'if there is any hope for me'—

"But 'twas no use wonderin' now what the letter had said, or what he'd wanted her to do; 'twas too late.

"She stood there in the sunshine starin' at the bits o' paper till the front door opened an' the family come out all ready for church, then she put 'em away in her pocket, an' dropped her artemisias on the ground, an' went along with 'em.

"O, well, the minister said that day that 'twas folks' duty to be always thankful, an' that generally speakin', they had more reason to be than they rightly understood.

"Philury she sat and listened to him with her hands folded in her lap. She knew what reason she had for bein' thankful. She was young an' she had her health, an' plenty to eat, an' to drink, an' to wear, an' kind friends, an' yet how could she be 'spected to be thankful with such an ache in her heart, an' poor Elliott's unanswered letter, that she couldn't read, in her pocket?

"They had a grand dinner at the Square's that day. A great crowd o' their relations was there and Philury flew round tendin' to everybody an' everything, an' nobody guessed she wan't the happiest one o' the lot.

"In the evenin' some more young folks come in, an' Sam Mosier with his fiddle, an' they had a dance. Folks didn't think there was any sin in goin' down the middle in them days.

"Philury didn't feel much like dancin' an' she kept out o' it long's she could, but the young folks thought 'twas strange, an' last 'twas easier to stand up on the floor 'n to make any more excuses. Obed Nichols was her partner, an' she'd jest took her place beside him when Elliot come to the door.

"I don't know whether he told the truth 'bout himself or not, nobody ever did know. But if he had it must a ben dreadful hard for him, whatever he'd done, to stand there unnoticed an' unwelcomed in the door, while folks with less right 'n he had, laughed an' danced an' enjoyed themselves in his father's house.

"I don't know how he happened to come on Thanksgiving evenin', but I reckon he never thought o' their havin' a party, an' jest meant to keep his promise to his mother, an' praps to make one last trial o' his father.

"He was standin' there, lookin' round at the company an' thinkin' to himself that 'twant no use, when Sam Mosier see him. Sam was a reckless kind o' a fellow, who always said and did anything that come into his head, an' he 'membered what he had heard 'bout Elliot's fiddlin', so what did he do but hold his violin out to him.

"My arm's ready to come off," sez he, 'You give us a tune while I rest a minute.'

"Elliot took the violin in his hand an' looked across at Philury an' her partner standin' up and all ready to begin. Sam Mosier offered him a chair but he didn't take it.

"Philury hadn't seen him, but the minute she heard the music she knew Sam Mosier never played like that. She'd broke away from the set if she could, but she knew 'twould put the others out an' she could leave them when she got to the end o' the line without 'tractin' so much 'tention. She didn't try to talk to her partner but kept listenin' an' listenin' to the music. 'Peared 'twas like a beseechin' voice talkin' to her an' nobody else in all that room full o' company.

"The Square was listenin' too, when he was standin' by his wife over to the other end o' the room.

"Is that Sam Mosier playin'?" sez he, but his wife didn't pay no 'tention, she was too tired an' heart sick to care for fiddlin', who-ever played.

"'Twas said, the Square had ben dreadful fond o' Elliot's music, fore he went to sea, an' there was one tune in particular that he liked; I don't know what it was, my mother couldn't tell, but she said they always called it 'Elliot's Tune.' Praps he made it up himself.

"Well, when the Square heard him begin that he couldn't stan' it no longer; he started right off to see who was playin'. Folks said he was pale as death. But it took some minutes 'fore he could get round the dancers, an' the music had stopped. Sam Mosier was sittin' with his violin on his knees, when the Square came up, an' Philury was jest ahead o' him.

"Who was that playin', a minute ago?" sez he.

"'Elliot Warrin',' sez Sam, lookin' up at Philury an' then at the Square, kinder defiant. 'It's precious few folks can fiddle like him,' sez he.

"Where is he now?" sez Philury, without noticin' the Square.

"He's gone," sez Sam, tunin' up for another dance. 'Choose your partners, gentlemen.'

"Philury didn't stop to ask no more questions. She felt certain Elliot wouldn't go without seein' his mother. But when she come to where Miss Warrin' had been settin' she wan't there, an' she hurried out o' the room to look for her, quick as she could, never noticin' that the Square was followin' on behind.

"Out in the hall the great front door was standin' wide open, an' Mis Warrin', with the cold night air blowin' in around her, was stretchin' out her hands into darkness an' callin'.

"'Elliot! Elliot! Come back!'

"No, child; he never come back. Why should he? His father wouldn't own him, an' Philury'd never answered his letter. Some said he went off with the pirates again, but there wan't a mite o' proof against him, 'less the Square had it. He was known to be a just man, so folks was sure he must a had good reason for the course he took. 'Twas said he looked fifteen years older after Elliot was gone, an' Mis Warrin' she took to her bed an' never had the heart to get around again, no more.

"Philury stayed with 'em an' took care of 'em long's they lived, and when they died they left their place to her, 'stead o' any o' their own relations. I reckon they knew she'd keep Elliot's room ready for him, jest as his mother'd always done.

"Philury was very much respected in the town, though folks did call her queer. She did so much good all the time they could 'ford to overlook some o' her queer ways an' habits. You see, they never could understand why, winter an' summer, rain or shine, she always took a walk, every afternoon down the lane to the bridge in the hollow.

"An' the first thing every mornin', after her artemisias was up in the spring, she'd go out to the brown one that grew by the fence, an' look it all over careful, as if she expected to find somethin'."

Bessie Morgan.

Fashionable lady—Don't you think, doctor, that my husband ought to send me to some fashionable watering place for my health?

Doctor—Why, madam, you have a phenomenally robust physique.

"I knew there was something the matter with me. Where have I to go to get rid of it—Long Branch or Saratoga?"

How Can Land Values Be Determined?

I WILL accept Mr. Marshall's challenge without wabbling. By the term "Single Tax," the majority of the followers of this belief mean a single tax on special privileges. Mr. George, in his work, keeps this idea uppermost, that all persons are equal before the law; that when the law gave one or a group of persons a legal advantage, it should compel such to pay back to the public in taxes the amount any other person would pay annually for it. While Mr. George believed in applying this principle to land values, he claimed that where in other monopolies competition became impossible, they should become a public function, operated by and for the whole people. Most of his followers reject the latter, because he showed no means to bring it about, except by purchase, which includes much besides the labor value of such property.

His first proposition, Mr. George worked out fully, and formulated a plan to abolish all taxes on improvements and commodities and increase the land tax until land values were taxed to the point of disappearance and all land could be had free, that is, for one year, at the end of that time the holder would have to turn over to the community the advantage he had over the poorest site in use which was not taxed at all, thus assuring equality of opportunity and freedom of action.

Yet Mr. Marshall reiterates, how can we arrive at land values? This is simple: 1st, assess all improvements at full cost, less wear; 2d, make all owners fill out a blank setting a price which they would be willing to sell at; 3d, have it legally provided compelling them to accept the same from any purchaser, within ten days after open publication. This latter would seldom come in effect, except a sale was desirable, as men will tell the truth if it pays to do so. Let us have laws to encourage truth instead of putting a premium on falsehood as is done at present.

Now, the difference between the owner's valuation and the assessment would be the land value. Objection might be made that if we taxed this value away we would be without a guide from that time forward. To some extent, yes, but we could determine it by trial; if next year there was a difference still, increase the tax. If the valuation was less than the improvement, reduce the tax. In this way it could be rectified annually. This principle of assessments could be applied to railroads to show the charter value or watered stock, also to street railways, telegraphs, gas, water works, and telephones, leaving the value of such franchise bare. I think this the proper way to solve these questions, either by taxing away the monopoly or in determining a just price for public purchase.

KANSAS CITY, MO.

G. M. Russell.

How the Editor Can Live.

He can live without towels, live without soap,
Breakfast on vowels, and dine upon hope;
He can live without gallus, live without shirts,
Keep a kicking despite all manner of hurts;
He can manage to get on without advertisers,
But the editor cannot survive without scissors.

Sunny South.

AND the editor sat on his three legged chair
With his left hand clutching his unkempt hair,
His right hand uplifted and sawing the air,
He swore by his paste-pot he had nothing to wear.
As he looked at his hat, his trousers and shoes,
The more violent became his attack of the blues,
And wildly exclaiming, "Is there nothing to cheer?"
Forthwith starts out for a schooner of beer.
O! think of his joy, as just then perchance,
A heaven-bound pilgrim paid in advance
For the *Trumpet of Freedom*, a round silver dollar.
And then from the depths of his stomach, all hollow,
He sent forth a shout, and started instantler,
To find Billy Bones, the famed restauranter.
And as "six bits" of his dollar, like the minutes, went fleeting,
He swore that an editor could live only by eating.

Edmund Allen.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

A New Book.

We have on our table a book bearing the title of "Progressive Examinations of Locomotive Engineers and Firemen, by John A. Hill, member Brotherhood of Locomotive Engineers, associate member American Railway Master Mechanics' Association."

In addition to the examination questions and answers the book contains nineteen "diagrams, illustrating manner of using signals according to the standard code of Train Rules, as adopted by the American Railway Association, approved July 15, 1889, amended April 8, 1891."

The book is not large, containing only 78 pages, but its size answers the demand the author had in view; besides, its dimensions permits the men for whose benefit it was written to conveniently carry it in their pockets for study and ready reference. In his introductory remarks the author says:

The future locomotive engineers of this country will need a different, and, perhaps, a better education in their business than has been required or demanded in the past. All important roads have already prepared or are preparing to examine every man before promotion. In the hope that these examinations shall be practical, go far enough and not too far, and that better posted engineers can be had for the great responsibilities resting upon us, the author, who has served ten years on the foot-board, has proposed the Progressive Plan, believing that it is just and in the interests of the men, the roads and the public. It will tend to better the understanding and increase the confidence and self-respect of the locomotive engineers and firemen of America whose skill, judgment and heroism have been the chief factors in the safety and success in the establishment of the greatest transportation system the world has ever known.

It does not fall to the lot of every man to write a book, and thousands have been written, which reflecting no credit upon their authors, speedily found their way to the limbo of forgotten things.

But here we have a book written for a purpose worthy of the highest commendation, written for the benefit of locomotive engineers and firemen by one of the craft, who served several years on the foot-board and in every word of advice and direction knows whereof he writes.

We write no undue eulogium of the author, John A. Hill, when we say by education and investigation, by service and by experience he is specially competent to write of the "progressive examinations" of engineers and firemen, which the railroad service of the future will demand.

Starting out with the proposition, that "every child is taught to creep before it walks," we have a clue to the purpose which animated the author to write his book; to help the inexperienced, to smooth, in some measure, the rugged path they have to travel from the day they begin firing an engine till they reach the goal of their ambition, the "right side" and the throttle, and it is easy to see that from first to last the author was influenced by a purpose to help those who are sufficiently ambitious to avail themselves of every means in their power to help themselves.

In the course of his preliminary remarks the author says:

Locomotive engine running is a responsibility, than which there is no greater, and the most painstaking care is none too efficient in selecting and training men for this more than responsible position.

The way to secure a good class of engineers is:

First: Select good, clean material, inspect for culls and have some quick and fairly accurate method of testing for such defects as would prevent the candidate from ultimately becoming a first-class passenger engineer.

Second: Provide the opportunity and means, or point out the way, to the student to learn the rudiments of his business, first—teach him how to fire, before he goes head-over-heels into valve motion.

Third: Provide an incentive to the learning of the right part first, and establish a point at which no progress or any other defect in the candidate for advancement will call for a termination of the apprenticeship.

Mr. Hill has observed, as many others have done, the tendency to advance without the necessary equipment of knowledge, and he, therefore, proposes a method by which "responsible officers can provide a system of periodical examination of firemen, advance them step by step until they become thoroughly proficient engineers; and abandon the usual rule of putting a conglomerate gang of men upon locomotives, letting them fire a term of years, and select the oldest for examination, only to find that he knows little about his business, that he is color blind, illiterate, or intemperate—all of which should have been discovered before he was given a job at all." The method proposed by the author at once challenges respect. In practical education it is the one thing needed. Promotion is based upon merit, and when an advance occurs by virtue of knowledge, the individual dignifies the position and the interests of the service are promoted.

According to the educational equipment of applicants to become firemen the author says the "applicant must have a common school education, at least equal to the grammar grades of the public schools of the state—graduates of regular high schools gives preference. Must be soberly temperate, of good moral habits and physically strong enough for the arduous work of firing. This ought to suggest to locomotive firemen who are in the service, at once get their

books, and master thoroughly the rudiments of an English education. We refer to those who are incapable of constructing a sentence grammatically, and whose orthography is sadly deficient, and who, we doubt not, would find it difficult to answer correctly such simple arithmetic problems as the following:

Examiner: If freight train No. 10 ran from A to B, six miles and a half, at the rate of 15 miles per hour, how long would it take?

A. Twenty six minutes.

Q. How long does it take a passenger train travelling 30 miles per hour to make a mile?

A. Two minutes.

Q. If this road has 350 engines, each making 100 miles per day, how many miles do they all make per day?

A. Thirty-five thousand miles.

Q. Suppose each fireman wasted half a cent's worth of coal a mile by letting steam blow off at the pops too much, or by throwing away coal, how much would that amount to a day to the road?

A. One hundred and seventy-five dollars.

Q. What do you read?

A.

To the last question in the list, "What do you read?" the answer, we are inclined to believe, would be damaging.

Just here comes in a bit of advice and warning which we reproduce, because of its importance.

You have, no doubt, thought over the matter seriously, and understand something of the duties of the road and its dangers. Is it doubly dangerous where any faculty is dormant while on duty; train yourself to avoid sleep or drowsiness on a locomotive; it is a habit that grows, and oftentimes kills. You will have many duties to perform, and it is desirable, and necessary, that you learn to do them not only well, but cheerfully. Cultivate the faculty of getting along well with the men with whom you are at work, and avoid dissensions. Try and please your engineer; remember he has years of experience; you have none. He can teach you much that you need to know, but may appear taciturn, cranky, or close-mouthed; but the meanest engineer on earth will learn to like and help a loyal fireman, who has nothing to say against him or the engine, who tries hard to keep steam and keep the engine reasonably clean, and who is always willing to help him with his work, especially in case of an accident.

Establish now, while you are young, the habit of taking rest as soon as you are in; do extra work, loading or visiting afterward—you may have to go out before you expect.

Don't forget that it is not the *last* drink that hurts a good man's reputation—it is the *first*. Be temperate. The officers of this road have no right to say to you, "You shall not drink intoxicating liquors;" but they have the right to say, "We will not employ a man in any capacity that drinks."

The progressive examinations are given after one, two, and three years' service, and following each examination the author introduces a "lecture" brim full of the right sort of talk.

In the first examination there are ninety-one questions and answers; in the second examination fifty-nine questions are asked and answered, and in the third examination 147 questions are answered, giving a total of 297 questions and answers, every one of which is to the point.

In the closing lecture the author says:

If there is disagreeable work to do, do it as cheerfully as possible, and with little "kicking." Say you can't pull cars after you have tried—never before.

Get the reputation of oiling around, taking water and getting ready to move quickly. Get the reputation of running on the road evenly, occupying card time between stations, and not running fast and stopping often.

If you find it necessary to run fast to a station for a meeting point, commence to run fast right then—not at the last moment. Get the reputation of doing well, and on time, anything you set out to do with an engine. Make your fireman your partner; show him all your orders; interest him in his work and the engine—he will be of great service to you—and above all, don't forget that you fired a long time yourself.

Avoid the reputation of being "fly" on the road. Never be reckless or foolish; it's a grave business. Don't let your thoughts wander from your work. Accept the responsibilities of your position with your eyes open and hand firm—just as a successful surgeon uses the knife near the vitals—know what you are doing and how to do it, just how far to go, and where to stop. A nervous, excitable, uncertain engineer is as dangerous as an ignorant one.

Don't ask many favors or make many kicks, so that when you do ask a favor it will be more likely to be granted, and when you do kick it will count.

We have devoted more than usual space to Mr. Hill's book because we regard it of the greatest value to locomotive firemen, particularly those who hope to be engineers, and every one of them should have a copy in their pockets, and should thoroughly master its contents.

The book supplies a want and meets an imperative demand. It is written in a style that firemen will appreciate, simple and pointed. There is no surplus anywhere—nothing stilted, but plain, straightforward common sense throughout.

We bespeak for it a large sale to brotherhood firemen, and we take occasion to assure them that the investment will pay large dividends in solid knowledge.

THE Virginia law forbidding the running of Sunday freight trains has been decided by the supreme court of that state to be unconstitutional, on the ground that it interfered with interstate commerce. The court held that the state may enforce observances of the Sabbath, "not as a religious duty but as a day of rest," but that when such legislation interferes with or obstructs interstate commerce, it is void. This position has been virtually already taken by the supreme court of the United States and the result, it is feared, will be to nullify the earnest and commendable efforts which have been made to diminish Sunday railway work, with the purpose of giving railway employes a fixed day for rest as well as for religious observance if they are so disposed, for if the running of freight trains on Sunday is held to be a necessity and any restriction thereof is an interference with interstate commerce of course the same argument can be applied with still greater force to the running of passenger trains. At present the prospect of any reduction in Sunday railway travel seems very small, and indeed the tendency has been marked in the other direction of late years.—*Railway Age*.

Piston Speed of Locomotives.

The piston speed of a locomotive is equal to the train speed times double the piston stroke in feet, divided by the tire circumference in feet. Thus a train running twenty miles an hour, with tire four feet in diameter and piston stroke twelve inches, has a piston speed of $\frac{22 \frac{2}{3} \times 24}{4 \times 3.1416} = 280.01$ feet per minute. In order to somewhat simplify this calculation, there has been prepared the accompanying table, which gives the second one of the two compound factors above given. Thus instead of doing the work represented by 4×3.1416 , the result is 0.1591.

STROKE.

DIAMETER AND CIRCUMFERENCE OF DRIVING WHEELS.

In.	Feet.	4' 0"	4' 6"	5' 0"	5' 6"	6' 0"	6' 6"	7' 0"	7' 6"	8' 0"
		19.0884	16.1272	18.708	17.2788	18.8496	20.4204	21.9912	22.562	23.1328
26	2.167	.3448	.2905	.2759	.2548	.2399	.2122	.1970	.1839	.1724
26	2.083	.3316	.2848	.2653	.2411	.2210	.2040	.1895	.1768	.1658
24	2	.3182	.2620	.2546	.2315	.2122	.1958	.1819	.1698	.1592
22	1.917	.3049	.2512	.2440	.2219	.2034	.1877	.1743	.1627	.1525
22	1.833	.2918	.2386	.2324	.2122	.1945	.1796	.1667	.1556	.1459
20	1.749	.2785	.2276	.2228	.2026	.1857	.1714	.1591	.1485	.1393
20	1.667	.2652	.2158	.2122	.1929	.1768	.1632	.1515	.1415	.1326
18	1.583	.2519	.2040	.2016	.1832	.1680	.1551	.1449	.1344	.1260
18	1.5	.2386	.2122	.2010	.1736	.1592	.1469	.1363	.1273	.1194
17	1.417	.2254	.2004	.1904	.1640	.1503	.1387	.1288	.1202	.1127
16	1.333	.2121	.1886	.1808	.1548	.1415	.1306	.1212	.1132	.1061
15	1.250	.2000	.1768	.1691	.1447	.1326	.1224	.1136	.1061	.0995
14	1.167	.1876	.1651	.1585	.1350	.1238	.1143	.1060	.0990	.0928
13	1.083	.1751	.1533	.1479	.1254	.1149	.1061	.0984	.0919	.0862
12	1	.1591	.1414	.1273	.1157	.1061	.0979	.0908	.0849	.0796

Thus an engine with a twenty inch stroke and 78 inch drivers, when making thirty miles an hour, has a piston speed of $\frac{22 \frac{2}{3} \times 20}{0.1632} \times 0.1632 = 430.8$ feet.

Robert Grimshaw.

Current Notes and Comments.

A 110,000 mile run without any repairs is the published record of locomotive No. 13,293 on the Pennsylvania R. R. This engine runs between Altoona and Pittsburgh, and makes 48 miles per day.—*National Car and Locomotive Builder*.

Is not this rather a high number of miles, as well as a high number for the locomotive, even if it is a Pennsylvania Railroad engine? As there appears to be a mistake in the number of the locomotive, may there not also be a slip of the pen or the type in the miles? As it stands the statement is open to question.

The Cleveland, Columbus, Cincinnati & St. Louis Railway is the owner of 114 different kinds of locomotive. The diversity has arisen to a great extent through the inheritance from the numerous small roads absorbed. The mechanical department has not yet been able to ascertain the number of cars they have got with different kinds of dimensions and diverse attachments.—*National Car and Locomotive Builder*.

If the master mechanic of the above road insisted on adopting uniform standards he would probably have some trouble to make the parts come together, or to get over the road with the machines after they were put up; nevertheless, some master mechanics insist on certain standards among a lot of different engines, much to the men's annoyance and discomfort. While there is so much difference in engines of the same build that each one has to be treated a little different from its mates to get the best re-

sults, it is utter folly to attempt to establish certain unalterable standards to fit all engines, and no master mechanic in the world will be able to make a uniform standard until he has rebuilt all the engines on the road, and even then he will find that different runners will require different adjustments, for the one may be able to get lots of steam and get over the road on time while another one will get "stuck" for steam and unable to make time or pull a train. If the master mechanic has confidence enough in a man to put him to running he ought to have confidence enough to trust him with the adjustment of the parts, and not bind him by unalterable standards like the famous laws of the Medes and Persians.

The Pennsylvania Railroad likes are putting air brakes and Janney couplers on all their coal cars. It is admitted by all practical railroad men that coal cars need power brakes more urgently than any other kind of car owing to the difficulty of stopping them in passing over such cars to set brakes. On the eastern lines of the Pennsylvania system there was trouble with the freight engineers handling the air brakes badly, but this has now been to a great extent remedied. The engineers on the western lines handled the trains satisfactorily from the first, and the experience then obtained in the East of how to handle them was all that was necessary to teach their men how to handle the trains with air brakes.—*National Car and Locomotive Builder*.

It is indeed true, that with increase of speed required to handle the year's output of coal and take it down the mountains to

the seashore the old system of hand brakes is entirely inadequate to the demand and ought long ago to have been replaced by the more powerful and swift air brake, but so many of the eastern roads had so large an equipment of cars that their conservative managers could not entertain the idea of spending thousands on brakes, until put to expense by disastrous wrecks which might and would have been prevented by the use of the air brakes. Most of the western roads have been buying their equipments largely since the introduction of the air brake and have thus had many cars with air brakes and the men have thus been trained to handle them, and of course could do better than their eastern brothers, to whom air brakes on coal and freight cars are a new thing. Perhaps the length and weight of some of the eastern coal trains may have something to do with the matter, for a train of a thousand tons thundering down the mountains for ten to twenty miles or even more, by its own gravity, is a formidable force and good judgment must be added to practice to enable the engineer to control this moving mass. It is to be hoped that the eastern men will be equal to the task. Look at the paragraph below to find out what the train may be.

What has been spoken of with some degree of truth as an extraordinarily heavy train was recently taken over the Philadelphia & Reading. The train was made up of 90 long "hopper" cars carrying an average of about 25 tons of coal each, or 2,375 tons in all. Each hopper car is 34 ft. 1 in. long, and including engine and caboose car in the rear of the train, the whole train was 3,100 ft. long. The ordinary train is made up of 40 to 45 of these hopper cars. The engine hauling this train weighed over 75 tons, loaded. This long train was an experiment, and was entirely successful. It should be noted that the Reading line has a continuous down grade from the coal regions to tidewater, or "with the trade." On the return trip the same engine described above hauled back 210 of the old four-wheeled empty coal cars, equivalent to 60 of the empty hopper cars.

Increase of Compound Locomotives.

The appearance of the committee of the Master Mechanics' Association having the work of investigating the merits of compound locomotives will have ample data about these engines to draw from before the year is out. The Baldwin Locomotive Works intimate to the committee that they have seventeen compound locomotives in the erecting shop. The Schenectady Locomotive Works have eight compound locomotives at work in different parts of this country. Besides this they are building four 10-wheel passenger and one 12-wheel compound for the Southern Pacific. The Rhode Island Locomotive Works have three compound locomotives at work, the Brooks Locomotive Works are about to deliver a compound to the Lake Shore & Michigan Southern, the Pittsburgh Locomotive Works are building one compound, the Chicago, Burlington & Quincy people have one at work, and the compound locomotive that the Old Colony people have been building in their shops at Boston is almost ready for trial. All the compound locomotives built in this country except the Baldwins are two cylinder engines.—*National Car and Locomotive Builder*.

"Economy is wealth," is as true of railroad management as of other business, but

in all it has to be in the right direction, and it does seem that the compounds are to prove one of the best factors in economic management of the railroads in the near future. A saving in the big fuel account is something no member of our order can object to for it will also affect him and work to his interest in several ways. In the first place less fuel for a given amount of work means less work to get over the road and it certainly ought to insure better pay, for if it turns out as present reports seem to indicate, that one or two tons of coal can be saved every day by the use of every compound, it ought to justify the road to pay their firemen some of the savings. Every fireman ought to give every compound a fair chance to prove her merits in this respect and not be ready to condemn without reason, for it is certainly a move in the right direction and is bound to succeed in the end even if useless obstacles are placed in the way of progress.

Changed Practices on the Baltimore & Ohio.

A change of sentiment appears to have come over the Baltimore & Ohio. This is about the oldest railroad in America. After giving to the country some practical illustrations that a new era in the methods of transportation had arrived, the men in control seemed all at once to become paralyzed with their own enterprise and audacity, and made up their minds to show no more of it. For about half a century the railroad was managed on the lines of certain antiquated aphorisms, the principal one being "leave well enough alone." The mechanical department was dominated by an article of the company's moral law, which read, "never put in the scrap heap anything that can possibly be made of use."

It was no wonder that the Baltimore & Ohio became synonymous with something exceedingly ancient and worthless.

This condition of affairs has changed now, and people have got voices in the company who are not only ready to raise them in favor of progressive practices, but also to use them in proclaiming to the world that the Baltimore & Ohio will no longer be tamely left by its competitors. The laws of the Medes and Persians were flexible compared to the rules of this company forbidding the giving out information to the press. Now those in charge seem to invite publication of what is going on in the shops and among the various departments. The stronger the talk about the merits of the company's machinery the better it is liked. The practice of the company, too, is beginning to justify praise, for everything purchased, cars, locomotives and other machinery, is the best of its kind.—*National Car and Locomotive Builder*.

We are glad to notice that the spirit of progress has stirred up the Baltimore & Ohio, and that it seems to have received an infusion of new blood in its veins by contact with the metropolis. As long as it stopped at Baltimore, or even Philadelphia, it seemed hardly alive, but when it reached New York city it appeared like one waking from a long sleep, and finding things changed, it began to adapt itself to circumstances and develop an amount of vitality which has caused universal comment. As the Baltimore & Ohio has ever been one of the best roads in the east to grant favors in transporting delegates to and from our con-

vention, it ought to please our order to learn that it is soon to take such a rank among the trunk lines, as the length of the road and its business seem to warrant.

Wm. Weiler.

Encompassing the Earth.

"The world (Cosmos) is a field; mankind is the seed; the end of the world is the harvest, and the reapers are the angels."

This is the epitome of the divine plan as declared in the scriptures and recognized the world over, both in Christian and heathen theology. At the final consummation, it is taught, the human race will have become qualified for a higher grade of existence and a new dispensation will be inaugurated. Meanwhile the struggle for ascendancy goes on.

From the very beginning of creation nature and human effort have wrought together to bring about the speedy consummation of the promised harvest; but the lapses have been so frequent that the net gain from age to age have been relatively small. By the time that new fields have been discovered and placed under subjection in one part of the globe old ones have become exhausted and worn out in others; so that the history of the world throughout seems to have been but a discouraging repetition of itself and each successive apparent achievement little more than an afterglow of some previous golden age.

Hitherto facilities for intercommunication between regions wide apart have been so meager and the scope of investigation consequently so limited that each division of the globe has believed itself to be possessed of the only civilization. All those parts of the earth which geographers were not acquainted with they indicated on the maps as deserts and all strange peoples as barbarians. But now, in the midst of a remarkable epoch, all the world has suddenly become an open book. The antipodes are brought together. By marvelous devices of mechanical construction remotest races are placed face to face and enabled to see and understand each other. Necessities of commerce and the spur of business competition, more than mere scientific inquiry, are contributing to hasten the forthcoming harvest. We are rapidly encompassing the earth and we are doing it on straight lines and by short cuts, regardless of natural obstacles.

Once it was our habit to go around; now there are no deviations. Before the present century closes every principal mountain chain will be tunnelled, every chasm spanned, every ocean traversed, every isthmus channelled and every strait bridged. Everywhere we are boring into the bowels of the earth, burrowing under the waters, mounting on the winds, harnessing the

lightning and securing self transportation by volition without physical effort. Already the several continents are connected by 125,000 miles of submarine electric cable. There are 11 cables between America and Europe. Africa is completely encircled by submarine telegraph. There is no end of economic projects soon to be undertaken or already under way. Some leading ones are herewith enumerated:

1. Railway from Jaffa to Jerusalem, in Palestine.
2. Bridge across the strait of Dover, near Folkstone.
3. Mombasa & Nyanza railway in Africa, to connect the Nile with interior lakes and with the coast.
4. Railway across Siberia from St. Petersburg to Bering strait.
5. Railway across Alaska to Bering strait.
6. Bridge or ferry across Bering strait.
7. Canal across the isthmus of Corinth, in Greece, to connect the *Ægean* sea with the gulf of Corinth.
8. Ship canal around Niagara Falls.
9. Railroad from Quebec to Belle Isle, in Labrador, with connecting ocean steamship line to Medford, in Wales, G. B.
10. Ocean cable from Clew bay, Ireland, to Greenly island, strait of Belle, 1,900 miles.
11. Railway from Winnipeg, Manitoba, to Hudson bay and steamship line thence to Liverpool.
12. Railway from Winnipeg to the North Saskatchewan river across the Northwest territory.
13. Tunnel under the Hudson river at New York.
14. Tunnel under the St. Clair river between Sarnia and Port Huron, Mich.
- 15 and 16. Panama and Nicaragua canals.
17. Tunnel through the Atlas mountains in Russia.
18. Tunnel of the Great Northern railroad through the Rocky mountains in Montana.
19. Tunnel through the Sierras from Truckee river, Nevada, into California.
20. Canal from Knoxville, Tenn., through Alabama to the Gulf of Mexico.
21. Canal from Chicago to the Mississippi river, to cost \$25,000,000.
22. Ship railway, 66 miles long, from Georgian bay to lake Ontario, connecting the great lakes and the St. Lawrence river, costing \$12,000,000.
23. Canal from Chicago to the gulf of Mexico.
24. Ship railway around the Dalles of the Columbia river.
25. Ship canal across New Jersey to the Atlantic Ocean, 60 miles.
26. Ship railway to connect the Gulf of St. Lawrence with the Bay of Fundy, 12 miles, costing \$12,000,000.

27. Steam lines from Tampa, Fla., to all parts of the West Indies.

28. Longitudinal railway through the axis of North and South America from Chicago to the Argentine republic.

29. Steam lines from Vancouver, in British Columbia, to Japan and Australia.

30. Steam lines from New York to the Caribees and Windward island.

31. Steam lines from Scotland to North Cape and the Antarctic ocean.

32. Stated voyages between Sitka, Alaska and Point Barrow in the Arctic ocean.

33. Steamboat navigation to all the great lakes and rivers of Siberia, British America and Central Africa.

Very rapidly, too are new ports of entry being established in all the continents to furnish terminal facilities for these many far-reaching lines of transportation. Industrial colonies are being planted in remotest and most forbidding regions. Overlooked and neglected tracts are becoming one after another the busy centers of all that represents activity, business competition, accumulation and the genius and enterprise of man. Great deserts have been reclaimed. Swamps and lakes have been drained and placed under cultivation. Already the last accessible mountain ranges are being prospected for their ores and minerals. Unknown oceans are being investigated for their fisheries. Islands in mid ocean are visited and examined. The polar seas are being gleaned of the remnants of their living products, and the innermost resources of Africa are swept of their last remaining spices and ivory.

What next? What must follow in the natural order of things?

Obviously in the general rush and scramble of business competition there will soon be no new part of earth to gain or waste place to occupy. The whole field will be abolished, and eventually when no untried device or element of power shall remain by which the shrewd and active may outstrip or overreach the slow and stupid competition must close by an equalization of conditions.

Socialists, philanthropists and moralists are working themselves into an unnecessary fever to discover some way to prevent the few from usurping the emoluments of the many. Possibly they may be able, temporarily, to ameliorate in some slight degree the sufferings of men, but the inevitable logic of events is speedily bringing about the very desideratum which they would invoke; except that instead of being permanent and abiding whenever it does come, as they would fondly believe, this ultimate consummation will be the signal for the reaper that the harvest is ripe for the ingathering. Time and space will then be virtually annihilated and it will be so pro-

claimed by "the angel who shall stand, one foot on sea and one on solid land."

Assuredly man cannot play with the subtle forces of nature with impunity. He cannot deflect the ocean and river currents, disturb the equations of the tide, drain the cosmic centers of their gases and vital fluid, and change the structure of the earth without creating far reaching effects. Disturbance of organic laws must provoke disintegration and collapse. With its resources exhausted the external world will be of no more use to mankind than the dry cast off pupa-case of the butterfly. Its continuance would but prolong the distress of the human race through over-population and rank growth.

The more we exterminate material things from the theater of this mundane life and overcome the physical obstacles which trammel it, the greater intellectual freedom we attain, and the more spiritual we become, the more fully we may be assured of the near appearance of the final harvest. The world shall indeed pass away but the seed shall develop into a new and higher life.—*Charles Hallock, Member Biological Society, of Washington, D.C., in Railway Age.*

Heavy Consolidation Locomotive.

The Rhode Island Locomotive Works have lately built a very heavy consolidation locomotive for the Denver, Texas & Ft. Worth, which has been hauling heavy freight trains on the New York, Providence and Boston. After it is tested to the satisfaction of the New York, Providence & Boston road, it will be disconnected and shipped to Chicago, where it will be again connected up and tested on the Chicago, Milwaukee & St. Paul, in connection with their large 10-wheel engines, a number of which were built at the Rhode Island Locomotive Works. After that it will be placed on the Minneapolis, St. Paul & Sault Ste. Marie Railway, and there tested against some very large engines, and after these tests it will be put in the Chicago, St. Paul & Kansas City to run in opposition to some of the large mogul locomotives between St. Paul and Chicago. After these tests are over the machine will be disconnected and freighted to its destination. The engine is a very powerful machine, and good accounts are expected of its very extensive and, doubtless, very thorough tests. The engine has cylinders 20 inches in diameter and 24 inch stroke, drivers 50 inches in diameter, driving wheel base of 15 feet, total wheel base of engine 22 feet 6 inches, wheel base of engine and tender 49 feet 9½ inches. The total weight of the engine in working order is about 122,000 pounds, weight on drivers about 109,500 pounds, on pony truck about 12,500. The weight of tender is about 75,000, and its tank capacity is 4,200 gallons.

The boiler is of homogeneous steel $\frac{7}{8}$ inch thick, riveted with $\frac{1}{2}$ inch rivets, and is calked within and without. The waist is 62 inches in diameter at smoke-box end, made wagon top, with extension arch. The 246 tubes are of charcoal iron, 2 inches outside diameter and 13 feet 8 inches long. The fire-box is Otis steel, 108 $\frac{1}{2}$ inches by 33 $\frac{1}{2}$ inches. The crown is supported by radial stays 1 inch in diameter. Cast iron rocking and dumping grates suitable to bituminous coal are used. The Rhode Island Locomotive Works balanced valve is used in the steam chest, piston heads have cast iron spring ring packing, piston rods of twisted iron, and the Laird guide and crosshead are used. Driver ties are of standard steel, 3 inches thick; the first and fourth pairs are flanged, and the second and third pairs are 6 $\frac{1}{2}$ inches wide. Driving axle journals are 7 $\frac{1}{2}$ \times 8 inches. The rods are of hammered iron, the parallel rods being put up with solid ends. Seller's injectors, placed right and left, feed the boiler. Two-wheeled truck under the front end swings from a radius bar. The wheels are Paige, steel tired and 30 inches diameter. The engine is fitted with Westinghouse brake for tender and train.—*National Car and Locomotive Builder.*

Shall They Enlist?

The *Railroad Register* advocates enlisting railroad men for a term of years, in a manner similar to naval or military service, and remarks as follows: "Seven hundred and fifty thousand men. If each, from lack of attention to business, or lack of knowledge of his duties, should waste in the course of a whole year, one dollar, or one dollar's worth of time, of his own employer, that would mean a loss of three-quarters of a million dollars.

"Should each man work three hundred days per year, and waste but one cent per day for his employer, the loss would amount to \$2,250,000. How the pennies mount into the pounds!

"A railway service that is carried on by a shifting company of employes, in the nature of things cannot be economical. Though the workman be ever so industrious and faithful he cannot accomplish results such as are easy for a trained workman.

"The railways are forced by various influences to economize rigidly these days in order to show a dividend balance when the year's end comes round. If these same railways could conduct their business through thoroughly disciplined employes, the gains would be most gratifying.

"But a workman cannot be disciplined for the duties of a position in a day. His work is relative. A superior locomotor cannot show his best results the first time he runs over a line. Not only must men work well

individually, but they must work well collectively.

"The opportunity for thorough discipline will never be available until railway employes enter the service by enlistment for a stated term."—*American Journal of Railway Appliances.*

Reckless Engine Running.

On one of the fastest runs the country has heard of in some time there was a little side incident that, had it been known back in the coaches, would have caused a stampede for the bell rope. Shortly after starting the engineer discovered that the bolt that holds the inside pair of guides to the cylinder head was loose; he watched anxiously, knowing that a stop and a disconnect meant a bad reputation for him as a flyer. He came to the conclusion that the outside pair of guides would hold the crosshead and that the bolt was simply jarring loose. It grew steadily worse and finally dropped out; the top guide swung in toward the frame, but the engineer kept up his speed and kept his eye on the guide. The gibbs flew off the crosshead and the guides soon left the yoke to help ballast the track, and the engine ran on in this condition in the neighborhood of 100 miles, reaching a speed far in excess of 60 miles per hour.

The engineer was not censured by the officers—because he was successful. Suppose the other guide had let go? There might have been a—?—*Locomotive Engineer.*

An inventor has been at some pains—not much, however—to invent a self-feeding stoker, so called, for a locomotive. The stoker consists of a screw-conveyer working in a trough, or chute, which last leads from the tender to the fire-box. The screw-conveyer is worked by bevel gear, of course, and the coal is dumped into the fire-box just under the furnace door. In what way this constitutes a stoker it is hard to see. There are many things more needful in firing a locomotive than screwing coal into it—brains, for one thing—and as this machine has none, we don't think it will stoke much.

An Altoona paper, speaking of a big locomotive to be built for the Pennsylvania railroad in that town, says "it will be about three times as long as the average locomotive, will have two sets of driving wheels, one set being in front and one set of pony wheels being under the pilot. The wheels will be under trucks, so that the locomotive can go around curves. Two firemen will be necessary to supply the coal. The locomotive, it is alleged, will be powerful enough to haul a train of freight cars a mile in length."

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

HOW CAN WE IMPROVE THE MORAL STANDARD?

In reply to the question, How can we best promote a higher morality among men and women? that wise and able woman, Frances E. Willard, suggests four different methods:

(1) Co-education—the training with each other of those formed for each other, that their intellectual sympathy may be increased and their mutual estimate based on a more thorough knowledge than society affords; (2) the financial independence of women, that they may not be tempted to marry in order to secure support; (3) reform in dress that women may have better health, greater vigor, and thus enter upon home life under more hopeful conditions; and (4) equal suffrage, that women's influence and character may react upon government so as to secure just laws for home protection and heavier penalties against those who assail the physically weaker.

The opponents of the first, second and fourth of these propositions have always urged as an argument against them that they would have exactly the opposite effect. They have claimed that co-education would demoralize both boys and girls; that the entrance of women into all sorts of trades and occupations which take them away from home would increase immorality; and that the conferring of the right of suffrage would complete the general ruin. There is no knowledge so accurate as that gained by experience. Let us examine very briefly the facts in the case and form our opinions in accordance. It is now about a quarter of a century since women first began to engage in large numbers in industrial pursuits. The war precipitated a condition which otherwise would have been a process of slow evolution. The men were at the front fighting to preserve their homes, and the women were compelled to take their places in the various occupations. At the close of the long struggle many never returned, and the women were obliged to continue as bread-winners. Others had found a development of latent powers and tasted the sweets of independence, and for them there was no going back to the old life. About this time, late in the "sixties," the higher institutions of learning began to open their doors to women. This action was due partly to the advancement of public sentiment, and partly to a recognition of the fact that, if women

were to compete with men in the industries of the world, it was only fair that they should have the same advantages of preparation.

We have now had about twenty-five years' experience of co-education and co-labor. They have passed the theoretical stage and furnish a practical basis upon which to form an opinion. Is there a man or woman whose honest judgment would approve of returning to the old conditions? The unvarying testimony of the presidents of all colleges where there is full co-education is heartily in approval of it. If the system were a wrong one they would know more about it than any one else, and if it were in the slightest degree conducive to immorality they would be the first to condemn, as they are responsible for the young people under their charge. The two largest universities, which have been endowed within the present century, the Baptist, at Chicago, and Stanford, in California, offer the same opportunities to both sexes. Boys and girls have nobly stood the test, have mentally and morally improved under the stimulus of the companionship, and have formed a higher estimate of each other and a finer ideal of life than are possible to those who have known only the association with their own kind.

In the world of labor the results have been equally satisfactory. The number is small who will claim that immorality among women is, proportionately, on the increase. Women are held in greater respect to-day than ever before in the history of the world. That financial independence which comes from the ability to earn money has made them stronger and better. There is no longer any excuse for them to live a life of shame, nor are they driven to that other extremity where they are compelled to enter into a loveless marriage for the necessities of existence. Financial independence is conducive to morality among women, and indirectly this tends to promote morality among men. The third requisite, reform in dress, has not so direct an influence, but whatever produces health and comfort and strength is a prominent factor in developing good and useful women. The encouragement of economy in this direction would have a greater influence upon morality, for the love of dress is the root of much evil among women. But this tendency may be largely checked by cultivating the mind, and by encouraging girls to earn money in order that they may understand its value.

The fourth condition, equal suffrage, is as yet principally a matter of speculation. Wyoming, where women have full suffrage, was the most respectable and law-abiding of the territories, but this may be due to other causes. It is a significant fact, however, that after twenty years' experience,

her judges, legislators, and prominent citizens made woman suffrage a prominent feature of their constitution when they were admitted into statehood. They would not have done this had they not believed it to be a good thing for the people. Nobody will claim that there is more immorality among the women of Kansas than among those of other states, and yet they have been exercising municipal suffrage for a number of years. In the twenty-four states where women have school suffrage, the statistics do not show any increase of immorality. It is commonly believed that the very first use women would make of the ballot would be to provide and enforce more rigid penalties against immoral practices, and by these means protect and preserve their homes. The claim might be made with much reason that all other methods of promoting morality are but minor ones compared to that of conferring upon women the privilege of exercising the suffrage.

SUGGESTIONS TO OUR WRITERS.

We will have again to address a few words to our correspondents. First, be brief. We receive from thirty-five to fifty or sixty letters each month. At most we can have but ten or twelve pages in the *Magazine*, not always so many. When a correspondent sends us an article of a dozen pages it can be published only by holding over a certain number of other communications, which thus become old, and the writers dissatisfied. If you find your letter is growing too long, divide it up and make two out of it. Do not stretch it out and then send an apology. Please remember that we can use but one letter a month from a correspondent, and reserve your second for the next issue. In spite of all that has been said our writers still neglect to send their names. We receive a number of private letters every month with the request that we forward to certain contributors. This, of course, we cannot do unless we have the correct name and address. We will never publish these names or reveal them when requested not to do so.

We had to strike out the reference to the waste basket from twelve letters this month, but it is not worth while to waste any more time or space upon this subject. A writer asks if a letter written with a lead pencil will be accepted. Yes, if it is necessary, but we urge our correspondents to make their communications as legible as possible. Many of them, written with pencil or pale ink, or in a very fine hand, are ruinous to the eyes, as they have to be revised very carefully and every punctuation mark supplied, misspelled words corrected, etc. Of these errors many could be rectified by the writers themselves if they would read their letters over carefully before sending. We

will ask our correspondents to examine accurately all of the newspapers, magazines and books they read, and see if in any of them they find "&" in place of "and." One hundred times in every month's correspondence we have to change the former to the latter in preparing the letters for the compositor. There is, however, a marked improvement in the contributions. The suggestions that have been made from time to time have been conscientiously adopted by many of our number, and the results are most gratifying. We can only fully appreciate the excellence of the letters in our department when we compare them with those of other magazines of a like character.

Now is the time to write your Christmas articles and send your greetings for the New Year. Remember, when you date your letters, that they will not appear for two months, and put in only such things as will "keep" for that length of time.

A CORRESPONDENT wishes to know the author of the poem commencing—

Only a box secure and strong,
Rough and wooden and six feet long,
Lying there in the drizzling rain,
Waiting for an up-bound train.

H. C. P.—Single copies of the *Magazine* can be had by applying to E. V. Debs, and the price is 25 cents.

E. C. S., Los Angeles, Cal.—Your letter was forwarded as requested.

SOME REFLECTIONS.

Perhaps the topic of card playing has been about exhausted, but I want to answer "H. C. P.'s" letter in general, so must bring in the cards. We are told that we should refrain from placing aught in our brother's way, over which he may stumble or fall (bible), though common humanity should teach us that, and as we cannot judge of our brother's strength, we cannot tell whether he would be led to swear and get drunk or not, while playing cards. Hence, we cannot positively draw the line between right and wrong, for very often when we have drawn a line that to us seems perfection, we find that wrong crowds over the boundary line of right. We can hardly discriminate for ourselves, much less have we the positive assurance that the child we have taught the innocent pastime of playing cards and tried to put the good sense into, together with the teaching, will not fail to do our judgment credit when we have sent him with a "full hand" to pass under the shade of outside influences. Innocent card playing is like innocent tipping, begun in the home, which very often grows to be an elephant, for which we have no house-room. "H. C. P." says: "Prepare your children to fight the evils that be. Make them strong with knowledge. Give them an insight to the mysteries of evil." Now, don't you see, there is a blank right here that hinders discrimination? for in order to make her theory good, and teach the child the knowledge she evidently advises, she must bring each of the little evils he must encounter in after life into the home, or else she must teach only the card playing, and then take the child by the hand and lead him into each of the "bells" that he may gain the desired knowledge. For teaching him the one thing, cards, would not make him strong with wisdom, and by the time she has gone the rounds, leading a son or daughter by the hand,

if they have one spark of manhood or womanhood left they will feel like kicking somebody down the back stairs. But if the spark has gone out, they will be full fledged and equipped to hold the "trumps" in each little game. No, sir! I say never teach your children a thing that may be the means of marring an otherwise beautiful life. Tell them of the evils that exist, and teach them to shun each and all. Make them strong with the knowledge of purity and noble manhood. Then, if circumstances alter the current of your child's life and turn the stream awry, you will not feel the cornerstone was laid by your own hands.

Now listen. Again, how weak is discrimination. The advice is, make the child strong with knowledge of the evil it is to encounter. Now, as only one evil, the little game of cards, is supposed to be taught in the home, it is proper to assume the other little games must be taught elsewhere. And now in the July number of the *Magazine* she condones the habit she says some people have. Listen to the sentence. "Parents have sent their children into the streets to learn the most important of all lessons, which should be taught at home so reverently as to awaken only veneration in the mind." Now, let me ask you, good mothers and readers of the *Magazine*, is this sound doctrine? Did any one ever hear of the evils that exist to day, or any other day, being taught our children with so much reverence as to awaken only veneration in the mind? Veneration for what? Is it synonymous, does it hold fire with Christian principle; with the teachings of Christ, which she condemns? She says some people ride their hobby to death. Now I will venture to say, not one of you good, Christian mothers will acknowledge an inferior judgment. And I warrant not one of you has sent your children into the street to learn what "H. C. P." broadly asserts. True, we have what is termed "street Arabs," who are surely not made strong with the knowledge mothers are advised to teach with reverence. Waifs, who have no shelter but the street, poor outcasts who know nothing but the evils, until civilized and Christianized. Again she says, "The race is evolving out of all kinds of savagery and brutality, and into love, kindness and charity." Yes, as fast as the cobwebs of darkness are swept from the heathen brain, and the beautiful light of the Son of God is let in, cannibalism ceases, and children cease to be offered as sacrifices. And never in the world's history has the doctrine of the Bible advanced so rapidly as within the past few years, in heathen lands. The growth of the religion of Jesus Christ in Japan, in the past quarter of a century, has been simply wonderful.

But the "Republic of humanity" reminds me of the poem, "The Boy Stood on the Burning Deck," and we read, "But the father, where was he?" I deplore the dark blot that has dropped upon our own fair land, but what is the object of this very *Magazine* if it is not to humanize the antagonisms between man and man. Are not two thirds of our people being put on different racks of torture by the other third? Are not plunder, oppression, murder rife in the land? Now read any part of the Bible carefully and any intelligent person will see we stand very much to-day as people of olden times stood at different periods. Again, allow me to say, if any intelligent person will read the Bible carefully and thoughtfully, not take it second handed, he will see that evils were not allowed nor sanctioned. They existed, and as to day, the result was bloodshed. Always and everywhere, the people were admonished to desist in evil practices. Harsh means had to be used many times in order to bring the people to a sense of their sinful ways, just as to day the sword of justice will fall in God's own good time on the head of injustice and oppression. And now tell me, will the people who live two thousand years hence have a right to say that the evils that now exist were sanctioned, or that it was unjust to punish the unjust? And then, if you please, answer this: If the Ten Commandments were strictly taught and lived up to, would there be Pinkertons to-day? And as for our government being founded upon the Bible, read the assigned laws and by-laws, and see if they do not lie close beside the Ten Commandments. The difference, wicked hearts have and do pervert their purity.

Mention is made of our Presidents. True, we have had some with sound business heads whose names were not on the church roll. But why not mention Webster, Franklin and others in the category, who believed in the beautiful life and teachings of Christ, and believed that God's moral law is as binding as His physical law. And who doubts that there is a natural tie that binds an act to its consequence? "As we sow, so shall we reap." Is as old as the Bible, and as true, as has been acknowledged by all people in all ages.

And now we come especially to her letter in the July number, and I will answer in rotation:

1. Christ has been accused, but has he been convicted? No man stands guilty until he has been convicted. 2. "He that is an heretic, etc." Titus iii., 10. Paul's words to Titus instructing him how to govern his church and especially the ministers under his care, for he was a bishop or overseer of churches. An heretic was one who taught what he knew was contrary to the church, hence Paul says that he is condemned of himself. v. 11. It means thus simply that a teacher, as one applying to teach in the church known to be a heretic, should be rejected as a teacher. The chapter taken together makes this plain. 3. "If any man love not the Lord Jesus Christ let him be accursed." There is no such place in the Bible. It is Anathama Maranatha, i. e., devoted as set apart for judgment by the Lord at his coming. 4. "If thy hand, or thy foot, offend thee, cut it off, etc." Well understood by the Jews as by every one to-day as a figurative expression, meaning that it is better to suffer for the right than to do wrong. We believe that most people have been blessed with too good sense to mutilate themselves. And it is as foolish as it is monstrous to claim that Christ used the text except in its well understood sense. 5. "He that is unjust let him be unjust, etc." Rev. xxii., 11. This teaches a fact that every one admits, viz., that sinful habits lead to confirmation in evil, and Christ taught that there is a point in moral growth just as in physical, beyond which growth a change is impossible. 6. "All that ever came before me are thieves and robbers, etc." John x., 8. Christ is speaking of his Messiahship, and says that those false Christs, of whom there had been many, pretending to be the Christ for the sake of gain, were thieves and robbers, which history shows to be true. But he did not speak this of all the people. 7. "He called people vipers, etc." He spoke of their cruel crafty and unholy designs just as speakers and writers of to-day speak of bad men. That these titles were not unmerited is shown in their subsequent treatment of Christ and others. 8. "Reference is made to David as putting his enemies under saws and harrows of iron, etc." Every intelligent person knows that this simply means that David made slaves of his prisoners as the customs of the times demanded and put them to work in saw pits and in brick kilns. But it is utterly false to impute such feeling to Christ who taught, love your enemies and do good to them that hate you, and in all His life not one act of His can be quoted that is not in harmony with that commandment. On the cross He prayed "Father forgive them for they know not what they do." 9. "If any one preach any other gospel let him be accursed, etc." It does not say if any man preach Pythagoras, Buddha, etc., let him be accursed. But if any man in a Christian church preach as Christian doctrine any other gospel, let him be anathama, i. e., forbidden under pain of excommunication not to so teach. Instead of Christ commanding the people of other faiths to be accursed, He commanded His church to preach the gospel to them and offer to every creature its benefits. 10. "Whoever will deny me before men him will I deny, etc." Christ does not show malice or revenge, but simply stated a necessary result of an attitude of defiance toward His teaching. Christ could not be true and report to His Father that men who had rejected Him had accepted Him. He will simply report the attitude which men assume toward Him. 11. "I came not to send peace on earth but a sword, etc." It was not Christ's mission to send peace by compromising with wrong, but by overcoming it. His very teaching of justice and repentance and godliness would awaken hostility and strife as it has always done. Christ knew this and warned those who would be

His disciples that if they lived a life of devotion to God that they would be persecuted, that even their own relatives would turn against them. This principle was in the world before Christ spoke it. The antagonism between good and evil is as old as the world, and the simple fact that Christ stated it to His followers does not make him responsible for its existence or for its operations. To sum up with I will repeat Sam Jones. Some one asked him if he believed in a hell, saying, "I do not." Jones answered: "You poor little fellow, you won't be scratching in hell fifteen minutes before you will find out there is one." With great regard for your good book and work, I will say God save all railroad men and all others, and women too.

Mrs. L. Wells.

KANSAS CITY, MO., Sept. 15, 1891.

Editor Woman's Department:

Almost every month for more than eight years I have thought that I would like something for the Woman's Department, and with one exception I have allowed other things to occupy my time and have postponed it till some other date. But now, after reading the September *Magazine*, I will make the attempt.

I am glad to see such an article as "Women before the Law," and wish that all good and able writers would follow Mrs. Harper's example till public opinion demands that women shall have justice. I assure you that I am not one who "has all the rights she wants." Perhaps politics and religion should not be discussed by the correspondents of this Department, but I shall venture to say that it makes me sad to see such letters as the one from a "Fireman's Wife," of Radford, Va. Do not let me confound a Christian with a professing Christian. Surely what we can see in such daily association as that of husband and wife, ought to be much better evidence of a good heart than all the professions one could make in a life time. Does not Christ himself say, "By their fruits ye shall know them?"

I have often wondered why so few of the *Magazine* sisters write anything of their children. I think we might profitably exchange ideas as to their care, clothing, etc. As to correcting them, I think every mother should be her own judge and try to do what seems best under the circumstances.

Now that we have been told so many good ways for married people to manage each other—which, if condensed, would only mean: First; Love each other truly. Second; Try to do right and use common sense—I wish some one would tell how to manage a pocket book so that a little money would buy a great many things.

I will mention a few things that I find helps in that direction, although I have not achieved complete success. In the first place I think it pays to be careful in little things. Very few women are deliberately wasteful, but a little here and a little there, makes a great deal after awhile. Some months ago I provided myself with scales and a measure and began to measure and weigh all the provisions we use. I assure you I was surprised when I had a chance to see how many pecks and pounds we have paid for which we never received. I think it pays to buy a good quality of every thing, and in as large lots as is consistent. Always pay cash if possible. Of course, when wages are low it may be hard to do, but usually, when people have good health, it can be done by a little careful management, and I am sure, after trying, you will find it the best way. To be sure, if you have to ask your husband every time you spend a quarter you don't have a chance to manage, but a sensible couple can make an estimate of what they can afford for each different class of expenses and divide their income so that each can use a part to the best advantage.

There are many ways to practice economy in buying clothing. One way is to buy only what you know will be suitable for the time and place in which it is to be used. I think it pays for a poor man's wife, if she has children, to wear flannel dresses as much as she can. A good flannel makes a pretty suit if neatly fitted and made, and then just think of how it can be used after it is too shabby for a dress. It can be washed and turned and made into

little dresses and skirts, with, perhaps, a little bright trimming, or, if your children are boys, it makes splendid shirt waists for winter, and there will be some left for underwear. Maybe you will say "buy knit underwear for my boy, it looks so much better." A skein of scarlet yarn and a few minutes spent with knitting needles, and you can have the wrists as handsome as any you can buy and your boy will be just as warm and just as jolly, and the money that would buy ready made waists and undershirts will go a long way toward the new dress that will make you look neat and attractive.

Azeliah asks for recipes, and I have a good one for pickles. It may be too late for her to use it this year, but it will be good next time. Wash, and chop fine, eight pounds green tomatoes; add four pounds brown sugar; cook three hours; add one quart vinegar, and cinnamon and cloves to taste; let boil fifteen minutes longer. They will keep without sealing. When putting them, or anything that needs so much cooking, into the kettle, add four or five large glass marbles. The heat will keep them rolling and prevent burning and save having to stir constantly. If put in after the liquid is hot, they might break. I am not a fireman's wife.

Lucy Lynn.

[If you have read the *Magazine* eight years you deserve a corner in the Woman's Department.—Ed.]

FARNHAM, August 9, 1891.

Editor Woman's Department:

I suppose some of your readers on looking at the heading of this letter will say "Where in the wide world is Farnham?" So I think to begin with, I would better tell them that it is a small town in Canada about forty miles east of Montreal. It is quite a railway centre, and has the C. P. R. shops for the Atlantic Division located here. My brother is a member of the B. of L. F. lodge here and through him I receive the *Magazine*, which I think very interesting reading.

Some one suggested that we should exchange ideas in fancy work. I hope the suggestion will be acted upon.

I will tell you how I made a pretty cover for a small table. The material for the cover consisted of fine grey ladies' cloth, one and a half yards square, hemmed all around and decorated in the following manner: With a piece of chalk I drew the outline of a vine all around about two inches from the edge. Then from a piece of dark green cloth I cut ivy leaves of different sizes, using real English ivy leaves for patterns. These I placed at unequal distances along each side of the vine, with large clusters in the corners. I tacked them all on first and then fastened each edge down by button-hole stitching all around with zephyr the same shade as the leaves. Worked the vine with dark brown Berlin wool over and over stitch. Crimson cloth would be pretty in place of the grey.

My letter is already much longer than I intended so I will close with best wishes to the *Magazine*.

Maud Brown.

CHARLESTON, MASS., August 1, 1891.

Editor Woman's Department:

Noticing a letter in the July number from Pochontas, signed "Mary," the management of husbands, I cannot withstand the opportunity for a few remarks.

In the May number the editor remarks: "The waste basket is waiting for all future letters upon the management of husbands. No further information is needed. Give the poor man a period of repose." But in "Mary's" letter there was so much good the editor made an exception.

Her letter was indeed a commendable one and a worthy exception. She must be a noble and lovable woman to be possessed of such a nature. Any man who possesses such a woman for a wife may thank God. I know I should were I married, and I would endeavor to do all in my power to make "home" what it should be.

C. H. Hendricks.

ABBOTTSFORD, WIS., Sept. 26, 1891.

Editor Woman's Department:

Perhaps I have been a little slow in finding passages Mr. R. claimed could not be found in the *Sacred Book*, but here they are: Let the oppressed go free, break every yoke.—Isaiah lviii, 6. Be ye not the servants of men.—1 Cor. vii, 23. Could anything be plainer? Yet, I dare say, that it is an accident that room was given such utterances, for it is a well established fact that the Bible is no friend to woman and is the original cause of woman's subjection to man, and all the ills thereto. Yet she clings to and defends it with more earnestness and zeal than the average man. The Gods, the Angels, too, are all *A's*. We see the tenth commandment addressed to man; woman only classed in with his live stock, the ox, ass, etc. The ignorance of the times in which this was written should be considered. Might was right in those days. The laws were made by man for the benefit of man, and not for the protection of woman. It was about the third century when they decided by vote to call it a Divine Inspiration. If Paul's teachings had been heeded the church would have been dispensed with long years ago, for it is woman's activity (not her silence) that is instrumental in keeping it alive. In no country in the world had women less liberty than in the Holy Land, and no monarch held in less esteem the rights of wives and mothers, than Jehovah of the Jews. The position of woman was far better in Egypt than in Palestine. Before Moses was born women had sat upon the Egyptian throne. Upon the ancient tombs the husband and wife are represented as seated in the same chair. In Persia women were priests, and in some of the oldest civilizations they were revered on earth and worshipped afterwards as goddesses, in heaven. At the advent of Christianity, in all pagan countries women officiated at the sacred altars. Under the domination of the Christian Church, woman became the merest slave for at least a thousand years. Until about the sixth century she was considered a soulless being, when it was decided by vote that she had a soul. According to the old testament woman had to ask pardon and had to be purified for having borne sons and daughters. This custom was in vogue when I was a child.

The doctrine that the woman is the slave or serf of man, whether it comes from heaven or hell, from God or demon, is savagery, pure and simple. The condition of woman has improved just in proportion as man has lost confidence in the Bible. The time was when its geology, astronomy, and modern history were thought to be inspired, but that time has passed. There was a time when its morality satisfied the men who ruled the world of thought, but that time has passed. The Greenlanders have a story that relates the creation of woman from man's thumb. There is wisdom in this, even if it be regarded as a myth. The fact that woman has always been under man's thumb, shows some relation.

Women should have equal rights with man; but I disagree with "Schoolma'am" in regard to all women voting for prohibition. It is not long since I, too, believed that. At present I agree with ex-Rev. H. O. Pentecost, "that the liquor traffic is bad, but to stick your nose in other people's affairs and dictate to them what to eat, drink, or wear, is making a bad matter worse." Ellen Battelle Delrick gives similar reasons for not endorsing prohibition, in her excellent article in the *Woman's Journal*. Compulsion is not what we want; we should deal with things as they are, not as we would have them. It is not *force* but education and evolution that will bring about the desired result.

Elsie objects to human reason on the Bible passages I mentioned, but commends its use on her own selection; rather inconsistent. If we are not to exercise reason why not read the Bible to the horse? Christians are never willing to have the Bible tested by reason, justice or humanity. Knowledge and wisdom are the forbidden fruits of the garden of the gods. Orthodoxy is opposed to the teaching of science—see the lives of Galileo, Bruno and Copernicus. A divine inspiration could not be so full of contradictions, falsehoods and nonsense. There is nothing in the Book that is impossible or beyond human invention, but it is an utter impossibility for human

power to invent or produce such a beautiful world as we live in, therefore, it is reasonable to believe it the true book of creation.

As for not having the peace and love of Christ's holy (?) gospel, the love, peace and comfort that careful investigation has brought me far exceeds it, nor did it take the wealth of the Orient to bring it. I speak from experience, having been a devoted orthodox Christian the greater part of my life. "Seek and ye shall find." "Prove all things and hold fast to that which is true," are precepts that induced me to search, and I find, using a Bible phrase, that "the kingdom of heaven is within you." To cultivate a love for the good, pure and true, to do right for right's sake only, is far superior to the old way, where reward and punishment are used to lure you on. "Many are called but few are chosen." Now, if nine-tenths of the race are going to suffer endless pain, I do not see how those who are to constitute a large part of that number and are to be eternally lost, can call it peace and love, for it should not be forgotten that the vast majority of those who are going to suffer the wrath of God are professed Christians. "Many will say unto me in that day, Lord, Lord, have we not prophesied in Thy name, and in Thy name done many wonderful works?" and then will I profess unto them, "I never knew you, depart from me ye that work iniquity."

How can one person judge another in matters wholly unknown to them; but is not that characteristic of the Christian? We see the different denominations, each believing and proving from the Bible, theirs the only right way. In regard to Christ's ignominious death; an all-wise, all-powerful God would not let things get into such a condition as to require the murder of His only Son. It seems strange that any person can cherish the thought for a moment that the Infinite Father would require a sacrificial offering for the trifling act of eating a little fruit, and require no atonement for the infinitely greater sin of murdering "His only begotten Son." If there is any virtue in the atonement, in the way of expiating a crime, then there is now another atonement demanded by the principles of justice to cancel the sin committed by the first atonement. It would be murder after murder, atonement after atonement, etc. The doctrine of the atonement has led people to believe they can pass through life committing all sorts of crimes, and at last, when they find themselves about to die, can call upon Jesus and find eternal life? How many murderers have stepped from the gallows into heaven to join innocent children, pure maids and matrons, none of whom would associate with the fiends were they here on earth, providing the governor had issued a pardon.

To ascertain the truth of a story we usually hear both sides. The truth alone will stand the test, and abide forever. Elsie says the "truth of the Lord" abide forever. Will she please tell us what is the truth of the Lord?

H. C. P.

TERRE HAUTE, IND., Aug. 14, 1891.

Editor Woman's Department:

Through the kindness of a dear friend, I have just had the pleasure of reading the August number of your valuable and instructive *Magazine*, but have felt rather timid about contributing a letter, not being directly connected with any one on the road. I read with pleasure the letter of Marie F. W., of Seattle, Washington, and only hope her letter next month will contain some remarks on short hand, as I always like to get new ideas in my line of work. I have often wondered why there are not more contributions from this place as there are so many who I know, could send in interesting matter. I enjoy looking over the receipts for cake and anything in the cooking line, but must confess I have not been practicing on that so much as on the typewriter. I should be pleased to see more ideas expressed on fancy work in these columns, but as I am a stranger among you, I will not express my opinion this time for fear my letter will be too long. With best wishes for the noble order of B. of L. F., I remain a Fireman's Friend.

Tad.

PERHAPS.

We loved each other? Well, perhaps—
We both were young and life was new;
I had a score of other chaps
And he, a girl or two.

But, somehow, they as nothing seemed
When we two were together;
We sang together, sighed and dreamed,
We hoped, and wondered whether

The future held a gem for each
Of fame and worldly dower.
If fortune's pinnacle we'd reach;
And oft he whispered, "How e'er

"The world may serve me, my sole prayer
Is that you may fare better.
Tho' all for you, I'd do and dare,
I still should be your debtor.

"You taught me life's one secret deep,
The aim and end of living—
That love, received, is vain and cheap,
More blessed far, is giving."

Alas, I taught too much you see;
That love's its own requital,
That hearts are bound, tho' hands be free,
And faith alone, is vital.

He never said, "Make yours my name;
Take all I have to offer!"
His heart was mine, his hope, his fame;
What mattered me his coffer?

We had not time to pause just then,
And throw aside ambition,
I hoped to wield a mighty pen,
He, fame and high position.

Then, tho' we felt, no word we spoke,
To knit our lives forever.
So time and change the old ties broke,
As ties on earth must sever.

Who knows, but over there we'll meet,
Beyond the stormy weather,
To spend a long, unbroken, sweet
Eternity together.

Volo T. Tacere.

SEATTLE, WASHINGTON, Aug. 6, 1891.

Editor Woman's Department:

If W. B. Richmond's letters were a little more consistent they would be more readable. If he would read them over he would see that their inconsistencies are so numerous it would take too much space to mention them. I suggest that he try a change of subject and of style.

When my brother read "Merl's" letter he said, very emphatically, "Well, that is the kind of a girl to have." I should like very much to have her for a neighbor.

Sella, in the July number, says that she does not think that the majority of women believe in "Woman Suffrage." I think she is mistaken. From all I have read and heard, I judge that most women are in favor of it and that it is mainly those who have given it but little thought, and who, perhaps, have not really understood what it means, who do not want it; and as J. S. says, "The education of these ignorant sisters shall be the first duty of the enlightened class." Please don't think I know all about it. I have read a great deal both for and against Woman Suffrage, and am decidedly for it myself, but need quite as much enlightenment as any one and shall be glad to get it.

The idea of women using their influence "to direct men in the right direction" is a very charming one to talk about, but practically, it does not seem to amount to much. The laws regarding property, the disposition of children, etc., in our States were made by men and these men had mothers, sisters and wives. Yet, if you read many of those laws, you will find it impossible to think that women's influence had anything to do with the direct-

ing of those men; and they were probably as much influenced as any man ever is. To have just laws we must have "Woman Suffrage."

Will Sella please tell me what harm has been done by women's crusades? I can think of nothing but good. The appointment of police matrons in our eastern and western cities was accomplished principally by a woman's crusade; and were that all that they have done, it should be sufficient to make us thankful for the women who are courageous enough to carry on these "crusades."

Sella says that the moderate drinkers "can do more to promote the temperance cause than those who go to extremes," and that "the way to reform drunkards is through the religion of Jesus Christ." But they will not ask for it. It must be taken to them, and when they have been brought to believe and to want to live pure and useful lives they should be helped, especially by Christians, to resist temptation. How much help will a "moderate drinker" be to a man cursed with a craving for intoxicating liquor? "It is good neither to eat flesh, nor to drink wine, nor anything whereby thy brother stumbleth or is offended, or is made weak." "Wherefore if meat make my brother to offend, I will eat no flesh while the world standeth, lest I make my brother to offend." I can't believe that the "moderate drinkers" are going to do much to help rid the world of the terrible misery and crime caused by strong drink. There are several other things that I want to say, but I am afraid I won't have stamps enough to send it and that you will refuse to look at so lengthy an epistle.

I am making a scrap book, or rather, two—one to paste scraps in and the other to copy them in when I can't cut them out. If Mrs. Shannon has any spare scraps I should be very glad to exchange. I am glad she likes the *Ladies' Home Journal*. It is a very useful magazine.

J. S. would enjoy Mrs. Kate Woods' article on "What Women's Clubs have done for Women." In the August *Chautauquan*. I hope she will read it if she has not already done so. *Auf Wiedersehen*.

Yours, very truly,

Marie F.

[As this is a new correspondent she has not yet learned that the Woman's Department takes an advanced position on all questions pertaining to women. She has by this time probably read an editorial on this subject in last month's *Magazine* and will understand our sentiments.—Ed.]

NEW ORLEANS, LA., August 23, 1891.

Editor Woman's Department:

If at first you don't succeed, try, try again. Well, that is what I have been doing for a year, trying to pick up courage and ask for admittance into the Woman's Department, as I have as much interest in their department as our own. I have read Shandy Maguire's poem, How to manage a wife, and let me tell friend Shandy it is a hard job for some wives to manage their husbands and try to get enough from them to make both ends meet from month to month, though they command a salary of from \$125 per month up. They may and may not have families. It matters not to them after they get installed in a poker or crap game, commonly known as dice game, they forget every one, and as the saying is, lose their heads. I would advise young men before you take some innocent young lady from a happy home, test your love and be sure you have done with that love for the gambling table and bar room. If you don't, your future wife may go from a happy home to one she will soon learn is anything but a bed of roses, and such wives nine times out of ten fill an early grave, from a broken heart. This is every day life and I have known and know of such cases which I am sorry to say, are worse than I have pictured. Remember your wife is not a slave or servant. She is your equal, if not your superior. Do not leave home angry, for any trip is liable to lead to and end in eternity. Kiss her good bye, for I, at least, think my wife in other words is my sweet heart forever.

Shannon Grove.

MURPHYSBORO, ILL., Sept. 20, 1891.

Editor Woman's Department:

I wish to say a few words about "spot cash," it means independence.

Suppose you are running an account with the butcher. Don't you often have to take tough steak or do without, because you have not the money to go elsewhere? If the weight is short you do not like to say anything, because you are buying on a credit. And are you not often tempted to buy more than you would if you paid spot cash? Don't you, in one sense, belong to the butcher? How about the grocery store? Suppose you want a nickel's worth of tomatoes. He is just out. He reaches up and takes down a can. There may be fresh tomatoes at the next grocery, but you have no money. Instead of five cents you pay ten or twelve and a half for tomatoes. The same applies to dry goods. Smith has shoes for \$2.50. You trade with Jones; he is out of \$2.50 shoes, but has an excellent shoe at \$2.75, only a quarter more and not to be paid for until pay day, and if you lack a dollar or two he will let it run over. So you pay \$2.75 for a \$2.50 shoe, because you have not got spot cash. You don't feel like a free person. You are not free. Try to move out of the State while you are in debt and you will feel the hand of the law about your throat. Your creditor watches you though you may be ever so honest. He knows about what you can afford to buy each month. Get beyond this and you will find he is out of a good many things you may want. I once heard a merchant ask a lady if she couldn't curtail her expenses until she caught up.

I have heard both men and women say they didn't like the weekly pay. I always think, to put it mild, that it is for the want of common sense. I wouldn't object to getting paid every day for my day's work, though, with proper management, once a week is often enough. I like to have money in my pocket. It is better than soothing syrup to promote sleep. It is better for nerves than the whole catalogue of patent medicines. The man or woman out of debt, with money in the pocket, honestly earned, with good health and sound morals, is a king or queen. Nobody owns such men and women. If there is one thing more than all else I would drill into my children, it is this, "Keep out of debt."

Peblee.

[Every word of this is gospel truth. Debt is a millstone about the neck.—Ed.]

GOODLAND, KANSAS, July 26, 1891.

Editor Woman's Department:

Dear Mrs. Harper: Are we obliged to write with a pen? How often I feel like writing to the *Magazine*. If I could just take my pencil and tablet out in the shade to write, for that busy-body baby of ours is always possessed to get hold of the ink bottle.

I promised to "talk about my neighbors" some time ago, but have been too busy to do so. So now, while George is taking his annual bath, and the boarders are all busy reading the daily papers, I will use my spare moments in the "charmed circle."

George always poses as a model man in neatness as well as in every thing else, but I rather "give him away" when he calls out, "Annie, where is the bath towel?" and I answer "On the nail in the closet, where you hung it last August." Now here is a problem I "spec" I had better send to the Mechanical Department, but maybe some other bather can solve it for me. George says by bathing a month earlier each year, in twelve years he will have bathed thirteen times, but I doubt it.

They say the way to some men's hearts lies through their stomachs, and I wonder if a preacher's piety is not on a line with these men's hearts. For once let a preacher "catch on" to where there is a good table set, and he will be very much interested in the "soul's welfare" of that said family. And how closely one follows the injunction to "watch and pray," but he has need to watch, when a shepherd takes the "ring leader" of Satan's flock and puts him in as "bell sheep" for his own. I have one neighbor that it is a pleasure to see hang out her washing. I have often watched her—not through

the key-hole in the door, but through a convenient hole in the coal shed, for every movement counts. All are "hung by their fellows," or all of a kind in a place and look so white, and the big wash is put out in such a short space of time; but likely as not she is up and at her work while I am in bed. And one morning I saw another neighbor putting old doors and boards down, and I wondered if she were going to give a "bowery dance," and I did not see how she could for there was no bower. Presently she came out with some dirty carpet and proceeded to scrub it with an old broom and hot soap suds. After it was well scrubbed she lugged it to the hydrant and rinsed it. I say lugged for she was too slight to carry it. "Well," I thought, "you have got a bigger job on hand than you are man for." But "law me," just then that great big hubby of hers hove in sight, and, will you believe it, he, a fireman, actually took hold and helped his wife wash, no, rinse and hang out the carpet, for I overheard him say, "I'll rinse and tote it for you, but I'll be durned if I will scrub it." You see he draws the line at scrubbing—but he doesn't draw it from a set post to a set post to hang clothes on. But such is life and such is western Kansas.

I wonder if J. W., of Louisville, Ky., in the June number, really had to undergo that spell of hysteria on account of reading so much in the *Magazine* about the men? But as to their having it all their own way—well, not as far as I am concerned. As to the Adamless Eden and having it all to ourselves, we could but would we?

"Shandy," I think you get more than your share of the praise, so I will not tell you with what delight I found your "pictor" in an old B. L. E. *Journal* of 1888, the other day. It now graces (?) the organ and later will be put in the album. Yes, I love your writings very much and sincerely hope if you ever come to Goodland, the great metropolis of the West, you will not fail to make us a call, for our "latch string hangs outside the door," or would if the screen was not hung wrong side out.

Mrs. Harper, you deserve a free pass to—well, I'll say the World's Fair, for that article of yours on "The Financial Value of House work."

I must stop as it is about supper time, but "the half I know has not been told." Keith, have you discovered who the correspondent from G—— was?

Phillipa.

COLUMBUS, OHIO, Sept. 1, 1891.

Editor Woman's Department:

A few months ago some lady asked for a recipe for yeast cakes. I have waited to see if any person would answer it, but no one seemed to pay any attention. Here is a good receipt: Boil six common sized potatoes in one quart of strong hop tea; when soft mash them as fine as you can; when lukewarm add one cup of sponge (that has been set with dry yeast), one half cup of sugar, one tablespoonful of ginger, one half cup of yeast (dry). Set this sponge in a warm place to rise. When light stir in enough corn meal to make it quite thick. Let it rise till real light, then mold and cut (or crumble, as it dries faster). Lay in a shady place to dry. Do not put in the sun; for the sun draws the strength out of it.

Here is a receipt for piccalilli: One bushel of green tomatoes ground or chopped, sprinkle with a teacupful of salt and press twenty four hours; then add one or two large heads of cabbage chopped fine, ten red peppers seeded and chopped, five cents worth of grated horse radish, one half pound of white mustard seed, two teaspoonfuls black pepper, two ounces of mace, three pounds white coffee sugar, six quarts of best cider vinegar. Mix well together. Keep in a cool place. Do not cook it. You can add two tablespoonfuls of cinnamon, cloves and nutmeg if you like. I always do. Here is a cooky receipt: One egg, one and a half cups of sugar, three-fourths cup of lard, one half cup sour milk, one spoonful of soda, one nutmeg. Don't make it very stiff. I have tried all these receipts and find them good. I have more just as good, but will wait until some of the sisters try these. With best wishes, I remain

Yours truly,
Altonia J. L.

FLOWERS.

In the balm of mountain breeze,
In the shade of forest trees,
In the calm of sunny seas,
Will flowers gladly bloom;
Amid beauty, youth and pride,
Where the joys of hope abide,
Where the glad sunbeams glide,
They shrink away from gloom.

But around the silent dead,
In that mystic silence dread,
Joy is hushed and hope is fled,
It is needless to illumine;
And the blossoms fair and gay
Ne'er can blend in death's decay,
Ne'er can gild the lifeless clay,
Nor clear the lowly doom.

As the husks without the grain,
Left to wither on the plain
In the cold and wintry rain,
Are the ashes of the tomb;
But for shadows and the morn
Were the flowers only born,
And their beauties ne'er adorn
Where the deepest shadows loom.

Katie, a Fireman's Sister.

SAN JOSE, CAL., July 30, 1891.

CONCORD, N. H., Sept. 1, 1891.

Editor Woman's Department:

As I have never seen anything in your valuable *Magazine* about the Granite State Lodge, No. 306, I thought I would write you a few words in its favor. It is in a very prosperous condition, with a membership of seventy-five.

I will also tell you a little about the beautiful city in which I live. It is situated on the western bank of the Merrimack river. The population numbers about 17,000. There are several fine buildings, among them the State House and the Government building, built of our famous Concord granite, the new Hampshire asylum for the insane, the surrounding grounds, comprising one hundred and twenty-five acres.

The New Hampshire State Prison is located about one and one half miles above the city proper, and is one of the finest establishments, from a sanitary point of view, to be found.

A magnificent City Hospital, of brick and granite, the munificent gift of Hon. Geo. A. Pillsbury, of Minneapolis, Minn., a former resident and ex-Mayor of this city, has just been completed.

St. Paul's School, almost world wide in its fame, is located about three miles west of the city. Magnificent buildings, private dwellings and a chapel, comprise quite a settlement. This school receives pupils from all parts of the United States. There are in all, thirteen churches, many of them very fine structures.

Among the manufactories are the famous Abbott Downing Company, builders of all kinds of coaches and carriages, founded in 1813; the James R. Hill Harness Company, manufacturers of the widely known "Concord harness"; the Page Belting Company, a flourishing stock company, with a large trade at home and abroad, and the Concord Granite Company, noted for the quality of its stock and excellence of its work.

The city is accessible to nearly all parts by an electric railway. Two railroads center here, the Concord & Montreal and the Boston & Maine.

A trip on the C. & M. R. R. takes us to the famous White Mountains, a distance of about 130 miles, the characteristics of which are lofty peaks, deep gorges, frightful chasms, beautiful lakes and silvery cascades, earning for our State its name, "Switzerland of America." Mt. Washington, the highest peak, is 6,285 feet above the sea level. It is supplied with a good carriage road and a cog railway. In some places the rise is at the rate of 1,900 feet to the mile. Several trains ascend the mountain daily and return. Leaving this, we continue our journey toward the famous Crawford Notch, a narrow passage between two huge cliffs of the White Mountains, about two miles in length, and in one place barely wide enough for a carriage road.

Among the points of interest in this vicinity are the Glen Ellis Falls and the old Willy House, when in 1838, in consequence of a furious storm, a mountain slide descended, burying an entire family, consisting of nine persons who rushed from the house for safety. From here we proceed to North Conway, catching glimpses of the beautiful Socco river, which has its source in the White Mountains.

Let my letter prove too long. I will leave further description of scenery to able penmen. Wishing access to the *Magazine*, I remain,

A Fireman's Wife.

[An interesting letter.—Ed.]

GRAND RAPIDS, MICH., Aug. 9, 1891.

Editor Woman's Department:

Silver Star Lodge having received circulars sent out from the Railway Employes' Home located in a beautiful suburb of Chicago, asking aid for the Home and subscriptions for the *Journal* published in the interest of the Home, I decided to visit the institution in order to learn just what its proper needs and value might really be. I was seconded in my decision by the sympathetic members of an auxiliary, who thought we ought to aid the project if it was a worthy one and honest in its promise. On arriving in Chicago I called at the city office and was received by Mr. Jay B. Spencer, one of the directors, and Mr. Mann, who assisted by his cheerful little wife, so cleverly manages the Home. Mr. Mann escorted me to the Home, which is located fourteen miles from Chicago, in the suburb of Waukegan, on the C. & N. W. Railway. After partaking of a wholesome dinner, myself and daughter, who accompanied me, were shown the beautiful grounds and buildings, the latter of course being limited in capacity, while waiting for the various railroad technicians to recognize and aid them in their philanthropic work. As yet the capacity of the Home has not been over-taxed. It is to be most devoutly hoped that an institution which has for its object the providing and caring for of the helpless and bestowing upon them the comforts of a pleasant home, and the preparing of the crippled for the earning of an honest livelihood, will meet with a generous response for which our fraternal organizations are noted.

Will not each of our auxiliaries place some good deed to its credit by contributing, if ever a little, to the comfort of our unfortunate brothers who find this Home their only one?

On taking pains to ascertain the actual condition of the Home I found there is a grand opportunity for woman's work and love to manifest itself. I think of the pleasant sensation caused by feeling good, soft, warm bed comfort tucked around one's suffering body in the cold winter night and the added pleasure of knowing that it was the loving hearts of fraternal sisters which bestowed the luxury. Then, too, we women all know what an irritation is found in sitting down to a meal where a table is made attractive by a pretty variety of useful wares. Sisters, don't hesitate because you do not know what is most needed. I assure you every article which contributes to make a home comfortable and attractive will be gladly received, and each member of all the R. R. Brotherhoods I say, subscribe for the *Home Journal*. The price of sixty cents a year will be missed by none, it will add much in this good work. The managers assured me that ten thousand subscribers to the *Journal* would make the Home self-sustaining. Can not that number be obtained from our hundred thousand men who are members of different railroad organizations? The motto of the Home, which is, "Remember us in your prosperity and we will remember you in your adversity," is a strong appeal of itself.

Any members of either of the R. R. Brotherhoods or their families may feel assured that they will be met with the same genial hospitality which was accorded me, if they will do themselves and the Home a favor to visit it.

I write hoping to awaken a substantial interest among the R. R. organizations for the Empire Home.

Mrs. M. E. Bell.

ELLENBURG, WASH., August 14, 1891.

Editor Woman's Department:

What can I say that will be of interest to the B. of L. F. boys, or is there just a little place in your journal for a mother, whose boys are all railroaders? Once they were fine rosy little fellows playing at my feet. To-day! how much gladness and deep sorrow it brings forth! One, the eldest born sleeps sweetly beneath the daisies in his "loved magnolia home" in the "soft, sunny South," the other four are separated from me many, many miles. They are still spared to me and I hope may be an honor to me, that I may live to bless the day they were born. One of my darlings used to be a fireman too and belonged to the B. of L. F., but now he is a B. of L. E. man and I hear from him every week. The youngest belongs to the order of the B. of R. T. and lovingly sends me each month the *Firemen's Magazine* from the "City of the Angels."

There is not a day but that we hear of some poor railroad boy who was killed at such and such a place. How sad to be ushered into eternity without a moment's warning! How I sympathize with the mothers of these dear boys.

I hope God will bless all the band of railroad boys not only my own but all of them. I lost a dear laughter here nearly two years ago and while our home has such a dark shadow thrown o'er it, I try to think that behind the darkest cloud the starlight often lurks—through showers the sunbeams fall. For God loves all His works, and has left His hope with us all.

Mount Baker Lodge, No. 412, at this place I hear is in a flourishing condition. I know several of the boys and think them a fine lot of fellows. It is named for Mt. Baker in Whatcom county, one of the highest peaks of the Cascade mountains.

Ellensburg is a city in Kittitas county on Yakima river, near the centre of the state. The site is 1,510 feet above the sea level. Well, as I do not wish to monopolize the journal I will say good-bye to all and many good wishes for the B. of L. F. and the Woman's Department. If accepted will write again and make one of the golden circle. Success to you all is the wish of

M. E. Clune.

[We are always pleased to hear from the mothers of the "boys."—Ed.]

THE DALLES, OREGON, August 8, 1891.

Editor Woman's Department:

In reading over the many interesting letters in the August number of the *Magazine*, the one signed "Pine," asking what shall be done with our tramps particularly attracted my attention. Now when these poor wanderers apply at our doors for food and shelter, let us stop and think before turning them away and ask ourselves the question, why they are tramps and what are the causes that produce this mass of wanderers. A great many of these poor beings have been tramps from childhood up, and owe their misfortune to the negligence of their parents in failing to look after their future welfare when young and providing them with trade or some other means by which they might be self-supporting. Now after they are thrown out upon this world to look after themselves, they find they are without money and friends and no visible means of support, you might ask the question, why don't they go to work? This question is very easily answered. Ask some unskilled laborer to relate to you his experience in looking for work, and you will see very readily what a difficult matter it is getting to be in this over-crowded country of ours for his class of people to get work.

And thus it is, this poor unfortunate of ours accepts the inevitable, collects all of his earthly possessions, puts them together in a red bandana handkerchief and starts out upon the road that leads to a great unknown. And on the other hand there is the one who has been reared in a luxurious home, and after reaching years of maturity embarked in business with as bright prospects and inducements as this world offers, but who after a few years meets with a reverse in fortune and unexpectedly finds himself minus money and friends, and now it is he

realizes that money makes the man; he finds himself thrown upon this cold world without the necessities of life and no means of obtaining them, unless he can secure work, and if he is fortunate enough to do this the wages will be so small that none can live upon them but the paupers who have been reared on foreign shores amid poverty and degradation and imported to this country by the monopolies and corporations which we have fostered and maintained on our own shores. This beautiful America of ours is being gradually overrun by this class of humanity who will work and can subsist upon a mere pittance, and who are being brought here for the express purpose of reducing wages, and are nothing but mere tools in the hands of those who are using them to undermine the labor organizations of this country. Now is it any wonder that this citizen of ours, who has tasted the sweets of life, prefers to roam the highways of this country and subsist upon the charity of others rather than compete with this degraded element of workers? It occurs to me that national pride alone would be a sufficient excuse for him becoming a tramp instead of a "scab," which would be his only alternative.

If you wish to alleviate the sufferings of these poor unfortunates give them food and clothing from your abundance. Speak a word of encouragement, and in a short while you will see these tramps or a majority of them transformed into industrious citizens.

If our kind editor will permit this subject to be discussed, I should like to hear from others.

I am respectfully yours,

Straight Shot.

[We will be glad to hear from you again and you must sign your name.]

ARKANSAS CITY, KAN., August 30, 1891.

Editor Woman's Department:

As my brothers take your *Magazine* I frequently read some of the leading articles in it, also a greater portion of the letters in the Woman's Department; and as my brothers are railroad men I have become very much interested in their work. I am always glad to see them come in, but it does seem hard for them to come in from a trip and be in two or three hours, or maybe just long enough to get to sleep, when here comes the call-boy for them, and then perhaps you don't get to see them for two or three trips. In walking up street one can hear persons making remarks about "the railroad men being a rough class of people." Of course there are some that are rough, just the same as anywhere, but when one gets acquainted with them they are much nicer than they are given credit for. I think for myself there can't be found a more friendly class of people than the railroad men, and for kindness they can't be surpassed.

"Charlie," may I make so bold as to ask if you are a railroad man? If so, I feel sorry for "Maggie Miller" (quite a novel name), for she will undoubtedly be doomed to disappointment. It seems strange that she should take particular notice of his letter. I wonder why? "Maggie," likely you had best not take too much interest in "Charlie," as he may be a railroad man, and then your cake would be dough, as you seem to have quite a horror of railroad men. But I chance to know that you are working for a fireman's wife. Now you should know that whatever one's brothers, husbands, or fathers are working at would take all one's interest. You say you are not a fireman's wife, mother, sister, or sweetheart, but I would wager that you would choose the former position with any of the firemen (single men of course) in Arkansas City in preference to working for your own living. I expect if you had been in reach of some of the ladies it would have been worse than the earth swallowing you.

I would like to ask "Marie F. W." of Seattle, Wash., what system of stenography did she study? I shall be very glad to get an answer to this question. As this is my first letter to the *Magazine* I will close, wishing the Brotherhood success, also "Maggie Miller." A fireman's sister and a fireman's friend,

Irene J.

I WONDER.

I wonder when the day will come,
When death shall come to tell to me
The story that we all must hear,
When with the silence drawing near,
I feel my hold on earth so weak,
My pale lips have no power to speak
Of anguish or of ecstasy?
Ah, lowly house the grasses under,
When will ye open to welcome me,
Your silent guest to be, I wonder?

I wonder if it will be spring,
When o'er my head the birds will sing
Their first sweet song not set to words?
And which of all the many birds,
Will be the first to carol there,
When I, forever done with care,
Just like a child tired out at play,
Sleep all the night and all the day.
So peacefully my green roof under.
Will it be autumn time or May,
Winter or summer time, I wonder?

I wonder if I shall be glad
To leave the pain I long have had,
Or if from friends who love me so,
'Tis with reluctance I shall go?
Go out upon that journey long,
So voiceless I shall sing no song.
Ah, chain of life's fair warp and woof,
When shall your bright links drop asunder?
When shall I sleep beneath the roof
Thatched with the violets, I wonder?

Etta Will.

STAUNTON, VA.

TERRE HAUTE, IND., September 21, 1891.

Editor Woman's Department:

Two or three items in your able editorial in the September number of the *Firemen's Magazine* have caused me to make my maiden effort at writing for the *Magazine*.

I fully agree with you in regard to woman's rights. It is a sad state of affairs to think a mother has offered her such a terrible alternative, i. e. lose her child or forswear her virtue. Let every mother have equal power given her to protect her children. Let true worth, purity and fitness triumph, when equal rights are given and no true mother need to fear. Nine times out of ten the mother has the entire care and guidance of the children. The father provides them with food and shelter and clothing and thinks his duty done. Which of the parents has the greatest care and responsibility? Why not give a mother equal right?

There is an old adage, "A penny saved is a penny earned." I think the majority of true women try to "save the penny." If they succeed, "the penny saved" should have equal right with "the penny earned." A true wife is her husband's equal, and should have equal right with him. Why should every low grade and nationality of men (the pauper export of other nations) be placed above, and given better rights than is accorded a refined, educated and American-born woman?

Were women given more rights I believe State government, yes, the United States Government would be of a higher, purer type. Crime would be on the wane. Evils men smile at, women would condemn.

Thank God, I have no cause, so far as my home is concerned, for more right than I now have. My husband, although we have been married about fourteen years and have five children, loves his wife and little ones, and is never so happy as when with us, and is always greatly missed when he is absent. He considers his wife his equal, and the pocket book is a partnership affair. We have no quarrels. We are neither one without temper, (I confess I have the moat), and as we have our cares and trials, we are prone to give way at times. We don't both get out of sorts at the same time, and as "it takes two to make a quarrel," we do not have any quarrels. I scarcely get a chance to pout. Is not that dreadful?

I think if women are compelled to pay taxes they should have a voice in the management of their property. Either exempt them from taxation or give them equal rights with other taxpayers. It is not the viragoes who want equal rights, but the mothers. Not for themselves as much as for their children.

I have said enough. If not too much, about women's rights, and will now write of women's work.

This past summer has been a hard one on the dear, little babes. Many a home has been made desolate. Thank God ours are all with us. I have not much trouble with my babies during their second summer and I think much is due to two things. First, I never take wool off my babies' bowels and feet either day or night until they pass their second summer. In winter I have high necked and long sleeved shirts of soft wool or camel hair. In summer, low necked or short sleeved slips, of thinnest gauze flannel, if you desire; but don't put cotton on them to hold the perspiration and cause them to chill when a cool air strikes them. In winter I have their flannel skirts made with a waist of the flannel the same as the skirt, sewed to the shirt. I take a piece of goods wide enough to make a good, deep waist, and long enough to button loosely around their little bodies. Hollow out places for the arms. Bind across the top, front or back, with ribbon or bias silk. Bind the arm places in the same way but allow the ribbon long enough at each side of the arm place to tie on the shoulder in a bow. Mothers, if you have not tried such a skirt, you do not know how convenient it is. If an accident happens to baby's skirt, slip your hand up inside its dress, loosen the ribbon and button at the back and the skirt is easily removed, and a clean one put on without having to undress the little one. For the growing ones, who get out of every thing, they are so handy, for they can be lengthened or shortened at will, by tying the ribbon shorter or longer on the shoulders.

If you have croupy children keep on hand a supply of flannel bibs. I make them with a narrow band to fasten around the neck and attach a piece to the front long or wide enough to cover the chest well. At the first croupy symptom take goose grease and turpentine, well mixed. Gr. seal well their chest and throat, back of the ear and the sides of the nose, pin on a flannel bib, fasten the lower corner of the bib to their under clothes to keep in place, and tuck them in bed. I have big, fat babies. My first, baby weighed 23 pounds when six months old. None of them have ever had the croup.

I always nurse my babies through their second summer. I can watch my diet more carefully than I can trust to feeding them. I know some mothers will say, "O, my!" I took an old physician's advice on the subject, and have never had cause to regret so doing.

In case of flux, give a child, four years old, 10 drops of paregoric in a teaspoon and fill the spoon up with castor oil. Give the dose every three hours until the child has a natural operation. Then if too free give the paregoric alone every few hours until moderated. Watch their food carefully. Get fresh milk from a good cow and boil as soon as milked. Put into an air tight vessel and keep in a cool place. Give all they want to drink, and no other food. For a change, to quench thirst, get best black tea. Make the tea and keep cool same as the milk, sweeten just as they like it and let them drink freely. Nothing else of either food or drink until all danger is past. I had one little one of four years and one of two years taken this summer with flux. I gave baby just half the above dose and both got along nicely and are well and strong to day.

Of course I called in our physician, and what I have given here is his treatment. When baby was taken, I did just as he told me to do for her little brother, only as she was just half his age I gave her just half the dose.

I am afraid our patient editor is worn out.

A Mother.

[This is a helpful letter. We trust our correspondent will come again. Thanks for good wishes in private note.—Ed.]

KANSAS CITY, Mo., September 5, 1891.

Editor Woman's Department:

In the August number the letter from "Prue" strikes a tender chord in my heart. I think that there are very few men now, who are at all reliable, who do not belong to some secret society, and consequently can get help from members of the order to which they belong. But because such a one has a pass word and grip, and can appeal to a Willie and a Jim, who takes him to his boarding house, gives him meals and a bed, and either finds work for him or gets him a pass to a distant city, is he any the less a tramp than the poor unfortunate who works by the day at anything he can find to do, a stranger perhaps in a strange city, looking for work, finding none, his money all gone, and perhaps wife and little ones watching and waiting in vain for the letter that will bring them the promised relief when "Papa gets work." There ought to be a certain amount of judgment used in giving promiscuous charity, but I think there is not one of us who will feel any poorer at the end of the year for giving an occasional meal to a tramp who was, as "Prue" says, at one time someone's darling. If we have children at home let us give, feeling that we little know what our own boys may come to in the future. If we have a noble husband and sons let us give, thankful that our loved ones are not as the unfortunate tramp at our door.

I hope that "M. I. P." of Leadville, will show her good common sense and write again. She ought to consider that our editor, who does not know her any more than the latest arrival from China, took occasion to whip many of us over "M. I. P.'s" shoulders, and it is my opinion that there are very few of us, if any, who cannot be benefited by the lesson.

I agree with Emma E. Smith in August number in her ideas of novel reading, *as far as she goes*, as she only treats of the dime novel. The novels of the seventeenth and eighteenth centuries were condemned by all moral classes, and only read by the half educated. But the novel of the nineteenth century treats of truths and of human nature, written in an attractive form. The great questions of the day are discussed in the disguise of the novel, and are read by minister as well as layman. Sir Walter Scott first gave the novel an honorable place in literature, and since his day it has grown and flourished and has taken the place of the essay. Miss Murfree gives us delightful and instructive pictures of mountain life in Tennessee. In her Felicia she has been compared to George Eliot. One of our most learned and prominent ministers of this city frequently quotes George Eliot in his sermons, and in our last church paper I read three quotations from the same author. Charles Dickens gives graphic descriptions of the lower classes in England; his "David Copperfield" will no doubt become a classic. "John Halifax Gentleman," by Miss Mulock, is a beautiful story. E. P. Roe's novels are all moral; his "From Jest to Earnest" might be read from the pulpit. Some one has said that "no matter how innocent a thing may be, the excess is always criminal." The wise will know when to begin and where to leave off. When my children were small I did not have much time to read, but when I read a good novel I did just as I would if I was going to spend a day with a friend or going to a picnic. I gave the day up to my book and thoroughly enjoyed it. Pages could be written on this subject, and authors mentioned whose names will go down as benefactors of their age, but as the question is an open one room must be left for each one to explain her ideas.

Let me ask Maggie Miller if she does not know that there are thousands of little worlds in this big world? Our worlds are those great big black things which run on the rail, and our sun controls the moving power. Our thought, love and affection are centered there. There are noble men among the railroad men; men whose good influence is felt by all around them, and there are gentlemen who would gladly give half their fortune if their son would associate with and find as good a companion as our son finds in "Jim."

A Fireman's Mother, W. L. E.

[Come again.—Ed.]

ELDO, IOWA, August 4, 1891.

Editor Woman's Department:

The first letter I turned to in the August number was Emma E. Smith's, denouncing novel reading so bitterly, and as I am quite a novel reader, I will try to say something in their defense, and try to show that good as well as bad can be derived from them.

I have read novels since I was twelve years old; read them while going to school, yet always ranked as high as any in my class, especially in reading (for I read so many novels that I understood reading). I am now twenty, and still read novels, and as for neglecting household duties, I do my own housework (washing and ironing included), my plain sewing, and quite a good deal of fancy work. I have been complimented quite often on my house-keeping, too. If I am reading a novel and think of some work I have to do, I can put my book down and do it. I do not have to wait till the novel is finished. She also says to "inspect the penitentiaries, and we will find there those who put into execution the crime that the hero of a dime novel perpetrated." Yes, and most likely the "hero of the dime novel" paid the penalty for his crime. Wouldn't that teach the reader that "murder will out," and to avoid rather than follow? As for the asylums, those that the novel put there must have had a "brick loose" before they had ever seen a novel, for any man or woman of sound sense would not let a novel drive them insane. As for our "modest young lady" following the pranks played by some of the novel heroines, she would see how ridiculous they are and "profit thereby," and avoid doing those things, just as we do in life. If we see a person doing anything we disapprove, how quickly we think, "I wouldn't do that for the world." On the other hand, the heroine is often patient, loving, forgiving and true—a noble type of woman. Could not we profit by trying to be like her?

I intended to give my answer to Maggie Miller concerning railroad men, but as my letter is so long already (for the first one) I think I would better stop and come again if I am welcome this time.

Gipsy.

[Come again.—Ed.]

MEMPHIS, TENN., August 5, 1891.

Editor Woman's Department:

After a long absence, I once more make a visit to the *Magazine*, through the medium of my pen. I have been reading the *Magazine* at each new arrival, and I find that still none of the ladies who have an "interest" in Lodge 206, have written to it.

Our lodge is still climbing the ladder, which of course it will, while it has in Mr. D. L. Forsyth so worthy a Master, so full of brotherly interest, each meeting finding him filled with renewed fervor and ambition for the success of the lodge and the attainment of its purpose. How many homes bereft of a devoted husband and father, or a loving brother, have been brightened by the simple yet kindly acts of this grand organization.

Mrs. Editor, I do not think any one has told you how Memphis is improving, and should you, as I certainly hope you will, take a trip to Memphis, you will see what a pretty city it is. Electric cars have taken the place of horse cars all over the city, and new buildings are going up on every available lot. Our new bridge across the Mississippi river will, in a short time, be completed, and it is one great structure which will always be a source of interest and pride to the citizens of Memphis.

While attending the Firemen's picnic, which was given on the 14th of July, I had the pleasure of meeting Mr. J. G. Carey, of Red Mountain Lodge, No. 339, of Birmingham, Ala. He spoke in the early part of the evening on "Federation," and during the course of his remarks, I came to the conclusion that he was Alabama's natural orator.

Well, I will not make my second letter to the *Magazine* too lengthy, as I hear that the "firemen of the 9 and 23" intend writing, and as I would like to divide my space with them, I will close.

With best wishes to the noble boys of the B. of L. F., and the Woman's Department, I remain,

Ethel May.

A WOMAN'S LAMENT.

Work, work, work!
 From morning 'till late at night,
 Work, work, work!
 With nothing but work in sight:
 With dishes to wash and beds to make,
 The dinner to cook and bread to bake.
 Work, work, work!
 And baby crying, too:
 The sweeping and dusting not yet done—
 Oh! dear, what shall I do?
 And there's Tom and Willie and Caroline,
 To be dressed for school, and it is almost nine.

Work, work, work!
 From early morn 'till set of sun;
 Work, work, work!
 Yet woman's work is never done:
 'Tis wash and iron and bake and brew,
 Mend old clothing and make the new.

Work, work, work!
 With little or naught for pay,
 With never one moment in which to rest,
 And yet some men will say,
 "It seems to me, and I know 'tis true,
 That women, as a rule, have little to do."

Work, work, work!
 Without having one pleasure in life;
 Did I bargain for all of this wearisome toil
 When I promised to be a wife?
 Did I expect a household drudge to be
 For the daily support doled out to me?

Work, work, work!
 Alas! it is nothing but work,
 For those who toil for daily bread,
 And their household duties ne'er shirk;
 And should I die and to heaven repair,
 I wonder if I would need to work up there?
Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

ENVILLE, TEX., September 1, 1891.

Editor Woman's Department:

I just received a letter from my sweetheart down in Monterey, Mexico, and he asked me to write to the *Magazine*. He sent me the August *Magazine* and that is the first one I have ever read, and I am just delighted with it. Mr. —, well, you all can guess who he is, is a member of White Breast Lodge at Laredo. His run is between there and Monterey, but it is not very often he is able to attend, as he is most of his time in Mexico.

There are so many subjects to write upon I hardly know which one to select, but as Friendship is the most important one, will say that the making of a new friend is like the reading of a new book, full of surprises; and if there is merit in either the surprises are always pleasant ones, but with your friend as with your book, you do not wish to proceed too rapidly. You desire rather to advance leisurely, to take time in which to think over that which is new and comprehend well what seems old, so when the book or the character is perfectly understood you will keep your friend and your book as life long companions. This is as it should be, but alas! there are many harmful things done in the name of Friendship. To a mere acquaintance you foolishly give your confidence without reserve, and to one who, perhaps, a year hence, will be a stranger to you, you unfold the secrets of your heart, and too often reveal secrets that do not belong exclusively to yourself. To some one you have just met you tell all your aspirations and hopes, your likes and dislikes, your friends and enemies, until you are read as easily as a story intended to amuse for an hour and afterward be forgotten. You may, perhaps, make many friends easily, but that is little to your credit, for being gifted with a pleasant presence and an agreeable manner, you really can not help being generally liked. You can make friends, but can you keep them? Unless you can, be wise and advance no further than acquaintanceship with any. You think because you love your friend so truly you have the right to seek her at all hours, but you were never more mistaken, for the very

friendship you possess should make you understand thoroughly the virtue of consideration. Friendship should be a beautiful floral chaplet, pleasant to wear. Instead, it is too often an iron crown overlaid with gold, and so heavy with base metal that it is a burden rather than a decoration. The right to Friendship there is none. Love may give you a few privileges, among them that of sympathizing with a great sorrow or sharing with a great joy, but of rights of things that can be claimed there are none. That so many people believe in these rights is one reason why so few friendships last. Does affection give you right to be critical, to be impertinent, to be thoughtless, to be inquisitive? Surely you do not think so. The only right true Friendship gives is that of being affectionate and thoughtful, and you must affect no more. If in all your Friendship there should come a time when you find yourself involuntarily lapsing into rudeness, stop at once, for nothing is more dangerous. We can better afford to offer impoliteness to a stranger than to one for whom we care, and the familiarity that comes from a close and long intercourse does not excuse it. Politeness is the cloak worn by affection to protect it from the storms of small sins. If you misunderstood your friend or she you, try to explain the mistake between you, but do not wrangle over it.

Usually the Friendships that last longest are of slowest growth. As the years roll by the two people grow to understand each other better, grow to be considerate of each other's faults and appreciative of each other's virtues. Remember always that your friend's thoughts, beliefs and actions are her own, and that when you attempt to govern them you are trying to make of her a sort of friendly slave, and not a real friend, and between these there is all the difference in the world. Once you have a friend, study to keep her, and you can do this while still being and acting your own true self. Your conduct and speech need not be tinged with hypocrisy. Yet by carefully considering those things which are likely to please or displease, and governing yourself accordingly, you can make her genuinely happy. You can give her your confidence, also, but not force her to carry your mental burdens. Above all, refrain from giving her too much of yourself, for satiety is a relentless foe of friendship.

This letter is written to please my noble fireman. May God's blessing be bestowed on the brave boys who shovel coal.

Only a Fireman's Girl.

[A very good letter. Poem next month.
 —Ed.]

ATLANTA, GA., September 23, 1891.

Editor Woman's Department:

Here I come, to make my excuses or apologies, or whatever you want to call them, for not going to church. My baby, as I call him, although he is nearly three years old and his baby brother is seven months old, has not seen a well day since he was eleven months old. As he was liable at any minute to have a bad attack I never left him with anybody. No one could do any thing with him but myself. If I carried him to church or anywhere else he was certain to cry, and so I thought I would better stay at home with him till he got well. We are in hopes he will soon be well, as he has gone through a very difficult surgical operation and is getting along nicely. Then I hope to be able to go to church when I want to, as I dearly love to go to any church.

As for women preaching, those that have no home or family can generally do as they please. But here are some extracts from an article published in the *Constitution* that express my views better than I can myself. They were written from Rome, Ga., and signed "B."

"If a woman has no husband or children to care for, and no prospects, she may preach, or speak if she wants to, and so if a man has no wife, and has a baby he may nurse it or rock the cradle if he wants to. There are many things neither can do, and many things neither can do well. As a usual rule God has fixed the spheres of the sexes and they must move in them. Each ought to move in his own appropriate sphere, when he can do it: but change of

condition may make the rule exceptional and violate no natural or revealed law.

"When a woman is single and has lost hope, it is better for her to teach or preach than to go through town slandering her neighbors. She does less harm and she may do good.

"If a woman has a husband and children the place for her to teach and preach is at home. The duties of maternity bar a woman from public life. She must nurse her own children, if she has any, and if she hasn't any she is to be pitied; nurse them, keep them at her breast in infancy till they become part of her own life. Man can't do this. She must take them at her knee, in the twilight as the stars are breaking into light, and with their little hands folded and their innocent eyes turned to heaven, teach them to say their prayers. So she will bless her race and make the people noble, virtuous and holy.

"There are no sermons like those preached at a mother's knee.

"A woman ought not to be made a pack-horse. Her health and strength ought always to be regarded. She should have the constant love of her husband and children. Nothing but kindness should fall to her lot. Don't cross her—give her pleasant words and kisses and she will fill the house with sunshine, and won't want to preach. To conclude, therefore, in exceptional cases only should woman preach and man nurse the baby."

I believe in woman having her equal rights in the household and a man must be more of a brute than man who denies them to her.

I see novel reading is in order. I read novels and do not think they will hurt anybody if they read nice ones. I do not think such books as "Uncle Ned's White Child," "Thorns and Orange-blossoms," "From out the Gloom," "Beulah," "Dame Durdan," "Doris," or "Opening of a Chestnut Burr" will hurt any body. As for dime novels, I once bought a copy of "Little Nell" for a dime and I have bought several others for a dime that I do not think were "trashy," although "yellow backed."

Poor "W. B. R." I think his best girl must have given him the "mitten," and so he has soured on all the female sex.

Well, I did not intend to write so much, but I will make short apologies, for you know "least said, soonest mended." Good bye to all.

Mrs. A. A. Maner.

[The extracts from the *Constitution* may be sentiment but they are not argument. God did not "fix the spheres of the sexes." They were marked out by man, who had the impertinence to decide that his own was whatever he chose to do, and woman's was whatever he chose to let her do. She has a right to settle the boundaries of her own sphere and man has no more business to interfere than she would have to dictate what he should or should not be permitted to do. If women will just bear this fact in mind it will simplify matters considerably. We believe, our correspondent will agree with this view of the case after she thinks the matter over.—Ed.]

TACOMA, WASH., Sept. 4, 1891.

Editor Woman's Department:

Such a bright happy morning ought to awaken one's energies and I'll try mine at letter writing. Mt. Tacoma, or Ranier, as Seattle (our rival sister city up the Sound) calls it, has on its holiday garb this morning—such pretty tints of color with last winter's snow for a background. We appreciate the glimpses we get of the mountain in summer, for as a rule the firs that are made to clear our heavy forests fill the air with a dense smoke that hides the mountains for weeks at a time. It is a splendid mountain, three miles high and sixty miles from Tacoma, but there are no mountains intervening so that it may be seen from base to summit. It is

thought to be a slumbering volcano. Several parties from Tacoma have passed a night at its summit and there is to be a stage line built to the base so that the tourists that stop at Tacoma on their way to Alaska may have an opportunity of exploring our grand old peak. A sadly fatal accident occurred on the Northern, forty miles east of here, on the 22d of August. Through the negligence of a conductor a west bound extra freight crashed into an east bound regular freight, instantly killing Engineer Young and injuring Fireman Cooper so that he lived but a few hours. I think we wives do not realize the danger our dear ones are in so keenly as when some of the boys are brought home all through with this life's joys and dangers. The Cascade, a single track division, is a peculiarly dangerous run, through a mountainous country and for eighty miles skirts a high bluff, with frequent tunnels, cuts, sharp curves and heavy grades, and a swiftly running river close to the left of the track. A great many accidents have occurred lately.

The topic open for discussion is a good one, yet I think that without much discussion the verdict will be that novel reading is harmful. Excessive novel reading produces the same effect on the mental system that the excessive use of tobacco and liquors produces on the physical system. Just as the latter destroys in a measure the delicate flavor and taste of food, so does novel reading destroy in a greater measure the taste for solid, pure reading. Novels such as Bertha Clay, M. E. Braddon, "The Duchess," and May Agnes Fleming write may be intensely interesting and may be extremely harmful—to say nothing of the more recent writings of other authors, that have even less purity in them. Nothing can possibly be productive of good that is untrue from beginning to end. Young people are generally more influenced by novels between the ages of fifteen and twenty years. If one has a tolerably fair amount of common sense he ought, in that time, to have learned the fictitious and foolish character of the average novel and with a little determination give it up for more wholesome reading. I do not think an occasional novel by Marion Harland, or the stories found in the standard magazines (Harpers', Scribners', Lippincott's, etc.) would harm the most imaginative person. But indiscriminate novel reading totally unfit one for the enjoyment of such poetry as Longfellow, Tennyson, Browning and Jean Ingelow give us, and history to them would be like a dinner of chips.

September 10th is the opening day of our Exposition. There are to be exhibits from all parts of the state. The charge of admission is so reasonable that every fireman ought to take his wife and children one time at least. Of course our single boys will take their sweethearts just as often as they want to go. My fireman and I are going but we have no young railroaders at our home. It is nearly time for the *Magazine* to reach Tacoma and my letter must surely be on its way ere that, for every month I have decided to write, but the *Magazine* would come and in reading the many ably written letters my courage would lose itself. With best wishes for everyone and for the Woman's Department a long life of prosperity, I am

Very truly,
"Chime."

JAMESTOWN, N. DAK., Aug. 7, 1891.

Editor Woman's Department:

This is my first attempt to write a piece for the *Magazine*, though my intentions have been good enough for some time. I have been a constant reader of your *Magazine* for five years and I like it very much, especially the Woman's Department. I think it very instructive and wish it the success it deserves. I have two brothers, one is an engineer, the other is a fireman, and they both belong to the brotherhood, which I think is a very good order. The latter belongs to Fargo Lodge, No. 85. I am greatly interested in the *Magazine* and *Journal*. They both come to our home every month and I appreciate them very much, especially the Fireman's. Well, as my letter is getting quite long I think I will quit, with best wishes for the success of the B. of L. E. and the B. of L. E. I remain,

An Engineer and Fireman's Sister.

WHERE MY HEART LIES.

Under the sod where the wild grass grows,
Under the leafy trees,
Where the moaning song of the sad wind flows
Like the murmur of the seas.
There, where my thoughts all end in sighs,
There's where my heart lies.

Where the lifeless leaves rustle and fall
Wedded to the ground,
Where the night bird's coo is the only call
That breaks the stillness round.
There, where the spirit of darkness flies,
There's where my heart lies.

The wind blows low, for death holds here
Its silent reign supreme,
And never the force of a drifting tear
Can wash away its dream.
And there, in the grave where love ne'er dies,
There's where my heart lies.

ENNVILLE, TEX.

Addie Deering.

STOCKTON, CAL., July 16, 1891.

Editor Woman's Department:

I have before me the July monthly number of your interesting periodical, sent me by a member of the Firemen's Brotherhood, who is, according to my ideas and taste, the bravest and handsomest of all the railroad boys. But no, that last remark is almost a selfish one for me to express; I will say, there are very likely, others as handsome and brave, but of those whom I have met he is the nearest to perfection. Until lately I had not the opportunity of forming an opinion concerning railroad men, their principles or mode of living, from my own experience. I do not think too much can be said in praise of them, when one thinks how often human life and the happiness of loved ones at home are depending on the courage and industry of those who are daily guiding the iron horse over the rails of our many railroad avenues. The memory of them should be revered almost, and not spoken of in scornful accents or be made the subject of a remark such as I observed at the heading of an article in the *Magazine*, entitled "He is only a Fireman." The ably written and well-worded criticism which followed its mention says, "A man's a man for a' that. What matters the rough exterior? Beneath that blouse beats a heart as brave and chivalrous as ever distinguished a knight of old." I would also add, "Forgive them, they know not of whom they speak." In conclusion allow me to say, although knowing quite well that a railroad man's wages are not sufficient to afford the luxuries of life to wife and children, I can imagine no happiness more complete than to have the love, confidence and protection of a husband whose manly hand grasps the bell cord of locomotive, or listen to sweeter strains of music than the clanging of the engine bell at eventide, announcing the home coming of your fireman.

A Fireman's Sweetheart.

DENISON, TEXAS, September 1, 1891.

Editor Woman's Department:

May I join this charming circle? I am inclined to stay at home a great deal, have been married scarcely two years and have a sweet baby boy which we have named Charley (after his papa). I intend to teach him to wash dishes and to cook as soon as he can talk. I love to see children working and helping "mother," and I think the boys can be as useful to us as our darling girls, if they have careful training. My husband is what some people choose to call "an old woman" around the house. He likes to see everything just so, and should be tumble over a flat iron on the floor he will pick it up and put it away, then go on until he finds something else to do (perhaps the dishes to wash). I often beg him to sit down and read, but as long as I am at work he must wait. I love him better for it, though, and I do not regret the advantage of his generous self. I never speak of, before I was married, how much heavier than it ought to have been to get a receipt book. Now I am doing pretty well.

Really, my friends say I can cook a good meal, and I am more determined to cook a better meal now than ever I was.

I love music and painting and every thing that elevates our minds and home. Novels I do not like the last one I read or ever intend to read was "Elena." I was lonesome, in the first place, and had no business to begin a novel, but after I begun it I could not stop. I read until I cried, and I cried until I was have had the hysterics. I found out how foolish I was and determined then and there to shun novel reading. I think we ought to turn over the leaves in the Bible oftener and stop reading novels, try to occupy our leisure hours with purer thoughts than those generally involved in the novels of to-day.

I would like for some of our sisters to give us their ideas of a pretty dining room. I have so many different ideas that I shall have to come to you to give me the right one. I do a good deal of drawn work. If any of you work at it you know how tedious it is. Yet how beautiful a pattern or a scarf after it is completed. Does it not pay to use our idle hours in this way, and many others of equal importance? I have just finished a sideboard cover of butcher's linen, two yards long, each end worked three-fourths of a yard deep. It is pretty and cheap. I have spent many a lonesome day working on it, and my husband says it is the "handsomest thing he has ever seen." That much praise from him pays me a hundred times for the toil I put on the sideboard scarf, and I know your husband will give you an extra kiss for a pretty scarf in your dining room. I do not like gossiping or gadding about, but I admire a woman who loves her home and children.

I hear the whistle and I am waiting patiently for my husband, so good night. Good luck to the E. & L. F.

Their friend,

Evaline.

[This is a very pleasant letter but we feel sure that there are some ideas in it that will call forth a reply from our readers. Discussion is the life of our Department.—Ed.]

"ONLY A COON."

Dead, yes dead; killed instantly. Only two short hours before, the little negro boy, with three white boys as companions, started out on a hunt, buoyant with the thoughts of the game he expected to exhibit to his parents when he returned.

Ah, poor child! Little did he dream he would be among the "game" that day.

Yet, there he lay dead before me. It was only another one of the many accidents which are happening every day. One of the white boys shot. Rushing forward to secure his game he beheld the lifeless body of the little negro stretched out before him. Then a despairing cry rang out on the air to the other two boys: "Oh, boys, won't you help me hide him!" It was the cry of a soul in anguish.

And now there will soon be another mound in the church yard which will always remind me of an unfinished life. The usual crowd attending such scenes is there. Some pass by with tender looks of sympathy, others gaze on the little face, now cold in death, with a cold impassive face, which is only a mask to hide the feelings. And still others turn abruptly away and go to weeping.

Yes, to-day the busy world in this small town can stop and rest awhile, because Death has entered there. To-morrow the world will resume the same old work just where it was left off, until another death takes place. It will be but a day or two at most until the little negro boy will be almost forgotten by all but a few.

As I was turning away from the newly made grave a young man approached a group of boys and asked who was dead. "Oh, only a 'coon,'" was the thoughtless reply.

Ah boys, though I suppose he was only a "coon" his life was just as much to him as yours is to you. His parents loved him just as dearly as yours love you. But the little negro boy is now something more than "only a coon."

MURPHYSBORO, ILL.

Wilda Chesterfield.

BROOKLYN, N. Y., August 5, 1891.

Editor Woman's Department:

As I am at leisure this afternoon I will write my first letter to your charming *Magazine*. I enjoy reading it very much, and look anxiously for it as soon as the first of the month comes. As father and three brothers are Brotherhood men I will give a few receipts for home attractions, and if acceptable to anyone will give more.

1st—Get an old shoe of your husband's or brothers, gild it all over with gold paint (you can buy at any paint shop at 25 cents a bottle); when it dries get white glue, and then get old corks and cut in small square pieces and stick all over the shoe; let it harden, then gild over again, when you can ruffle a piece of bright satin or silk around the open top and down the middle of both sides. You can fill it in with bright colored paper flowers, or artificial moss, and you will then have a very pretty ornament for your parlor. You can shake different colored dusts of gold, silver and garnet all over it and the effect is pretty.

2d—Get a large or small stone jug and paint it over with shellac; when dry, get some putty and rub it across your hands till soft, roll it out about quarter of an inch in thickness and cover the jar; while it is soft stick every little thing you can get on it, such as children's toys, small dolls, clothespins, a pipe, small lump of coal, empty spools and buttons, everything of a small light character, stick all on firmly and leave for a day or two and they will be tight. Get gold and crimson paint and tip every article with each color so that all are painted. Tie a pretty ribbon on the handle.

Very nice dressing case covers can be made as follows: Get thin muslin and make the length of bureau, allowing about a quarter of a yard extra to turn up on both ends; pencil a vine or some object that you can trace with a spool or some round object, then work with red outlining cotton; make a herring bone stitch at both sides of the hem and along both sides; trace something such as a fan or bottle in the center; finish with linen lace on ends. If done nicely it will look pretty and do up well and is cheap. It is my own idea. Pretty tidies can be made from ticking, which must be new. Herringbone stitch the white stripe with differently colored embroidery, cotton; after you cut it the desired size, get gold and differently colored tinsels and cover the blue stripe. It makes a pretty tidy when you edge it around with lace. If you find this letter worth printing I will call again if I may, and will give some more fancy work ideas and will tell all about this part of the world. Will close with best wishes and remain,

Estelle Maxwell.

PRAIRIE DU CHIEN, Sept. 1, 1891.

Editor Woman's Department:

The editor strictly forbids any allusion to the waste basket, but I am one of the independent class, belonged to an independent class at school and always have been independent, so I am going to write nothing but waste basket.

In looking over the old *Magazines* for four or five years back I find the waste-basket allusion a favorite phrase. Now, I really do not believe Mrs. Harper's is such a dreadful article after all, only dreadful to think about. Should we see it no doubt it would be a very meek looking little basket, sitting quietly beside the editor's desk, filled partially full of letters eulogizing the brave, beautiful boys in blue overclothes and smutty faces. But it is a waste basket, and just such letters as this make it such.

Now, although my remarks savor of it, I am not about to take up a collection to get the editor a new basket, but rather to tell you how to make one and what to put in it. Then, perhaps, other people's won't be so dreadful to your ears.

Take two good looking peach baskets of equal size, bind one on top of the other inverted and tie about its waist a sash of pink cambric finished in a large bow. Finish the top and bottom with a double ruffle of scalloped cambric and you have a waste basket nice enough to hold any one's superfluous literature.

Now for the material to put in it. First it is the

best receptacle for all hastily written or poorly spelled compositions, and a good place for all letters written in anger and deception. Put in it all such articles from your pen as have not a sound, substantial foundation, all such as are in any way detrimental to any one's peace of mind, happiness or character, and all that withhold forgiveness and reconciliation sincerely asked for. Swell its stock by adding to it all productions which you think likely will find a resting place in Mrs. Harper's or any other editor's waste basket. Would you not rather consign an unworthy article to your own than to another's waste basket? Fill your own larger first. Mine is completely full, so if this is unworthy of a space in the *Magazine*, it will out of charity alone find a resting place in Mrs. Harper's. You see I have written almost entirely on forbidden subjects, even gone so far as to mention the boys, but I'll wager a cookie (one of my own make, too) with any reader of the *Magazine* that I get into the Woman's Department. Yours in sober mischief,

Nora Bull.

[Yes, here you are. Your suggestions are good. No woman who is accustomed to a waste basket will feel that she can do without one. They are convenient to hold the threads and clippings when sewing, the hair that will get into the comb, the small litter that children make, letters that have been answered, wrappers and strings about little packages, a thousand and one things that the housewife hardly knows how to dispose of. We advise every woman to have one of some sort within easy access.—En.]

PENSACOLA, FLA., September, 14, 1891.

Editor Woman's Department:

The *Magazine* came to hand this morning and as it always is, was the most welcome visitor. After reading all the letters in the Woman's Department I thought I would like to describe some of the surroundings of Pensacola, if I be permitted.

As all know who have ever seen the "little black dot" on the map of Florida marked Pensacola, it is in the extreme western part of the state. There are many places of interest here in Pensacola and near here. We have two nice parks; one called Kruphian's park, a delightful place at the end of the western division of the street car line, and Trascati park, at the eastern. The Elevated Railway here, managed by the Export Coal Company, has added greatly to the export trade. The Navy Yard, Fort Pickens (where Geronimo, the Indian chief, and his associates were imprisoned after their capture), Fort Barrancas, the ruins of Fort McRea, and the Life Saving Station, besides many others, are very interesting places.

The improvements in this city have been great in the last few years. Large buildings are now taking the place of the little one story buildings that so long ruined the beauty of Pensacola.

The L. & N. Company has charge of this division and does a splendid business. Some of our foremost business men are trying to get a new road through here called the Mexican Gulf, Pacific & Puget Sound. One hundred thousand dollars is the required amount for the Pensacola people to furnish, and \$85,200 have been subscribed. I am satisfied the road will be commenced in about two months, and then there will be work for plenty besides Pensacolians.

All the engineers running on the main line here are married except one, and lucky will be the one that gets him. I won his most intimate friend about six months ago, and to say I am proud of it is a mere expression.

I am going to talk up the Robinson monument fund to my friends, and see if something can't be done by the railroaders of this place. I enjoyed reading Mrs. Coffenbarger's poem, "The Sequel," very much. Asking all to remember the B. of L. F. and the B. of L. E. of this city, I remain a friend to all railroaders,

Mrs. E. T.

LOUISVILLE, KY., August 5, 1891.

Editor Woman's Department:

Tap, tap, rap: here I am again, asking admittance to your charming circle to talk to and about others. So much has been sung, said and written on this subject that one might deem it entirely exhausted did we not all know that in every true household there is one all-powerful influence emanating from the dear friend we call mother. And, O mothers, remember you cannot love your children too much; it is the great panacea for all their little aches and grievances in babyhood. It will be their safeguard as they grow older. Manifest our devotion, not only in deeds but words, and keep your children from a repressed and chilled childhood. This is, perhaps, easier when a baby, but it is so appealing in its utter helplessness. But believe me, they do not need their mother's caresses so much as when grown into boyhood and girlhood. Fill their lives then to overflowing with motherly love, appreciate every little attention offered by your boy, and beware of keeping your shy and seemingly cold natured girl hungry hearted. Every child loves to kiss its mother, so be careful that you wear not too fine a gown for them to crush in their strong young arms. "The kiss my mother gave me," has often proved the password to honor in a young man's career and a shield against the many temptations in a young girl's life. How many mothers, overworked and unnerved, set aside the claims of their child. Yet had God intended Nellie, the nurse, or Mrs. Brown, the teacher, should train our child he would have given the child to one of them instead of to you. The Creator permitted the child to become yours, and from you and its father he demands a strict rendering of the charge. See that your hands are clear and your heart innocent of the charge of neglect.

Before I close I must compliment May Flower Lodge, No. 415, and Fall City Lodge, No. 103, on the way their picnic was conducted. Over a thousand people were there and it was a grand success. I will close with best wishes to all the railroaders.

L. B. R.

EL DORADO, KANSAS, AUG. 3, 1891.

Editor Woman's Department:

After reading some very interesting letters in the 3. of L. F. Magazine for the year 1891, up to the present number (August) just received, I concluded to write a few lines. It is through the kindness of a "fire boy" friend of mine in No. 369, Walnut Valley Lodge, that I have had the pleasure of reading your much appreciated Magazine.

I was very much amused at the different methods given for managing husbands and wives. Can not tell by experience, but I would think each party ought to manage himself, then it would be evenly divided and so would not be a one-sided managing business. I used to think the railroad boys were all a rough crowd of fellows but I found I was mistaken in my judgment, for there are just as good, true and noble hearted men engaged in that occupation as in any other work. Of course if I had had a uncle, cousin, father or big brother interested in the R. F. I would have known better and had a better opinion than that. I would like very much to tell you about the lodge here, but as I am not very well acquainted—have been here only a short time—consequently don't know a great deal concerning it. I believe they have about fifty members in the lodge here and only four of the firemen occupying the realm of bachelorhood. They appear to be perfectly happy, judging from their smiling countenances.

Now a word with reference to girls knowing how to cook, wash dishes, etc. It is all very well for "us girls" to know how to keep house, but I sometimes envy the girls who have no household cares or do not know anything about housework, as they apparently succeed in life as well. As this is my first attempt at writing for publication, I will come again sometime if this meets with approval. With best wishes for the Magazine, the B. of L. F. and 369, I will desist. I am

A Fireman's Friend.

MAPLE GROVE, MAN., September 9, 1891.

Editor Woman's Department:

I have never, since I became a reader of the *Firemen's Magazine*, seen anything from this part of the world, and there are several railroad men's wives around here, who might write, if they would. I am not a wife yet, but will be if spared about three months longer. My particular gentleman friend takes the Magazine, so I have the pleasure of reading it every month. I often read them two or three times over, for I think there is no book like them or equal to them. Last night I was reading a letter signed "A Fireman's Wife, Annie," who requested ladies to tell how to make fancy work. I have a very pretty "banner," which I will tell you how to make. Take a piece of common striped bed ticking, ten inches wide and fifteen inches long. Stitch down the centre a piece of plush, $1\frac{1}{2}$ inches wide; on each side of the plush work a feather stitch of embroidery silk in the white stripe of ticking and a row of frosted tinsel in the blue stripes; a strip of plush at the top and bottom, with balls on bottom. I also have a straw box which I might, in the future, tell you how to make.

As for card playing, although I have played myself I think there are other plays which would be nicer, both for guests and ourselves.

Well, as this is my first attempt at writing I guess I had better stop. I pray that God may bless all the railroad men and their wives. Jen.

STANBERRY, MO., Sept. 5, 1891.

Editor Woman's Department:

As I have seen nothing in the Magazine from Stanberry for some time I thought I would write. My father is an engineer, although he was once a fireman and shoveled the black coal and I am not ashamed to own it. I know a great many railroad men and I do think they are the truest men there are. My father works for the O. & St. L. railway. He takes the Magazine, and I like to read it and read the Woman's Department first and am delighted when the Magazine comes with its nice pieces. Mrs. Nellie Bloom's poems are splendid.

Stanberry is a beautiful place to be only eleven years old, it has a large Normal and a splendid High School. The Normal opened up Tuesday, September 1, with about 500 pupils and still coming in from different parts of the country. They have electric lights and have voted for water works. They have a beautiful public park, and a racing park, large Wabash hotel, three large banks.

They have no saloon. As to card playing I believe in letting a man play at home, though not away from home. Wishing the firemen an abundant success, I will sign myself

A Fireman's Friend, Alta Campbell.

SALIDA, COLORADO, August 6, 1891.

Editor Woman's Department:

While reading the August number of the Magazine one article in particular caught my eye. It was that on novel reading.

I think that the writer is rather wholesale in her condemnation of novels. There are novels and novels; good novels and bad novels. The trashy literature called *dime novels* can not be too severely censured, but one would scarcely think of putting the novels of Charles Dickens, Sir Walter Scott, Lord Lytton, Thackeray, and others on an equal footing with the aforementioned productions. Who, that has ever read any of Dickens' books, can say that "they palliate the vices and follies of mankind, and underrate the sober refining virtues?" Dickens wrote not only "for bread" but to reform. The same can be said of Lytton.

Some people might not call these men novelists, but that is just what they are, and the world is all the better for having held them.

I might say a great deal more on this subject, but I fear I have already monopolized too much space, so I will close, wishing the Magazine every success.

Very truly yours, Chaffee.

AN OLD TIME MCGINTY.

DeKalb county, Illinois, once possessed a queer old farmer by the name of "McGinty." He was an awful coward, and would never go in the woods alone after night unless armed with an old musket that had a bayonet attached. Some times he would feel bold enough, if it were not too dark, to go with only the bayonet.

Such times as the small boys had scaring him: they would be in the woods after their cows, and if they heard "McGinty's" cow bell they would get as near as they dared and make the most hideous noises they could invent. He would yell, "O, 'oil pale yez on the pint of me baynit, jist show yer bloody selves!" and all the time he would be fairly panting with fright. He would go home at such times and tell his wife, "Howly saints, sure o'ive seen a ghost, the devil's own imps are surely abroad in the wood, wife!"

Horse thieves were quite numerous there at one time, and as several of his neighbors had lost their horses, he was constantly on the worry for fear his own good team would be stolen, so he fixed up a trap to catch the thief. If one should be so unwise as to visit his barn after night. He got a large stone and fastened a stout cord to it, and placed it over the barn-door inside, and the other end of the string was tied to the door in such a way that the stone would fall on whoever opened the door.

It worked most successfully, but instead of the thief, he caught himself the next morning, having forgotten all about thieves when daylight came. It worked so well that he had to be carried to the house.

Nell

GOODLAND, KAS.

[Your letter will appear next month.—
Ed.]

CLEVELAND, OHIO, July 27, 1891.

Editor Woman's Department:

I do not know as you want to hear from me, as I am not a fireman's sister, wife or daughter, but we keep boarders. I say we, that means my mother, sister and myself, and we have three firemen and one engineer among our boarders. I do not know much about the engineer, as he has not been here long, but the firemen are like brothers to me. They all call my mother "ma." Although I am but fifteen years of age I wash all their overalls and jackets, they paying me 25 cents a pair. The fireman of that terrible wreck on the Nickel Plate boards at our house. He was not hurt very much but is laying off now, as one of the bruises that he received then is paining him again. I was at the Engineers' picnic last week and had a lovely time. There were twenty-nine coach loads went. It was at Oak Point, about thirty miles from Cleveland. I have waited

cake: One cup of sugar, two eggs, half a cup of oil, water, one pint of flour, two teaspoonfuls of baking powder. Beat the sugar and the yolks of eggs; cream, add the flour in which has been stirred the baking powder, then the water, lastly the whites of eggs and flavoring.

Where people live in the city and have to buy a dozen of their eggs, especially when they are fifty cents a dozen, they make quite an item in cake baking; so I will give you a recipe for a cake without eggs. A heaping cup of sugar, one of thin, sweet cream—and milk will do—flour enough to make a little stiffer than if eggs are used. If milk is used instead of cream a little butter must be added. This makes a good layer cake. Use one heaping teaspoonful of baking powder. But there, you must have grown tired of so much sweetness, but if I may come again I will give some recipes for desserts that are less expensive yet nice. Wishing success to the Magazine I am
Yours respectfully,
Pamela

GOODLAND, KAN., August 3, 1891.

Editor Woman's Department:

Do firemen ever flirt? Well, I should smile. I never believed they did, however, till recently started on a journey and as I passed a well known restaurant (a regular fireman's favorite: I saw a fireman sitting, as Tennyson would say—

"Knee to knee
And cheek by jowl
With a — fair damsel!"

Not at all, but with a woman off on a pleasure excursion. Oh! the confidentialism of that chat! Of course I asked my hubby if that was the way he was going to act while I was gone. "Oh! I'll kill him for giving us summer widowers away," he said.

So I went on my way, mentally resolving that what was meat for the gander could be sauce for the goose. But I exonerate the ladies, young and old, from all blame for flirting, for the firemen are so very fascinating, or at least they think they are, and it is such amusement to chat with them a few hours and see how ridiculous some can act. But such a life, and such is Western Kansas. If your wife is not at home, why, go and see some one else's wife!

It is about time for the next Magazine, and I am watching every mail to get ours to see what Mr. Shandy is giving Mrs. Bloom.

Philippe

[It is a bad practice, even if indulged in for fun. There is an old adage about playing with fire and with edged tools which applies here.—Ed.]

THE MAGAZINE.

ected Manuscripts are not returned unless accompanied with required postage.

scriptions must begin with the January, April, July or October number, and expire with the year.

anges of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

tributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

scribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

FOR THE GOOD OF ALL.

What is for the good of all? The answer could seem ready, peace, good will, harmony, fraternity, kindness, help in time of need.

Such a condition of things would be a millennium, a sort of heaven upon earth. It promised and the universal prayer should "let it come."

Perfect peace may be but a dream never to be realized, simply because man, to use the phrase, is not built that way.

It is the ideal condition which Utopians picture to themselves, for which they languish and pine. It was never known since the world began.

There have been, here and there, men and women calling themselves "perfectionists." They sought the unattainable, built their air castles to see them swept away, and were compelled at last to exclaim with the preacher, "all is vanity and vexation of spirit."

There is, nevertheless, a common sense view to be taken of human affairs. Those who pray for universal peace, however desirable peace may be, are doomed to disappointment. It were better to pray for as much peace as practicable, and for as little war as possible, and, if men must pray in the direction outlined, let them pray that they may be influenced and guided by the spirit of peace.

Men deplore war, and man's better nature applauds when efforts are made to arrest its ravages, and yet, who is there to say that war is an unmixed evil?

The question arises, was the war of the American revolution a deplorable event? Was it not better to fight for independence than to live and die slaves?

When war involves a principle, right, justice, independence, it is a blessing, and to oppose such a war is little less than blasphemy.

But there are wars which are not sanitary, neither bloody nor murderous, they are the wars of opinions. They will

exist and never cease where thought finds expression in free speech.

It is for the "good of all" that free speech should prevail. In autocrat cursed lands there is no free speech except by those who claim the "divine right" to rule and to make "dumb driven cattle" of men. Russia is the one cursed land where speech is imprisoned and shackled, and the result is nihilism and dynamite, hates festering until the body politic resembles a case of confluent small pox, while thousands await an opportunity to assassinate the autocrat.

Here, in the United States of America, we have free speech; here no tongue is fettered, here is the broadest toleration of opinions within the broad and shining circle of subjects that relate to "life, liberty and the pursuit of happiness."

One of these subjects relates directly to labor, and the subject of labor suggests and has brought to the front a multitude of collateral subjects, each of commanding importance.

It would be strange, indeed, if there was no conflict of opinion, and it is this conflict of opinion, that for the want of a better term, is called "war."

There are those who believe that the well being of workingmen demands organization. Then there are those who oppose organization. What is the result? Conflict, war of opinions. What is to be done by those who are watchful of events, who study conditions, who are profoundly interested in the welfare of workingmen? Shall they yield? Shall they be supine and silent? Or, shall they buckle on their armor and go forth to battle for their convictions? In such a crisis, to retreat, to show the white feather, to formulate excuses, is cowardly to the last degree. Some do it and invite the scorn of all honorable men.

In such cases, what is the verdict of workingmen who have organized for protection against workingmen who use their influence to disrupt organizations and leave their fellow workmen to the mercy of their employers? Who does not know that the verdict is one of multiplied maledictions? Who does not know that the verdict is an arraignment of such apostates as traitors to their fellow workingmen, as scabs who would annihilate the organizations of workingmen, sweep them out of existence and reduce their members to the conditions of serfs?

To enter the arena with voice and pen, and make eternal war upon such men and their vile policy, is to glorify manhood; to do less is to invite degradation so vile as to make exaggeration confess that its mission is ended, and that the vocabulary is only for those who now, as in times past, regard workingmen as simply "hewers of wood and drawers of water," who were created to

do their bidding and be silent, content if they are permitted to live.

The *Locomotive Firemen's Magazine*, under our management, has been the outspoken foe of everything that so much as *squinted* at such conditions.

Believing in the dignity of labor, we have believed in the God ordained nobility of workmen. We believe that the beaded sweat on the brow of an honest toiler is more resplendent than the diamonds in the crowns of kings, and as we have had the ability, we have waged a ceaseless warfare upon all things either directly or remotely calculated to degrade labor.

What do we now see? We refer more particularly to railroad employes, engaged in the train service of the country. We ask, what do we see? We answer, numerous orders of these employes organized for protection. By what names are they known? We answer:

The Brotherhood of Locomotive Engineers,

The Brotherhood of Locomotive Firemen,
The Brotherhood of Railroad Trainmen,
The Order of Railway Conductors,
The Switchmen's Mutual Aid Association,
The Order of Railroad Telegraphers.

In these orders there are at least *one hundred thousand* men enrolled. United and harmonious they constitute an invincible army.

The principles embodied in their constitutions are absolutely the same. They have the one same purpose in view.

In so far as principles are involved there is absolutely no difference. The ultimate object in view is the same.

To make this apparent, to voice it and enforce it, has been the steady purpose of this *Magazine*.

In this unrelenting effort we have voiced the sentiment of the great Brotherhood of Locomotive Fireman.

We see the two orders of Telegraphers uniting under one banner.

We see the two orders of Conductors coming together.

We see all around the horizon those signs which presage *fair weather* for the organizations we have named.

We note with supreme satisfaction the furling of the battle flags, and hail with joy the day so near at hand when the war drums of the brotherhoods will throb no more.

If there is to be war, let it be against the enemies of the brotherhoods, not internecine. Not brother against brother, nor organization against organization.

We do not doubt but that a time will come when the brotherhoods will find their supreme strength in harmonious relations with each other, and since it has been their good fortune to see all obstacles removed

calculated to impede their progress, or to prevent harmonious relations, we realize that the good time coming has dawned and that the outlook is full of promise.

To intensify harmonious relations between all the brotherhoods will be the purpose of this *Magazine* in the future as it has been in the past, and believing peace has its victories as well as its votaries, we see many reasons why the future of the brotherhoods should be one of unexampled peace, prosperity and power.

THE ROBINSON MONUMENT.

On the 7th day of November, 1891, one year will have elapsed, since W. D. Robinson, the founder and first Grand Chief of the Brotherhood of Locomotive Engineers, expired in his humble home, in the city of Washington, Davies county, Indiana.

How shall we rate him? If we write eulogiums of him, what shall be their word and warp? How shall they be constructed so that the membership of all the organizations of railroad employes shall at once recognize the truthfulness and the propriety of our pen portraiture?

About Ben Adhem was content if the angel would simply write that he loved his fellow-men, for it followed that he who loved his fellow-men, loved his God and his country.

The man who loves his fellow-man is a co-worker in lifting men out of debasing conditions, above corrupting surroundings, to those high planes of independence and usefulness, below which, life, whatever it may be, is inexpressibly less than what it should be.

W. D. Robinson was a practical philanthropist, and being a practical working man, he saw with a rare gift of prescience, that better conditions were within the reach of locomotive engineers.

To grasp these conditions, to rise, to advance, to achieve victory in spite of obstacles, were the problems to be solved.

W. D. Robinson was a poor man in worldly possessions. His inheritance was toil, and he knew that in the sweat of his face he must eat bread. But, while poor in purse, he was rich in intellectual resources and power. He improved, as opportunities offered, his natural gifts, and regardless of self, utilized all his splendid faculties to better the condition of his fellow-engineers. He laid the foundation of the great Brotherhood of Locomotive Engineers, and he built like a master architect upon the foundation. In laying the foundation of the great Brotherhood of Locomotive Engineers, like the men who

"Rounded Peter's dome
And groined the aisles of Christian Rome."

He builded better than he knew, for he laid the foundation of every other brother-

hood of railroad trainmen. He was the avante courier of the splendid conditions which railroad trainmen enjoy to-day. His was the one voice "crying in the wilderness." Make straight paths for the brotherhoods of railway employes, who are to organize to better their condition.

Wm. D. Robinson was the path-finder to the highlands, where all the brotherhoods have pitched their tents. He blazed the pathway they have traveled from doubts and fears to confidence and security.

In the days of his young manhood, Wm. D. Robinson toiled for his fellow-man. He took little thought for himself; he took little thought of to-morrow; content if he could lay the foundation of a brotherhood so deep and strong as to resist the storms of adversity, gathering strength and influence as the years go by.

What can the living do for Wm. D. Robinson? For him, nothing. No eulogiums can reach his ears. No pomp and circumstance of parade, men marching beneath waving banners to stirring strains of music, can disturb his repose. He has fought his last battle for organized labor. His tongue is still and his voice is silent. Still, the question recurs, what can the various orders of railway employes do to bear testimony of their gratitude to Wm. D. Robinson?

We answer, build a fitting monument to perpetuate the name and fame of the man, who, more than any other man, taught railroad employes the blessings which were certain to flow from organization.

To whom do we make this appeal? We answer, to the members of the B. of L. E., B. of L. F., B. of R. T., O. R. C., S. M. A. A., O. K. T., and other organizations of railway employes.

They never fall who die
In a great cause: the block may soak their gore.
Their heads may sadden in the sun: their limbs
Be strung to city gates or castle walls—
But still their spirit walks abroad.

It is true, the spirit that animated Wm. D. Robinson is in all our lodges. It is in every union meeting. Its influence is all pervading and will live forever.

True, when Wm. D. Robinson, laid down his burden, there were others to take it up and march on. The building of the temple of organized labor is still going forward. The grand superstructure is rising, a hundred thousand hands are willingly contributing their help. It is rising in grand proportions and challenges the admiration of the world.

Shall we forget in the days of our power and wealth, O, fellow toilers, that Wm. D. Robinson conceived the plan, and that we are simply carrying on and carrying out his splendid designs?

We appeal to a hundred thousand men,

as noble and generous as ever wore the badge of labor, to decree that a fitting monument shall be built to perpetuate the name, the fame, the noble work of Wm. D. Robinson.

We build monuments to commemorate the deeds of heroes in battle, and it is well. Survivors cannot do too much to attest their gratitude for men who do and dare for their country—for

Honor decks the turf that wraps their clay.

But,

There's a warfare where none but the morally brave,
Stand nobly and firmly, their country to save,
'Tis the war of opinion, where few can be found,
On the mountain of principle, guarding the ground,
With vigilant eyes ever watching the foe
Who are prowling around them, and aiming their blows.

Wm. D. Robinson was a moral hero. The odds against him never daunted him; indeed, as perils thickened his courage increased and he lived to see success crown his efforts. Shall it be his fate to die un-honored and unsung?

We feel confident, such is not to be the verdict.

There is now more than one hundred dollars in the Robinson monumental fund.

How easily it could be swelled to \$5,000 it is scarcely required to outline here. The small contribution of ten cents each, from the members of the orders we have named would secure a fund of \$10,000.

If we can reach their ears, we feel satisfied we can reach their pocket books, and that the Wm. D. Robinson monument fund will speedily reach such a sum total as to warrant the preliminary step required to carry out the cherished purpose in view.

In this connection, fellow railroad men, we suggest that at every union meeting held the question of the monument be referred to as the meeting may deem prudent, and that then and there a collection be taken up. If this is done, we do not hesitate to say the response will be such as will gladden every heart, creating a sentiment which will redound to the glory of the orders.

What will be the lessons the monument would teach? First of all, that railroad employes, connected with the train service, recognize the fact that they owe to Wm. D. Robinson a debt of gratitude, an acknowledgment bearing testimony that one noble trait at least has lodgment in the hearts of men.

To build a monument to perpetuate the memory of Wm. D. Robinson, is to build a monument to the God ordained nobility of the men, who following his example, his precepts and indomitable spirit, have organized for their protection and prosperity.

Wm. D. Robinson, toiled for the emancipation of railroad men from debasing thral-

doms. He spoke eloquent words for independence, and thousands of aching breasts have felt the thrill of his convincing arguments, and the world is better for his living, and everywhere the "thorny stem of time" is building, blossoming and bearing fruit for the pleasure, peace and prosperity of railroad employes.

B. OF R. C.

The Third Annual Convention of the Order.—Held in the City of Louisville, Ky., Commencing Sept. 21, 1891.—The Occasion one of Unusual Interest and Importance to the Order.—Propositions for Consolidation with the Order of Railway Conductors Submitted and Accepted.

RECEPTION, ADDRESSES, ETC., ETC.

The Third Annual Convention of the Brotherhood of Railway Conductors convened in the city of Louisville, Ky., Monday, Sept. 21, 1891.

At the date of the Louisville Convention, the order was just three years old, its birth having occurred at Los Angeles, California, A. D. 1888.

The reason why the order was organized was that the railway conductors were without any organized means of resisting wrong and oppression. While other employes in the train service of railroads could obtain redress for grievances, conductors were required to submit to such treatment as was awarded them, or have their burdens lightened by yielding to humiliations at war with all ideas of manliness and self-respect.

Such conditions brought into existence the Brotherhood of Railway Conductors, under the splendid leadership of George W. Howard, who had been a railroad man from his boyhood—a fireman, a brakeman, a conductor, an engineer, a yard master, a train master, master of transportation, a division superintendent, and who is now declared to be "the best all around railroad man in the United States," and in addition, he was a Union soldier.

Under the guidance and leadership of George W. Howard, the Brotherhood of Railway Conductors sought first, last and all the time, to educate railway conductors to comprehend the importance of protection.

Young, weak in numbers and finances, but rich to opulence in ideas and argument, the order, from the first day of its existence, exerted a powerful and healthy influence.

The Order of Railway Conductors, long established, with a large and intelligent membership, with money at its command, no longer able to resist the logic of protection, found that its existence depended upon a radical change in its constitution and policy,

and as a result, the O. R. C. became a protective order.

This much, as preliminary to the proceedings of the Third Annual Convention of the Brotherhood of Railway Conductors.

The reception of the delegates at Louisville was all that the most exacting could have demanded.

The opening exercises of the convention were held in the Masonic Temple Theater where His Honor, Mayor Tyler, welcomed the officers and delegates to the Falls city, the metropolis of Kentucky. The welcome was warm and generous, and the prestige of old Kentucky was fully maintained.

It is needless to say that the Mayor's welcome touched every manly heart in the vast audience, or that the applause was spontaneous and to the echo.

The Mayor having concluded his address Mr. J. B. Stanton, of Seymour, Ind., who presided, introduced Grand Chief, George W. Howard. As Mr. Howard stepped forward the cheering was simply deafening, rising wave upon wave, making a scene which can only be described as a tumultuous ovation. Quiet having been restored Mr. Howard spoke as follows:

Mr. Chairman, Ladies and Gentlemen:

This is the opening of the third annual convention of the International Brotherhood of Railway Conductors. At these annual conventions, our conduct and general work of the year past is carefully reviewed. Our maps are brought out and obstructions of all kinds are carefully located thereon, and in legislating for the new year our best efforts put forth to remove these obstructions, and failing to remove them, we seek the very best course either above or below or around or through them. The work of our delegates here in your city for the next ten days will determine what the course of our brotherhood is to be for at least the next twelve months, and if biennial sessions are decided upon then for the next two years.

It is not necessary for me to dwell at any great length upon the details connected with the formation of our brotherhood. Suffice it to say that we know that we started right; that our platform and principles are right and have always been right. We mean, we have always meant, and have tried to do only that which should redound to the best interests of the toilers of the American continent.

The Brotherhood of Railway Conductors provide for a compulsory insurance for its members in policies of one thousand dollars each. The first policy only must be taken, but as many more as is desired can be taken by any member, who will be required to pay in proportion to what he takes, and this insurance is paid alike in cases of death or total disability. I do not believe however in the policy of peddling these insurance features of our organizations. Insurance can be had anywhere and by any body. We have a score of first class insurance companies doing business in this country, and there can be no excuse for everybody not being insured. And not wishing to at all detract from the great good that has been accomplished by the insurance departments of our various organizations, I say that insurance should be made a secondary consideration by the members of all of them, and they should not allow themselves to be blinded by any insurance showing on the part of either of them. Our first consideration should be a protection to our situations and wages through which we are enabled to get money to pay for the necessities of life and insurance, and if you will insist upon insurance as a first consideration in the make-up of your business life then remember that in order to be insured merely it is not

ecessary that you should belong to any organization and subject yourselves to laws that at times may be cumbersome upon you; not necessary to attend meetings and pay grand and local dues and assessments; not necessary to employ a horde of officers to attend to insurance alone. You can get insurance without any of these responsibilities. Think of it.

Every man in America should prove himself a citizen of this great republic; should never fail to exercise his right of suffrage and thereby assist in making and unmaking its laws. We have been taught from birth that this is a government of the people, for the people, and by the people, but there seems to be a general misunderstanding as to *who* are the people, or else the constitution of this country intends to convey that this is a government for several classes of people, but this was never intended by our forefathers, the framers of our constitution. They intended that the people of the United States should be an undivided people, and that equal and exact justice should be meted out to each and all, and that special privileges should be extended to none; but in the past this has almost entirely been set aside. Influenced by the teachings of a false political economy, legislation has for years and years discriminated against the wage-workers of the world. Adam Smith, the great English writer, first directed thought in the wrong direction, and it has been hard for modern writers to get out of his rut. He reasoned from the stand point, that the man who has the money to employ labor is the autocrat; that he has the right to dictate all the terms of its employment, and that labor has left it only the right to accept the terms offered, or if not satisfied with those terms, to make its exit, and give way to others less exacting. He taught that labor was a commodity to be bought and sold, but that unlike any other commodity in the market, the buyer has the exclusive right of naming the price to be paid for it. This false economy, in a manner applicable to an age long since buried, has been the source of much misunderstanding, much trouble, and many proscriptive laws. It has been accepted as the correct doctrine by a large per centum of our very best people, for the reason that no other thought has had a chance for growth. As soon as a young man passes beyond the common schools to an academy or college, the poison is filtered into his brain and heart through every text book on political economy he encounters, and the learned professors who never did a day's physical work in their lives, emphasize their teachings with lectures on strikes and boycotts, and the general follies of workingmen.

We have been on the wrong track for years, but through a higher sense of duty and a better understanding, we are gradually getting onto the right track, and the good work must continue until every American citizen can stand wholly untrammelled in the exercise of his rights as such. I know that whenever anything is said about citizens' rights, it always brings forth derision from those who would like to establish and constitute a nobility here in our country, from those who feel that the poor have no rights or should have none; but thank God these are few and grow perceptibly less year by year. It is the duty of every fair-minded man to unearth wrong everywhere, and to use his utmost endeavors to rectify it, and we cannot ignore the rights of the American people if we would. Our common school system is turning out thousands of intelligent, educated people every year; people that can think and express themselves, and people who have a right to be and will be heard. Free speech can never be destroyed or even throttled to any extent until our free school system is destroyed, and that will never be.

I thank God to-day for the free schools of our country, and I hope that the spirit may spread until every country on the face of the globe may become noted for its free schools, and that the time may come when no child on earth will be able to attain the age of ten years without knowing how to read and write fluently.

Ours is the grandest country on the face of the globe, but we can make it yet grander, and it is our duty to do it. We must arrange so that none shall remain idle who wish to work, and this can readily

be done if by no other way than a shortening of the hours of labor. Eight hours a day is enough for any man to work anyhow, and especially if he is engaged at hard work. Our toilers should have more time to improve themselves. They don't have time to read enough. I have heard it said by some of our would-be wise ones: "Oh, it will never do to reduce the hours of labor, for our workmen will spend all their leisure time in saloons, and will drink themselves to death."

Now, possibly some would do this, but it would be only our "weeds" that would do it, if any at all, and it might prove a blessing to the balance of the crop of humanity to get rid of these weeds in that way. Anyhow it is time enough to consider the crossing of a bridge when you have found one to cross. It does no good to construct them in imagination, and so far as the liquor curse is concerned, we can rectify that too.

I want right here to urge upon you in the most forcible way at my command, that the most powerful force in American society, is public opinion lawfully expressed, through a fair and honest ballot. Is there any doubt, can there be any doubt as to where the majority of the ballots lie in this country? Our wage earners by keeping in close touch with each other can make and unmake laws at will, and since the liquor curse has been so often interestingly paraded before us by our sympathizing friends, let us now take the matter into our hands and entirely do away with the liquor traffic in this country and stop its manufacture here altogether. If we haven't got the nerve, then let us grant to women the right of universal suffrage and then ask them to help us, and the task will be found quite easy. Don't be afraid to bank on our American women, they are day by day proving themselves the peer of man in all of the avenues of life. They already have the partial right of suffrage in twenty-three of our states, and the full right in Wyoming, and to every test they have never been found wanting. They have been tested in the counting room, in mercantile pursuits, and as doctors, lawyers, teachers, railroaders and in marine pursuits, and have always proven themselves equal to any occasion. Yes as farmers and preachers they have got there, and even on the field of battle fighting side by side with her burly brother, she has proven herself to be of the proper material, nery unto death. I say God bless our American women, the noblest and best creatures on earth and warmest and staunchest supporters of the most glorious flag that ever graced the air of heaven.

So many reforms in my estimation are needed in this country that I hardly know which to tackle first, but one of the worst evils is our universal credit system, and it should be done away with. Do you know that at least seventy-five per cent. of the business of this country is done on credit? And so much credit or so much business done on wind, or on other paper besides money is what caused our panic of 1873 and wrought absolute ruin to thousands who had thought that they were beyond the possible reach of want. It ought to be made a crime punishable by fine at least for any one to do business in America on credit; and if we haven't money enough in circulation to do a cash business, let it be provided for. Of course in speaking of cash I mean cash or its equivalent. To simplify, if you come to my store and want goods and haven't got the necessary cash, then bring something equivalent to cash to pay for them; but don't bring me a piece of paper with a promise written on it no matter how well endorsed, for it is not an equivalent to cash. The endorsers and the principal may all become bankrupt before the note falls due, and if ever so good I may have to resort to law with its troubles, vexations and stays in order to get my money. Any honest man would rather do a cash than a credit business. And were a spot cash system adopted, our wage earners even would be enabled to save much more of their wages. "Spot cash" will always be quoted a better price than credit and this is true the world over.

Another thing we must stop, gambling in the fluctuations of our money; and to do this we must have money that won't fluctuate. We must make a silver dollar worth 100 cents and as good as a gold dol-

lar if we have to make it as big as a cart wheel, and we want all money to be made and issued directly by our government to our people through our treasury or sub-treasuries, and we want the standing of our country to be such, that a paper dollar issued by it, will be accepted at par at any port in the world, and as readily as a silver or gold dollar. And in order to establish this, it is only necessary to have a thorough understanding with the other countries of the world, and this can be readily brought about by the tolling masses, when once they have arrived at a common understanding as to what is necessary to be done in the premises, for they have the intelligence to carry it out, never fear.

Our present national banking system must be done away with. We must have places that we know are absolutely safe for the deposit of our monies. When our government takes charge of all banks and makes sub-treasuries of them, then we will hear of no more "busted" banks, and of the many business failures incident thereto; will hear of no more suicides on account of "lost all I had in the world in the bank that has just closed its doors." That's the way they say it now, "closed its doors," but that isn't what we used to say when we went out on a jaunt the night following pay-day, and woke up next morning with our money in somebody else's pockets, we always said we were busted and that is always what is the matter with the banks that "close their doors," they are simply busted, and not one in fifty ever resumes.

I have been asked if I did not as a general rule, despise capitalists, and I answer "no;" that I was a capitalist myself. The world is full of capitalists. You meet hundreds of them every day, in fact nearly every man you meet is a capitalist; every human being in the world that has good brains and health is a capitalist; every one who has five cents in his pocket over and above what he owes is a capitalist. It is impossible for capital and labor to conflict with each other; people do not always agree, but capital and labor go hand in hand and it is impossible for it to be otherwise; one cannot possibly exist without the other, and such men who are always engaged in trying to excite the envy of the unfortunate, the malice of the poor, should be considered as enemies to humanity and good society. Every fair man should encourage thrift; believe in the better classes, and glory in the spirit of money-making and money-keeping, that distinguishes American life from other life. When that spirit is confined to fair, honorable and legitimate channels and should never want to see any limit fixed to the accumulating possibilities of thrift and enterprise, but the men, or corporations, syndicates, trusts or combines of whatever nature that accumulate millions of dollars by taking more than a fair proportion of the joint earnings of capital and labor, should be classed as thieves and robbers and should be punished accordingly. Men who accumulate their money in this way have taken unfair advantage of their associates and competitors and should be branded the common enemy of mankind.

Of course if we consider that this game of life is a fair one no matter how it is played, and care only for the things of this life and nothing for the future, our hearts then have assumed an adamant cast that turns all teachings of honesty, morality and even humanity itself to the wind. But what is man? Whether he be deprived of that light which is from on high or whether he discards it, he is a frail and flimsy creature, a little more than three-fourths water standing on time, that bleak and narrow isthmus joining two eternities, and whether his life be long or short, his last year, last month, last week, last day, last hour, last minute, last second must

be concerned, at least, in the eyes of Him who made us all? Do you try to carry out the obligation you took in your division or lodge room, or do all the teachings received therein go for naught?

Your lodge rooms are the only churches to a great many of you, and as good teachings are there imparted to you as could emanate from any church. The same bible is used, and as fervent prayers are offered as can be heard in any of our churches, and we all make our appeals to the same God. It is your duty to try to get closer and closer together, and if anybody or anything deter you, and no matter who or what gets in the way, remove him or it. It should simplify matters all we possibly can, and never fail to remove all causes possible that are all likely to create strife or jealousy, or ill-feeling of any kind.

We should have but one organization for, and of each class of railroad men. This will do away with much contention, strife and jealousy at once. We should insist upon an amicable relationship between the officers of our various organizations, and when any prove obstinate or a detriment in any way to progress, he or they should be immediately removed or replaced by better men.

Railroad employees generally ought to be mutually encouraged to work in closer touch with their officials, and this can be done without any compromise of manhood or dignity on the part of either. By getting closer together a better understanding can be had, and misunderstandings can be prevented. This, in the past, would have saved many changes and removals on the part of employees. And make it a rule to render better and better service every day for your company. Take a personal interest in the affairs of your road and assist your officials all you can. They will appreciate it. If you are working under rules that can not be implicitly obeyed without hardships, go at once to your officers and call their attention to them, and they will gladly rectify, but don't wait until something has happened through your violation of these objectionable rules, but go while your record is clear, and it will look better and have a better effect.

Another thing I want to call your attention to, and that is a movement on foot to create dissension between railroad men and farmers. Sit down on this hard wherever you may find it. Without the farmers we would have no railroads and nothing to haul on railroads. Encourage the farmer all you can, he will always prove a friend to you in time of need. His interests are your interests. The best citizens we have are farmers, and we want fewer speculators and more farmers. The farmers for the past thirty years have been supporting too many men who would not work. We want fewer loafers and more workers in this country, and middle men must be knocked out wherever it can be made possible to do so. Our farmers are the back bone of our country, and when they are blessed with good crops we are blessed with good times, and when they have poor crops we invariably have dull times. Hence, you see it is desirable that the farmer should always raise fine crops, that we may always have good times. Then let me again urge you to encourage our farmers every time you can make an opportunity to do so, and I like men who make their opportunities much better than those who wait for opportunities to be made for them.

On behalf of our brotherhood I thank his honor your Mayor for the generous welcome extended to us, and for his words of encouragement and good cheer, and I thank this people who have so kindly turned out to welcome us on this occasion.

From start to finish Grand Chief Howard's address received profound attention and elicited frequent cheers, his reference to consolidation being warmly applauded.

A number of brief addresses followed, each of which favored consolidation with the O. R. C., so that there should be but one great order of railway conductors on the continent. Mr. H. S. Reardon, of Louisville Division, No. 85, O. R. C., said: "We

of the O. R. C. have only to blame ourselves that the brotherhood was ever organized. We should now take the initiative in reconciling the differences, and if anybody is in the way of the two organizations getting together he should be swept out of the way. I speak in behalf of nine-tenths of the masses of the Order of Railway Conductors. If Clark is in the way, sweep him off the face of the earth; if Howard is the obstructor, he must step down and out."

Wednesday, the 23d of September, was another gala day of the convention, and the session was held with wide open doors.

It was the writer's good fortune, upon the earnest solicitation of Bro. Howard, to be present and participate in the proceedings. Our generous reception is a fadeless picture in our memory, and a rich compensation for any effort it had been our good fortune to make to effect the consolidation of the O. R. C. and the B. of R. C.

In the course of the remarks which we had the privilege of making, we are reported as follows:

Mr. Debs' appearance in the hall was the signal for an ovation, attesting his popularity with the conductors, and exhibiting the hope that with the aid of his counsel the differences between the two organizations of conductors may be harmonized. Mr. Debs made a speech of some length, which was listened to with great attention. It was directed mainly to the importance of harmony and federation of interests between the railroad employees. He said that two organizations of employees of the same class, sometimes at cross purposes, could not accomplish the one great purpose of each, the protection of their rights. No matter how cordial and fraternal their relations might be, the leverage is weakened by the want of unity and the fact that their different methods made them unwieldy when they were called upon to pull together in the same cause. Their employers, when a clash of interests came about, would recognize this weakness and profit by it, and it would lose them many a battle for justice and right that could be won by one powerful organization. He saw nothing anomalous in the character of the two organizations. They were composed of men who had the same aims and purposes in life; the purposes of the Brotherhood and the Order of Railway Conductors were identically the same—the maintenance of the individual and collective rights of their members, and the furtherance of their individual interests, and there was really no distinction between them save the name and the mere form of their by-laws.

The constitutions are identical in spirit. The spirit of emulation is inspired by a desire for the common good, and the mingling of the two orders could be accomplished with very slight concessions from both. Such an opportunity for consideration as the present one had never before arisen, and might not again, and with both sides willing and no obstacles existing the great scheme ought to be accomplished right now.

Mr. Debs also dwelt at some length on the condition and hopes of the laboring men of America.

Following the address which we were permitted to make, Bro. C. W. Martin, editor of the *Federationist*, published at Indianapolis, was introduced. Bro. Martin is entirely at home on the rostrum, and his address was replete with telling hits, which were warmly applauded.

Bro. S. Keliber, grand secretary and treasurer of the Brotherhood of Railway Car

Men, followed in a logical and eloquent address, which was well received and elicited hearty applause.

The proceedings of the convention on Thursday, the 24th, related chiefly to the consideration of measures of consolidating the Brotherhood with the Order of Railway Conductors. Grand Chief Howard submitted the following recommendation upon the subject:

LOUISVILLE, KY., September 24, 1891.

To the Third Annual Convention of the International Brotherhood of Railway Conductors:

DEAR SIRS AND BROTHERS:—As your chief executive, I deem it my duty to call your attention to a subject that above all others should receive your earnest and careful consideration. I refer to the matter of uniting, if possible, in one great organization all of the railway conductors of the American continent. It is a fact well understood that at its last convention the Order of Railway Conductors adopted by practically an unanimous vote a policy of protection, thus not only placing itself in accord with other orders of railway employees, but removing all material differences which have hitherto existed between the two organizations of conductors and practically placing them, so far as aims and purposes are concerned, upon a line of perfect equality. This being the case it at once becomes apparent that there is no longer any necessity for two organizations. Indeed, while rival organizations are in the field, men will of necessity be led into hostile camps; prejudices will assert themselves; envy and jealousies will prevail and do their deadly work, and all these influences will combine to prevent a perfect unification of the craft, such as is necessary to protect their rights and interests and secure for them that degree of consideration at the hands of their employers to which they are so justly entitled.

In view of these facts I beg to recommend that measures be taken by the appointment or election of proper representatives, or otherwise, to negotiate with the authorized representatives of the Order of Railway Conductors for the consolidation of the two organizations of railway conductors upon such terms as may be regarded fair and honorable to all concerned. Brothers, let not selfishness or vindictiveness stand in the way of such a consolidation. Let us be frank and sincere in our disposition to meet our brothers of the Order of Railway Conductors. There is no longer any occasion for estrangement. The interests of all conductors are identical, and now that they are in accord on the great question of protection, the bed rock principle of organization, it is, in my judgment, eminently in consonance with prudent policy that they be united in one body for the good of all. Trusting that you will give this matter the careful consideration its importance merits I subscribe myself,

Fraternally yours,

G. W. HOWARD, G. C. C.

The following resolutions were submitted and adopted:

WHEREAS, It has been recommended by our Grand Chief Conductor that measures be taken to, if possible, consolidate the Brotherhood of Railway Conductors and the Order of Railway Conductors; and

WHEREAS, It is believed that such recommendation in view of existing conditions is wise and timely; therefore, be it

Resolved, That a commission composed of five representatives (of which the Grand Chief shall be ex-officio chairman) be elected by this body to meet a similar commission to be selected by the Order of Railway Conductors, with full power and authority to act in all things necessary to unite and consolidate the Brotherhood of Railway Conductors and the Order of Railway Conductors

Resolved, That if such negotiations prove fruitless it is the desire of this body that the matter be referred to a board of arbitration, to be chosen equally by the representatives of both organizations.

Resolved, That this body pledge itself to in all

things, abide by the action of the commission herein provided for.

Under the resolutions the following conference committee was appointed, viz.: Geo. Lovejoy, Terre Haute, Ind.; W. H. Sebring, Savannah, Ga.; L. G. Cummings, Leadville, Col.; Thos. Gilluly, San Bernardino, Cal.; W. E. S. Gibson, Roodhouse, Ill.; Grand Chief Geo. W. Howard, ex-officio chairman.

As a further movement, telegraphic communication between the grand officers of the O. R. C. and the B. of R. C. resulted in a conference at Cedar Rapids, Iowa, October 7, which finally brought about the consolidation of the two orders, as is fully set forth in the following official circular:

CEDAR RAPIDS, IOWA, October 8, 1891.

To all Divisions and Members of the Order of Railway Conductors and the Brotherhood of Railway Conductors, Greeting:

The late session of the Grand Division of the Brotherhood of Railway Conductors elected a commission for the purpose of conferring with a commission on the part of the Order of Railway Conductors, upon the question of some plan of consolidation of the two, whereby the friction and ill effects of having two organizations of the same class of employees in rivalry, might be removed. The Board of Directors of the Order was convened for the purpose of meeting the commission from the Brotherhood and upon October 8th after a conference lasting two days, the following plan was agreed upon:

This Agreement made this 8th day of October, A. D. 1891, between G. W. Howard, Geo. W. Lovejoy, L. J. Cummings, W. E. S. Gibson, and T. Gilluly, representing the Brotherhood of Railway Conductors, hereinafter called "The Brotherhood," and E. E. Clark, C. H. Wilkins, M. Clancy, F. J. Dorsey, W. J. Durbin, Sam Phipps and Wm. P. Daniels, representing the Order of Railway Conductors, hereinafter called "The Order."

WITNESSETH:—That it is hereby agreed that the above named organizations shall be consolidated upon the following terms, to-wit:

1. The title of the consolidated organization shall be The Order of Railway Conductors of America, provided that it is agreed upon the part of the Order, that the matter of the title shall be presented to the next session of the Grand Division for its final decision.

2. The Brotherhood to provide for the immediate issue of a certificate to each one of its members, which, if presented on or before January 1st, 1892, shall be received by any division of the Order as *prima facie* evidence that the holder is entitled to membership in the Consolidated Order, and he shall be admitted and obligated without the payment of any fee whatever, and such members shall not be required to pay any local or grand dues to the Consolidated Order until January 1, 1892. Any member of the Brotherhood who has been suspended or expelled by any division of the Order, is hereby reinstated to membership in the Order with the full rights of any other members of the Brotherhood as herein provided, subject to the approval of the next Grand Division of the Order, provided that any member who is in arrears or who has been suspended for non-payment of dues by either organization, shall not be entitled to membership in the Consolidated Organization until all dues are paid to the date of such suspension, should it be required.

3. All divisions of the Brotherhood to be immediately closed, and at any point where there is no division of the Order, the necessary charter and supplies for a division shall be furnished free of charge, and a division organized, to which division all members of the division of the Brotherhood who hold the proper certificate shall be admitted, and any money or property held by the division of the Brotherhood shall become the property of the division of the Consolidated Order, which is organized in its stead.

4. At points where there is a division of the Or-

der, all money and property of the division of the Brotherhood, shall be turned over to the division of the Consolidated Order.

5. Every member of the Brotherhood who holds one or more insurance certificates, shall, upon admission to the Consolidated Order, the surrender of the certificates held, and the filing with such certificates of a written application for such exchange, receive certificates of membership in the Mutual Benefit department of the Consolidated Order, free of charge, such certificates to be dated and to take effect on the day that the application for exchange is certified by a division secretary, provided the number of certificates so exchanged for any member shall not be in violation of Article III of the law governing the Benefit Department of the Order, and all becoming members hereafter shall carry at least one insurance certificate for one thousand dollars.

6. The affairs and accounts of the Brotherhood shall be closed up as soon as practicable by its officers, and after the payment of all legitimate indebtedness, all money and property on hand shall be turned over to the officers of the Consolidated Order; and the existing laws of the Order shall govern until lawfully changed or amended.

7. It is further agreed between the parties hereto that the influence of the representatives of the Consolidated Order shall be used in favor of general cooperation between all organizations of employees in train service, and the franchise of the Brotherhood in the Supreme Council is hereby transferred to the Consolidated Order, subject to the approval of the Council; and all agreements at present in force between the members of either organization and railway companies, will be recognized and protected by the Consolidated Order.

8. Appreciating the benefits to accrue to the large majority of the conductors by removing the friction caused by the existence of two rival organizations, composed of that class of employees, and desiring to avoid imposing upon the members the heavy expense of a special session of the Grand Division to pass upon the questions, and believing that the Grand Division, if convened, would endorse the same terms, the representatives of the Order of Railway Conductors assumed to act and have fully explained the text and application of their laws and have pledged themselves to use their influence upon their divisions to induce them to carry out in full this agreement, and if they feel aggrieved to make their appeal to the Grand Division.

And it is hereby further agreed on the part of the representatives of the organizations, parties hereto, that each and all shall use his influence to carry out in good faith and in the full spirit thereof, the provisions of this agreement.

(Signed by representatives.)

The Board, on the part of the Order, has been assisted largely by the representatives of the Brotherhood in their efforts to avoid the necessity of incurring the enormous expense of a special session of the Grand Division, and as incorporated in the agreement, the Board on the part of the Order appeal to each and every division and member to comply with, and carry out the provisions of the agreement. The Commission from the Brotherhood were empowered to act and they unqualifiedly bind that organization to the agreement. It is a universally conceded fact that the best interests of the whole suffer by the existence of conflicting interests, and it is equally a fact that no adjustment could be made except where an earnest desire to work for the good of all existed. No agreement could be reached except by mutual concessions of a greater or less nature. In this spirit and in this way this agreement has been reached and we earnestly request each one of our members to do his best to assist in the same being carried out in the spirit in which it has been made. At all times earnestly wishing for the best interests of the United Conductors of the land, we are,

Fraternally Yours,

E. E. CLARK, G. C. C., O. R. C.
G. W. HOWARD, G. C. C., B. R. C.

On the 19th of October the grand officers of the B. of R. C. issued the following circular to the members of the order, which fully explains itself.

TOLEDO, OHIO, October 15, 1891.

To B. R. C. Men, Everywhere:

Before this reaches you you will have received and read the agreement and joint circular made and issued by and between representatives of the Brotherhood and the Order of Railway Conductors, and dated at Cedar Rapids, Iowa, October 8th, 1891. We feel sure that some, at the outset, will feel displeased with the steps that have been taken on the part of our Brotherhood; will feel that everything was surrendered on our part. To such we say: you are mistaken. At the time the agreement was made—and in fact ever since the O. R. C. convention held at St. Louis in May last—the only difference between the Brotherhood and the Order were the grand officers and the name, for the Order had surrendered to the Brotherhood in every other particular. They eliminated their anti-strike clause and adopted our platform of protection, and also arranged for a compulsory insurance for one thousand dollars, same as we had in force, and they have arranged to do away with their permanent membership, which was always opposed by the B. R. C. They have dissolved their incorporation, exactly in accordance with the ideas of the Brotherhood. Their obligation has been changed until now it is practically the same as the obligation of the Brotherhood; and they, as the agreement will show, accepted the place we vacated in the Supreme Council, and the same was endorsed by the S. M. A. A. and the B. of L. F., and G. C. C. Clark personally said he would accept this membership in the Supreme Council in good faith as soon as endorsed by the S. M. A. A. and the B. of L. F., and Howard, Lovejoy and Gilluly, were witnesses to this pledge. We were advised by representatives of the B. of L. E., B. of L. F. and even the S. M. A. A. to get the two organizations of conductors together, and to take the initiatory steps, too, and we know they saw us as we could not see ourselves, and advised us as friends, with the best interests of the conductors of America in view. If we could have had our way we would have named the consolidated organization the Brotherhood of Railway Conductors of America, and we made this proposition to the representatives of the Order, but they had no power to change anything in their make-up without convening a special session of their Grand Division, and this would have cost them twenty thousand dollars; they offered to do this if necessary, but in case they did it they wanted us to convene a special session of our Grand Division also, and this would have cost us about fifteen thousand dollars. We knew, and know now, that no man with the best interests of the conductors of our country at heart, would insist upon any such expenditure of money to merely change a word in a name for our conductor's organization, when if desired the same thing can be accomplished a little later on, and without any extra expense. To the true friends of protection in the O. R. C., as well as the B. R. C., our advice is to get close together, and if anything is wrong with or in the make-up of our conductors' organization, right the same through your influence and votes at coming conventions; and now privately to B. R. C. men, we say earnestly as brothers, knowing that you have always placed implicit confidence in us—and we would not betray that confidence, even for life—that all things considered, the movement made at Cedar Rapids was a wise and timely one which the future will demonstrate to all, and we say this with a never-dying remembrance of our Brotherhood, which was quite as dear to us as anything on earth. Accept the action of your commission in the same good faith in which its work was done, and rally together, drive out the drones, and be not satisfied until every worthy conductor shall be enrolled in one organization of railway conductors, the Order of Railway Conductors of America, and as before stated, if the Order does not prove to be what it should be, then through your influence and votes correct its mistakes and shortcomings.

With kindest feelings and best wishes for all, we are
Fraternally yours

G. W. HOWARD.
J. W. MARTIN.
D. J. CARR.

Bearing even date with the foregoing, Grand Chief Howard issued the following circular which formally winds up the affairs of the B. of R. C., which has ceased to exist:

TOLEDO, OHIO, October 19, 1891.

CIRCULAR.

The Grand Office of the Brotherhood of Railway Conductors at Toledo, Ohio, will be closed by November 1st next, and all bills, claims and accounts, together with the books of the Brotherhood, will be sent to the Chairman of the Executive Board, (G. W. Lovejoy, 121, South 13th St., Terre Haute, Ind., who will thereafter levy any necessary assessments, receive all monies, pay all claims, and attend to all unfinished business incident to the closing up of the affairs of the Brotherhood. It is earnestly hoped that each and every brother will cheerfully respond to any and all calls made by Brother Lovejoy, and will manifest an interest and pride in assisting him to preserve the good name and record of the Brotherhood to a finish. Brother Lovejoy's services in the foregoing will be rendered gratis.

Issued by order of the Executive Board.

G. W. HOWARD, G. C. C.

Attest:

D. J. CARR, G. S. & T.

In closing this account of the third and last convention of the B. of R. C., it only remains to note that the officers and delegates and their guests had, socially, a royal good time while they sojourned in Louisville. They were the guests of the theaters and the tired delegates, when the evening came, enjoyed the most delightful relaxation.

Willard's hotel threw open its doors for terpsichorean delegates, and the light fantastic toes, in the wildering maze of cotillion, quadrille, and schottische, danced the bright hours away. On Sunday the convention was invited to worship at the Masonic Widows and Orphans' Home, and observe what a great fraternity is doing to mitigate the sorrows of the unfortunate.

Among the delightful incidents of the occasion, was the presentation of a superb diamond pin to Grand Chief Howard, and neither Africa nor Brazil can produce a gem that will be worn above a nobler heart. It was happily presented and as happily received.

Another incident in the same line, was the presentation by Col. W. H. Sebring of a magnificent gold watch to Grand Secretary and Treasurer Carr, which was most gracefully done. Bro. Carr, though given ample time, was brief but to the point.

The delegation was a notable one, every representative being a *man* eminently competent to grasp problems and solve them, and by the consolidation the O. R. C. receives a body of men who will be found true to every obligation.

The B. of R. C. closes a splendid career and furls a defiant flag without one dishonorable concession; and on the page of history treating of labor organizations, not one will be found with a record with fewer errors of head or heart. *Adieu* B. of R. C.; all hail O. R. C.

THE S. M. A. A.

The Sixth Annual Convention of the Switchmen's Mutual Aid Association.—Held in Philadelphia, Commencing September 21, 1891.—A Large Attendance of Delegates and a Harmonious and Profitable Convention.

OPENING EXERCISES, SPEECHES, ETC., ETC.

The Sixth Annual Convention of the Switchmen's Mutual Aid Association of the North America, was held in the great city of Philadelphia, commencing on September 21, 1891. The order is now reported to have 155 lodges, and more than 11,000 members.

The growth of the order may not have been "phenomenal," a term frequently employed to convey the idea of rapid increase in lodges and membership—but its growth has been steady—and there is not to-day on the continent a labor organization whose membership is more devoted to those principles and policies, in which centers the hopes of workingmen for the emancipation of labor from the thraldoms which hitherto, and now, appeal to every honest workingman to be vigilant and courageous.

The convention was attended by nearly 200 delegates and officials, and from first to last, was a pronounced success.

The convention was held under the auspices of Quaker City Lodge, No. 73, of Philadelphia, and the meetings of the convention took place in Industrial Hall.

The opening exercises were conducted by Thomas B. Essick, Master of Quaker City Lodge, No. 73, and he presided with the grace of a master. In a touching manner he referred to the death of H. M. Davis, a delegate from Peoria, Illinois, who was found dead in his bed in his room at the Howard House.

Prayer was delivered by Rev. Mr. Conwell, after which the chairman introduced Col. A. K. McClure. Among other things Mr. McClure said:

Every man should strive to become master of his calling. I came to Philadelphia forty-five years ago, a journeyman mechanic, possessing only a certificate that I was a competent tanner and currier and an honest man with a good moral character.

The only way in which capital can be commanded is for labor to be just to itself, not by denunciation, but to make itself so valuable and perfect in its skill and intelligence, and so faithful to its contract that capital dare not provoke it to strike. Then it can command capital. Let your future be as wise and conservative as your past and you will always be one of our leading industrial organizations.

Chairman Essick read a letter from Governor Pattison, expressing regret at his inability to be present and address the delegates, caused, he said, by the press of work. He highly commended the association, and hoped it would continue its good work.

Following Mr. McClure, the chairman introduced Mr. John H. Fow, of Harrisburg, Pa., who spoke as follows:

Mr. President and Gentlemen:—I beg leave to return

to you my sincere thanks for the honor which you have conferred upon me by the invitation to be present with you upon this occasion. When the gentleman who represented you called upon me last Wednesday, I felt very much inclined to refuse, for two reasons. First, because of the short time I would have to prepare anything, and secondly, my want of knowledge of the facts governing your organization and the benefits to be derived therefrom. I take it for granted, however, that you are banded together as an aggregation to protect individual interests; a right which, under our constitution and laws you possess, and which you have a right to enjoy as long as you do not transgress the organic and statute laws. It is eminently fit and proper that the discussion of all matters affecting your rights and liberties as citizens of this republic should take place in this city, wherein is situated Independence Hall, the throne whereon Liberty shall forever sit enshrined in the hearts of all men.

We Philadelphians are pre-eminently Americans, and a sojourn among us will, I have no doubt, enlighten you to a great extent upon the problem which we confront, and has for some time past, confronted the laboring classes. The relations existing between capital and labor are upon a better footing in this city than any other city upon the continent, due mainly to the fact that a vast majority of our mechanics and laborers are interested as owners of the property wherein they reside; and wherever you find such a condition of affairs you will find a community composed of peaceful and law-abiding citizens; for it is to their interests and the protection of their families that they should be so. Industrial agitation has its blessings and its inconveniences. Its blessings consist in improvements in the condition of things—better machinery, better sanitary arrangements in our mills and workshops, better wages, and as long as these can be brought about without inconveniencing the great mass of citizens who have no direct interest in this subject matter, all right, and the vast majority of all right-minded citizens will uphold, aid and assist any organization to accomplish such results; but when force, intimidation and the destruction of life and property are resorted to to accomplish them, the American mind suffers a revulsion of feeling and withdraws all aid and sympathy, and the movement has always failed under such a condition of affairs, and industrial statistics prove it.

Labor is the exertion of individuals, which produces some object in political economy. The exertion of animals is taxed to capital, and is not a voluntary act, but the mere usage of that which some one owns. Labor may be of two kinds, muscular and mental. The tendency of modern political economists is to consolidate, on the ground that any work which ministers to the people's requirements is labor—of a productive kind. The mere fact that you, in the strict line of your business, produce nothing but results simply by the use of your mental powers, would not give the right to class you among the non-producing portion of our population. The violin maker is a producer, the violin player is not; the mere sound that he brings forth from the instrument pleases the ear and has no further results, unless it would be such bad music as to give you a headache, but your exertions have results which are of vital consequence to the public. I hold that among the responsible positions of railroaders you may name the switchmen, especially in these times when every railroad of any consequence has a system for switching trains that is so comprehensible to the uninitiated as the problems of Euclid are to most men.

The intricacies of the switch system on any of our great railroads require a pair of steady nerves and good mental faculties to fill the position. I take it for granted that it is no ordinary gathering of men that I see here before me, gathered from all over this country. You have come here to consult together as to what you should do to better your condition in the future. Lord John Russell said, "If we compare the condition of the working classes with what it was a century ago, they have retrograded, and cannot get for their services the quantity of the necessities of life that they did then." That may have been true in 1844, but now, to-day, in the

year 1891, a different condition of things exists—brought about by three great forces—first, legislation; second, philanthropy; thirdly, in the intelligent efforts, of the workmen themselves; and this great combination working in harmony together has made America the best place for a workman to live in on the face of God's earth.

At the conclusion of Mr. Fow's address, Rev. Russell Conwell was introduced. His theme was the "Ideal Railroad," which he is reported as saying, "must be conducted by the stockholders for the benefit of the people and for the good of mankind. 'We have all an equal right when born into this world. A child is not responsible for being poor. If capital must rest in the hands of the few, it must be administered as a trust for the benefit of all, on the principle of the greatest good for the greatest number.'"

Among the listeners to the addresses were seated on the stage Rev. Russell H. Conwell, A. K. McClure, Representative John H. Fow, all of whom addressed the convention, and the grand lodge, consisting of the following: Grand Master, Frank Sweeney, Chicago; Vice Grand Master, John Downey; Grand Organizer and Instructor, Miles W. Barrett; Grand Secretary and Treasurer, William A. Simsrott; Editor and Manager of the *Switchmen's Journal*, John A. Hall; directors, E. M. Hutchinson, Town of Lake, Ill.; J. M. Callahan, Auburn Junction, Ill.; J. E. Wilson, La Crosse, Wis.; W. R. Davidson, Joliet, Ill.; and George Law, Chicago; and on the floor were to be seen J. W. Donnelly, Chief Clerk of the Town of Lake, Chicago; George W. Law, Chicago; H. E. Gormley, Stevens' Point, Wis.; Harry Bird, Scranton; A. H. Vincent, Minneapolis; J. W. McGrath, Philadelphia; George Mette, Albino, Ore.; T. J. Richardson, Norfolk, Va.; B. B. Johnson, Algiers, La.; F. G. Fitzpatrick, Memphis; W. G. Havlin, Oakland, Cal.; H. O. Russell, Fort Wayne; E. Logan and T. B. Adams, St. Louis.

It will be noticed that the convention had a magnificent send off, and the city press of Philadelphia referred to the delegates as "a fine looking body of well-dressed, stalwart, confident-looking men."

During the time the delegates were in Philadelphia they enjoyed the pleasures of a grand ball and the delights found in tripping the "light fantastic." The switchman's life, when on duty, is in all regards one of superlative seriousness, and it is wise that their leisure hours should be as joyous as possible.

The business of the convention was, throughout, of exceptional importance and so far as reports have come to hand it is shown that every important question had due attention. The Philadelphia *Ledger* reports as follows:

The Treasurer reported that during the year, from September 1st, 1890, to September 1st, 1891, funds amounting to \$171,712.56 had been collected for the Endowment Fund and \$166,600 disbursed, 173 claims

being paid, including 136 death claims and 37 total disability claims, while in the year 1889-1890 only \$73,300 had been disbursed for similar claims, showing an increase of payments this year of \$33,300. The association comprises 155 lodges, and shows an increase in membership during the year of 2,458, making a total membership of 7,453.

The lodges of the organization are chiefly in the West, although thirty-five applications for the establishment of lodges in Pennsylvania, New York and Massachusetts have been received. The collection for the fund for defraying the general expenses of the grand lodge was \$25,384, and the expenditures \$22,373.57. The voluntary subscriptions for the support of unemployed members aggregate \$1,320.50 during the year, and the expenditures were \$1,817.05.

Such are the results accomplished financially by a labor organization, only six years old, still in its infancy, judged by years, but standing forth by its deeds as a giant.

The convention decided to continue annual sessions and to create a fund for the payment of the expenses of delegates, instead of having their expenses borne by the lodges, as has been the rule in the past.

The Supreme Council of the Federated Orders of Railway Employes was indorsed in the most unqualified manner.

The convention took high ground in the matter of unauthorized strikes. They will not be tolerated. Lodges engaging in such illegal proceedings will promptly lose their charters, and in such matters the Grand Master will be held responsible, the purpose being to put a final stop to such proceedings, regardless of consequences.

Necessarily, the Northwestern outrage was discussed and its true inwardness exposed, but no law was passed directed at the B. of R. T. and in all of the discussions no delegate was permitted to speak in an unbecoming manner of that order.

In the progress of business a proposition was submitted, that no member of another organization should become a member of the S. M. A. A. but was rejected by the convention.

One of the noble acts of the convention related to John W. Drury, who died recently in Chicago, leaving his family in an impecunious condition.

Drury, it appears, was the first organizer of the S. M. A. A. and in the early years of the order was one of its most active and efficient members.

At the time of his death he was not a member of the order. Neither legally nor morally was the order required to extend any relief to his stricken family. But the convention rose grandly above all such considerations. The delegates remembered that when the order was struggling for a foot hold, when its pathway was strewn with obstacles, when courage was required to build and to advance, John W. Drury did his best to promote the welfare of the struggling order, and remembering these things the convention appropriated one thousand dollars for his needy family. All honor to the switchmen of the S. M. A. A. for this

truly noble deed. Only men who have big hearts could have done it. One thousand dollars will throw floods of light into the darkened home, where the widow of John W. Drury lives, and a widow's blessing, refreshing as sunshine and rain, will be the reward of the S. M. A. A.

The election of the grand officers, which was unanimous, resulted as follows: Grand Master, Frank Sweeney, Minneapolis; First Vice Grand Master, John Downey, Chicago; Second Vice Grand Master, Miles W. Barrett, Kansas City; Grand Secretary and Treasurer, William A. Simsrott, Chicago. The three retiring members of the Board of Directors, John Callahan, Town of Lake; Robert Davison, Joliet, and George Law, Chicago, were re-elected. The other members of the Board are John E. Wilson, LaCrosse, Wis., and Edward Hutchinson, Town of Lake, Ill.

There were a number of candidate cities for the honor of entertaining the next annual convention, but Dallas, Texas, won the distinction for 1892.

The convention adjourned September 30, 1891, after doing an unusual amount of good work.

THE ROBINSON MONUMENT.

We take this occasion to express our thanks to *The Railway Conductor* for its hearty indorsement of the Wm. D. Robinson Memorial. It says:

THE TELEGRAPHERS.

Consolidation of the Two Orders Effectuated.

THE OUTLOOK FULL OF PROMISE.

The Brotherhood of Telegraphers met in annual convention in the city of St. Louis in the month of September last, and the roll call disclosed the fact that the divisions were fully represented.

Let us premise briefly for the purpose of a clear comprehension of the situation: There were two orders of telegraphers at the time of the meeting of the convention in St. Louis, of which we write, viz.: The Order of Railroad Telegraphers and the Brotherhood of Telegraphers. Of these two orders the Order of Railroad Telegraphers was the oldest, the first organization. At the time of its organization the O. R. T. was *non-striking*, or *non-protective*. Because of this feature in its constitution the Brotherhood of Telegraphers was organized. The O. R. T., at its annual convention held in June, 1891, eliminated from its constitution the *non-striking* feature, and became protective. This action on the part of the O. R. T. removed one of the principal obstacles to the consolidation of the two orders and opened the way for negotiations.

The convention of the B. of T. was made up of eminently level headed men, whose supreme purpose, first and last and all the time, was the good of telegraphers.

While this can be said of all the delegates, every consideration of justice demands that the highest encomiums should be written of the grand officers of the order, viz.: M. D. Shaw, Grand Master; E. F. Kearney, Vice Grand Master, and J. H. Schwerkzen, Grand Secretary and Treasurer. These men were animated by the supreme purpose to sink all minor matters for the welfare of the men, and of M. D. Shaw it should be said that with true moral heroism he sacrificed his position of Grand Master of the B. of T. to accomplish results which he clearly foresaw would redound to the welfare of the great body of telegraphers.

At the convention of the B. of T., of which we write, the O. R. T. was represented by two of its grand officers, viz.: A. D. Thurston, G. C. T., and D. G. Ramsay, A. G. C. T., who were clothed with the necessary power to negotiate a consolidation of the two orders, and these gentlemen, acting within their delegated powers, were frank and manly throughout all the deliberations. The convention was addressed by the grand officers of the two organizations, and it is scarcely required to say that consolidation and the benefits certain to result from such a movement was the theme of them all. In these deliberations the writer hereof was permitted to participate, and to the extent of his ability demonstrated that every minor question should be subordinated to

the main question of consolidation. The strength, the conquering power of unity was set forth as compared with the weakness of separated organizations of men of the same craft or profession. As a result, the convention of the B. of T. authorized its grand officers to meet and confer with the grand officers of the O. R. T. to see what could be done to bring about the unification of the two orders.

With commendable promptness the conference was arranged and the appreciated honor was conferred upon the writer to preside over its deliberations. This conference was in session several hours. Every provision of laws, every item of policy was brought forward and exhaustively discussed. There were times during the conference when everything pointed to defeat, and the outlook for consolidation was dark and gloomy. It was at such critical junctures that reason and logic came to the front, it was at such times that personal considerations disappeared and the welfare of telegraphers stilled the storm and opened the way for success.

In no instance, on either side, was a vital principle sacrificed; only non-essentials were given up, things which to surrender for the good of all only magnified the profound comprehension of the situation and immense importance of having one strong and influential order of telegraphers in the field.

We have seldom, perhaps never, had an opportunity to witness a more courageous manifestation of men's capability to master adverse circumstances. When there was yielding, when concessions were made, it was so manifestly patriotic, so clearly for the good of all, that those who made them were the heroes of the occasion, and when results were finally reached there was unusual gratification and satisfaction.

The terms of the consolidation are as follows:

TERMS OF AMALGAMATION.

First. The name of this body shall be "The Order of Railroad Telegraphers of North America."

Second. In cities where there are O. R. T. Divisions, all lodges of the Brotherhood of Telegraphers shall surrender their charters, and all members in good standing on date of surrender of charter shall be admitted to membership in the O. R. T. division located in the same city free of charge, and said members shall pay dues to the O. R. T. upon expiration of the time for which they have paid dues to the B. of T.

Third. Upon the consolidation of any lodge of the brotherhood with any division of the O. R. T. as above arranged, all offices of the brotherhood shall be declared vacant. Should two-thirds of the amalgamated body desire a new election of officers, the Grand Chief Telegrapher will grant dispensation therefor.

Fourth. All moneys in the treasuries of the local lodges of the Brotherhood of Telegraphers shall be turned over to the treasurers of the divisions of the O. R. T. and receipt taken therefor.

Fifth. At points where there is a lodge of the B. of T., and no division of the O. R. T., the charter of the B. of T. lodge shall be surrendered to Grand

Secretary-Treasurer J. H. Schwerzgen, together with a list of members in good standing, who shall immediately furnish to the Grand Chief Telegrapher of the O. R. T., who shall cause the same to be regularly organized with charter and necessary supplies free of charge.

Sixth. Grand Secretary-Treasurer J. H. Schwerzgen shall immediately, upon ratification of this plan, furnish the Grand Chief Telegrapher with a list of the names of all members of the B. of T. directly attached to the grand lodge with their addresses, and stating the date to which the dues of said grand lodge members are paid, and said members shall at once be accepted by the O. R. T. as regular members, entitled to all the privileges of such free of charge. They shall not be required to pay any dues to the O. R. T. until the expiration of the time to which their dues are now paid to the B. of T.

Seventh. After liquidating all legitimate claims and debts, the funds remaining in the treasury of the grand lodge of the B. of T., together with all supplies on hand upon date of ratification of this agreement, shall be immediately turned over to the Grand Chief Telegrapher of the O. R. T., who shall receipt for the same, and cover the funds into the treasury of the Grand Division of the O. R. T.

Eighth. The Grand Division of the Order of Railroad Telegraphers agrees to admit all of the present members of the brotherhood regardless of whether they have served in railway employment or not.

We, the undersigned, Grand Officers of the Brotherhood of Telegraphers, hereby certify that the above report of the Judiciary committee of the O. R. T., was adopted at the regular session of the Grand Lodge of the Brotherhood of Telegraphers, held at St. Louis Mo., this 15th day of September, 1891.

M. D. SHAW, G. M., B. of T.

J. H. SCHWERZGEN, G. S.-T., B. of T.

Accepted, this 15th day of September, 1891, St. Louis, Mo.

A. D. THURSTON, G. C. T.
D. G. RAMSAY, A. G. C. T.

In this connection we introduce also the following article which appeared in the *Telegrapher*, the official organ of the Brotherhood of Telegraphers, in its issue of September 29th:

There are two principles which the brotherhood has always held to be indispensable to the solution of the problem whether telegraphers can have a successful organization or not. These principles are: *Universal organization and Federation.*

It is not our desire at this time to show why we believe that universal organization is necessary, for the *Telegrapher* has devoted a large portion of its space to the discussion of that question during the last three months. It is a question over which exist honest differences of opinion among telegraphers, and we can safely leave its solution to the future.

Federation, on the other hand, is a principle on which we all agree, and we desire to say to the members of the brotherhood that one of the most important points which induced the convention at St. Louis to agree to the consolidation was, that amalgamation will insure our admission into the Federation beyond a doubt. The grand lodge felt that the brotherhood could well afford to temporarily waive one principle—that of universal organization—to gain another—Federation.

It was agreed upon, as one of the conditions of the consolidation that the grand officers of the Order of Railroad Telegraphers shall make application for admission to the present Federation within one week from date of adjournment of the convention of the Brotherhood of Railway Conductors—at this writing in session at Louisville. Bro. E. V. Debs, who presided over the joint meeting of the grand officers of both orders, assured them that he would do all in his power to insure our admission into the Federation. Since want of unity among the craft was the only reason why the two organizations of telegraphers have been refused admission, it is reasonable to suppose that the telegraphers, now that they are united, will be welcomed with open arms by the United Orders of Railway Employes.

If the consolidation of the Brotherhood and the Order of Railroad Telegraphers had accomplished nothing else but the establishment of the principles of federation, it would be well worth all the sacrifice made.

The foregoing terms of consolidation, upon being submitted to the convention, were unanimously ratified and the two orders became one, the title being the Order of Railroad Telegraphers.

The representatives of the O. R. T. could make no concessions that would come in conflict with the constitution of their order, therefore, in order to bring about consolidation the constitution of the O. R. T. had to remain intact and be adopted as it stands, and if this had not been done consolidation could not have been secured.

The Order of Railroad Telegraphers admits only railroad telegraphers, but if they have had three years experience as railroad telegraphers, though now otherwise employed, they may be admitted to the order.

The question of universal organization of telegraphers, which means the admission of all competent telegraphers, is engaging the minds of the best thinkers of the craft.

The question has had our serious consideration, and our conclusion is that universal organization is preferable to limited organization. The objections urged against universal organization rapidly disappear when subjected to logical inspection.

If a man is a competent "commercial" telegrapher, he is a competent "railroad" telegrapher, or may become such so speedily as to make objections of little force in the discussion, and it is known that a competent "railroad" telegrapher experiences no serious inconvenience in becoming a "commercial" telegrapher, and it is to be presumed that at the next convention of the O. R. T. the subject will be exhaustively discussed.

The question now is to build up the order, to stand by its Chief and his associates and make it as it has the material to become, one of the grandest orders on the continent. There are at least one hundred thousand telegraphers in the United States and Canada. If these men are animated by the spirit of unification and are willing to work zealously for the welfare of all, nothing can prevent the order from becoming one of vast power and influence, not only for the good of its membership but for the good of every organization of railroad employes.

In this connection we appeal to the members of the B. of L. F., and to the members of all other orders of railway employes, to help on the organization of the O. R. T. divisions. There should be a division at every important point throughout the country. Let the fraternal spirit prevail and be active in lending a helping hand, for in helping others we are helping ourselves, and in a thousand ways our generous acts

will pay the most satisfactory dividends in good will and help in time of need.

It will be the pleasure of the *Locomotive Firemen's Magazine* to do all in its power to make the O. R. T. all that its most ardent friends could wish it to become.

The headquarters of the O. R. T. are at Vinton, Iowa, where all communications should be addressed.

PEACE ALONG THE FOOTHILLS.

"Tomahawks and war clubs at last have found a grave.
Where the whangdoodle mourneth in the gloom of his cave,
And now the Pipe of Peace is smoked by each war-painted brave,
'Rah for the boon of Friendship, which is mighty to save."

And thus be it ever, as Cy Warman puts it in the *Western Railway* :

THE PIPE OF PEACE.

To the Western Railway :

We, the undersigned, being the ones most deeply interested, are convinced that the position taken by the *Western Railway* in regard to the admission of Kahstadt and Daniels to 77 was correct. They were not eligible to membership, and have since been expelled.

W. F. HYDEN,
C. D. LANE,
W. F. BRUNDALE.

The above is the beginning of the end of a long and bitter fight that has been going on between this paper and the local lodge No. 77, Brotherhood of Locomotive Firemen. While we are proud of the part we have taken in this matter, so far as it relates to the case of the firemen who claimed that they had been discharged by the Burlington officials for joining the Brotherhood, we are very sorry, indeed, that we were allowed such items attacking the members personally, to enter our paper as have been printed during the past year. We were right, and we knew it, and believing we would never be able to prove it by these gentlemen themselves, we grew bitter in our hatred for them, and printed items unbecomingly not wholly uncalled for. We dislike strife, we like to live in peace with our fellow-men. In justice to this journal, however, we will say that many of the unpleasant things we said were prompted by those who pretended to be our friends in the matter, and the friends of our friends (at that time), our enemies.

Some of them went so low as to write letter after letter to this office, abusing the gentlemen whose names appear above, and when they could get a reply they at once sent our answer to the men they helped us to roast.

We sincerely hope that in the future we will be able to fill our columns with something more readable—something more edifying than bitter personalities.

We thank the gentlemen for their frankness in furnishing us with the above acknowledgement of their error, and we cheerfully confess ours.

The foregoing tells the whole story of a little unpleasantness which is at last explained and out of the way forever. It is "human to err" and it is "divine to forgive," so goes the maxim, and all experience demonstrates its truth.

To see men who have been estranged smoking the "pipe of peace" is one of the prettiest pictures to be found in the art gallery of memory, and we congratulate our Denver brothers upon the happy termination of an affair which for a long time has been fruitful of infelicities.

THE B. OF E. T.

The Called Convention of the Brotherhood of Railroad Trainmen.

In response to an official call, a special convention of the B. of E. T. was held at Galesburg, Illinois, commencing October 5, 1891.

In the first place there was a contest between two Boards of Trustees—the deposed Board and the appointed Board. It is only required to say that the deposed Board, by a decree of the convention, remain in a dethroned condition, a fact which may be referred to as the first “knock down” for the grand officials.

According to the Grand Secretary's report the membership of the order, September 1, 1891, was 20,409, and the amount paid out during the year on death and disability claims, is given at \$367,800.

The Brotherhood of Railroad Trainmen—formerly Brakemen—began its career October 1, 1884. We remember the time well, because it was our good fortune to aid in laying the foundation of the order and to aid in building the superstructure.

As a matter of course and necessarily, the Northwestern affair demanded early attention, and Grand Master Wilkinson was prompt to make the following statement:

On the 7th of May I arrived in Chicago and attended a meeting at the Tremont House, at which were present the General Manager, General Superintendent, Division Superintendent and General Solicitor of the C. & N. W. R. R. with Bros. Ogden, Wheat and Quinn. This was the sub-committee that was appointed by the general grievance committee of the C. & N. W. road to make such arrangements as they considered would be necessary to make a complete settlement of the case of Bro. Frank Mc-Nerney, a discharged yardmaster of that line. After receiving an introduction the question was asked me if this committee had the power and authority to act in this case, to which I replied, the law of our organization gives them that authority and power and that law must not be violated in any manner.

Then the question was put to me directly, “Will you furnish members of the Brotherhood of Railroad Trainmen to do switching at the different points on the C. & N. W. line?” I stated positively and emphatically that I was not running an agency for the employment of men in railway service, and that I would not only refuse to do it myself, but would refuse to give my sanction to anybody else connected with the organization to do it. There was no understanding reached at that meeting to my knowledge as to what the C. & N. W. officials intended to do in connection with the settlement of the case, nor was there any time set for another meeting at which it could be taken up and considered or adjusted.

On Monday, the 11th of May, as I had received an invitation to be present at the opening exercises of the twenty-third annual convention of the O. R. C., which was to be held in St. Louis, Tuesday, May 12th, and Bro. Sheahan was not at home, I wired him to meet me in Chicago on Monday morning, the 11th. After my arrival, in company with Bro. Sheahan, we met Bros. Ogden, Wheat and Quinn and officials of the C. & N. W. in parlor G, Tremont House, Chicago, Ill., and there were other officials present that were not in attendance at the first meeting when the same matter was taken up and discussed. At this meeting the question was asked: “In case switchmen engage in a strike would the Brotherhood men take their places?”

To which I replied that they would not. This meeting is the one in which we have been accused,

tried and condemned by the Supreme Council for entering into a conspiracy with the C. & N. W. R. R. Co. for the purpose of destroying the S. M. A. A. of North America. There were no promises given by us, nor agreement made, nor time set that we, as representatives of the Brotherhood of Railroad Trainmen, would have anything at all to do with any trouble that might occur on the C. & N. W. R. R.

It is worthy of remark that Grand Master Wilkinson's explanation of the affair was accepted as final. Whatever the grand officers did do, no matter what, was condoned and endorsed, and Grand Master Wilkinson and his associates escaping all censure, were permitted to go forth with new robes of office, made to order.

It was not until the 6th of October that the real opening of this convention began, in so far as the public were concerned, and the opening was via the banqueting hall, where, however modest a man may be in other places, he is certain to open his mouth. It is a knife and fork tournament in which fair women vie with gallant knights to win prizes.

At the banquet Mr. M. J. Dougherty presided and introduced the speakers, and for the first introduced His Honor, Mayor Cooke, of Galesburg, who spoke as follows:

Grand Master, Officers and Members of the Grand Lodge of the Brotherhood of Railroad Trainmen:

This occasion is exceedingly pleasant to the city of Galesburg. My memory does not recall the visit to our city of the grand lodge of so large and important an organization as the Order of Railroad Trainmen, and when our citizens learned that we were to be favored with the presence of the grand lodge at its annual meeting, it naturally created in the minds of all a very high degree of satisfaction. The chords of our vanity were touched, and they gave back no uncertain tones, expressive of our appreciation of the honor you had conferred upon us. Knowing so well, that railroad men, are of all others, the best judges of a first-class city, we naturally considered your location of your annual meeting in our city as proof positive of your good opinion of us. Galesburg people have taken a very deep interest in the affairs of your order, and have watched its steady and wonderful growth numerically, and its possibilities for good with the keenest interest. We have felt that we had a deep personal interest in your success, and have been proud of you and your efforts in maintaining the noble principles of your order. The notoriety we have gained throughout this broad land by reason of being the headquarters of the Brotherhood of Railroad Trainmen, has been to us a source of gratification, and we do not underestimate the good that you have been to us, and we do not underrate you as a potent factor in the material advancement of our city. Welcoming occasions are a matter of course to all organizations that favor us with their presence. They are frequently, in deference to custom, perfunctory in their character, but I say to you that the welcome that I am authorized to extend to you on this occasion is not a mere formality, but is the expression of earnest good will and good wishes of our entire citizenship. The principles of your organization are founded in good sense, and evince a patriotic purpose that insures good order and good government. The preamble of your constitution is a condensation of solid common sense, and if adhered to as a rule of action must insure the perpetuity of your order. I may be permitted to repeat it: “To unite the railroad trainmen, to promote their general welfare, and advance their interests, social, moral, and intellectual; to protect their families by the exercise of a systematic benevolence, very needful in a calling so hazardous as ours, this fraternity has been organized. Persuaded that it is for the interests both of our mem-

bers and their employers that a good understanding should at all times exist between the two, it will be the constant endeavor of this organization to establish mutual confidence, and create and maintain harmonious relations." A declaration of principles that any man might be glad to work for, live for and die for. It has the ring of true patriotism, and would do credit to the brain and pen of the author of America's declaration of principles. Surely our great state of Illinois needs no statutory enactment defining conspiracy, and providing for its punishment as against the influence of an organization such as yours. Labor organizations, especially among railroad men, have become in late years, a matter of necessity to the existence of railroad employes. In this age where capital is running mad in its struggle for the accumulation of wealth and where wealth is fast becoming concentrated, rendering it easy to obtain legislation in its interest and preventing needed legislation in the interest of the many, labor organizations are being felt, by bringing to the attention of our legislatures in a most forcible manner, the needs and necessities of proper laws in the interest of the laboring man, and these powerful organizations have and will be able more fully in the future to counteract the pernicious influence of organized capital. We may hope to see the day when the dangers incident to railway employment shall be minimized, through the influence of wise laws, induced by railway labor organizations. We may see the day when the employes will have the same standing in the courts of the great state of Illinois, that is accorded to every other citizen, and when he will be able to recover for his injuries or his widow for his death, on the same principle of law, that the courts compel satisfaction to be given for injuries inflicted upon others. We may hope to see the day when the legislature of this state will adopt the wisdom of our sister state of Iowa and declare the common law no longer in force as to employes, by enacting a law making all employers responsible to the employes, even for the negligence of the co employes. Indeed the possibilities of your organization are illimitable. Public sentiment stands behind you, a powerful ally in your laudible efforts in behalf of labor. The public recognizes the advancement railway men have made socially, morally and intellectually, and are inspired with a high degree of security in committing their lives and property to your care while traversing the land by means of railway transportation. They recognize your fidelity to their safety and comfort and are unstinted in their admiration of the many acts of personal bravery and courage evinced by the humble railway employes in times of terrible danger, acts of personal heroism that have never been surpassed on fields of battle. You are here from every state in this union, representing the interests of your local lodges and laboring for the ultimate advancement of your order, and if I read your faces aright no trivial matter will be allowed to outweigh the weightier considerations that affect the growth of your order numerically or in its power for the accomplishment of its purposes, the advancement of your membership socially, morally and intellectually, and the protection of their families by the exercise of a systematic benevolence. The good wishes of every citizen of Galesburg you certainly have. We shall strive to make your visit pleasant to you as it is to us, so that when you shall return to your homes near and far you will be able to bear good tidings of us and retain pleasant recollections of the city of Galesburg. And now, gentlemen, I thank you for the honor you have conferred on our city and again say to you, welcome to the city of Galesburg.

The Mayor's address was received with prolonged applause. After order was restored, Mr. Dougherty introduced Grand Master Wilkinson, who responded as follows:

This is the first time in my life that an opportunity has been afforded me or that I have been called upon to address the people of the city where I live and I assure you that it is with much timidity that I make the attempt to reply to the Mayor of our city. I admit that I take pride in the city of Galesburg,

[applause] a city of one of the greatest states kind by the sun. It is not often that the Brotherhood has the pleasure of listening to as able a speech or as royal a welcome from one as well acquainted with our order, with its aims, its progress, its details, and its work done since it has been located in this city as his honor. There is no tongue on earth or brain of the present time that can tell or imagine the good that can be accomplished as the golden opportunities may arise before morning. In the conventions of the past it has been our pleasure to meet the Mayors and hear addresses of welcome, but I don't believe that we ever had a warmer welcome or one more cordial or containing more meaning, or showing forth more clearly the objects of our order. You have been assured of a welcome. It is not only lip service but from the heart. As I have been around, I have heard some ask: "Are these all railroad men?" As I look over this assembly, it would be hard work for me, were it not for the badges, to tell where the citizens are. [Applause.] I could pick out Captain Burkhalter, because, like myself, he is out of proportion. [Great laughter.] If one of the citizens were on the stage like myself, he would be puzzled to pick out the railroad boys. But six or seven years ago any one with a good eye would have had no trouble picking out from this audience every one of the railroad men. [Laughter.] Before we go to the banquet, I want to tell you that one of the accomplishments of the railroad man is to eat. [Laughter.] You have the opportunity to become acquainted with the best citizens of Galesburg. I want to say to the men here and especially to the married men, that the city is in good hands, and that you will be well taken care of. [Laughter.] I want to utter a word of caution to the men of large families, in case they have marriageable daughters of 18. In every convention some of our boys have got acquainted with some of these daughters and have afterwards come back for them. If you citizens have eligible daughters look out for them, for many of the railroad boys exercise the prerogative of taking a woman to live with her through danger and trial. [Cheers.] I want, in the name of the many railroad men here, to thank you for this cordial welcome. I don't believe it will be necessary to call the "hurry wagon" to take care of our delegates. [Cries of never.] The reputation that railroad men had years ago does not now exist. Their living is now in accordance with the ideas of our motto, benevolence, sobriety, progress. [Applause.] The banquet we will be appreciated, but this will not be seen as well now as when you gaze upon the empty dishes.

At the conclusion of Grand Master Wilkinson's speech the festive binnacle proclaimed its readiness to proceed, the piping quail on toast was weary with waiting, and the beef, *a la mode*, was smoking for recognition by the chair. Reports have it that about the middle of the center table were Mayor Cooke, Grand Master Wilkinson, General Post, Hon. L. S. Coffin, W. M. Mitchell, Grand Treasurer B. S. M.; A. P. Applegate, Grand Organizer B. S. M.; Vice Grand Master Morrissey, Hon. J. J. Tannicliiff and Mr. M. J. Mack. Other Galesburg guests present were Mr. R. M. Kimber, Division Trainmaster C. B. & Q.; M. J. Dougherty, I. P. Norton, W. F. Stanton, E. A. Bancroft, F. A. Freer, L. W. Sanborn, W. H. Smollinger, D. W. Bunker, W. C. Calkins, L. H. Jelliff and the newspaper men.

The toasts were numerous, and Gen. Post in responding to "The College City, the Trainmen's home," said:

Mr. Chairman: On the straight track in Western Nebraska when the conductor saw the headlight of a locomotive just glimmering above the horizon, he

wisely backed up and side-tracked. In those days on the Union Pacific it was, as the gentleman from North Carolina said to the gentleman from South Carolina, a long distance between switches. After waiting a reasonable time for the wild train, he took another look. The headlight was no larger, but it was a good deal higher, and with renewed doubts as to human accuracy, with subdued and melancholy feelings, he gave orders to pull out, as there was no longer danger of colliding with the planet Venus.

Mr. Chairman: A different problem is upon me; shall I go ahead or side track? The sentiment to which I am directed to respond is freighted with momentous words, and yet with this heavy freight I am expected by the managers of this feast to run on schedule time and clear the track in five minutes. It can't be done. The expresses which have preceded me have lost time on this grade, and though get there Bancroft with the Eli has cleared the track, yet planets and constellation headlights loom up in my rear. Freer with the Fast Mail, Dougherty with the Cannon Ball, and all the limited and greased lightning expresses of the evening warn me to side track my freight or go ahead. Last of all comes Calkins with the wrecking train to gather up the anticipated debris.

Distinct above the reverberating echoes of the oratory that has preceded, and above the resounding eloquence of that which is to follow and which casts its shadow before, rings out the last words of the toast just read, "home." Home! It is an inspiration and a benediction. The first home, the home of childhood, the home of maturity, whether in the farm house by the limpid brook, or in the hamlet on the banks of the pond where the blacksmith's anvil rings out by day and the mill wheel sings day and night, or in the town from which church spires point heavenward, or in the crowded, jostling uneasy city; wherever home may be, however far we may have wandered, the magic word brings back to bearded men a flood of cherished recollections, and in every heart there is erected a monument to the author of "Home, Sweet Home," and the makers of homes, sweet homes. Schedule time five minutes; shall I side track or go ahead?

"Trainmen's Home!" Trainmen, trained public officers, the eyes, the ears, the hands of corporate bodies; bodies which without them would be blind, deaf, useless for public benefit; trainmen, the men who convert inertia into regulated and harmonious motion; the men who carry man whither he will, who distribute for the benefit of humanity what men make and produce to those who need; who add to the handiwork of man and the products of the earth the quality of mercy, making them

twice blessed;

It blesseth him that gives, and him that takes." Trainmen, conductors with unflinching good nature, answering a thousand foolish questions, guarding the interests in their charge while teaching courtesy to the public, willing even to side-track their train rather than collide with a planet.

Trainmen, ready at instant notice to down brakes, or with hand on the lever in sunshine and storm, every thought concentrated, every muscle under control, peering forward into the fitfully illuminated darkness, conscious of the responsibility for an hundred lives.

Passengers unconscious of cold, of storm, of danger, waking, sleeping, expecting, as did England at Trafalgar, that every trainman will do his duty. Oh, traveling public, you owe your punctuality, your comfort, your lives to trainmen. To tell of this in schedule time—five minutes—it is impossible; shall I side track or throw wide open the throttle and go ahead?

The College City, Galesburg, founded as the site of a college, surveyed, platted, sold for the benefit of a college, organized by good Presbyterians and Congregationalists for a college town which should be "sin tight." Other colleges came, and here, where solemn professors talk languages which have long been dead and inculcate mathematics which have always ruled the world and which will live forever; here, where astronomers point their telescopes to the stars and fix time-tables for comets and planets; here, in this center of literary activity the greatest travelers of the world, the guides, protectors, con-

ductors of the moving world have naturally fixed the seat of their literary organ, the *Railroad Trainmen's Journal*—a journal which ornaments the literary circle it enters.

The College City! But it was never a city until the trainmen came. Galesburg was a college town, but it is a railroad city; trainmen created it a city, and it is truly a city of their own creation. Here in the center of the continent, the center of all railway activity in North America, the Trainmen are welcome to their own home. Men accustomed to act without faltering, to face danger without shrinking, to assume responsibility without hesitation, to exercise authority without abusing it are doubly welcomed by an appreciative public in their own home.

I have learned something to-night of trainmen. An hundred times as a passenger have I heard the call, "Twenty minutes for supper," but when trainmen supply themselves they take two hours and twenty minutes, for I have timed them to eight. Schedule time five minutes, already five minutes behind schedule time, let the Fast Mail pass, let the Cannon Ball roll on, the heavy Freight is side-tracked.

Hon. L. S. Coffin was the most numerous speaker of which we have an account, during all the proceedings of the convention. He seemed to be in demand, and was coupled on to almost every subject. He is called the "Father of the Boys" and responded to the toast, "The Railroads," and among other things said:

Mr. Toast Master: This wonderful and hearty greeting given me as I arise to respond to the toast assigned me, reminds me of the story of the Hibernian, who seeing a bull the other side of the fence lowering and bellowing with rage laughed heartily to think how he would sober him down when he got over and took him by the horns, but when he tried the experiment and the bull had tossed him back over the fence, he turned around, and looking at him said, "Be gorrah, I am glad I had me laugh first." So I am compelled to say we are glad we did the cheering first. My toast, Mr. Toastmaster, is "Railroads." Had I had the choosing of the subject I might have selected some theme upon which I would have preferred to dwell, but like all good railroad men like these before me, I obey orders and do the best I can. The first thought I wish to present in relation to railroads is that they are a novelty. This is really and literally true. At this age we are to be amazed at nothing. Still the most amazing thing of this century is our railroad system. I am comparatively a young man as well as a handsome man, as is proved by my picture in your evening paper, and still I antedate all railroads. To day we have the most wonderful net-work of roads in the world. We have not less than 270,000 miles of track; we have 29,036 locomotives; we have something over 1,200,000 freight cars, and for the encouragement of these trainmen let me say that of these locomotives over one-half are already equipped with the driver brake, and about 15 to 20 per cent. of the freight cars with automatic couplers and power brakes. By these railroads space is annihilated. As a farmer let me allude to what the roads have done for the tillers of the soil. Farms in Illinois, in Iowa and in all this great west are about on an equal footing with farms in the heretofore most favored localities in New York, Pennsylvania, or any of the eastern states. To day my farm in the western half of Iowa is worth as much, acre for acre, for the profitable production of crops, stock or dairy products as those eastern farms that are valued at \$70 to \$1.00 per acre.

To the railroads we owe the amazing and unparalleled prosperity of this nation.

But, Mr. Toastmaster, I want to turn from the roads to another thought. What good would the roads be to us *per se*? It is to the men like these before you. I want now to ask your attention to these men who run those roads, and without whom they would be useless. This great railroad industry has brought into being not less than 704,748 men as wage

workers in new forms, under new conditions and new surroundings. As a matter of interest I may incidentally here state in contrast: While we have 704,743 men in railroad industries, England has 347,428, giving to her some 1,748 to each 100 miles of road, while our men, showing their usual superiority, can take care of our roads with only 459 men to the 100 miles. One Yankee to four of the Britons. Still the public have reason to think and act as though these great mammoth trains headed by these 29,000 "steam muscled and steam eating hounds that run over the land with loud, screaming bounds," are great monster automatic that go themselves without the aid and guidance of human hand and brain. We have failed in a measure to realize that with every train there are human beings—our brothers, our own fellow citizens. We have not realized that when we have been cosily sitting around our warm firesides of a winter's night or comfortably resting in our soft beds, have heard the scream of the locomotives and the roar of the ponderous trains as they passed our homes on their transcontinental journey, loaded down with not only the commerce of our own nation but also that of the world, that with every train not less than five and from that to eight and ten of our own flesh and blood were there also, regardless of the darkness of the night, regardless of the flashing lightning, regardless of the sleet and snow. Shall I be believed when I tell you that not less than 2,700 of just such men as you see before you to night must give up life in the most tragic and awful manner, and that 20,000 more are more or less crippled and maimed for life every twelve months in our land that we may have the best, the cheapest and the most wonderful railroad facilities of the world? Let me bring this home to every one of you. Are not the lives of these men just as dear to them as ours is to us? Does not the wives they love, the mothers they support, and the child they work for love them just as dearly as ours love us? I am inexpressibly grateful for the progress that has already been made. In my own state and some others we have laws on our statute books requiring safety appliances. But we must go higher. The nature of the case is such that uniformity is absolutely requisite. I am overjoyed that my honorable friend, General Post, your excellent member of Congress, honors us with his presence to night. I want the great power and influence of what he jocosely terms his "heavy freight" wielded in the coming Congress to give us an adequate law, and we want it quick. Mr. Toastmaster and citizens of Galesburg, I want to thank you from my very soul for your grand and hearty welcome and generous treatment as shown by this magnificent spread. The men to whom this is extended are worthy of these high tokens of your appreciation of their work.

The papers before us are full of "proceedings," and we could extend this report indefinitely. But our purpose is fully accomplished in reproducing the addresses and the general send off which the convention received.

Other matters may come up for discussion at another time.

We have on our table No. 3, Vol. I, of the *Monthly Balance*, the official organ of the Brotherhood of Station Men, published at Topeka, Kansas. The title of the publication, "*Monthly Balance*," is something novel as well as unique in the line of journalistic names, as apt as it is original. Typographically the *Monthly Balance* is all that could be desired, and the matter, like a "square meal," is strong and healthful. Most cordially do we welcome the *Monthly Balance* to the field of organized labor journalism, and wish it a career of prosperity.

HON. L. S. COFFIN, OF IOWA, ON THE SUNDAY QUESTION.

Not long since Hon. L. S. Coffin delivered an address before the Columbian Board of Fair Commissioners and his remarks are reported as follows:

Mr. President: All my life I have been a laboring man. I am now nearly 70 years old. My sympathies are with the laboring classes. We laboring men come to ask of those that have the power, say, that our exhibit, for all this exhibition is the product of labor, shall not be desecrated by Sabbath desecration. [Applause.] The greatest boon from heaven to earth was this God given one day's rest in seven from labor, and we want to preserve intelligent labor from one end of this nation to the other is beginning to understand this more and more, as is shown by the innumerable petitions presented to legislatures and city governments for stronger laws compelling employers to close their places of business on Sunday. There is now a national and combined movement among all labor organizations that are worthy of the name, for the greater exemptions from demands upon their time in Sunday hours.

LABORERS WANT THE EXHIBITION CLOSED ON SUNDAY

The only argument that we have heard in favor of opening this exposition on Sunday is that the people in this vicinity can only have that day to visit the exposition. That argument is a cheat and a fraud. [Applause.] It comes not from the laboring men. It comes from those who are enriching themselves from their hard earned earnings. Admit for a moment that there is any force in this argument. What does it amount to?

The labor element in this city that might possibly be benefited by that doubtful gain, is but a drop in the bucket compared to the vast millions of labor and wage earners in this nation, who demand Sunday rest. [Applause.] The true laboring man in this city will not go back on his record. He knows that his brothers and sisters by thousands will be employed in and on those grounds and he asks for their Sunday rest. If the exposition is open on Sunday, the booths and the stores in the grounds will be open. If the booths and stores inside are open, the booths and stores outside of the grounds will be open, and woe to the wage earners employed therein. [Applause.]

THE RAILROAD MEN WANT SUNDAY.

But I came here more especially to plead for the railroad men of this nation, without whose help, Mr. President, you would not have an exposition. [Applause.] I stand here pleading for not less than 700,000 wage workers in the railroad work of this nation and of these about one-half are engaged in track yard and train work. Of these about 250,000 have their time so employed that they have actually Sabbath to themselves, and I came here to plead for their behalf. There is to-day in the organization of railroad men, in the brotherhoods, a move in the direction of Sunday rest. They are discussing the question in their different lodges, and the time seems to me, is opportune for this great nation which has been served so faithfully by these men. I say, it is opportune for this great nation through you, its representatives, that are here before me taking charge of this exposition, to acknowledge the work and services of those men by saying that you will take no part or parcel in robbing them of their Sunday rest. [Applause.]

Do you realize that the most wonderful prospect of this country has been achieved in the work of these railroad men? and do you realize at what an immense cost they have done their work? Mr. Chairman, let it be sent out on the wings of the wind and on the wires to every part of this nation that 2,700 of these brave men are every year compelled to meet a tragic death, that you and I may have the facilities of railway transportation in this great nation. [Sensation.] Add that 20,000 men are crippled every twelve months in their work giving to you and to me these railroad facilities. That is what it is costing these men now, and that

come to you and ask that you will give them whatever there may be of prestige in their great fight for Sunday rest, against the greed and rapacity of the public.

Let them have your sanction in their fight by our not asking them to run their trains at this ex-position on the Lord's Day. [Applause.]

THEY DESERVE IT.

Let me say that there is no more faithful class or better trusted class of men in the world than these railroad men. They will work for you six days and six nights to make your exposition a success and a grand one. But let me caution you to make not too large calculation on the success of your enterprise by trying to force these men to incriminate themselves before God in order to assure you this success. [Applause.]

It affords us pleasure to give Mr. Coffin a hearing through the columns of the *Magazine*, as the question which he discusses is deemed by many to be of great importance. We have pronounced views upon the subject of Sunday desecration, of rest and worship, which will appear in the December *Magazine*.

PERSECUTION BECAUSE OF RELIGIOUS OPINIONS IN LABOR ORGANIZATIONS.

In writing this article, while denouncing proscription and persecution on account of religious opinions, generally, we refer more particularly to organizations of railroad employes, and especially to the Brotherhood of Locomotive Firemen.

Let us, so far as the United States of America is concerned, begin at the beginning.

The constitution of the United States provides that:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

From the beginning, the great body of the people of the United States put upon record their unqualified abhorrence, their deep and unconquerable detestation of religious proscription and persecution. In some of the New England colonies the fires of religious persecution were lighted by the men who had fled from such exhibitions of infernalism, as soon as their feet touched the sod of the new world, and though centuries have elapsed since these persecutions of Quakers, Baptists and witches were perpetrated, the lapse of years has not yet sufficed to abolish the "damned spot" from the record.

In ten thousand instances the world has been confronted by the crimes perpetrated by monsters in human shape, but of them all, scanned as they have been by the light of heaven and the fires of hell, there are none which for satanic wickedness approximate the crimes committed in the name of religion.

No imagination, however far reaching, no fancy, however fervid, no vocabulary, however rich in words, no intellect, however towering, has ever been able to paint the religious bigot, engaged in his nefarious work of persecution, and the contemplation

of his deeds of death by torture stands forever as the one bleak and black and horrifying monument of infamy and crime.

Who and what is a bigot? It has been written of him that he is "a wretch, whom no philosophy can harmonize, no charity soften, no religion reclaim, no miracle convert; a monster, who, red with the fires of hell, and bending under the crimes of earth, erects his murderous divinity upon a throne of skulls, and would gladly feed, even with a brother's blood, the cannibal appetite of his rejected altar."

The bigot is the enemy of man. He has no conception of the spirit of fraternization.

Who and what are the canting crew, who so smooth and so godly, are as venomous as a hooded cobra?

Who, arm'd at once with prayer-books and with whips,

Blood on their hands, and scripture on their lips,
Tyrants by creed, and torturers by text
Make this life hell in honor of the next.

The question arises, are there any of these morally deformed monstrosities, these unnatural productions in the brotherhoods of railroad employes who are carrying about with them patent hell tinder boxes to light the fires of religious persecution in the ranks of the brotherhoods? Are there members of the brotherhoods who are using the organizations to propagate ideas destructive of the organizations, which if not checked will blast them as certainly as the storm of fire annihilated Sodom, will shake them down as an earthquake ruins cities?

The story is whispered abroad that in certain localities the lodges of the orders are being prostituted to such nefarious purposes.

We are not talking at random. To say that we approach the subject with earnestness, but feebly expresses our abhorrence of the fanatical movement, and if we do not denounce it with the severity its infamy demands it is because of a lack of ability and not of purpose.

The Brotherhood of Locomotive Firemen was not organized that its lodges might be degraded as coverts where religious (?) fanatics might formulate schemes of proscription and persecution, because of any diversity of religious opinions.

The Brotherhood of Locomotive Firemen is not an organization of religious fanatics and bigots. It is not an organization which has a purpose of collecting fanatics to burn heretics, to erect wheels to break their bones, or obtain thumb-screws to elicit recantations.

The Brotherhood of Locomotive Firemen tolerates, without question, all religious opinions, and the locomotive fireman, a member of the brotherhood, who, by word or deed, introduces creed questions in the lodge, or who uses the order in any way to promote religious dissension, is a deadly

enemy of the order and should be forthwith expelled.

The brotherhoods of railroad employes have a right to believe that they can overcome all outward foes; that they can remove every obstacle to progress, and by stately strides achieve anticipated success. They have a right to believe these things, because experience warrants the conviction. But no matter what the past has taught, the day that religious intolerance and proscription is introduced their glory departs and wreck and ruin is their inevitable fate.

To introduce the schemes of fanatics and bigots is to invite decay and death—a multitude of cankers and cancers to eat into the vitals of the orders and sap their life, and to create chaos where order reigned, and fling out the banner of discord in the place of the ensign of peace and prosperity.

We call upon every loyal locomotive fireman, member of our brotherhood, to at once engage in the work of stamping out the abomination of religious intolerance in the order, wherever the deformity shows its presence.

In the future, as in the past, let fraternity, good will, brotherly kindness be the watchwords.

The question of religious conviction must be left between each man and his God for settlement. The brotherhood cannot, ought not and must not be the arbiter.

We are all "poor wanderers of a stormy day," and the business of the brotherhood deals only with such affairs as are conducive to smooth sailing on life's tempestuous seas, and to find those havens of repose to which *fraternity* in its best and broadest significance contributes.

SARGENT AT DENVER.

The *Western Railway* edited by Cy. Warman, in its issue of Oct. 1st, has the following complimentary notice of Bro. F. P. Sargent, Grand Master B. of L. F.:

During the early part of this week we had the pleasure, for the first time, of meeting F. P. Sargent, President of the Supreme Council of Railway Employes, and Grand Master of the Brotherhood of Locomotive Firemen. Mr. Sargent did the best day's work of his life, we believe, the day before yesterday, when he settled, for all time, we hope, the differences that have existed between members of the organization in this section. He is a very able, honest and conscientious gentleman, and we are firmer than ever in the belief that he is the proper person in the right place.

When Cy. Warman dallies with the tuneless nine, neither the laughing of the brooks, the pattering of the rain, the cooing of doves, nor the recital of "Love's young dream," is more captivating. But look out, when in a different mood, he ceases singing and *presto* is the philosopher and logician, and no matter which or what, he knows how to sling English.

THE TELEGRAPHER.

We have received No. 22, Vol. 2 of *The Telegrapher*, published at Fort Wayne, Ind. From the first the *Telegrapher* has been wide awake and aggressive, as the following from its "good bye" *bon* demonstrates:

That there are some who will view our journalistic demise with the keenest pleasure we do not for a moment doubt. If the paper had made no enemies it would not have been fit to live as long as it has. It has not hesitated to call a spade a spade whenever it became apparent that such a course was necessary, even though it knew perfectly well that it outspoken sentiments created a feeling of enmity against it, necessarily involving some financial loss. It never sought to curry favor with any, it has sought to be the spokesman of no clique or faction, but to represent the interests of the entire craft.

We have regarded the *Telegrapher* as one of our best exchanges. It never failed to grasp the subject in hand and to state its propositions fairly and lucidly. We should deeply regret its discontinuance were conditions less satisfactory than they are, but as consolidation has been secured one publication answers the demand, but we shall expect to note that the editors of the *Telegrapher* are speaking in the columns of the *Railroad Telegrapher*, now the organ of the order. At any rate the work done by the *Telegrapher* was well done, and in saying "good bye" to the editors we wish them a future more fruitful of content than falls to the lot of the average editor.

JAMES LEAHY.

Living, James Leahy, of Chicago, member of Chicago Lodge, No. 95, was one of nature's noblemen. He was an engineer, but retained his membership in the B. of L. F.

As a man, Brother Leahy's character was above reproach. His fidelity knew no variability nor shadow of turning. He was true to every obligation. He was always peace-maker, never a factionist nor kicker. He was thoroughly posted in all brotherhood affairs, and though often and earnestly solicited to represent his lodge in the conventions of the brotherhood, he uniformly declined in favor of others whom he was glad to see honored, but he took such deep interest in all that pertained to the welfare of the order, that he attended the conventions at his own expense, and was a valuable adviser.

So recently, before his death, he looked the picture of robust health, his eye so sparkling, his smile so gracious, and his voice so cheery, that the announcement of his demise, September 28, startled like an alarm bell. One of the oldest members of the order and universally beloved, his death creates a vacancy in No. 95 which will be difficult to fill.

His whole life was a noble example of devotion to the principles of our brotherhood, and we chronicle his death with undigged sorrow. May he sleep well.

THE ROBINSON MONUMENT FUND.

The following subscriptions to the *Robinson Monument Fund* have been received since our last report:

no. F. White, Ft. Worth, Texas	\$1 00

A CURIOSITY.

Having occasion to examine our files for information we were doubly repaid for the expenditure of time by finding the following letter, from George M. Adams, 111 Broadway, New York. The reperusal of the literary gem impressed us forcibly that a document containing such cogent argument should be given to the public, *verbatim et literatim, et punctuatim, et spellatim*, and we are furthermore influenced to give the readers of the *Magazine* this banquet of choice intellectual viands, as it shows in some measure the quantity and quality of classic invectives which are occasionally showered upon the head of an editor of a labor publi-

cation, as also upon those who are active in the support of those principles which are the foundation of all progress in the labor world. The following is Mr. Adams' splendid production:

New York, August 26th, 1890.

Grand Secretary Debs, D. B., Secretary Knights of Labor, Terre Haute, Ind.:

DEAR SIR:—In the resolutions, which you presented to the Public, are nothing but a dam lot of lies. The only Liberty you want is the liberty the "Lion gives to the lamb". Yours society men will not work them selves or let any body else work. Strike all you wish, but let other men work to support themselves and famly. All compay, should have the right to discharge men who get drunk and are careless or incompetent as most of your drunken Irish members are.

What was the result on the Old Colony Rail Road the other day. Careless Irish men who caused the death of twenty two and over a million dollars lost. I suppose you all will strike if any of those men are discharged. Ask Mr. *Dictator* Powderly, this country must be very badly governed if the discharge of fifty men can stop U. S. mails, all provision train the passengers trains, of a great Rail Road who distributes \$12,000,000 dollars per year to workmen to the number of 12,000. that looks like *Liberty*.

The only way would be for a safe future discharge every Irish man and never allow one to work for the compay in any position, for they are always the leading spirit in wrong doing, what comes of their drunken habits and all want to be walking delegates who talk but never work. You officers who are interested in keeping these men in the society to keep them paying their dues so you can draw your big salaries, the time may come when you D. B. will have to go to work.

We thank God, you will let us live a little longer and can get our mails, &c. for a few days longer. Your society can be made to pay all damages for the losses that have been sustained during the past and it will be done. Keep together for a better cause than you have shown in the past.

Very Resp^t

George M. Adams,
111 Broadway N. Y.

It will be noticed that we are addressed as "Secretary D. B.," which being interpreted means dead beat, and also as "Secretary Knights of Labor,"—titles enough to satisfy the most cormorant ambition of the age.

The "resolutions" referred to were those passed by the Supreme Council at the Terre Haute meeting held in August, 1890, in reference to the strike on the New York Central R. R.

Mr. Adams, we conclude, is one of that class of workingmen who enjoy hugely the application of an employer's lash, the stinging of which tickles his cuticle, however deeply imbedded in dirt.

Mr. Adams is, doubtless, a scab who would not hesitate an instant to enter into a conspiracy with railroad companies to first rob employes of their jobs and then drop into their places with such ease and grace as to win the approval of any scab organization that might contract to keep clean.

It will be noticed that Mr. Adams is persuaded that "all compay should have the right to discharge men," and then adds, "who get drunk, and are careless or incompetent," and then comes the climax—"as most of your drunken Irish members are."

It is to be surmised that Mr. Adams is not

an Irishman; on the contrary, it is to be inferred that he is one of those American idiots known as Know-nothings, who boasting of their American birth submit to the lash like spaniels, one of those degenerate boot-lickers who excite abhorrence and one of those parasitical fleas who are content if they have a place in the hair of a corporation dog.

But without further comment we invite the reader to meditate upon a letter which must take its place in classic English.

L. W. ROGERS.

In the Galesburg, Ill., *Republican Register*, of October 17th, we find the following notice of Bro. L. W. Rogers' purpose to establish a labor journal:

Mr. L. W. Rogers, editor of the *Trainmen's Journal*, announces his intention of resigning his position as soon as he can get the affairs in such a condition that they will not suffer by being turned over to a successor. Mr. Rogers gives as a reason for his resignation the statement that he can not conscientiously support the policy adopted by the brotherhood. His future intentions are to establish a new labor journal and to issue it in Galesburg. He says that he has already 2,000 subscriptions pledged and that this number will swell largely before the first issue which will appear in the course of a few weeks. Mr. Rogers is very confident of the success of his new enterprise, and avers that many of his subscribers will be members of the brotherhood.

The name of the journal has not yet been decided upon, nor has it been fully decided whether or not it will be issued from its own plant. It will be under the personal editorial care of Mr. Rogers, who will associate with him such help as he may think desirable. As we understand it, the new journal is to be the organ of no particular organization, but a periodical devoted to advancing the general interests of labor.

Mr. Rogers held a reception at the Union hotel last evening from 7 until 11 o'clock for the convention delegates and friends. He met nearly all of them and was assured of their hearty good wishes. Mr. Rogers says that while many of the delegates did not approve his editorial policy on the *Trainmen's Journal*, they are all his warm friends personally, and so it would appear from the hearty handshakes he received last evening.

Mr. Rogers' term of office as editor of the *Trainmen's Journal* does not expire until January, but his resignation goes in at once, and will take effect when he has matters in the shape he would like to turn them over, probably a fortnight or three weeks hence.

The fact that Mr. Rogers' policy as formulated and advocated in the *Trainmen's Journal* was not indorsed by the Galesburg convention, and the fact that Mr. Rogers could not indorse and advocate the policy of the order, constitute the cause of his resignation and retirement from the position of editor of that publication.

The charge that we had at any time dictated the policy of the *Trainmen's Journal*, or sought in any way to control its policy, is in its woof and warp absolutely false in every particular. The falsehood is strictly in keeping with that which made us the controller of the policy and utterances of the *Switchmen's Journal*, having for their purpose in both instances the injury of competent, brainy, honorable and courageous men

by belittling their capabilities until they could crawl into the gimlet holes through which their authors can conveniently pass.

Neither Mr. Rogers nor Mr. Hill require any assistance from outsiders in constructing a policy or in defending it. L. W. Rogers is one of the best writers in labor journalism of the period, and withal is a man who has the courage of conviction. He dare be true to principle, he dare defend the right and denounce the wrong. He is not the first and may not be the last man to suffer from the poisoned arrows of enemies.

Cy Warman, of the *Western Railway*, in a note to the trainmen, sizes up L. W. Rogers like one who knows what he says:

One word of advice to trainmen: Stick to Rogers so long as he is right. He will go hungry before he will forsake you.

We shall be on the alert for Mr. Rogers' new labor journal, and we wish him in the future the largest possible success.

DEAD.

A dispatch from Bro. Hannahan, dated Chicago, October 11, said: "A. R. Caver died last night." It is needless to say the news was startling. But recently Mr. Caver was to all human appearance in the enjoyment of robust health, with the prospect before him of seeing three-score and ten years.

At the time of his death the deceased had his plans matured for a prosperous business career. The enterprises in which he had engaged promised a fortune, and he was fully equipped to secure success. But the summons came which admits of no postponement, and A. R. Caver had to obey it. In the very prime of his manhood, joyous and hopeful, surrounded by friends who had unlimited confidence in his masterly capabilities, he is required to close his earthly accounts and pass on to

The undiscovered country, from whose bourn
No traveler returns.

In the October *Magazine* we made special mention of the enterprises in which the deceased was engaged, and we shall hope that they had been placed in such a condition as to be carried forward for the benefit of surviving relatives.

Death is usually referred to as the enemy of man, and we confess that there are cases which seemingly maintain the indictment. But human eyes can only scan the surface of the inscrutable; beyond all is mystery. This we know, that to the dead has come rest. To them the warfare of life is over: neither battles, victories nor defeats are to disturb their repose. We, who survive, must fight on till the summons comes to us as it came to our deceased friend, and encouraged by his example of fidelity to principle, we may hope that it may be said of us as it must be said of him: Well done, good and faithful servant.

R. AND MRS. F. P. SARGENT'S TIN WEDDING.

On the evening of the 19th of October, 1891, the beautiful home of F. P. Sargent, Grand Master of the B. of L. F., was ablaze with enjoyment. The occasion was the tin wedding of Mr. and Mrs. Sargent. Ten swift years of married life had passed since

To love, to bless, their blended souls were given,
And each, too happy, asked no brighter heaven.

In the bright circle of friends who gathered at the home to felicitate the bride and groom was seen the beautiful little Mabel, precious link in the golden chain that binds the wedded hearts of parents indissolubly together. There were fair women and gallant men at the tin wedding, and during all the bright hours of the occasion every incident added to the joys of the happy ride and groom.

As entertainers Mr. and Mrs. Sargent are, as the French say, *au fait*—or, in plain English, they know how.

The beautiful costumes of the ladies, their smiles, the flowers, the music, the elegant dalliances of the masculines, all, everything, combined to make tin glow like burnished gold. There was ease and elegance, and the air was burdened with congratulations for host and hostess, in which little Mabel, in her China silk, was not forgotten.

The presents were numerous, unique and quaint, occasionally going beyond the tin line, as if in anticipation of that good time coming, when for the happy pair, we hope, there may be crystal, silver and a golden wedding in store for them.

At a late hour the happy guests departed, each bearing a pretty souvenir of the occasion—a small tin cup with a bit of blue ribbon tied in the handle, leaving the happy tin wedded couple to sing—

"Go where we will, this hand in thine;

Those eyes before me smiling thus,

Through good and ill, through storm and shine,
This world's a world of love for us."

KATE FIELD'S *Washington* is handling the "sweet girl" graduates of the various institutions of learning without gloves. Miss Field is of the opinion that the graduates can't cook; that they can't tell the "chemical result" of putting milk in their tea, and that their education won't enable them to earn their salt—hence, boiled down, their education is of no practical value whatever.

HON. JOHN WANAMAKER commenced in early manhood laying up "treasures in heaven." The amount of his deposits is not known, but much or little, Mr. Wanamaker keeps a sharp outlook for those who may be in need when he is required to hand his checks, and therefore, at an expense of \$60,000 a year, carries life insurance policies amounting to \$1,000,000.

GEORGE B. ROBERTS, President of the Pennsylvania Railroad Company, was born in 1833, and is therefore 58 years of age. The position of President he has held since 1880. His salary is \$40,000 a year. As a graduate of a Polytechnic Institute, his first railroad employment was that of rodman, and it took him 29 years to move on up through all the grades, until he reached the highest position.

The *Pennsylvania Railroad Men* says:

"The importance of Mr. Roberts' office, as bearing upon the internal affairs of the Pennsylvania Railroad exclusively, will be comprehended when it is stated that the company operates nearly ten thousand miles of road running through nine states of the Union, hauls nearly ninety thousand cars of all kinds with three thousand locomotives, and employs an army of men approximating one hundred thousand in number, and has a gross income of over \$10,000,000 per month. This vast body with its diversified service, ranging from section hand to the keenest financiering and executive talent, includes artisans in every conceivable branch of industry, embraces all the arts and professions, and affects innumerable and widely separated communities. Greater in importance even than this is the relation of the road to the country at large. Its stockholders number 20,000, and are scattered over two continents."

TO DANCE BEFORE THE QUEEN—FOUR PRETTY AMERICANS TO ENTERTAIN HER MAJESTY WITH A MINUET.

NEW YORK, Oct. 5.—Fashionable circles in this city are much exercised as to the identity of four pretty American girls who have arrived in London to dance a minuet before the Queen.

Their chaperon refuses to give their names, but says they are well known in the best New York society. A picture, however, is printed in the October number of THE NEW YORK AND PARIS YOUNG LADIES' FASHION BAZAR, entitled "Pretty girls learning to dance the minuet," which gives some clew to their identity.

Society here also is interested in the fact that each of the four Americans is to wear a dress similar to the one illustrated and marked No. 8 in the colored plates of the magazine, which has partly revealed their personality and set fashionable circles agog.

The young ladies have been practicing the minuet for eight months before venturing to ask the privilege, which has been granted, of dancing before Her Majesty.

THE NEW YORK AND PARIS YOUNG LADIES' FASHION BAZAR is for sale by all newsdealers. It will also be sent, postage prepaid for 25 cents per single copy. The subscription price is \$3.00 per year.

GEORGE MUNRO,

MUNRO'S PUBLISHING HOUSE,

(P. O. Box 3751.) 17 to 27 Vandewater St., N. Y.

THE MUSICIANS' GUIDE.

Every music teacher, student or music lover should have this volume. It contains 300 pages of valuable musical information, with full description of over 10,000 pieces of music and music books, biographical sketches of over 150 composers, with portraits and other illustrations. Also a choice selection of new vocal and instrumental music and other attractive features. Upon receipt of eight two-cent stamps, to prepay postage, we will mail free, a copy of THE MUSICIANS' GUIDE, also a sample copy of BRAINARD'S MUSICAL WORLD, containing \$2.00 worth of new music and interesting reading matter. Address

THE S. BRAINARD'S SONS CO., Chicago, Ill.

B. OF L. F. CHARTS.

Anyone desiring a B. of L. F. chart can secure a copy by enclosing \$1.00 to Mrs. Lillian Keever, Judd, Cook Co., Ills.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth* day of each month.

A LULLABY.

What song shall I sing for my boy to-night?
Shall it be of the sounding sea,
Where the hurricane sweeps with gigantic might,
And with chorus of ghoully glee?
Shall I sing of the calm in the liquid caves
Where the force of the tempest dies,
Or the creamy foam on the crest of the waves,
As they leap toward the inky skies?

Shall I tell of the ships and the dauntless tars,
By the drive of the breakers tossed
On rock-bound shores or harbor bars,
Till the ships and crews are lost?
Shall I tell of the time on the Spanish main,
When the cut throat buccaneers
Dyed the water red with the blood of the slain
And unheeded their victims' tears?

Shall I sing of the seas where the icy blasts
Chill the marrow in human bones?
Of the bergs that rise over lofty masts,
Drifting round in the frigid zones?
Where explorers find not the northwest course,
Nor oftentimes their homeward path,
But are crushed to death by the mighty force
Of the bergs in their drifting wrath?

It would curdle the blood in thy youthful veins
If I were to relate such tales;
So I'll sing of the flower-bespangled plains
And the shady emerald vales,
Of the song birds flitting from tree to tree
And carolling notes of joy;
And I'll tell of the haunts of the bumble bee,
To delight my darling boy.

So now hurrah for the sylvan streams,
Where the gamy trout is found,
And the mossy sod where rich verdure teems
And the butterfly flits around;
Where the robins mate, and the ring doves coo,
And the lambskins friar and leap.
Now listen attentive, "my yittle guggoo"—
Why, bless me, he's fast asleep.

Shandy Maguire.

Needed a Certificate.

I just do like to run across an Englishman who is fresh to this country and determined to combat American ideas. He is a good deal better company than an American would be in Europe. Such a chap rode with us from Vicksburg over to Jackson.

"Excuse me, ye know," he began as the conductor came along, "but I'd like a compartment to myself."

There was no place to put him except in this was ascer-

n' chump, ye broad?" said the con-

duct me to the ye know, in a all over the

country to fetch up at some place which is on a h'air line?"

We had no sooner got him quieted down than he began to find fault with the scenery along the road.

"It's devilish awkward, ye know, to be gazing at nothing but a pine forest," he broke out. "If there are no mountains, cliffs, valleys or pretty villages, why not go to work and provide them? They can't expect a fellow to put up with such as this and go over the route another time."

We rubbed him down gently, and had restored his good nature when we side-tracked for ten minutes for the other train to pass.

"I'm no bloomin' chump, ye know," he began at the end of two minutes, "but I certainly protest against this delay. If there is only one track, who is to blame for it? Is my valuable time to be taken up in waiting here, because the other train is on time? In the first place, there is no h'air line; then there are no compartments then the scenery sets one crazy; then we must switch off and submit to delay. Gents observe that I protest."

We patted him on the back and lulled the storm, but it broke out again as soon as we reached Jackson. He didn't like the situation of the hotel nor any of the rooms in it nor the way the porter talked back at him, and he flung himself into a chair and exclaimed:

"I'm no bloomin' chump, ye know, but I can't go this—really, I can't."

While he had been fussing around we had put up a little job on him, and now informed him that there was a carriage at the door to take him to a fine hotel in the suburbs—a place we had not time to visit.

"That's jolly, and I won't forget the favor, ye know," he said, as he tossed his bag into the hack and drove off.

The driver was directed to take him on to the insane asylum, and the order was faithfully carried out.

"I'm a bloomin' chump if it isn't a fine building, though I can't say much for the scenery," said the man as they drove up.

He alighted with all his baggage and entered the superintendent's office. In about an hour he returned to the hotel, and turning into the office, where we sat smoking he hotly announced:

"First, there is no h'air line; then no compartment; then no scenery; then no double track; then I arrive at the tavern and find it only a third-rate club house; then I'm sent knocking about to a suburban hotel, and when I reach it what does the half-headed old cock-a-doodle of a landlord inform me? Why, gents, that I've got to have a certificate of insanity to be admitted. I'm a bloomin' chump if your blasted country isn't enough to drive one wild!"

A Dakota Marriage Case.

[New York Telegram.]

Old Bill Ditmars was recently elected a justice of the peace in a Dakota town. He had formerly taught school and run a small postoffice somewhere in Pennsylvania and had come west like so many other men with the intention of not accepting anything less than the governorship, but when he got here he found the ground pretty well covered with men possessed of a similar idea. The woods also appeared to be full, while, figuratively speaking, the houses were overflowing and their feet were sticking plentifully out of the windows; all of them had gone out with the expectation of getting some good office and "running things." So when he found how matters stood he just gave out around that he had once been circuit judge in Pennsylvania, and settled down to finding fault with everything in the neighborhood.

The next day after he was elected justice a big, awkward young fellow came into the office and said:

"Mr. Ditmars—"

"Jedge, ef you please, young man, Jedge Ditmars."

"Well, jedge, then. You marries folks, do you, jedge?"

"I does."

"Yes, so I s'posed. I want you to do the job fir us, I and—"

"All right, young man, I'll tend to you. I'll put your case on the docket. I s'pose you can give security for the costs?"

"How's that?"

"I say I'll enter this case o' yourn on the docket."

"But we want to be married now—we're in a hurry—Louwese is out'n the wag'n now."

"Can't help it young man, got 'o go at these things right. Ef you want'o go on with the case I'll issue a summons for the gal and make out a war'nt."

"Who's goin' ter use this war'nt?"

"The conster'ble, of co'se."

"Now, jedge, I ca'kerlate you ain't goin' to do any sich thing. I tell you Louwese is out'n the wag'n."

"Don't make no dif'rence—you don't know nothin' 'bout law. Ain't I got the statutes right here in these books? Don't you s'pose a justice knows w'ot he's do'n, still? You can not begin no action in this court, 'thout it goes on the docket and have all parties concerned supenured to appear and show cause. I issar cite-ations to all your folks, and you come on the day w'ich is sot. You don't have to have a jury less you want, though I allers recommend it. Then if either of you want to back out you can get a writ of mandamus and that fixes you. If you are engaged to any other gal she can put a 'tachment of habeas corpus

onto you and replever you out. Now, do you want to begin this action on the premises hereintoforward mentioned, er don't you?"

"You thu'drin old fool, I don't believe you know how to mar'y folks!"

"I fine you five dollars for contempt of court! Don't know nothin', hey! I'll show you! Think cos I've jist been 'lected that you can run on me! Think this is my first case, d'you? I'll have you understand it ain't; I swared a man to an afferdavit this mornin' fore sun up. Mebby you think I'm jist some common noterer public, but afore you git through with me yo'll find out I ain't no sich thing. Now, you jist pay that five dollars and get out, or I'll imprison you for startin' a suit when you ain't got no case, and ef I shet you up onct I won't low nobody to put no bail on you either!"

The young man concluded the best way to get out of it was to pay the fine. Then he hunted up a minister, and soon he and "Louwese" were one.

Antiquity of the Apple.

The virtues of the apple as a fruit have been celebrated from time immemorial, and few fruits have so many legends associated with them. The garden of the Hesperides was the garden of the golden apple, just as our Avalon is the Isle of Apples. "Of all fruits," it has been written, "the apple seems to have had the widest and most mystical history." The myths concerning it meet us in every age and country. Aphrodite bears it in her hand, as well as Eve. The serpent guards it, the dragon watches it. It is celebrated by Solomon, it is the healing fruit of Arabian tales. Ulysses longs for it in the gardens of Alcinoüs; Tantalus grasps vainly for it in Hades. In the prose Edda it is written: "Iduna keeps in a box of apples, which the gods, when they feel old age approaching, have only to taste to become young again."

It is in this manner that they will be kept in renovated youth until Ragnarok—the general destruction. Azrael, the Angel of Death, accomplished his mission by holding it to his nostrils; and in folk-lore Snow-drop is tempted to her death by an apple, half of which a crone has poisoned, but recovers life when the fruit falls from her lips. The Golden Bird seeks the Golden Apples of the King's garden in many a Norse story, and when the tree bears no more, Frau Bertha reveals to her favorite that it is because a mouse gnaws at the tree's root. Indeed, the kind mother goddess is sometimes personified as an apple tree; but oftener the apple is the tempter in northern mythology and sometimes makes the nose grow, so that the pear alone can bring it to moderate size.

Rhode Island Superstitions.

This wild, wooded and rock-ribbed region, less than a day's journey from General Putnam's historic wolf den in north-eastern Connecticut, is full of superstitions, writes a Rhode Island correspondent of the *New York Times*. It is one of the queerest of localities. In the center of Gloucester lies Ponagansett Lake, and all about the shores of this lake are the dwellings of a hale and hearty people, who make this country, far from the busy haunts of men, a veritable wonderland of legend and reminiscence. The old men delight in telling ghost stories, and the young people like to listen. Gloucester lies on the crooked old Indian trail which ran between Connecticut and the Providence plantations.

For generations back the Gloucester farmers have believed in wizardry. They will do much of their work only during the full of the moon. Otherwise they would expect to die or have very bad luck. Planting must not be done until the signs of the zodiac are propitious, and gardens must never be plowed on Fridays. Even a tooth must not be pulled unless the stars are right; if it is, it will come hard and cause great suffering.

Pork, if killed during the small of the moon, will shrink to nothing in cooking, while that butchered at the full of the moon will continue white and firm. To insure luck in the management of domestic animals the sign of the zodiac must be in the leg. The wishbones of all fowls are preserved on sticks. Some families keep hundreds on hand all the time. When the zodiacal sign is in the head, then the Gloucester people believe one can do the most at catching pickerel and can hook the biggest fish. Hence, the almanac hung by the kitchen fireplace in all Gloucester houses is a thing the settlers could not live without. Its study, if one would reap good harvests, "catch" good clamming tides, and avoid misfortune, is imperative.

These people also believe that if you take up a black snake and bite it your teeth will never decay; that if the nails are pared on Friday toothache will be prevented, and that a child born in the heat of the day can see into the future, and will be exempt from the influences of witchcraft. A ship that has such a one on board they say will never sink.

Perhaps the most curious belief still haunting these hearthstones of interior Rhode Island is that relating to the character of the little fish in Ponagansett reservoir. This pond is the source of the Pawtuxet river, which flows eastwardly into Narragansett Bay, and years before the building of the dam across the outlet of the pond, the salt sea used to swim in the shoal waters of the

lake to spawn. The old settlers who have lived about the lake all their lives aver that the shiners which now glisten in its crystal waters are naught else but the degenerate descendants of the herring race, and show the same characteristics. One of "the Bowen boys" at the lake frequently says that "my father used to say there was no shiners before any d-d dams was built to fence out the herrin's."

A Complete Vindication.

[Arkansaw Traveler.]

A fire occurred in an Arkansas town the other night, but the chief of the fire department paid no attention to the alarm. The next night he was summoned to appear before the council.

"Mr. Chief," said the Mayor, "did you hear the fire alarm last night?"

"Yes."

"Were you in good health at the time of the alarm?"

"Yes, believe I was."

"Then you acknowledge a willful neglect of duty?"

"No, sir."

"Why, then, did you not respond if you were not determined to neglect your duty?"

"Couldn't get away."

"Illness in your family?"

"No."

"Then, sir, I demand the reason."

"Well, you see, a parcel of us fellows were in Anderson's back room when the bell rang. I had four aces at the time, and—"

"What?"

"Yes, held four aces. John Bucher began to bluff, and—"

"How did it result?" the Mayor asked with heightened interest.

"O, I lifted him for about \$300."

"You don't say? Gentlemen that we doubtless a very interesting game. As there is no business of any importance, we'll adjourn and go down to Anderson's back room."

Next morning the daily papers contained the following notice:

"The enemies of the chief of our fire department having circulated reports to the effect that he had wilfully neglected his duty, that gentleman was last night summoned before the city council to answer the charges brought against him. The investigation resulted in a complete vindication of our worthy chief, and friends on every side pressed forward to congratulate him. The wiser's tongue is very eloquent, and to our shame be it said, we are ever willing to hearken to the words of the truth-teller. Our worthy chief will be a candidate for reelection, and as the matter now stands it will be impossible to defeat him."

"Git Up, 'Squire."

Elder Hopkins was the pastor of a rural congregation, and a hard-shell Baptist, who hit straight from the shoulder, and generally succeeded in knocking out the sins of the people. Two of his deacons were pillars of the church, whom I shall call Uncle Benny Jones and 'Squire Brown. Of 'Squire Brown it may be said he pretended to a good deal of piety he did not possess, while Uncle Benny was inclined to bibulosity and often attended church under the "influence" owing to the fact that the time elapsing between Saturday night and Sunday morning was too short to sober up. One Sunday morning Elder Hopkins concluded to wind up his sermon with a pointed allusion to the besetting sins of his two deacons. In a solemnly impressive voice he said:

"There are certain sins to which I desire to refer particularly this morning. Take the sin of intemperance and drunkenness for instance. Rum has slain more than war, famine and pestilence. Where is the drunkard?"

Instantly, with a tremendous effort, Uncle Benny Jones assumed the perpendicular, somewhat curved after the manner of an interregation point, and exclaimed:

"Here I am, (hic) old hoss! (hic) Here I am (hic) a listening to you!"

The sudden and unexpected response brought down the house, but in no way disconcerted Elder Hopkins, who after the laughter had subsided, proceeded:

"Brethren, while I have animadverted severely upon the sin of drunkenness, there is a still greater sin and that is the sin of hypocrisy. Where is the hypocrite?"

No one responded and Uncle Ben reached over into the next pew where 'Squire Brown sat, gently shaking him up, said in a loud and earnest voice:

"Git up, 'squire, (hic) git up. I got up when he called me?"

The congregation dismissed itself without waiting for the benediction.

A Mutual Mistake.

People sometimes make great blunders in judging of one's refinement and social position by his dress.

Years ago, says the *Boston Journal*, a famous lawyer and wag came to Boston in a suit of homespun. At the public house some of the fashionable guests undertook to quiz him. As he entered the parlor of the house he found that several ladies and two or three gentlemen were there assembled, and he heard a remark from one of them. "Ah, here comes a countryman of the real homespun genus. Here's fun?" Whitman stared at the company and then sat down. "Say, my friend, you are from the country?" remarked one of the gentlemen.

"Ya-as," answered Ezekiel, with a ludicrous twist of face. The ladies twittered.

"What do you think of our city?"

"It's a pooty thick-settled place, any how. It's got swampin' sight of houses in it."

"And a good many people, too."

"Ya-as, I should reckon so."

"Many people where you came from?"

"Wall, some."

"Plenty of ladies, I suppose?"

"Ya-as, a fair sprinklin'."

"And I don't doubt that you are quite a beau among them?"

"Ya-as, I beaus 'em home—tew meetin' an' singin'-schewl."

"Perhaps the gentleman from the country will take a glass of wine?"

"Thankee. Don't keer if I do."

The wine was brought.

"You must drink a toast."

"Oh, git out! I eats toast—never heerd o' such a thing as drinkin' it. But I kin give you a sentiment."

The ladies clapped their hands; but what was their surprise when the stranger, rising, spoke calmly and clearly in tones ornate and dignified as follows:

"Ladies and gentlemen, permit me to wish you health and happiness, with every other blessing earth can afford; and may you grow better and wiser with advancing years, bearing ever in mind that outward appearances are often deceitful. You mistook me, from my dress, for a country booby, while I, from the same superficial cause, thought you were ladies and gentlemen. The mistake has been mutual."

He had just spoken, when Caleb Strong, the Governor of the State, entered and inquired for Mr. Whitman.

"Ah, here I am, Governor! Glad to see you!" Then, turning to the dumbfounded company: "I wish you a very good evening."

And he left them feeling about as small and cheap as it is possible for full grown people to feel.

The Dog.

[Detroit Free Press.]

It has been claimed that the dog was one of the first animals created, and that one stood ready to follow Adam about when he left the Garden of Eden. Just what Adam wanted a dog for when there was nothing to "sic him on" is a puzzler, but it is evident that the dog appeared in the early stage in this world's history, and that he has held his own wonderfully well. No one seems to know just how many species of dogs can be put on record, but the number is great enough to give us all a change for every day in the week. There is no country without its dogs, and the poorer the country the more dogs.

The Blood to Spatter.

[Detroit Free Press.]

A farmer looking man entered a Grand River avenue drug store yesterday, and handing the druggist a small hard lump of something, asked if he could tell what it was.

"It's a piece of alum," replied the druggist, "but there's a kerosene taste to it."

"There orter be, for its bin in a kerosene lamp fur a week. Sure its alum?"

"Oh, yes."

"Can't be no mistake?"

"No, sir. What about it?"

"Well, a fellow came along about a week ago and sold my wife five or six pieces to put in the lamp, warranting it to save half the oil. Did it save any?"

"Not a drop."

"Was it a swindle?"

"It was."

"That's all, doctor. They've come along and sold me aniline, tonka beans, cucumber seeds, poke-root, and spice bark to save ile and prevent explosions, and have all got away. I know where this feller is."

"And you—!"

"Exactly. I wanted to be sure it was alum. I shall now move on him. Want to come along?"

"Oh, no."

"Jist as well, p'raps, unless you are used to the sight of gore. I'm going to fling him down, put my foot on him, and take him by the hair and pull his head off. I've got on old clothes so that the blood kin spurt and spatter and be hanged. It's alum for sure!"

"Yes."

"That settles it! Let her spatter!"

Too Old To Lie.

A prominent Maine journalist, formerly editor of a Portland paper, once practiced law in Foxcroft, and at that time a quaint old man, named Graves, lived in the neighboring town of Gardford. He had a little property, but was very slow about paying his bills. He became indebted for small amounts to a number of storekeepers in Foxcroft and Foxcroft, and they gave their claims to this journalist's lawyer to collect. He wrote several letters to the old man, which produced no effect. Till one day he threatened to attach his name if he did not call and settle within forty-eight hours. This threat made the old man pull out his stocking and on the next morning after receiving the letter he appeared at the lawyer's office and announced that he was prepared to pay. "How much does it amount to, please?" he asked.

"Seventy-eight dollars," said the lawyer.

"Here's that square," remarked the old man.

"You owe Ferguson \$5 and Snodgrass

\$9, and Jaggerson \$8, and my charge for collecting is \$5."

"I did not know you had any bill against me, 'squire."

"I must have my pay for writing those letters to you."

"Well, I declare, 'squire, I wasn't calculatin' on that. I'm a pretty old man, 'mos eighty-two, and it was hard for me to get this money together to pay these bills. I'm not prepared to pay you."

The old man begged the lawyer to let him off, and after considerable talk the lawyer said: "Look here, Mr. Graves, you have made considerable mischievous talk about me. You have gone through the country calling me a big liar and other hard names. Now, if you will go around and see everybody to whom you have made this talk and tell them that what you have said about me is false, I'll knock off the \$5."

After rubbing his old gray head, the old man answered: "Mr. Pullen, I'm 'mos eighty-two years old, and too near eternity to tell such a 'tarnal lie as that."

She Held a High Office.

"Well, dear," said Mr. Topnoody to his wife, as he started down town this morning, "this is Masonic day with us, and as I am to attend the meeting of the general grand council of the Royal and Select Masters, I will not be home to dinner, and may not even be back until far into the night, so do not be alarmed by my absence. We will be very busy, you know, my dear."

"Oh, you will, will you?" replied Mr. Topnoody, firing up. "The general grand council of the Royal and Select Masters, is it? And you'll be out till late?"

"Yes, my dear," he answered gently.

"Early, you mean," she snapped. "Well, go on; but let me tell you, Topnoody, that there is a special grand council of the Royal and Select Mistresses right in the house, and I'm the M. P. G. G. M., and the R. F. G. D. M., and the P. D. Q., and all the rest of the meeting, and if you come poking around that night with your watch key at 3 a. m., trying to wind up the clock, as you did once before, I'll come down and open the hall with a grand chapter in live knots that will make you think that you have been riding a goat for a month. It you hear? Now, get out, don't let the ladies get to your memory, or you'll be sorry for it."

Mr. Topnoody packed up his hat and went away sadly.

An episode of which the following is to be a story is this in the same year a certain man's grave at Gardford, Maine.

It is said that he was
but a small man as to size.

He thought of "Dem Hogs."

[Detroit Free Press.]

"Just previous to the war," said a Mississippi planter the other day, "I was out in the field giving an old and favorite slave of mine some instructions about a change of fence, when I heard the hiss of a snake and jumped aside just in time to avoid the fangs of a cotton mouth. I was for the time badly rattled, while the old man seized a club and killed the snake. Several months passed, and the incident had been forgotten, when I got into trouble and was challenged to fight a duel. I accepted and named the next morning at 8 o'clock. How the news got to the old slave I never could understand and he would never tell, but in some way he got an inkling that I was to fight. In the afternoon, as I sat alone on the veranda, he came shuffling up, pulled off his hat, and when I gave him a nod of encouragement he approached and said:

"Mar's James, dey dun say you am gwine to fight wid Mar's — to-morrow."

"Hush! What nonsense!"

"I ain't gwine to say one word to nobody, Mar's James, but de old man—"

"What?" I asked as he hesitated.

"Member dat cotton mouf down by de swamp, Mar's James? 'Member how—how you dun turned pale an' trembled?"

"Perhaps I did."

"Wall, Mar's James, if you am gwine to fout wid Mar's — jis' doan't fink of snakes 'tall when you am standin' up to shoot. Put yer mind right on dem eighteen hogs which rooted under de fence an' got out into de brush de odder day, an' de Lawd will help ye drap him."

"The duel came off, and Mar's — was 'drapped' with a bullet in his shoulder, and the old slave didn't quit shouting and praying for a week."

Tim Murphy being brought up before a borough magistrate for assault and battery, "in that he did wickedly and feloniously assail the complainant, pulling his nose to the effusion of blood," was asked if he had any excuse to make.

"Merely this, your honor," was Tim's reply. "I couldn't resist the temptation av a thing I could get hold of, bedad, *wi' both me hands.*"

Mr. Howells says the home of fiction is to be America. Mr. Howells has evidently been reading the newspaper accounts of storms in the West, where mules were lodged on the tops of four story trees, and hail-stones fell "as large as pumpkins." And yet we don't suppose the newspapers would exaggerate about a little thing like that.—*Norristown Herald.*

REMINISCENT RHYMES.

The autumn days are on us now,
And back my mind is turning,
To times when 'neath a placid brow
Youth's fondest hopes were burning.
When all my pulses beat with health,
Barefooted and light hearted,
I never called such blessings wealth
In those dear days departed.

How sprightly were our nimble feet,
And tougher far than leather,
When swiftly o'er the stony street
Companions flew together!
We'd kick the straggling stones away
And never note the bruises—
Alas! since that some heads are gray,
And some turned toward the Muses.

Jack Welch, my chum of bygone times,
Now drives his lady tandem;
He never reads my railing rhymes—
His household long has banned 'em.
He's rich, but faith! I knew him well
Before he kept a carriage,
When he and I'd the chorus swell,
Ere wealth he won by marriage.

Jim Tyrrell is the same old Jim
He was when first I knew him;
He's turning gray, he's lack of limb,
But pride 's a stranger to him,
He's got enough to keep him snug,
And end his days in clover;
The same old smile adorns his mug
That always there did hover.

Tom Crosby went from bad to worse—
He wed, they separated;
His darling sued him for divorce,
She swore they were mismated.
In York state here the law is strict
For cutting marriage traces,
Tom's now a strolling derelict,
A tramp in dubious places.

Will Jones, who used to serve at mass,
And ranted scripture hourly,
Is now an unbelieving ass
That scoffs at Christians sourly,
Within a few more years I fear
He'll wiggle in commotion,
And squeal to have an ice house near,
Or wind-swept Arctic ocean.

Tom Quirk has seven strapping boys
To kindly call him father,
And maidens three to crown his joys
Since married to Jane Mather.
A grandson toddles at his side,
Both rosy-cheeked and handsome;
Tom's poor, but swears with honest pride
He's worth a sultan's ransom.

Oh, dear! the ups and downs of life
Are wonderful and many!
Its crosses, heartaches, toil and strife
Are seldom known to any
Until man gets beyond his teens,
Chin deep in its commotion,
Which sweeps alike kings paupers, queens,
And drowns all in Death's ocean.

Shandy Maguire.

Addresses Wanted.

THEO. APGAR.—When last heard from, three years ago, was in Chicago. His mother is very anxious to hear of him. Address Mrs. Catherine Apgar, Byron, Ill.

GEO. W. SPRATT.—When last heard from, two years ago, was running a yard engine at Cairo, Ill. Any one knowing his whereabouts will please correspond with his sister, Mrs. Birdie Loyd, Somerset, Ky.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

NOVEMBER, 1891.

Assessment Notice for November.

OFFICE OF GRAND LODGE, B. of L. F.,
TERRE HAUTE, IND., November 1, 1891. }
ASSESSMENT No. 24, \$2.00.

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 500. Michael Bowes, of Hudson River Lodge, No. 349, died of Typhoid Fever, June 17, 1891.

CLAIM No. 501. Michael Leyden, of Buffalo Lodge, No. 12, was declared totally disabled with Chronic Bronchitis and Bowel Disease, July 20, 1891.

CLAIM No. 540. John Pope, of Falls City Lodge, No. 103, has been declared totally disabled by injuries to Spinal Cord, October 5, 1891.

CLAIM No. 541. Wm. Hayes, of Grand River Lodge, No. 265, was declared totally disabled by having his Arm Crushed, October 10, 1891.

CLAIM No. 542. F. A. Colley, of Industrial Lodge, No. 21, was declared totally disabled by Chronic Pneumonia, October 17, 1891.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership NOVEMBER 1ST, 1891, also for all members having taken a withdrawal (limited or final) after NOVEMBER 1ST, (and for all members who died or were totally disabled since that date.) said remittance to reach the Grand Lodge not later than NOVEMBER 20TH, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all benefits of the order, as per Section 62 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Acknowledgments.

DANVILLE, ILL., Oct. 7, 1891.

To the Officers and Members of the B. of L. F.:

DEAR SIRS AND BROTHERS:—I wish to return my sincere thanks for the kindness shown me during my misfortune, and also for my disability claim of \$1,500 which I received on the 7th day of October. I also thank the brothers of Hercules Lodge, No. 63, for their kindness to me in my sickness, especially H. E. Kyger, Receiver, and John Tracy, Secretary. I also return thanks to the brothers of Kit Carson Lodge, No. 257, at Raton, N. M., for their kindness. Wishing prosperity and success to our order, I remain forever with you all.

Yours truly,
CHARLES C. STEVENS.

COLUMBIA, PA., September 26, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN AND FRIENDS:—Allow me to express my heartfelt gratitude for your promptness in forwarding draft for \$1,500. Insurance due on the life of my precious boy, Wesley G. Browne, who was killed on the South Carolina Railway. My sincere thanks are extended to the members of Congaree Lodge, No. 427, for kindness and attention, and I assure them of the near and tender feeling I have for their lodge, my dear boy being one of their charter members.

Very Respectfully,
MRS. A. H. BROWNE.

SEBALIA, MO., October 5, 1891.

To the Editor of the Magazine:

SIR:—I wish to return my sincere thanks for the kindness shown me during my misfortune, and also for the draft of \$1,500 due me on my disability claim; and I wish to thank also the members of No. 78 for their kindness during my illness. Hoping the members may ever prosper,

I remain, always a brother,

J. T. HATY.

HANNIBAL, MO., October 15, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—It is with sincere thanks that I acknowledge the receipt of draft for fifteen hundred dollars (\$1,500), the amount due me on the policy held by my beloved son, W. J. Kelly, who met his death in the discharge of his duties on the 19th day of last June on the M. K. & T. R. R. We can scarcely express our gratitude for the kindness shown us by the brotherhood, and especially to Messrs. J. McCuskie, Wm. Kersen, Jerry McCarthy, John Haus and R. Doak, who so kindly took charge of the remains of our dear one and accompanied them home. From the depths of our hearts we wish you prosperity, health and all earthly happiness. We earnestly pray that when this painful exile is ended you will enjoy the happiness of heaven.

Your sincere friend,

MRS. M. KELLEY AND FAMILY.

EAST BUFFALO, OCT. 6, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Allow me to express my sincere thanks to members of Admiration Lodge, No. 101, for the many acts of kindness and sympathy shown me during my recent bereavement in the death of my husband, Michael Bergin, also for the beautiful floral offerings and set of resolutions and very prompt payment of \$1,500 which I received through Mr. P. J. Stoddard, Receiver. Hoping that the brotherhood will always prosper and with best wishes to all its members, I remain

Yours very respectfully,
MRS. ANNA BERGIN.

ALTOONA, WIS., Oct. 9, 1891.

To the Officers and Members of the B. of L. F.:

GENTLEMEN:—I have just received a draft for fifteen hundred dollars (\$1,500) on the policy held by my dear husband. Please accept my sincere thanks for the prompt payment of the claim. To the members of Eau Claire Lodge, No. 68, I extend my heartfelt thanks for the kindness shown myself and husband during his long illness. May God bless and prosper every member of the order.

MRS. A. M. KINGSBURY.

BALTIMORE, MD., Oct. 5, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Please accept my thanks for a draft for fifteen hundred dollars, received through Mr. B. W. Mace, of Mount Moriah Lodge, No. 319, the full amount of the policy held by my late husband. Also I extend to the members of Lodge No. 319 my sincere thanks for their kind acts in my late affliction.

Yours respectfully,
AUGUSTA E. CONNOLLY.

WORCESTER, MASS., October 11, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to extend my sincere thanks to each and every member of the above order for the sum of fifteen hundred dollars (\$1,500) due me on my disability claim, and received this day. I wish each member and the order prosperity.

Yours fraternally,
THOMAS E. KELTON.

SOUTH BOSTON, MASS., Oct. 10, 1891.

To the Officers and Members of the B. of L. F.:

DEAR SIRS AND BROTHERS:—I wish to return my sincere thanks for the draft of \$1,500 due me on my disability claim and also for the prompt investigation of my claim.

Yours fraternally,
H. W. SKEENE.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., Oct. 1, 1891.

HAWKINS' CALCULATIONS
—FOR—

Engineers, Firemen and Machinists.

A work of instruction and reference
226 pages, with 150 diagrams and illus-
trations 9 inches x 6, printed on heavy paper, sold
in 10 monthly parts at 25c each, or in one hand-
some bound volume for \$2.50; postpaid.

**THEO. AUDEL & Co., Publishers, Room 3,
91 Liberty St., New York City.**

Note.—This work teaches practical men how to advance themselves
to the highest positions. "He who reads (this work) must learn," said
Cecil, London. "I would not part with the H. & C. for five times
the cost," Jno. J. Jennings. "I have found it to be the best ever put
before the public," Chas. Spies, Chief Engineer.

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all
use? Nearly all Brotherhood men wear overalls, and
I am making overalls that can't be beat. It won't
cost you a cent and will help me a great deal if you'll
ask your dealer for the "Brotherhood Overalls" and
insist upon getting them. He will handle them if
you insist, and when you get them you will be get-
ting overalls as good as can be built. Every garment
warranted not to rip. Look for "Brotherhood" on
the buttons.

At 5 per cent. on policies
by this first class fraternal
Order. Anybody can act as
an agent. Active farmers do
well, ladies also. \$200 to
\$4,000 in from 2 to 7 years
during life, and \$7 to \$40
weekly in sickness. Mention
this paper and write at once
to (Big Pay)

S. GLENNON,
8 Union Square, New York.

Lady agents do well also. Address MRS. K. F.
MILLER, General Agent Ladies Dept., 8 Union
Square, New York, for particulars.

Send for list of 500 claims paid in '91.

FAT PEOPLE

Desiring to reduce their weight, can do so at home
without starving or injury, 10 to 15 pounds a month.
Permanent results. Send for proofs.

DR. CLARKE,
186 South Clark St., Chicago.

Alexander's Ready Reference.

For Engineers and Firemen. Broke Down.
What I Should Do.

This book contains all of the items that were in all previous editions,
some of which have been greatly improved. Two pages have been
added to the time and speed tables, also forty-five pages of new items
have been added. Two very fine and costly engravings of the West-
inghouse Automatic and Air Brake Gear have been substituted for the
old ones, one of which is 8 by 34 inches, showing as one sheet the
whole brake arrangement from the pump on the engine to the rear end
of a passenger car. The new QUICK ACTION TRIPLE VALVE, and the
NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explana-
tions of the operations of all its parts as well as the manner of hand-
ling them are given. A diagram of SLIDER VALVE MOVEMENT, 10 1/2 by
1 1/2 inches, occupies each book, the explanation of which is made
so clear that any person can understand it. It shows every part or
part of a motion, from the eccentric to the steam chest, as well as the
manner in which steam is admitted to and discharged from the ports
in the cylinder. It shows the piston also and everything connected
with it. There are also three large engravings of engines, making five
in all, in a pocket in each book. The whole work without doubt con-
tains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier
understood by railroad men, than any other book now in print, because it
is written in the same manner that railroad men talk to each other, and
by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE.
REMEDIES FOR BREAK DOWNS AND FAULTS OF EVERY KIND that are
likely to occur on the road are given in language familiar to
every engineer or old fireman, also the BEST PRACTICES FOR RUNNING.
A careful study of the principle items of the old editions has qualified
very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their let-
ters to me say in substance, "I would not have been promoted without
it," or, "It put me on the right side." The book is very valuable to
MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive
FIREMEN ASPIRING AT PROMOTION. Every CONDUCTOR and BRAKEMAN, as
well as ENGINEERS and FIREMEN, should become acquainted with the
workings of the Air Brake now in use. One brief careful study of this
description of the operations of the Westinghouse Automatic and Air
Brake will qualify any interested person for examination on that sub-
ject. This item has been recently added to the edition. No books sent
C. O. D. Price of Ready Reference, postage prepaid, \$1.50 per copy.

CORNISH

ORGANS AND PIANOS have determined to introduce in every part of the civilized world where not already sold, and, with that end in view, beg leave to submit the following offer—which is the most liberal ever made—for the consideration of the American Public, who always appreciate a genuine bargain and a good thing whenever they see it.

A WONDERFUL OFFER!

We offer you this first-class, brand new, High Grade, Newly Designed, **\$75.00 PARLOR ORGAN** (altered for Church or Chapel use when desired), the very latest in style, and containing our Newly Invented and Patented **Stop Action**, for the astonishingly low price of **Style No. 16, SWEET MARK ORGAN**, (exactly same as this cut, taken from a photograph), Solid Black Walnut Case, 6 Octaves, 10 Effective Solo Stops, 3 Sets Orchestral Toned Reeds, Double Octave Coupler, New Tone Swell, Grand Organ Swell, all known modern improvements, making a Complete Parlor Organ, specially warranted 10 yrs

\$35

ORGANS and PIANOS upon the INSTALMENT PLAN

TO SUIT ALL PURCHASERS. When not convenient to pay all cash, we are willing to sell on easy monthly instalments. An experience of a "Quarter of a Century," coupled with ample capital, enables us to make better terms than any other house in America. There are many tempting offers made that are never carried out, by irresponsible advertisers, but this old Established and Reliable **CORNISH ORGAN AND PIANO COMPANY** carry out their contracts to the letter. We refer to the **First National Bank** in our city, where we deposit thousands of dollars every day, to any of the Mercantile Agencies, and, what is better, to the thousands of happy purchasers all over the world who are using our Organs and Pianos to their complete satisfaction.

OUR NEW PIANO CATALOGUE is now ready, and is free upon application. Don't buy elsewhere till you have seen it. We can save you \$100.00 and sell you a first-class piano, at factory price, upon the easiest instalment plan in the world. Prices from \$150.00.

WRITE TO-DAY FOR CATALOGUE OF ORGANS OR PIANOS. We have one million dollars' worth of instruments ready and in course of construction for our fall and holiday trade. Orders shipped same day as received. No waiting. A Catalogue will cost you nothing, and will save you money. Write at once.

TERRE HAUTE, IND.

LOCOMOTIVE & ENGINEERING.

A Practical Journal of Railway Motive Power and Rolling Stock.

THE LOCOMOTIVE ENGINEER has come into the hands of its editor, John A. Hill, and Angus Sinclair, editor of the *National Car Builder*, author of "Locomotive Engine Running and Management," and Secretary of the American Railway Master Mechanics' Association. On Jan 1st the title will be changed as above, the pages increased to four columns, and the number increased—20 pages of reading matter, anyway. Both editors have fired and run locomotives—the paper will be practical.

LOCOMOTIVE ENGINEERING will be profusely illustrated, be truthful, accurate, and as interesting as we know how to make it. Now, we don't propose to do much blowing, or make many extravagant promises of what we will do. We want you to be its judge. We want you to subscribe \$2.00 for a year's reading.

Now, this shall be no one-sided trade. You are seeking information on the mechanics of your business; you want to keep posted, know what's going on, how they do things far and near, get the latest kinks, and be ranked among your fellows and the public as an intelligent mechanic. You can't travel from Dan to Beersheba to see and study—you have duties to perform and work to do—but you would be willing to give something for memoranda, with drawings and data all jotted down plainly for future reference.

We are collecting information all the time, travel widely, have a large acquaintance and correspondence that keep us posted on current events. Then we have access to extensive libraries, &c., &c. We are compiling just such information as you want, and publishing it monthly. Every issue has thousands of dollars' worth of work and material. We couldn't afford to print one paper a month for thousands of dollars, but we can afford to furnish thousands of papers a month for \$2.00 each per year.

SHALL WE HELP EACH OTHER?

Don't judge us by other papers you may have tried. A good monthly is better than a poor weekly—but we want to leave this to you. If you don't get more than \$2.00 worth we won't ask a renewal. LOCOMOTIVE ENGINEERING is

ON TRIAL FOR HER LIFE!

All we ask is that you give her a hearing before an intelligent jury and a judge that doesn't drink!

WILL YOU SERVE ON THE JURY?

Send your name, address and a pair of dollars to

LOCOMOTIVE ENGINEERING.

ANGUS SINCLAIR, } Editors and Proprietors.
JOHN A. HILL, }

912 Temple Court,
NEW YORK.

\$1,000

FOR AN
OLD COIN.

and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since, a Lynn, Mass., shoe dealer found a coin worth \$1100. Recently a Scotchman in an Illinois town came across a coin worth \$700. Others have done even better. The *New York World* says: "Many people have become rich by looking after coins wanted by collectors." The *Home Journal* says: "Collecting coins is a very profitable business now-a-days, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest price. Write at once for further particulars enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune to you. W. E. SKINNER, Reliable Coin Broker, 325 Washington St., Boston, Mass.

IF YOU HAVE ANY COINS dated before 1864, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are, silver dollars dated between 1794 and 1806; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1890; silver five-cent pieces before 1897; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1872; all large copper cents, also small cents with eagles on, also cents of 1838 and 1877; all half-cents; foreign coins, fractional and Confederate currency, etc. For above we **PAY BIG AMOUNTS** over face value, if in required condition. This is a comparatively new business,

Catarrh Cured, ONE CENT!

If you suffer from Catarrh, in any of its forms, it is your duty to yourself and family to obtain the means of a certain cure before it is too late. This you can easily do at an expense of one cent for a postal card, by sending your name and address to Prof. J. A. Lawrence, New York, who will send you FREE by return mail, a copy of the original recipe for preparing the best and surest remedy ever discovered for the cure of Catarrh in all its various stages. Over one million cases of this dreadful, disgusting, and oftentimes fatal disease have been cured permanently during the past five years by the use of this medicine. Write to-day for this FREE recipe. Its timely use may save you from the death tolls of Consumption. Do not delay longer, if you desire a speedy and permanent cure. Address,

Prof. J. A. LAWRENCE, 88 Warren Street, New York.

* * RAILWAY * *
OFFICIALS AND EMPLOYEES
ACCIDENT ASSOCIATION

INDIANAPOLIS, IND.
WM. K. BELLIS, SFC.

THE WHEEL

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Railroaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroaders longer doubt it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

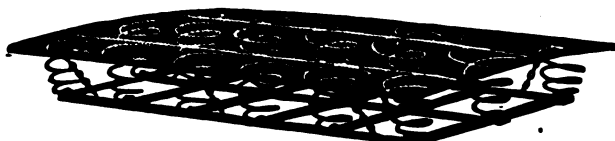

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

TO THE PUBLIC.—Cleanness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written in the interest of Locomotive Firemen.

70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

DECEMBER.

In the same latitude and longitude one December is very much like all previous Decembers.

It is the last month of the calendar year, and as such, it dates a period of time and bears testimony that another year is about to join the centuries.

There are men, who, when December comes, are inclined to pause and ponder subjects which at other times are little thought of. They exclaim, "How rapidly the wheels of Time revolve;" while others, careless of the flight of years, take little notice of Time's stealthy steps.

It were useless to moralize on such matters. It is the record of the centuries. Men are built that way.

Everywhere are found the thoughtful and thoughtless, the careful and the careless. There are men who are always watching for that

"Tide in the affairs of men,
That taken at the flood leads to fortune,"

while others drift regardless of ebbs and flows.

This being admitted, it follows that there are men and women too, and why not firemen, and the wives of firemen, who like merchants, take certain seasons for balancing their books, and note how "bills payable" compare with "bills receivable." In a word, "take account of stock" and ascertain if the profits of the year's business exceed the losses: and why is not December a favorable month for such economic transactions?

In writing of December, the theme predisposes the mind to melancholy. From our locality, northward to the pole, December is regarded a cruel month to those who are not prepared for its reign. And yet, December is conspicuously the holiday month, it having "a week of Christmas," and, therefore, ends its days, whatever the temperature may be, in scenes of festive enjoyments.

It may be that for the middle aged and the old, December, being the last child of the year, cold, stern and relentless in its arctic rule, may afford a proper time for serious reflection, suggestive of departures and tombs, and to the poor, the destitute and friendless, it may tell in "mournful numbers" that this beautiful world of ours, in December, with the mercury at zero, is less desirable than that other world of fancy, where there is neither winter nor storm, but one long summer's day—we say "fancy" because no traveler has ever returned to tell the living of the bliss and repose of that other world.

But all large per cent. of the human family is made up of youth, and to them "December's as pleasant as May"—or should be. We confess to a liking for the young that amounts to a passion. To note the joyousness of youth before the rigorous and unrelenting struggles of life's campaigns begin; before Time writes its wrinkles, before the days of spectacles come and the rose tints depart from the cheek, is a source of exquisite pleasure.

We would not have boys and girls men and women before their time, transforming the springtime of life, with its bloom and beauty, into sombre autumn and still more rayless winter. But, parenthetically it must be said, this is what is being done by those whose miserly greed triumphs over every human instinct.

There are children by the thousand in this fair land, whose lives are one long December without a Christmas, strangers to holidays, beaten down by the murderous flail of circumstances from which no kindly hand is stretched forth to rescue them. The storms are ceaseless and pitiless that beat upon them.

"And well may the children weep before you!
They are weary ere they run.
They have never seen the sunshine nor the glory
Which is brighter than the sun.
They know the grief of man without its wisdom;
They sink in man's despair, without its calm,
Are slaves without the liberty of Christdom,
Are martyrs, by the pang without the palm
Are worn as if with age, yet unretrievably,
The harvest of its memories cannot reap—
Are orphans of the earthly love and heavenly,
Let them weep! let them weep!"

But, as we write, there are harbinger notes heard announcing a better time coming for children—their December must be made as pleasant as May—and what could be more Christ-like than for all the lodges of workingmen of this great nation to resolve in December, 1891, that child labor must cease; that their youth shall not be one long, bleak December, freezing their tears into icicles, and transferring the prayer, "Our Father which art in Heaven" into a death rattle in their throats.

But, turning from children to manhood. December supplies a theme which takes on the serious or gay, as men may choose.

It may be said, we think, that men may

be divided into three classes, the pessimists, the optimists and neutrals.

There are those who think things are "ordered" for the best; others think things are "ordered for the worst," while others are of the opinion they are not "ordered" at all, and therefore that things can be ordered as one wants them, just as a man can order a suit of clothes or a dinner.

In this classification, the pessimists are the croakers, the optimists take things with commendable serenity, while those who believe that circumstances and conditions can be created are the agitators, and exert themselves to overthrow wrong wherever they find it entrenched.

December being the last month of the year, why may we not cast a backward glance and survey the pathways the armies of reformers have blazed through the wilderness to higher elevations of vision?

With December ends the campaigns of 1891. What of them? What lessons do they teach? What have been the battles, the victories, and the defeats? Who are the leaders whose names have received additional lustre? Who are deserving of promotion by virtue of their courage, their fidelity and their sacrifices? Who have proven weak-kneed, spiritless and chicken-hearted? Who have turned traitors to labor's cause, counseled with the enemy and won for themselves an eternity of infamy?

The last month of the year gives to such questions practical value. They suggest investigation, which, when honestly performed, lays bare defects and suggests remedies.

The armies of organized labor must understand that while they may be called upon to fight battles, lead forlorn hopes, hold forts and vantage grounds, the present is pre-eminently the time for education. The lodge rooms should be school rooms. Men enlisting under the banners of organized labor must learn, and the lesson which cannot be taught too splendidly or too thoroughly, that to be of service to the cause, their enlistment can terminate only with their lives.

The poet's idea, in addressing the armies enlisted under the banner of the Cross, is specially appropriate to the embattled hosts

of labor, who, if not "seeking a better country," are striving to make the one in which they live a better country. Sang the poet—

"Thy saints in all this glorious war,
Shall conquer though they die."

and thousands of labor soldiers, like the "soldiers of the Cross,"

"See the vict'ry from afar;
By faith they bring it nigh."

And it may be said if they are not animated by such a lofty spirit, their discipline is far from perfect, they are not veterans.

There are far away Decembers in the womb of time. What shall they be to the wage men as the years unfold and bring them into existence?

There are men who, even now, tell us that the United States of America is bordering on the fatal race that led to the downfall of Rome, that even now, the lines that separate the plutocrat from the toiler are as vivid as those which separated the Roman patrician from the plebeian. We are not required to believe such a postulate literally, but it is eminently the part of wisdom to check every tendency in that direction, and it may be said and should be said, for it is as true as an axiom in mathematics, that if our Heaven favored land is rescued from the grasp of those who seek the enslavement of labor, it must be done by the toilers themselves.

As has been said, December is a favorable time for workingmen as well as for merchants, to take account of stock, to find out the year's profits and losses, to correct defects in plans or policy.

With the average workingman the task is neither long nor laborious, because the average working man does not carry a load of first, second and third mortgage bonds, representing a large amount of *water* upon which he receives regular dividends. Our acquaintance with railway employes, engaged in the train service of railroads, is pretty extensive, and we do not know one who is a Wall street shearer of lambs, and who, day and night, is lulled to sweet repose by the melody of their bleatings; and yet, occasionally, some gifted labor orator whose lips have been touched with a "live coal from off the altar," declares that all workingmen, if they have five cents left

after their debts are paid, "are capitalists."

It is well in labor literature not to torture words until they are totally meaningless and ridiculous. If wage workers are capitalists, the term relates to something which the lexicographers do not mention. Their capital is not cash, bullion, bonds and mortgages, bank stock nor credits of any description, and yet, every day of their toiling lives they do make investments, of brains, of muscle, of skill, of health and life. Is that all? O, no. They invest ten thousand yearning affections for those who are dependent upon them, and for these investments the workingman receives his daily wages.

The workingman's capital is liable to contract disease and be sick. Brain and muscle get away, the eye gets dim, and there is "heart failure." When these misfortunes overtake the workingman's capital, it is at once retired and earns no more dividends until its health is restored, and to make matters worse, during its retirement it becomes expensive, and often it succumbs to such misfortunes and has to be buried.

Nevertheless, the December investigation may show that during the year dividends have exceeded expenses and that something has been saved, or it may show that expenses have exceeded dividends and that the capitalist is in debt.

If the balance sheet shows losses, simple prudence demands retrenchment. Luxuries must be dispensed with and rigid economy practiced.

The theme invites to extended remark, but we dismiss it with the reflection that the Brotherhood of Locomotive Firemen is to its members something in the nature of a savings bank, where each member keeps on deposit \$1,500 for the benefit of those dependent upon him, and which is ready for them in case misfortune overtakes him.

If December, 1891, is a bearer of dispatches to brotherhood men gone, to return no more, it occurs to us that he can tell them nothing more satisfactory than that the great brotherhood has 24,000 members who are doing their best to maintain the character and dignity of the order, and that when he left they all stood square on the books.

SUNDAY AND THE COLUMBIAN EXPOSITION.

The great Columbian Exposition will open at Chicago, A. D., 1893. Such is the programme now. If we are to believe current estimates, the Exposition will be upon a scale of magnificence such as the world never witnessed. The buildings themselves are to be wonders of architectural beauty and grandeur.

America proposes, in celebrating the 400th anniversary of the discovery of the new world by Christopher Columbus, to do that which in some measure will do honor to the event which in the world's history has no parallel, and which after all is done that wealth, genius and the combined energies of the nations of the earth can devise, looms aloft in undimmed splendor. Already the workshops of the world are preparing exhibits. Continents and islands are to pour into the Exposition buildings at Chicago their treasures of art and skill for the education and delectation of beholders. There are to be treasures from the forest, the field, the mine; of all the zones that belt the earth, including the seas and the oceans, and congregated at Chicago will be representatives of every nation of the earth—as also its flora and its fauna, together with its birds of song and of plumage, as also its reptilian tribes. Nothing is to go by default that wealth, will, forethought and patriotism can supply. The richest nation in the world is pledged to all things required to make the occasion unequaled and to respond to the wildest demands of the imagination in the field of possibility.

The question here arises, what class of the world's people is to be the most distinctly represented at the Columbian Exposition? We are not troubled for a reply. We answer, the workmen of the world.

The burning sun at midday in a cloudless sky is not more conspicuous than is the fact that the Columbian Exposition is absolutely dependent upon the workmen of the world. We seek no disparagement of the rich, of the proud and aristocratic—emperors, kings, dukes and lords. We care not a farthing for the entire brood who arrogate to themselves rights whether divine or satanic, to rule, and roll and riot in their

wealth. That they are on top in no wise affects the truth that but for the working men and women of the world the Columbian Exposition could not be, and but for them, around the exposition grounds a silence would reign as profound as in the buried city of Pompeii.

The Columbian Exposition, when opened to the public, will remain open about six months, or 180 days. This period will include twenty-six Sundays. The question now being debated is, Shall the Exposition be open or closed to the public on Sundays?

On the side of closing the Exposition on Sunday is a small army of cranks who prate of desecration, profanation, perversion, etc., to the end of the chapter. On the other side appear men of broad, liberal views, who scout the whole array of assumptions that any taint of desecration of the Sabbath can by any possibility attach to the mere act of viewing the beautiful and useful exhibits of the Exposition.

We assume, indeed, we take it for granted, if the Exposition is closed on Sundays, thousands and tens of thousands of workmen and their families will be as effectually excluded as if a decree debarring them from entering the building had been issued. Sunday is the one day which the toilers may call their own. It is the one day of the week when the shops are closed, when the steam engine ceases to throb, when the ring of the anvil is not heard, when the fires in the forge are dead, when all the implements of labor are laid aside and the toilers may seek healthful recreation for body and mind.

We make no pretensions to casuistry. We do not indulge in hair-splitting performances, preferring to grasp the common sense idea of a proposition and battle for its supremacy. We favor opening the Columbian Exposition on Sundays and to permit those who desire to do so to spend the day in viewing and admiring whatever is to be seen, believing that nothing will be on exhibition which to look at and comment upon can be tortured by the most dwarfed and deformed puritanic mind into the crime of desecration of the day.

The supreme idea of Sunday is rest coupled with worship. Not that a man shall sleep

twenty-four hours upon a couch or recline in an easy chair. Not that he shall worship in temples built with hands. Not that he shall by his presence indorse pulpit wrangles over dogmas and creeds, but that men shall rest, do no manner of work, devote the day to body and mind recuperation; go forth to find the beautiful, the good, the true; go forth to the forests, to the fields by the streams, everywhere beneath the bending skies, to the house of worship if you will, to the Exposition if you choose, anywhere where the body rests, where the eye transfers beautiful pictures to the mind, and the ear drinks in melodies for the memory, so that when Sunday is past the whole man physically, morally and intellectually, is improved.

The Columbian Exposition proposes to do this for all who enter its buildings on secular days, why not on Sundays? There is no reason why not. Not one has been assigned worthy of a moment's consideration.

During every Sunday while the Exposition is in progress thousands will wander about the grounds and gaze upon the buildings. Why not let them enter the buildings and contemplate all the treasures they contain?

No rational reply is given, but instead the veriest vagaries that ever nauseated the world are formulated and repeated by men whose pulpit wrangles have made the church the least potent factor in the education and reformation of men.

The pulpit complains that it does not and can not "reach the masses." It is not surprising. Reasons are numerous and cogent, and since the Exposition can reach the masses, if its doors are thrown open on Sundays, there are a thousand reasons why they should stand wide open on that day where one can be found showing why the massed should be barred out on that day.

The present is not a good time for bigots and fagots, thumb screws and wheels. The old theologies have no place in these practical, common sense days. The witch hanger and the Quaker whipper are now out of place. Ignorance and superstition are losing their grip and the mission of cranks, it is to be hoped, will soon be gone. If, however, they can succeed in barring the

doors of the Columbian Exposition on Sundays it will be proof that our much vaunted progress contains a large element of sham, and that the nation's emancipation from the curse of bigotry is indefinitely postponed.

THE way the money goes is explained by an official of the Illinois Central: "If," says the official, "the increase in the net earnings the past year have not been on a par with the increase in the gross earnings, the reason is to be found in the increased expenditure for extension and improvement of system. For instance, we have purchased 24,000 tons of steel rails, instead of, as usual, 8,000 tons. The rails are fifteen pounds heavier to the foot than formerly; our new engines, twenty-six of them, are sixty-one tons in weight instead of forty-nine; we have increased the number of ties per rail and weight of ballast, all of which any one familiar with railroad business would see we would not be likely to do were we financially depressed. And as for our paying dividends when there are no earnings, I am not that kind of a man." There were large earnings which went for rails and engines, for the improvement of the road to increase earnings and dividends another year, but it is such reports of "no earnings" and "no dividends" that serve corporations a valuable purpose when they want to cut down wages and discharge men. Occasionally, as in the case of the Illinois Central the real facts are told and the injustice to employees exposed.

THE entire globe, continents and islands contain about 54,000,000 square miles. If this land were all arable and in a high state of cultivation it might support four hundred persons to the square mile, or say, 21,600,000,000, but at least 18,000,000 square miles are not plowable, and it is a big calculation to say that under the most favorable conditions it could be made to feed more than two hundred persons to the square mile, or 7,200,000,000. As the population of the world is at present about 1,500,000,000, we have a margin of 5,600,000,000, which will be exhausted in about 27,000 years.

IMPENDING DANGERS.

The *Farmer's Voice* is one of the many organs of the Farmers Alliance, an organization that proposes to inaugurate a condition of affairs as different from that which now confronts the people, as light is different from darkness. And to accomplish the change it cries aloud. It sees great dangers ahead and utters warnings; as, for instance, the following:

If the dangers that menace our country's future were not one-hundredth part as manifest as they now are, we would be justified in drawing the possible catastrophe that threatens us in dark colors.

Better by far magnify the peril than to ignore it.

An oriental proverb says, "If thy enemy be a mouse fancy it an elephant."

It is wiser to err on the side of over-caution than to come to grief through careless indifference.

With the dreadful object lesson of the war of the rebellion only one generation away, it is the arrogance of unreasoning unbelief to affirm that even a greater calamity cannot soon befall us if we fail to prudently guard ourselves, when distinctly forewarned of the coming black day.

What are the perils to which the *Voice* alludes? The *Voice* does not specify them, and this omission is unfortunate. We are left to conjecture.

In the first place, the Farmers' Alliance demands more currency, good as gold, *per capita*, just how much is not stated. It is recently affirmed that the United States has more money, *per capita*, now in circulation than at any other period since the government was organized. This may not be enough, and more, perhaps, should be provided, but if it is not we fail to see why the lack of a few dollars *per capita* should bring about a dreadful catastrophe.

It also appears that the farmers of the country have been indiscreet in mortgaging their farms, and the sum total of these mortgages does appear startling. Possibly the government ought to aid the farmers in paying their debts, if so, why not aid every other class of citizens to pay their debts?

The drift seems to be to make the government parental, to treat the people as children, imbeciles, or subjects, when, in fact, the people are the government. The sovereignty of the people towers above everything in this country relating to government.

If we are to believe the *Voice*, the government is all wrong, and rapidly going from

bad to worse, hence, the people are all wrong and incapable of self government. If this is true, calamities are impending which it would be difficult, nay, impossible to portray.

It will be noticed that the *Voice* refers to the late war of the rebellion as in some measure foreshadowing the "coming black day," which has in store for us "even a greater calamity," and derisively alludes to the claim "that our government is under the special guardianship of the Almighty."

Well, after knocking out the Providence prop, and intimating that the people have been sleeping while the devil sowed tares, it is not surprising that the *Voice* regards the outlook as lugubrious in the extreme.

To change this mournful outlook is the mission of the *Voice*. Its theory, if we can apprehend it, is to increase the volume of currency and enable the farmers to get out of debt.

The Farmers' Alliance would have the government loan farmers money at 2 or 4 per cent. and take a mortgage on their farms as security, and this done, the storm clouds which are rearing their dark forms all around the horizon would disappear, the awful flash of vengeance and the deep toned thunder of warning would not be seen and heard, and the outlook would indicate peace and prosperity.

If we understand the *Voice* the way out of the wilderness is as straight as a bee line. The panacea is the simplest that was ever compounded in all the years of economic chemistry, compared with which a problem in simple addition is complex.

In the first place, set the printing machines a going until the volume of currency meets the largest demand. This done, loan the money to the farmers at 2 per cent. and take a mortgage on their farms.

If this farmers' emancipating programme could be carried out the government would at once become *sui generis*, the only money lending government on the face of the earth.

Look at it. The farmers complain that their farms are mortgaged to the money kings at from 6 to 12 per cent. They declare they can't pay the interest, and, therefore, the money kings are taking possession

of their farms. To save their farms they demand that the government shall stamp paper to the extent of \$1,000,000,000, and then loan it to them at 2 or 4 per cent. Every farmer whose land is mortgaged immediately applies for a loan, takes the money, pays the money king, and transfers the mortgage to the government. If the mortgaged debt is not paid when due, what then? Necessarily the government forecloses the mortgage and takes the farm, evicts the farmer and sells the land to the highest bidder: a re-enactment of the scenes in Egypt under the masterful policy of Joseph when he "bought the people and their land for Pharaoh" for bread, and the people became slaves.

It will occur to a good many thoughtful people that this way out of the wilderness is rather a way into deeper troubles.

But admitting that the government does issue \$1,000,000,000 fiat money to loan out at 4 or 2 per cent., is it to be presumed that the law will be so framed that only farmers will enjoy its benefits? Will not all classes whose property is mortgaged demand their share of the cheap money? It is easy to answer such questions, and to propound them discloses the glaring impracticability of the scheme. It follows, if there is no other way to relieve the farmers of their burdens, that a great many of them will lose their farms, a matter not to be spoken lightly of; but that it involves national disasters, calculated to send a shudder through the land, is altogether preposterous.

No one should seek to depreciate farmers as a class. Certainly, such is not our purpose. If farmers have an undue share of troubles they are entitled to a larger share of sympathy than those more favored by fortune. If there are laws, the operation of which impose unnecessary burdens upon farmers, they should be repealed or amended, and the same is true of every other class of citizens. The farmers are not entitled to special privileges. They must take their chances with the rest.

The *Farmer's Voice* and the Farmers' Alliance should understand that vast sums of fiat money will not be issued for their special convenience to be loaned to them at a

low rate of interest, taking as security their farms and personal property. Such vagaries in finance are well calculated to bring the Alliance movement into universal ridicule.

Suppose farmers, for purposes entirely legitimate and honest, borrow money, nominally at 6 to 8 per cent., but really at 10 to 12 per cent. The latter figures, though not appearing in the document, represent, nevertheless, to what extent the farmers are bunkoed by the money sharks. No law was ever devised, nor will one ever be enacted to save men from their follies, unless it be to dethrone their manhood and independence, place guardians over them and deprive them of the right to make bargains.

True, laws are made to prevent and punish usury—everywhere a dead letter—but were they enforced, borrowers, and especially farmers, as the facts show, to obtain money help the lender to evade the law and become the willing victims of the outrages of which they complain.

The same is true in every department of business. There has been and there still exists a mania for borrowing, and where mortgages on real estate, particularly farms, are given as security, if calamities come, the borrower is always the victim.

It were supreme folly to suppose that the way out of such a dilemma is *via* statutes, and yet, statutes could be enacted which would prove of incalculable benefit, not only to farmers but to every other class of citizens. We refer to laws which shall compel railroads to transport freight at prices that would leave some margin of profits to producers.

No railroad exists except by permission of law. Charters are not granted to railroads for the special benefit of the corporation but for the *public good*. It follows, if a great body of citizens, such as farmers, are impoverished by the policy of the railroads, then the law-making power should interfere. This is being done, notably in Iowa and Texas.

To ascertain the *exact* cost of any railroad in the country is not a difficult task. Everything connected with railroad construction is in sight. If corporations choose to inject water into their stock equal to the cash invested, then in that event the peo-

ple can compel them to pay taxes on water to an extent that would speedily suggest to them the importance of squeezing out the water.

If money sharks loan money at rates of interest above what the law specifies, regardless of methods, it would be an easy matter to correct the iniquity by declaring all such contracts void. But, then, those who want money would find all the safes locked against them, and thus it happens that usury laws are, except in certain cases, dead letters.

No laws can be enacted which will make men provident, and the dangers which threaten the peace of communities and the prosperity of the country are not consequent upon borrowing money and executing mortgages.

As a result, alarmists must suggest some other cause for a collapse, and unfortunately it is not hard to find.

RAILWAY SLAUGHTER.

The New Orleans *Picayune*, referring to the accident on a West Virginia train, July 4, by going through a trestlework says:

The structure, which was a lofty one, over a deep gorge in the mountains, had been attacked by fire. The flames were extinguished, but not before the trestle had been so much weakened that it was unable to bear a train. It was somebody's business to have known that the trestle was disabled, but nobody appears to have taken any notice of the matter. The consequence was that 50 people were killed outright or terribly mangled.

If the blame cannot be fixed on a miserable brakeman or some other humble employé nobody will be held responsible. Railways may be operated with the most defective regulations and lack of provision for any sort of warning against the most obvious dangers, but, according to Judge Van Brunt, of New York, nobody can be held responsible except the person who was immediately engaged in causing a disaster. The neglect or persistent failure of those who directly control a railway to provide regulations and precautions against the most usual perils of railway operation do not count. A railway may be operated without lights or signals, by an insufficient crew of inexperienced servants or employes, but unless the man who left the switch open can be found all go scot free, no matter how many lives are destroyed.

It might be well if the running of trains were governed by national laws, as is the case in the navigation of rivers and lakes. The national laws provide for the licensing of engineers, pilots and masters of vessels, and whenever an accident occurs a rigid in-

vestigation is had, with the result that wherever negligence is shown the license of the guilty officer is revoked.

Railway conductors, engineers and other persons entrusted with the charge of trains have as responsible duties to perform as have the pilots and masters of vessels, hence they should be subject to equally stringent regulations. They should consequently be compelled to have an official commission and be held to a strict accountability for the performance of their proper duties. The regulations for running trains should also be uniform all over the country, proper safeguards against accidents should be required, a uniform code of signals exacted, as well as a rigid official investigation in the case of every serious accident.

The vast number of people that travel on railroads and the frequency of accidents accentuate the growing necessity for reform in the running of trains. If there be no better way, then let the matter be taken in hand by Congress and uniformly regulated.

Having pointed out very distinctly that the accident which caused the death and mangling of 50 persons was the result of criminal negligence on the part of the officials of the road, it will be noticed that the *Picayune* does not urge the prosecution of the officials, regarding the decision of Judge Van Brunt (*alias* Van Boodle) as conclusive and immediately proceeds to point out what laws should be enacted, touching employes. Why the conclusion that Judge Van Brunt's opinion should stand? Judge Van Brunt was trying \$275,000,000. Money talks everywhere, but with special emphasis in the city of New York. As soon as the case to which the *Picayune* refers went to Judge Van Brunt, everybody knew what would be the result; but Judge Van Brunt's jurisdiction is limited and it might be that a judge could be found somewhere who is not influenced by money, and is not sufficiently debased to ignore the rights and interests of the people. No one even so much as hinted that the West Virginia "slaughter" was remotely attributable to the men in charge of the train, and yet the *Picayune* seeks to make that impression.

The brotherhoods of railway employes engaged in the train service of the country are far more solicitous to supply railroads with competent, sober men, than many railroad officials are to employ them.

Why does not the *Picayune* and the press generally, urge upon congress and state legislatures to pass laws affixing penalties for such criminal negligence as the West

Virginia disaster discloses? Why dismiss the subject by the announcement that railroads go "scott free, no matter how many lives are destroyed," and suddenly change the subject to the advocacy of "national laws" for the examination and licensing of engineers and conductors? Such a law might be well enough for aught we know, but with a disaster in full view by which lives were sacrificed because of the criminal negligence of railroad officials, it would seem to be the correct thing to have laws enacted which would punish such negligence.

MR. JAY GOULD.

The New York *World* remarks:

Railroads and telegraphs are supposed to be Mr. Gould's fancies; as a matter of fact, however, statistics show that he is a great American coal king. Mr. Gould has never cared to be known as the boss of the coal trade, yet such, beyond a doubt, he is. That a sequel that would have been to the attempts of a certain dashing promoter to get Mr. Gould to go to the ice business, if the effort had been found a success. The same little man, so nervous that he can't sleep without drinking warm milk; hating certain people with an absolute detestation and physical abhorrence; loving few, if any, outside of those of his own family; holding the telegrams of his country absolutely by right of ownership and control; making himself master of our births and deaths, and joys and sorrows, controlling intercontinental transportation and inter-state commerce, so that a man may travel anywhere by rail without leaving the Gould system; absolutely dictating the quantity and quality of the coal which we burn, and, what's more to the point, the price we shall pay for it—this same man would, in that event, boss the cooling of our champagne, the frozen delights of our juleps, the preservation of our food, and even the meagre fragments of frozen solace which are laid on the brow of the midsummer sufferer! A little more reaching out, a little more absorption, a little more affiliation, and such a man would be the king of the United States in a far truer sense than most crowned sovereigns abroad govern. The records show that Jay Gould owns more coal land than any other American citizen. The names in which he owns it are those of the Missouri Pacific Railroad, Atchafalaya, Topeka and Santa Fé Railroad, Delaware and Lackawanna Railroad; Union Pacific Coal Company, and Rich Hill Coal Company. All the coal lands in the Indian Territory are said to belong to Mr. Gould.

In all of the wide world, where can an autocrat like Jay Gould be found, if the *World* sizes him up truthfully?

Taking the *World's* estimate, Gould is cyclopean, a colossus and no mistake. His

dominion is continental, and his slaves are numbered by the million.

If the chief study of man is man, men of the most mighty intellect should study Jay Gould. He is *sui generis*, there are none like him. He is absolutely dangerous, a combination of Goth and Vandal, whom it were well to see reposing beneath a marble monument bearing appropriate inscription.

But why indulge in such reflections? Doesn't Jay Gould obey the laws? Don't the laws permit Jay Gould to do the things he has done and is doing, and will continue to do as long as he can shear a lamb? Besides, are there not a thousand little Jay Goulds doing, as they have the means, just what Jay Gould is charged with doing?

What a commentary upon our advanced civilization? How small and contemptible does the congress, legislatures, courts, laws and people appear, when compared with Jay Gould? A little fellow, weighing about ninety pounds, and yet swaying a scepter before which the nation bows as spineless and as abject as helots.

Moreover, suppose Jay Gould should, by a decree of Providence, be required to hand in his checks and wrap the drapery of his couch about him and lie down and await the resurrection, does he not leave a son, George? and if the half that is told is true, George is his father with a surplus of skill to manage and to maintain the policy of the "old man."

With all this and more, it isn't well to be alarmed.

No doubt, plutocracy is growing in this "land of the free and home of the brave." It will eventually get its growth, and begin to decay.

Already, there are signs that the people are becoming weary of exactions which the laws tolerate. There is to be a change. It should come without commotion beyond that occasioned by argument, but a change is coming, and when it comes the Jay Goulds of the period will cease to manage affairs and levy tribute.

THE Mormon Church finds its lobby at Washington a very expensive item in its yearly account, but the temple can stand it. The temple is solid granite.

TEXAS AND THE RAILROADS.

The *Railway Age* some time since remarked as follows:

The Texas Railroad Commission has undertaken to revolutionize the theory and practice of railway rate-making by adopting the absolute mileage basis. All railway experience has proven the impracticability of this principle, and the attempt in Texas will work great injustice to railways and injury to the state. While under the new theory a few rates will be raised many others will be greatly reduced, and the average as thus far indicated is very heavily against the roads. Thus the reduction in flour rates on one of the principal roads is found to be 33½ per cent., while in cotton and other staples it will also be very heavy. It looks as if the Texas railway companies would have to appeal to the Federal courts to prevent the virtual confiscation of their property.

Now, suppose the Texas railroads should conclude to collect dividends on honest cash investments and not on water, they would at once be able to carry freight and passengers at rates even below the demand of the Texas commissioners. It is preposterous to assume that the citizens of Texas or of any other state are so stupid as to desire to cripple railroads or confiscate their property. Why not state such cases honestly and not like a jack leg lawyer? Texas has chartered railroads to advance the interests of the people of the state and not to pay interest on watered stock and bonds, and the more the subject is agitated the more determined the people will become to have an honest deal with the railroads. The *Chicago Tribune* commenting upon the subject, says:

The railroads interested in Texas traffic do not intend to submit to the reduction of rates in Texas recently ordered by the Railroad Commission of that state without a contest in the courts. The new rates promulgated by the commissioners are about one-half for distances between 50 and 200 miles of the rates now in effect. The officials of the roads operating in Texas claim that the new rates will not pay operating expenses, and say if forced to make those rates they will be compelled to reduce expenses in all directions. Less trains would be run and the working forces reduced by one-half, and improvements would be out of all question. A petition has been gotten up by railroad employes in that state praying the commissioners to reconsider their action, as otherwise the laboring classes would be the worst sufferers. As ex-Senator Reagan is at the head of the commission it is not likely to take the back track. The railroads are working hard to effect a combination with a view of contesting in the courts the right of the commission to make such rates. All the roads have joined in the movement except the Missouri, Kansas & Texas, which, it is understood, has signified its intention of adopting the new rates. Unless the

company can be induced to act in concert with other roads there is little prospect of relief, as every instance where they were not unanimous the railroads have been defeated in such contests.

The Oregon roads are in the same pickle as the Texas lines. The Railroad Commission of that state has just promulgated an order reducing rates on the Union Pacific 33 per cent. and on the Northern Pacific 15 per cent. on local business.

Is it to be presumed that the railroads of Texas or any other state have been maintaining an equipment largely unnecessary and out of all proportion to the business transacted? The threat put forth by the *Tribune* is designed to lead to such a conclusion. But railroads are not operated in that way and all such rigmarole is designed as a bluff. It may, however, be tried as a measure of intimidation. The roads may reduce the number of trains and dismiss employes, and finally Texas may relieve the roads of their charters. It is by no means a one-sided game, and if railroads now introduce a policy of rebellion and intimidation, results will not be complimentary to their discretion. The better plan is for corporations to learn to obey the laws and submit gracefully to the sovereign will of the people.

SOME one rises to remark that "the dinner pail brigade is a very large and strong one in labor's army. It has been truly said that a country where lots of dinner pails are visible night and morning on the route between home and labor, is strong. The bearers of dinner pails in this country are not slaves, but intelligent citizens and sovereigns. They are becoming sick of betrayal by political bosses, and will soon demand representation by members of their own ranks." We hope so, but it will be when men assuming to speak for the "dinner pail brigade" stop their drivel about the "labor market," "buying and selling of labor," and that labor is a "commodity."

THAT portion of New Jersey bordering on the Atlantic is sinking. The state geologist has gone to see if the coast is going to sea.

THE czar of Russia, it is said, is afflicted with insomnia. His subjects, many of them, are anxious to put him to sleep.

PROHIBITION DON'T PROHIBIT IN KANSAS.

Ex-United States Senator, John J. Ingalls, of Kansas, affirms:

1. That there is no town of importance in Kansas where beer, whisky and other intoxicating drinks cannot be had and are not sold as a beverage. There may be some hamlets and villages where this is not true, but not many.
2. That in the principal cities of the state the dramshop traffic is recognized and practically licensed by the imposition of monthly fines, which are regularly applied to the payment of the expenses of the municipal government.
3. That the brewery which in a test case the Supreme Court of the United States held the state had power to suppress and destroy, has been and is now in constant, uninterrupted and profitable operation.
4. That these facts are known to the state officials, to the heads of police commissioners appointed by the governor upon oath to enforce the prohibitory law, and to the people generally.

It is the old, old story, men can't be made temperate or religious by law. What is wanted is wise laws, wisely administered; laws that touch all alike; not laws in the interest of fools, fanatics and plutocrats. And that good time is coming.

THE Boston *Herald* remarks that "the anti-lottery agitation serves to recall the fact that lotteries constituted an important factor in the social economy of New England a couple of centuries ago. In those good old days whenever any great public work was to be undertaken, a road or a bridge to be built, or a street to be paved, a lottery was organized. Public debts were lifted and fire losses liquidated in the same way. In fact, lotteries were almost universal here within a hundred years after the landing of the Pilgrim fathers. Massachusetts advertised three in one newspaper. Faneuil Hall was rebuilt by a lottery after having been burned in 1761, and Harvard College got the benefit of a big lottery in 1773." It serves also to impress the public mind with the fact that originally bigotry and superstition had their home in New England, and that the boast that our highest (?) civilization is the product of New England is a sham of extraordinary proportions. Hanging people for witchcraft, whipping Quakers and exiling Baptists are not seeds of highest civilization, nor civilization of any kind worthy of the name.

REV. T. DEWITT TALMAGE has an income of \$50,000 a year, the same as the president of the New York Central, and the same as the president of the United States. Mr. Talmage has been studying the "rest" question, and has come to the conclusion that a man ought to sleep at least seven hours out of twenty-four. Anything less than that, he thinks, will wreck the health of the average American. Mr. Talmage counsels his readers to remain in bed till they get rested, without regard to hours. That advice is well enough for men whose incomes amount to \$50,000 a year, but a man who works from ten to fourteen hours a day for a dollar or so a day, has to get up whether he is rested or not. There is but one way to overcome this cruelty, and that is to establish the eight hour day. This done many a weary worker would be thankful for a civilization that regards the lives of men and women as valuable as the life of mules.

ABOUT eight tons of diamonds have been found in the south African mines during the past eighteen years, valued at \$275,000,000. It is said that the diamond dirt is practically inexhaustible, and that digging may go on forever. True, the demand for diamonds for crowns, diadems, etc., is not as active as it was, but trust barons and syndicate lords, monopoly magnates and the like now buy them by hundreds, and it is a cold day when diamonds are not seen flashing on shirt fronts and fingers and dangling from the ears of people who rank several layers below the upper crust.

WAY back, not so far, either, Sahara was generally understood to be inhabited chiefly by big snakes. A stray ostrich was occasionally referred to, and a few wandering Arabs roamed over its barren and pestilential sands. But now come the French with a proposition to build a railroad from Algiers to Timbuctoo, and say "the road will lead to the settlement of parts of the Sahara which is not by any means the unclaimable desert which the geographers of a few years ago asserted it to be." Thus one by one facts are transformed into vagaries.

The Struggle for Existence.

WHY should most men be forced to constantly struggle for mere existence? Some shall answer that that is indispensable to human growth. History totally repudiates that answer. Even if we admit that men are better to-day than centuries ago, even then we can hardly close our eyes to the fact that civilization to-day is yet fundamentally wrong, so much so that it develops the germs of self-destruction pretty nearly as effectually as at any previous historical period. We may preach the theory of growth through pain as long as we like. Judged by results that theory is far from satisfactory. Besides, it does not correspond with divine ideals. Come to me and I will give you rest—joy in its highest forms. That is the divine theory of human life. And that peace which passeth all understanding, what can that mean but growth through joy? Growth through pain is what I call a gospel of despair. Growth through joy is what I call a gospel of justice and love.

Far from me to say that we should object to a certain degree of struggle in life. We should simply object to that animal struggle which has been the lot of most men all along in human history. Even the wealthy have their hard struggles in life, to preserve the wealth they have accumulated. Even that struggle interferes with a peaceful, joyful life, and prevents men to develop into manhood. The sheer struggle against poverty produces the rough, unpolished sinner. The struggle against the fear of poverty evolves the polished, refined sinner.

We shall drop no tears for the sorrows and struggles of the wealthy. It is the many, forever fighting tooth and nail against poverty that deserve the sympathies of all reformers. It is they and they alone, the workers, who can remodel civilization. But they shall only accomplish that work through unity of purpose, and by a combined attack against fundamental evils, that is, by tracing effects to causes.

We all know that the mass of workers are always and forever in debt. Even if the farm-

themselves be robbed by the few for permission to live and work on God's plane. There is the cardinal interest to be attacked: land rent or interest on land values, call it as you like. It is from that interest on land values, on social wealth, that the interest on labor-created wealth springs up. Interest on capital is the child of land rents, the child of land values controlled by a few men through the basic iniquity of land monopoly. Make land free to all by taking land rents from those to whom they belong; not, and by giving them to the people to whom they belong, for all public needs, and how long would it be before most workers became the absolute owners or possessors of their farms, and homes, and mines, factories and shops? Not very long, I guess.

Some tell us, look at the number of abandoned farms in many of our old states. Yes, we know all about it. The writer has seen them even in the choicest belts of Florida. The wilderness is already invading the Union just as it invaded the African and Asiatic civilizations. Look at England. Only twelve per cent. of the people are engaged in agricultural pursuits, and no over one-fifth of her arable soil is under the plough. What is that but the wilderness?

To give to any set of men the power to control the land supply is to give them the power to oppress the rest, the power of scattering farmers into the remote wilderness, the power to build up fragments of wilderness near centers of population, the power to crush the mass of workers, in forms diverse, the power to abnormalize all social conditions.

Pliny, the younger, declared centuries ago, that land monopoly had ruined Rome. Human history declares that land monopoly has ruined all civilizations, and is at the root of all barbarous struggles for existence, at the root of all wars, of all anarchies, of all poverty and all sin.

Suppose, now, that we want to attack the evil of land monopoly or any of the incidental ones, such as interest on capital. Suppose that we convert our government into a banking institution, lending money to any one who calls for it, with some kind of security, as we would necessarily have to ask, I imagine. Who can give better and more valuable securities than the men of wealth? Who can use larger sums to great advantage than the men of wealth? Who are the men with greatest wealth but the monopolists? Government loans would then intensify monopoly. But suppose that is not so. What right have we to make the Government assume the money lending business for the nation, any more than the soap manufacturing business for the nation. To coin or issue money is a governmental function. To lend money is a private bus-

ness. No John will ever need to borrow any money from the Government or from any Peter, if the Government sees that no Peter robs any John out of the land that every John is entitled to possess if he wants it. Let John borrow from Peter, if he so prefers, for some additional earnings to himself, but let no John be forced to borrow from anybody. If any John is forced to borrow, then the social compact rests on iniquity, on legalized land robbery, and then our dreadful struggle for existence must go on. No amount of free money, of Government loans, can save us!

Just as water flows into deeper levels, so money flows into deeper pocket books. The deepest pocket books are invariably in the hands of land monopolists.

In spite of all the above, we do need a healthy monetary system. We would need that, even after the suppression of land monopoly, just as even a building with good foundations needs a roof that does not leak. The more unhealthy a monetary system becomes the more it intensifies land monopoly. A monetary system shall be healthy when disconnected from any banking machinery, public or corporate; when free from favoritisms to any set of men; when the volume is fixed for certain periods known before hand, and all decided upon by a majority popular vote, not by any set of monopolists. That implies a currency not subject to imports or exports. That excludes precious metals with all temptations to change the intrinsic value of coins. That eliminates the rise and fall to which precious metals are more or less subject.

Money being essentially a measure of values, it must rest on fixed principles. That alone can make it a real measure, giving us a positive commercial stability and not the financial paroxysms to which all nations have been more or less subject up to our day.

This nation of ours is the one best adapted to give to the civilizations of the future an ideal monetary system. Why? Because our product of gold and silver is so large that we can afford to sell and export just as much of it as the foreign nations may see fit to buy. That other nations, with scanty supply of precious metals in their mines, should be timid in discarding those metals from their monetary systems, is not surprising. A similar timidity, on our part, is very ludicrous.

On the other hand, we should not be rash in adopting those schemes which would necessarily produce a constant commercial vortex. I refer to *free money*, as it is called, Government loans.

About 200,000 families hold over fifty billions out of our sixty-five billions wealth, in all forms. At 50 per cent. value of the security, they could claim from the Govern-

ment loans for \$25,000,000,000. Ten million American families own no wealth of any account. They could get no money from the Government. How could they? I shall let my readers meditate on the results of any such free money, as some reformers advocate, if I understand them correctly.

I shall now return, for a few moments, to the question of abandoned farms, the culminating point of what is called "Farming does not pay." The reasons for that are plain enough. The land tariff, land monopoly, on one side, and taxes on labor products on the other, with all the incidental monopolies they foster, all that contracts markets, restricts consumption, limits production, decreases all labor earnings, discourages thrift, and evolves wretched methods of cultivation. Hence the wilderness in country belts. Hence the wilderness in colossal cities. That has been the destructive course of all empires and republics. Similar blunders bring similar results. We cannot escape the effects of natural causes.

Do we want to suppress the two kinds of wilderness referred to? Righteousness in methods of taxation to begin with. That, and that alone can establish sound, social foundations. The task for other reforms would then be very easy. The hard struggles for mere existence would then be at an end. Some petty struggles would remain still, but universal joy and manhood would soon prevail. Still, as humanity seems always inclined to follow the crooked line, in all reforms, we may have to linger for years in the desert of surface reforms before we touch the fundamental one of land monopoly!

Jose Gros.

The End of the World.

YALE COLLEGE has among its instructors a lieutenant of the U. S. Navy, who has found leisure to hunt up the proofs that the world, the planet earth, upon which we live, will disappear within ten years.

He has searched the scriptures, found the testimony, set it in order and is satisfied that he has succeeded in eliminating the mistakes of the world-enders who have preceded him, and has got the date so accurately fixed that within ten years this beautiful world of ours will finish its mission and quit business.

One poor fellow, a clergyman of splendid promise, learned and cultured, wrestled with the proofs until he went crazy as a loon, and to him the world has come to an end.

There are others who, while believing that the world is to come to an end within ten years, do not assert that it will be the *finale*, simply the second coming of Christ,

who will reign in person a thousand years, during which period Satan will be chained and compelled to inhabit a pit, to go up and down in the earth no more for the time named.

In such matters disagreement among the doctors is fatal. The difference in their conclusions is so great that the average man finds it difficult to adjust his thoughts satisfactorily.

If, as some of the world-enders assert, it is only the second advent of Christ, when He will assume control and reign as universal king, bringing in a sovereignty of righteousness, of truth and justice, we can see no cause for alarm or anxiety.

If there is one thing this world stands in need of more than any other *one* thing, it is righteous government.

For our part, we should like to know that the devil is chained, loaded down with chains and securely imprisoned.

It is held by some, that this good time coming is to be preceded by wars and rumors of wars, great calamities, such as men in their wildest imaginings never conceived of; and those who pretend to be posted, say that the present condition of Europe is exactly in accordance with the proof they have obtained.

It must be confessed that the European outlook is grim; war appears inevitable, and rumors of famine already begin to horrify the world.

The trouble with a good many very serious people is to find some logical reason why Christ should postpone his coming until after a seven years' war in Europe with all of its attending horrors. Why not come at once? Why not chain the devil before the devastations of war and famine begin?

The world-enders do not care to wrestle with such questions. It is far easier to ignore them and assert that within ten years the world will be destroyed, or, that Christ's second coming will occur inside of ten years, notwithstanding the Bible explicitly declares that neither the Son nor the angels know when the event or events will take place; that only God Himself knows.

That would seem to be a clincher, but it has no effect whatever on a world burster or second coming crank.

The subject would seem to be a serious one. The destruction of the world, if men could possibly comprehend the awfulness of the catastrophe, would be well calculated to destroy all mental equilibrium and make all men mad. The world would be a mad house. There would never be another rational enterprise set on foot.

If the people could be made to believe that within ten years the world would be destroyed by fire, knocked into smithereens by comet, or that it would be de-

stroyed by the explosion of internal gas agriculture, commerce, mining, transportation, etc., would come to a dead standstill. Every one would be listening for the crash of doom, watching to see the stars fall, and the first signs of the great conflagration.

And in spite of fate and in defiance of common sense, reason, judgment and all things rational, thousands, under the influence of the world-ending vagaries, will be reduced to downright idiocy. They will see visions and dream dreams. In a word, they will go crazy.

When ten years are gone, the old world will be doing business as usual. She will be flying around the great central orb on her shining pathway as when the morning stars and the sons of God sang in rapture strains the finishing touches of the universe, and God Himself contemplated His work and pronounced it "good."

Really, what's the use of destroying the world? Why burn it up or knock it into fragments? Why disturb the equilibrium of all the planets in our solar system and send them flying hither and thither, crashing into each other?

The Creator being infinitely wise and powerful, why should He issue a decree to create chaos? No world bursting crank attempts to explain why the Almighty should permit or order such devastation.

The second advent theory is a great improvement upon the soothsaying prognostications of annihilation; in fact, we see no objection to it whatever; on the other hand, we like it.

We apprehend that the declaration that Christ shall reign a thousand years, means that He will reign in the earth until the sun is cold, and that the devil will have nothing more to say in mundane affairs.

We see no reason why, under such a beneficent reign, important enterprises for the happiness of mankind should cease. Under the reign of the Messiah, we conclude, the deserts will blossom and all the waste places of the earth will be fruitful. In Watts sang:

"Jesus shall reign where'er the sun
Doth his successful journeys run;
His kingdom spread from shore to shore,
Till moons shall wax and wane no more."

In such a reign, why should railroads cease to be built? Why should ships cease to plow the seas? Why should the plow stand still in the furrow? Why should children cease being born? Why should schools be closed and the immortal mind no longer be trained to comprehend in some measure, at least, the wisdom of God?

Under the new reign, something better than Bellamyism would be inaugurated. We fancy that the jungle, the bogs and swamps would disappear, no more to send forth their noisome breath to breed pestilence and death.

Even the wild beasts of the wilderness becoming as innocent as kids, would no longer occasion alarm, and the most venomous of reptiles would be as harmless as sh worms and the mission of hawks and vultures would be gone. No more

"Would big fleas have little fleas
On their backs to bite 'em.
And little fleas have lesser fleas.
And so, *ad infinitum*."

One thing is pretty certain, the corporations could no longer run the universe, and by processes purely divine, the water would be squeezed out of stocks and bonds, and dividends would be collected on actual cash investments.

We conceive that with the devil chained, the greedy monsters in human form, would not be permitted to grow rich by the "sweating system," by employing children and robbing them, and robbing working girls, and driving them to lives of shame worse than death, would cease.

We are, in fact, immensely pleased with the idea of the second coming of Christ. It means universal purification of human affairs. It may be that Congresses, Parliaments and Legislatures will be permitted to disband, that unrighteous laws will no longer be permitted to disgrace the statute books of the world, and it does mean, we conjecture, that debauched courts will close their doors and that the poor will stand an equal chance for justice with the rich when they have a grievance.

We conclude that the church will become something more and better than an arena where creed cranks and bigots play such fantastic tricks as make angels weep and sensible men kick.

We do not doubt but that under the second advent reign, labor will get its just share of the wealth it creates, nor do we doubt that the hours of labor will be reduced to the minimum. To sum it all up we would say, don't be alarmed.

In the first place the world is not going to vacate its place among the planets. In the second place, the second advent is not going to occur in ten years.

If, however, we are mistaken, not knowing whether either event will occur in six months or ten years, prudence dictates that we go right along doing our best to obtain justice by organization and federation, and if Christ does come and assume control, we would have every locomotive fireman of our great brotherhood, standing square on the books.

James Watson.

AMONG the wonderful products of art in the French Crystal Palace was shown a lock which admitted of 3,347,385 combinations. Heuret passed 120 nights in locking it; Fichet was four months in unlocking it; afterwards they could neither shut nor open it.

Round House Sermon.

BY REV. EMORY POLISHER, D.D., D.D.

BRETHREN, the summer is past—

"The melancholy days have come, the saddest of the year,
Of wailing winds, and naked woods, and meadows brown and sear."

We have had our picnics, our holiday enjoyments, and have begun the winter campaign.

The sun has gone south, and wild ducks and geese and many a song bird that tuned its throat and made all our woodlands vocal with Jenny Lind melodies, have followed suit.

Pretty soon the brooks, whose lullaby songs we have heard as they rollickingly danced their way to the sea, will be silent, bound in the fetters which the ice king forges in his arctic home.

Already, Jack Frost, with a blighting bite, has torn the green robes from the trees and shrubs, killed the flowers in all the fields, playing avant courier of the ice and snow storms which we of the throttle, brake, pick, switch and punch will have to contend with.

I do not know what has occurred, my brethren, since last we met, to make you happy or sorrowful.

Some of you may have found a woman and made her your wife; some trustful creature who has confided in your honor, your manliness, your recorded vows to love and protect her until grim death looses the "silver cord" and breaks the "golden bowl." If such has been your good fortune, then by all the gods, if you prove untrue to your vows, you are not fit for buzzard meat.

To some of you married ones, a child may have been born, to bless and beautify your home. If so, I felicitate you. A father who comprehends the responsibility of his station, expands to proportions that make him one of the greatest of the earth. To rear, to train, to guide a young, innocent mortal until morally, intellectually and physically it can stand alone, join the procession and march with steady unfaltering steps the dangerous pathways of life, is such a combination of philanthropist, philosopher and educator that neither Cyrus nor Alexander, Caesar nor Napoleon outweighs him.

Perhaps some of you have buried a wife, a child, a parent, brother or sister since last we met to worship in this improvised sanctuary. If so, no words of mine can solace your sorrow; only time can heal the wounds that death inflicts, and time does more than assuage the pain which death imposes by his relentless scythe, for though he may be a "tomb builder," he makes shrines of graves where dear memories, in all our future years perform daily pilgrimages, and as we kneel, permit our faith to assure us of a reunion with the departed.

Such reflections, I confess, are just a little foreign to my usual style of preaching, but you must note, my brethren, that they are no part of my sermon—just a little preliminary talk—which is becoming popular in all the churches, and serve a good purpose, as they withdraw attention from those who are coming in and finding seats. In the more fashionable churches, the organist plays selections from the great masters, to keep the congregation quiet, and permit the sisters to estimate the cost of costumes, particularly the “lovely bonnets,” those light and gauzy things, made of a bit of wire, two straws and a feather.

Well, I notice the benches are well filled and that the hour for serious work draws nigh.

It pleases me mightily to see so many of our sisters present, and so many children in the audience. I am more than ever convinced that the winter campaign is to be one of usefulness. Our songs are to be more spiritual, our prayers more fervent, and I shall try to keep up with the procession. I notice, by my watch, that we have time for a song or two before the sermon begins, therefore please turn to page 348 of our hymn book, R. M.

BY AND BYE.

This world of ours will be destroyed
By and bye, by and bye,
And fire, 'tis said, will be employed
By and bye, by and bye,
That stars will leave their silver sockets
And blaze and flame like sky rockets,
By and bye, by and bye.

Only listen, and you'll hear,
By and bye, by and bye,
Clergy cranks, both far and near,
By and bye, by and bye,
Telling what a time 'twill be,
When fire burns up earth, air and sea,
By and bye, by and bye.

They say that war will be proclaimed,
By and bye, by and bye,
That the devil will be chained,
By and bye, by and bye,
But in our God we'll put our trust
And let her bust if bust she must,
By and bye, by and bye.

The idea of the poet is for men to go right along about their business, nor listen to how cranks tell what they don't know, that only God knows, one of those secrets that He never told the angels, nor His only son. That ends it. And yet, a great many foolish people are hunting for signs and wonders, and going crazy when they should be at work. These cranks, who are predicting the end of the world, are, without exception, candidates for insane asylums and many of them will be elected by a unanimous vote. Some are even now preparing their ascension robes, and otherwise making themselves ridiculous.

‘The right thing to do is to do the right thing every day, and doing that there need be no anxiety about the end of the world or when the pendulum of time shall stop

swinging. This fact seems to have taken possession of the poet, when he wrote the hymn on page 210, which we will now sing.

DOING THE RIGHT THING.

Little matter how we pray, little matter how we wait,
There is something better, far, to record,
It is to be ambitious to do the right thing—
And receive the approval of the Lord.

Words don't count, we'll be judged by our deeds,
Such is the decree of our King,
He don't care a fig for a mountain of creeds
But He loves those who do the right thing.

To do the right thing is to do the thing that's right,
To the shrine when we kneel, we can bring
No offering that will afford us greater delight
Than when you hear it said, “you've done the right thing.”

I like that song, I like the words, I like the tune, I like the idea, I like the sentiment. They are all brim full of the best theology that was ever formulated by devines.

Don't think I am so foolish as to expect that men will not make mistakes. There are no perfect men and women in the world because, just as a poor pilgrim kicks the beam at the perfect notch, he or she can't their mission in this world.

You see, my brethren, the difference between an error of the head and an error of the heart are as different as a brotherhood man is unlike a scab.

There isn't a bit of use in splitting hairs about doing the right thing. A man who has sense enough to be an employé in the train service of railroads, if asked a thousand questions relating to the right thing and the wrong thing in all the affairs between man and man, will not make a single mistake in his answers. He will show that he knows the right from the wrong.

To get at this matter, my brethren, suppose we devote a few minutes to asking and answering questions. For instance, take a man with sense enough to be an employé in the railroad train service, and put him through this sort of a catechism;

Q. Is it the right thing to be honest and sober and industrious?

A. Yes.

Q. What do you think of men who answer the bill of the question you have just answered?

A. I think they are the salt of the earth, the light that is set on a hill. I think they are the back bone, brains, heart and muscle of society, of the church and of civilization and that there are more of them in labor organizations than in any other organizations on the continent.

Q. Is it the wrong thing to be a dead beat, a defrauder of lodges, of boarding houses and washerwomen and every body who will trust you?

A. Yes.

Q. Do you think it is a wrong thing to do to take your earnings to buy whisky and

and permit your wife and children to wear rags and go hungry?

A. Yes.

Q. What do you think of men who do these things referred to in the last two questions?

A. I think if they were skunks, coyotes, jackals, they would disgrace the breed.

Hence I conclude, my brethren, that on general principles we know the right thing to do.

These preliminary remarks have been so lengthy that little time is left for the sermon. Some brother says "Go on." Thank you, glad you are not weary.

Now, then, for the first regulation hymn, page 76:

COURAGE WINS

11 along the centuries when men have had good luck,
they have been men of courage, distinguished for their pluck;
they were not boasting braggarts, nor did they deal in whims,
their cry was "up and at 'em," for courage always wins

Look around you, brethren, the world is full of sneaks,
Who prefer a glass of whisky to Wisdom when she speaks.
Look at their red noses and the rags around their shins,
They are silent when the shout goes up, "Courage always wins."

God help the cowards, one and all, they are a low-lifted gang,
And the devil is after them with hoof and claw and fang,
And he will surely catch them and knock 'em off their pins,
For the devil and angels know that courage always wins.

Now, my brethren let the text be "Courage." I wish I had more time to tell what I think about the manly virtue called "courage."

Some people think that bull dogs and roosters have courage, and those "trained" human brutes who disfigure themselves in prize ring contests are often referred to by a degenerate press as courageous men. And the swaggering bully who trusts his fists for fame, as an army mule trusts his heels for victory, is often spoken of as "courageous."

True courage is to do that which is right, though all hell opposes. To do that which is wrong, no matter how much nerve and grit is displayed, is cowardly.

The Bard of Avon, I believe that's what Shakespeare is called sometimes, defines "courage" as daring to do all that becomes a man, and adds "He who dares do more" is not a brave man.

The truly courageous man, when he beholds his fellow man oppressed, will try to do some act to shield him, and he will stand

"Unaw'd by power and unappall'd by fear."

But, my brethren, is there not such a thing as moral courage? It is something

very much talked about now-a-days and highly extolled. What is it? Well, it is the courage of a great soul, to resist temptation to do wrong, to commit a mean and despicable act, to tell a lie to the injury of a fellow man, to be guilty of slander, to nurse envy and revenge, to become either infamous or contemptible.

But, as men are fallible, they are liable to err. Now, then, comes the supreme test of moral courage. If any of you have done a fellow man a wrong, and you step forth and accost him, saying, "I have done you a wrong; I confess it, I regret it, and I ask your forgiveness," that act decorates you with the most royal insignia of courage. You have passed an ordeal than which there is no higher test, no higher standard.

Let us be men of courage.

The congregation will sing one of our dismissal hymns, found on page 170 of our selection,

JACOB'S LADDER,

You have heard of Jacob's ladder, which reached from earth to sky,

You can have one if you want it, and call it your own,

The angels who use them keep a large supply,
And never miss a call of the heavenly telephone.

And the angels will come to you, as to Jacob, of old,
And they'll give you the courage to go triumphant on your way,
And when you are facing trials, 'tis then you'll be bold,

Then for a Jacob's ladder, let us all devoutly pray.

The Jews.

THE Jews, also known as Hebrews and Israelites, say what we may, are in many regards the most extraordinary people on the face of the earth.

According to the most reliable data at hand there are about 8,000,000 Jews in the world, and that there should be any at all must be viewed in the light of a miracle. In ascertaining the population of civilized countries sixty-two subdivisions of the earth are given, and in fifty-seven of these Jews are found. In the Russian empire the number is set down at 3,574,627, and the next country where they are numerous is Austria-Hungary, with 1,676,951. The United States is credited with 82,390.

The Jews were so called after the Babylonian captivity, and take the name from Judah, one of the sons of Jacob. The name "Hebrews" comes from Heber, an alleged patriarch, and the title Israelites is derived from the name "Israel," which the angel gave to Jacob, as stated in the Bible. "Thy name shall be called no more Jacob, but Israel; for as a prince hast thou power with God and with men." Hence the title, "Israelites."

The story of the migration of Jacob and his sons into Egypt and their sojourn in that country reads like a romance, and taken in

connection with the trials, escapes and triumphs of Joseph it would be difficult to find more entertaining reading in any history extant.

The birth of Moses, the great leader and law-giver, his seclusion to escape death, his miraculous preservation in the little ark of bullrushes in the Nile, his adoption by Pharaoh's daughter, his education in all the wisdom of the Egyptians, his call to be the leader and deliverer of the Israelites from bondage, the miraculous crossing of the Red sea and the overthrow of Pharaoh and his hosts; the wandering in the wilderness, and the trials encountered during forty years and the final triumphant entry into the "Promised Land," is the most captivating chapter to be found in the history of any people under heaven, and those who are not familiar with it should read it. It will be seen that of all the mighty host that crossed the Red sea "dry shod," but two were permitted to enter the "Promised Land," even Moses for being a little "too previous" on one or two occasions, was only permitted to see its "rocks and rills, its brooks and vales."

Joshua was a trained general, and he took possession of the land under an old claim that had come down from Abraham, the great progenitor of the Jews, and he made quick work with the "squatters" upon the territory, and at once proceeded to divide up the country between the twelve tribes of Israel.

It would be interesting to note particularly the ups and downs of the Jews from their entrance into the "Promised Land" until they were finally dispersed. As a nation, the reader will readily discover, they never were a success. Under the reigns of the kings David and Solomon, the Jews reached the climax of their wealth and power, but as soon as Solomon died the nation split in twain and established two nations: one known as the Jews, with two tribes, those of Judah and Benjamin, under Rehoboam; and the other, that of Israel, with ten tribes, under Jeroboam.

The kingdom of Israel existed about 250 years and then was effectually wiped out of existence by Shalmanassar, the Assyrian king, and from that day to this those ten tribes are referred to as the "lost tribes of Israel," no one knowing what became of them, and the hunt is still on.

The kingdom of the Jews, though broken and shattered, maintained some sort of an existence until after "Jesus was born in Bethlehem," and until he was crucified. Soon thereafter the kingdom was completely overthrown and the Jews were dispersed, and are now found throughout the earth. These Jews are the descendents of the tribes of Judah and Benjamin, who at the time of the crucifixion, held certain powers of government relating chiefly to their religion.

Their country was an annex to the Roman empire and the people paid tribute to Caesar. The Jews have given to the world the most illustrious names in history. As a leader and a law-giver Moses stands alone the grandest figure of the ages, and David and Solomon, as kings, father and son, aside from all religious glamour, have no parallel.

The literature of the Jews, usually referred to as "Hebrew literature," is monumental. It is the literature of the Old Testament scriptures, and in spite of all the learning of which other nations may rightfully boast, the Bible holds its place secure, and Isaiah, as prophet or poet, has no rival, and if the scope of this article required further reference to the Old Testament worthies whose names are immortal, their names and deeds could be recited.

It is worthy of remark just here that for the Jews there could be no Christianity. Jesus Christ was a Jew of the Tribe of Judah, and according to orthodox Christianity there could be no salvation for the world except by the crucifixion of Christ, and yet strange to say, for the perpetration of the act of crucifixion the Jews have been persecuted in all Christian lands. Not to the third and fourth generation, but to all generations, and even now, in the closing years of the nineteenth century, in Russia the fires of Jewish persecution burn more ferociously than ever before; indeed, so infernally malignant is the oppression that the world is horrified.

But Russia is only following the example of other Christian (?) nations set for it in the past, and while in most of them bigotry no longer outrages humanity, it may be averred that there is not a Christian (?) country in the world fully emancipated from the old time prejudices against the Jews as a people.

The Romans, when they became Christians, began their devilish work, and during the crusades the Jews were subjected to almost every conceivable indignity. In Germany they were the chattels of the emperors. They were driven from England, France, Spain and Sicily, and the cruelties inflicted by their decrees of banishment defy exaggeration.

In an old time opera, the scene being in Spain, an old Jew who had his home in a mountain nook, is forced to leave all, and with all his treasures in a little bundle he is seen wending his way into exile, whither God only knew. Coming upon the stage he casts a lingering gaze upon his embowered home, and sings:

"Farewell to the mountain, to hamlet and vale
To moss-bordered streamlet and balm-breathed gale.
All so fair, all so bright, a seraph might dwell
'Tis too lovely for me; Farewell, O, farewell."

The persecutions of the Jews in this day and age with savage ferocity suggests the

question, are these inhuman proceedings ever to cease?

The men immediately responsible for crucifying Christ were few in number, and however fierce their cruelty, were doing that which needs must be to perfect the scheme of redemption for a "lost world," and the wonder of the world expands when it is remembered that their victim prayed, "Father, forgive them; for they know not what they do." Is it to be doubted that that prayer has been answered, and that the Father has forgiven "them," those who perpetrated the crime? Be this as it may, one thing is certain, the persecution of the Jews has not ceased, and in Russia, with its Greek church, with an autocrat at its head, the monstrous crimes now being perpetrated shock civilization.

Possibly some good may come to the Jews as a people, some good growing out of their persecution by the Russians. Already the attention of all civilized nations converges upon the Jews in Russia, and to the everlasting credit of Christendom be it said, ceaseless denunciations are being hurled at that autocrat cursed land. The effect may not be immediate, but eventually it is to be believed good will come of it.

Here in the United States Jews are citizens in the fullest sense of the term; here their political emancipation is complete.

It is held by some that when the millennium dawned the Jews are to return to their old home in Palestine, but we doubt if a half hundred of all that are citizens of this favored land could be induced to migrate thither. It is no longer a land of "milk and honey," and an average Jew knows when he has secured a good thing. Social and business questions are not discussable in this article. Such things are to be left to regulate themselves, the point being that the persecution of this remarkable people has been amongst the darkest crimes perpetrated in the history of the world.

The history of the Jews from the days of Abraham, extends back more than four thousand years, and as a people they are true to all the traditions of that extended period. In every clime beneath the sun where there are Jews they bear testimony to the truth of the Old Testament. They preserve the ancient ceremonies of their worship. They believe the seventh day is the Sabbath and celebrate it, and with ceaseless fidelity celebrate the "Passover," when their first born were saved by the destroying angel that put all Egypt in mourning.

The Jews are not only a remarkable people, but as has been said their preservation has the appearance of a miracle. They are still looking for a Messiah, a king who shall again make them a great and powerful nation. Of this we make little note, and would not object if the expected king should

come at once. Meanwhile let all Christendom liberate itself from bigotry and superstition, and demand that the persecutions of the Jews shall cease.

Haratio Manning.

General Grant's Financial Misfortunes.

THE *New Nation*, in writing of "General Grant's poverty," says:

It was known at the time of the Grant-Ward failure in 1884 that General Grant, who, through his son, was involved in the failure, lost very heavily. How great were the straits to which he was reduced appears from some letters of his just given to the public by James Campbell, of St. Louis. In which the General, writing concerning the sale of some stock, states frankly that "even the small sum of \$150 is a matter of great importance to me just now when everything has been swept from me."

Now, of course, one man is as good as another, and General Grant's poverty is really no sadder a spectacle than that of any one of the millions of good men and true in this country to-day, and every day, who suffer straits as great, and indeed much greater than he did. Nevertheless, contrast between the poverty which overtook and embittered his age, and the brilliant prosperity of his middle life, makes General Grant's case a particularly striking illustration of the pitiless workings of the present infernal business system, against which wealth is no more a guarantee than virtue. None are safe from it. However rich a man may be at 40, he cannot be sure that, if he live to 70, he will not die in a poor house.

Let us, then, all join hands, rich with poor, and have done with it forever. Brotherhood is in the end the best plan for us all from the millionaire to the mendicant.

General Grant, until he joined the Union army, had never been a favorite of Dame Fortune, but no sooner had he drawn his sword in defense of the Union than the fickle goddess changed her tactics and ceaselessly lavished her favors upon him, and his war record became one continuous march from glory to glory. His fame brightened on until eulogiums became, no matter who pronounced them, dull and turgid, because all figures of speech were unequal to the task imposed upon them.

Becoming President added nothing to the fame of Grant. Unsited for the position by his nature and unqualified for it by education and association, his eight years in the White House dwarfed him and he came forth a much smaller man than when he entered upon the duties of the Chief Magistrate.

Grant had, doubtless, saved some money from his salary, and instead of retiring to his St. Louis farm, he concluded to reside in the great city of New York and maintain a high social position among the snobs of that heartless metropolis.

In this, Grant was not altogether to blame. His family had had a taste of *tip top* society and liked the whirl. Knowing practically nothing of business as conducted in New York, and trusting to his boys who knew still less, he became the victim of a sharper and was speedily a financial wreck.

"The pitiless working of the present infernal business system," had nothing under heaven to do with Grant's financial wrecking. It was a clear case of bunkoing on a large scale. Depravity on one side and child like confidence on the other side, which could only happen in that sort of a combination. Indeed, it was not business at all, simply robbery.

But of all this, the world cares little now. Still, there is a phase of "Grant's poverty" which it is worth while to remember, since in redeeming his family from want and bestowing upon them opulence, there is brought into prominence exhibitions of heroism which even Grant in all of his resplendent military career never paralleled.

General Grant in his latter days was poor and proud. To add to his misfortunes, a disease attacked his throat that no skill could master.

His days were numbered. Grim death could be seen stealthily approaching. In this supreme hour Grant resolved to write a book. Serene, self-poised, he bent himself to the task. Death came nearer every day, but Grant, undismayed, wrote on. In the morning, at noon day, in the evening and into the night Grant wrote on. Voiceless, speechless, with the death rattle in his throat, Grant plied his pen, determined to rescue his family from want and from charity. At last the pen fell from his hand, his great heart ceased to beat. Grant lay cold in his shroud, but his wife was worth a round million.

Elmer Barnes.

The Canal of Joseph.

[Engineering.]

How many of the engineering works of the nineteenth century will there be in existence in the year 6000? Very few, we fear, and still fewer those that will continue in that far-off age to serve a useful purpose. Yet there is at least one great undertaking, conceived and executed by an engineer, which during the space of 4000 years has never ceased its office, and on which the life of a fertile province absolutely depends to-day. We refer to the Bahr Jousuf—the canal of Joseph—built, according to tradition, by the son of Jacob, and which constitutes not the least of the many blessings he conferred on Egypt during the years of his prosperous rule. The canal took its rise from the Nile at Aslut, and ran nearly parallel with it for nearly 250 mile, creeping along under the western cliffs of the Nile valley with many a bend and winding, until at length it gained an eminence, as compared with the river-bed, which enabled it to turn westward through a narrow pass and enter a district which was otherwise shut

off from the fertilizing floods on which all vegetation in Egypt depends.

The northern end stood seventeen feet above low Nile, while at the southern end it was at an equal elevation with the river. Through this cut ran a perennial stream which watered a province named the Fayoum, endowing it with fertility and supporting a large population. In the time of the annual flood a great part of the canal was under water, and then the river's current would rush in a more direct course into the pass, carrying with it the rich silt which takes the place of manure, and keeps the soil in a state of constant productiveness.

All this, with the exception of the tradition that Joseph built it, can be verified to-day, and it is not mere supposition or rumor. Until eight years ago it was firmly believed that the design had always been limited to an irrigation scheme larger no doubt than that now in operation, as shown by the traces of abandoned canals and by the slow aggregation of waste water which had accumulated in the Birket el Querna, but still essentially the same in character.

Many accounts have been written by the Greek and Roman historians, such as Herodotus, Straby, Mutanus and Pliny, and repeated in monkish legends or portrayed in the maps of the Middle Ages, which agreed with the folk-lore of the district. These tales explained that the canal dug by the ancient Israelite served to carry the surplus waters of the Nile into an extensive lake lying south of the Fayoum, and so large that it not only modified the climate, tempering the arid winds of the desert and converting them into balmy airs which nourished the vines and the olives into a fullness and fragrance unknown in any part of the country, but also added to the food supply of the land such immense quantities of fish that the royal prerogative of the right of piscary at the great weir was valued at \$250,000 annually. This lake was said to be 450 miles round, and to be navigated by a fleet of vessels, while the whole circumference was the scene of industry and prosperity.

WHEN WOMEN VOTE.

When women shall rule by the ballot,
Which they hope to attain soon or late,
How grand will sound President Flossie,
And Mamie (Department of State)!

How dignified Gertie and Winnie
Will sit in their Cabinet chairs,
And Guselle, and Lullie, and Kittle
Transact governmental affairs!

How majestic will Chief Justice Bertie
Inspire with judicial awe
Sweet Roxie, and Sadie, and Myrtie,
The learned expounders of law!

And when the great General Mollie
With her troops at the battle arrives,
Her name will strike fear to the terrified foe,
And they'll turn and run for their lives!

—Ed. Sta.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Current Notes and Comments.

Is the Steam Locomotive Doomed? Mr. Edison declares that his newly perfected electrical motor "will displace steam if economy, as well as speed and safety, is a factor of locomotion"—which is an unqualified assertion—and he says that the electric motor will obtain the horse-power out of from one to two pounds of steam coal, while the locomotive requires six pounds of high priced coal to produce the same power.

Three stationary engines of from 10,000 to 12,000 horse power each, the inventor is reported as saying, would run the whole Pennsylvania railroad between New York and Philadelphia. The invention contemplates the use of a central rail, between the rails of the track, through which the current produced by stationary engines will pass to the machinery attached to the bottom of the car or motor. A motor would be necessary for each freight train, but single passenger cars, Mr. Edison says, could be run by their own motor beneath it. The inauguration of this revolution he declares will begin at the World's Fair, when electric trains will commence running between Chicago and Milwaukee. Electric locomotives may be employed in suburban railway service at Chicago by that time, but it is too much to believe that a new railway between this city and Milwaukee will be in operation within eighteen months. Mr. Henry Villard has taken up the new enterprise and Edison says he "would not be surprised to see him introduce the electric system over the whole of the Northern Pacific lines." All of these statements appear bold and doubtful, but now that electricity is daily working miracles before our eyes in the transmission of sound, light, heat and power—miracles that have already grown common and matter of fact—who shall dare set a bound to the possibilities of this mysterious agency?

The steam engine still moves the industrial world, but electricity threatens to drive this mighty monarch into exile. The contest will be long, but who can safely predict the result?—*Railway Age*.

Is it true that steam locomotives are doomed? Electricity is able to do wonders, yet, still, for motive power purposes steam has to come to its aid, and it is an unsolved question whether it would be safe to depend on two or three large engines to furnish the power for the business of a large railroad when we find how inefficient stationary power is in cable traction, in even a very limited distance. It is true that the cable system is not the electric, yet if the engine at one of the motor stations were to be disabled the whole section would be disabled until a reserve engine could be brought into play, and if this were to give out too, there would be a complete stoppage of traffic, far different from that occasioned by one or two locomotives giving out. But time alone will tell what is in store for us.

Angus Sinclair and John A. Hill, two locomotive engineers of credit and renown, have purchased the

Locomotive Engineer, formerly owned by the *American Machinist*, and hereafter will issue the paper under the title of *Locomotive Engineering*, preserving the distinctive character it had under its old title, with some new features. Both of the proprietors have had experience in technical journalism, Mr. Sinclair having been for some years editor of the *National Car and Locomotive Builder*, and Mr. Hill as editor of the *Locomotive Engineer*. We need scarcely say that they have our best wishes. What we are waiting to see is what they will do with the money they will make in their enterprise.—*Engineer*.

We are sure that the readers of the *Firemen's Magazine* will heartily endorse the sentiments above quoted from the *Engineer*, and will do their share in contributing the subscriptions for the newly named paper, and find that by thus adding to the editor's money they have found a constant stock of information, compared to which money is but dross.

Our wage earners by keeping in close touch with each other can make and unmake laws at will and since the liquor curse has been so often interestingly paraded before us by our sympathizing friends let us now take the matter in our own hands and entirely do away with the liquor traffic in this country and stop its manufacture altogether. If we haven't got the nerve then let us grant to women the right of universal suffrage and then ask them to help us and the task will be found quite easy.—(Grand Chief Howard addressing the B. of R. C. at Louisville).—*Railway Age*.

Grand Chief Howard is evidently a thorough temperance man, and his sentiments ought to be re-echoed by every member of our order.

In his address before the Brotherhood of Railway Conductors at Louisville recently, Grand Chief Howard talked a good deal of excellent common sense. On the relations of officials and employees he said:

Railroad employees generally ought to be continually encouraged to work in closer touch with their officials and this can be done without any compromise of manhood or dignity on the part of either. By getting closer together a better understanding can be had, and misunderstandings can be prevented. This, in the past, would have saved many changes and removals on the part of employees. And make it a rule to render better and better service every day for your company. Take a personal interest in the affairs of your road and assist your officials all you can. They will appreciate it. If you are working under rules that cannot be implicitly obeyed without hardships go at once to your officers and call their attention to them and they will gladly rectify, but don't wait until something has happened through your violation of these objectionable rules, but go while your record is clear and it will look better and have better effect.—*Railway Age*.

The above advice is as applicable to our order as to the B. of R. C., and is, withal, so fully according to the dictates of common sense that it should commend itself to all.

Federation of railway employees has received an impetus in the consolidation of the Brotherhood of Railway Conductors with the Order of Railway Telegraphers into the Order of Telegraphers—in both cases the consolidated organization standing for the principle of strikes for the enforcement of demands.

The Brotherhood of Railway Section Foremen and the Order of Railway Trackmen are to be amalgamated in an order called the International Brother-

hood of Railway Track Foremen. Headquarters will be at St. Louis and the next meeting at Cincinnati in October, 892.

The convention of railway trainmen which has been in session in Galesburg, Ill., adjourned on Saturday last after electing the following officers: Grand master, S. E. Wilkinson, Galesburg, Ill.; first vice grand master, P. H. Morrissey, Galesburg, Ill.; grand secretary and treasurer, W. A. Sheahan, Galesburg, Ill.; vice grand masters, S. C. Young, Fort Williams, Ont.; R. S. Bodman, Los Angeles, Cal.; O. L. Rolfe, Beardstown, Ill.; executive board, C. A. Upright, St. Paul, Minn.; W. H. Prince, Tucson, Ariz.; W. W. Browne, Philadelphia, Pa. Among the resolutions adopted was one thanking Grand Master Sargent of the Brotherhood of Locomotive Firemen, E. E. Clark, grand chief conductor of the Order of Railway Conductors and others for their sentiments regarding a closer union. Wilkinson, Morrissey and Sheahan were empowered to represent the brotherhood in the federation movement. The convention adjourned to meet in Boston in October, 1893.

The above clippings from the *Railway Age* do not seem to indicate much of a decay in the spirit of federation, but seems to prove that the leaven is working and that in due time it shall leaven the whole loaf.

The recent death of John H. B. Latrobe, of Baltimore, says an exchange, recalls the fact that he was the last survivor of the party who accompanied Peter Cooper on the trial trip of the first locomotive that ran from Ellicott's Mills to Baltimore on that historic occasion when the locomotive ran a race with a gray mare and was beaten.

Read the above and then the following and say this is not an age of progress. From being beaten in a race by a horse we have got so as to accomplish a day's journey for a good horse in one hour:

The fastest long distance regular train service in the world was successfully inaugurated on Monday, when the New York Central started its "Empire State Express" which is to run daily from New York to Buffalo, a distance of 440 miles in 8 hours and 40 minutes. This means a running average for the entire distance of 52 1/4 miles an hour, which is higher than that of the B. & O. on the 220 mile run from Washington to New York, or the Pennsylvania train over the 90 miles between Philadelphia and New York. To maintain an average of over 52 miles an hour for nearly nine hours with four intermediate stops means a tremendous speed at many points but the New York Central with its few curves, low grades and four tracks is specially adapted to making such an achievement with safety. It is to be hoped, however, that this train will not be the means of inaugurating a racing contest between all the trunk lines, for there is such a thing as running too fast for safety to the traveler and profit to the roads.

It seems that "Uncle Silas" has a "crow to pick" because I did not accept a rule on the speed of steam as unquestioningly as he seems to think would be proper. I naturally questioned how the speed of such an erratic and volatile body as steam could be measured as it was escaping into the air. We all know that steam moves fast enough to push the piston back and forth in our engines, be they stationary or locomotive, but as we all know, this is a retarded speed, and not to be compared with the unretarded flight of steam into the air, and that was

the subject under consideration. "Uncle Silas" says that books say 888 feet per second is the rate of escaping steam. As the steam is invisible, how has any one ever been able to determine it as a fact that the molecules have that speed? I have heard of persons who tried to ascertain the speed by putting their fingers in the jet, but have not been able to give exact figures of the speed at which the finger was removed, and question if even the experimenter could give more than a simple idea that its speed was but a fraction of its power.

Another reason why I do not wish to accept every statement I find in books or papers will be found on page 881 of the October *Magazine*.

And still another is that Troutwine's generally accepted as an authority on mechanics, has mistakes which have to be corrected by special notes.

Now, "Uncle Silas" deprecates the idea of wasting time in discussing steam and fooling away his leisure on the "Hy Sien" of "whether the hub, the felly or the turnpike gets there first," but I hold it is probably better employed in that way than it would be in some other ways which it is not necessary to specify, but of which "Uncle Silas" sets an example. I believe it takes some brains to run a locomotive with due regard to economy of fuel and repairs, and think that even the best of brains need study to develop any latent talent of the student, and to this the world is indebted for all advances it has made. If men had been content to let good enough alone, we would still be going about as Adam did, and it is only the discontented ones, or the so-called "kickers," who have had any hand in the progress of arts and sciences, for they have ever desired something better and have thus advanced from walking to riding on horseback, in carts and carriages until they have reached the present luxurious palace car. I hope "Uncle Silas" will encourage his "fire boys" to keep learning, and that a score or more of them may live to bless him for starting them on and trying to help them "klime in on the other side."

Wm. Wells.

Further Answering Vulcan and Eccentric.

In the consideration of this, the first of the questions referred to in July *Magazine*, 1891, page 607, I make reference to *Marine Magazine*, 1891, page 216, February, 1891, page 123, January *Magazine*, 1891, page 2.

First. The question of the movement of the piston rod and piston head through the cylinder in one movement, and on the reverse movement the cylinder moves over the piston head and rod. "Vulcan" says on this subject, 2, '91, p. 123:

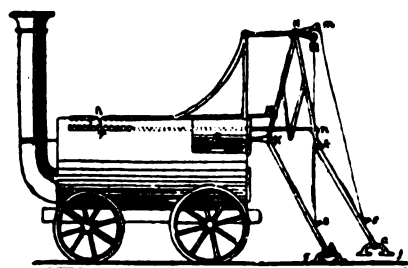

"Eccentric's" article in January *Magazine* could not have had a better place assigned

it than the page opposite the illustration of the Pioneer Locomotive, because most of the problems can be answered by simply looking from one page to the other." Again he says:

"If we admit that our modern locomotive is a most defective piece of mechanism, we can look over to the other page and console our hearts with the thought that it has been greatly improved since it was first put to use and that no doubt still further improvements may be made when the proper amount of thought and study is directed to it."

In reference to the illustration to which "Vulcan" refers, 1, '91, p. 29, I agree with him and the point is well taken; in this case the piston rod and piston head must move up and down through the cylinder, in account of its vertical action, only in relation thereto.

If "Vulcan" will refer to an illustration of Stephenson's Locomotive, 1825, he will find in it the precise action of the illustrated locomotive herein referred to; if he will then refer to an illustration of Stephenson's "Rocket," 1829, he will find that instead of the vertical action, the cylinders have been set at an angle of about forty-five degrees. Erickson's "Novelty" which was in the competitive test with Stephenson's "Rocket," October 6, 1829, her cylinders were set in a horizontal plane, so is the cylinder of the Mechanical Traveler, as shown by the illustration herewith. In the former illustration of the Mechanical Traveler, *Magazine*, March, 1891, page 216, I gave a description and reference. Through the kindness of W. Hazel Wilson, Esq., for many years chief engineer Pennsylvania railroad, I am enabled to give a better description, with letters of reference attached to the illustration.

1813 - The American Traveler.

Mr. Wilson loaned me a work by the late William H. Brown, Esq., entitled "The History of the First Locomotives in America;" D. Appleton & Co., N. Y., publishers. Mr. Brown was a silhouette artist, having cut from black paper, with a pair of scissors, a representation of the first locomotive and train of passenger cars ever run in the state of New York, the locomotive being the "DeWitt Clinton;" the run taking place

August 9th, 1831. This silhouette cutting is now the property of the Connecticut Historical Society, having been presented to it by the author.

Says Mr. Brown: "But the most remarkable, extravagant and amusing experiment of all, and one which must bring to the countenance of our readers at the present day a smile, was one adopted by a Mr. Brunton, of the Butterby Works, Derbyshire, in 1813, who took out a patent for a machine which was to go upon legs like a horse. This contrivance had two legs attached to the back part, which, being alternately moved by the engine, pushed it before them. These legs, or propellers, imitated the legs of a man or the fore legs of a horse, with joints, and when worked by the machine, alternately lifted and pressed against the ground or road, propelling the engine forward, as a man shoves a boat ahead by pressing with a pole against the bottom of a river.

"This contrivance was so singular and ingenious that we cannot refrain from giving a description of it, taken from a very interesting work upon road-making, by W. M. Gillespie, A. M. C. E.

"The legs are indicated by H K F and H k f. H represents the hip joints, K and k the knee joints, A and a the ankle joints, and F and f the feet. We will first examine the action of the front leg. The knee, K, is attached to the end of a piston rod which the steam drives backward and forward in the horizontal cylinder, C. When the piston is driven outward it presses the leg, K F, against the ground, and thus propels the engine forward, as a man shoves a boat ahead by pressing with a pole against the bottom of a river. As the engine advances the leg straightens, the point H is carried forward, and the extremity, M, of the bent lever H M, is raised. A cord, M S, being attached to S, the shin of the leg, the motion of the lever tightens the cord, and finally raises the foot from the ground and prepares it to take a fresh step when the reverse action of the piston has lowered it again. The action of the other leg is precisely similar, but motion communicated to it is from the first one. Just above the knee of the front leg, at N, is attached a rod on which is a toothed rack, R. Work in it is a cog wheel, which enters also a second rack, r, below it, which is connected by a second rod with point n of the other leg. When the piston is driven out and pushes the engine from the knee, the rack R is drawn backward and turns the cog-wheel, which then draws the lower rack r forward, and operates on the hind leg precisely as the piston rod does on the front one, and thus the legs take alternate steps, and walk on with the engine.

"This locomotive, or 'machine traveler',

as it was termed by its inventor, moved on a railway at the rate of two and a half miles per hour, with the traction force of four horses. Mr. Brunton's machine, however, never got beyond the experimental state, for on one of its trials it unhappily blew up, killing and wounding several of the bystanders. It was never repaired but laid aside as one of the failures of the times.

"These experiments, though failures in their results, were followed up by a Mr. Blackett, of Wyland, whose persevering efforts paved the way for the future labors of George Stephenson."

In quoting this matter so fully I do so because it pins two facts and answers most conclusively two inquiries. First, Who was the first one to place cylinders in a horizontal plane in locomotive practice? Second. It settles the point of contention as to the movement of the cylinders over the piston rod and piston head in one movement, and through them in the next, as contradistinguishable from a vertical movement up and down through the cylinders. One is a vertical movement only through the cylinders, up and down. The other is a movement through the cylinders in a horizontal plane, with a corresponding and alternating movement of the cylinders over the piston head and rod. "Vulcan" and "Eccentric" might make a comparison after this explanation, with the "pioneer locomotive," to which "Vulcan" refers, *Magazine*, January, 1891, page 29, and the two illustrations now and heretofore, March, 1891, in the *Magazine*, of "Brunton's Mechanical Locomotion Locomotive Traveler of 1813." They will also find in the *Magazine* for May, 1887, Mechanical Department, an illustrated article showing and describing the mechanical movements herein referred to. It seems to me from my standpoint that Mr. Brunton or Mr. Erickson "built better than he (or they) knew."

William E. Lockwood.

LOCH ARIE, November 5, 1891.

Master Mechanics Scholarship.

At the last annual meeting of the Master Mechanics' Association it was ordered that the so called Boston Fund, which had been on hand for several years, and for which there seemed to be no use in the ordinary course of the business of the association, should be used to secure scholarships for the sons of members in some of the technical schools of the country, thus voicing the sentiment of the association for a higher plane of learning, as a starting point for a practical railroad life. In expressing their views in regard to the training needed by a young man who desires to "make his mark" in the motive power department of a railroad, one M. M. thinks "a thorough course

of mathematics, mechanical drawing and chemistry" is needed; another would require a good common school education, with several years in the shop, and then two years spent in the drawing office of a railroad and then the course of mathematics and chemistry in the scholarship, but since all the keynote is struck in the thought expressed by one when he says "you must be a student. This world is a school, life is a constant study and recitation. Your school days are simply to teach you how to study." These words are worth considering. If a man at the head of one of our large railroads has formed such an estimate of life that he thinks it a constant school and study, thus acknowledging that he has not yet arrived at the point where he "knows it all," but is ever ready to learn, what is to be thought of men who while yet at the very threshold of the gates of learning, imagine that they "have got it all down fine," and do not bother themselves any further on the subject, but think that it will not pay to study. Perhaps some day they will awake to the fact that there is no standing still in the march of knowledge, for while some may be content with what they know, others will master other subjects and acquire more knowledge until the others will some day find that they have been relegated to the rear ranks and will be likely to stay there. Brothers, let us be up and doing, for we know not what the hours, the days or the years to come may have in store for us, for if a "rail-splitter" or a "mule-driver" can become a president, it is surely no false prediction to say that some men are to-day "shoveling coal into locomotives" who shall in due time arise to be Master Mechanics. Let each brother ask himself "Is it I?" and then "What am I doing about it?" and if the answer is not what it should be, resolve at once to be able to answer satisfactorily.

In discussing the recent accident at Monmouth, Ill., on the night of October 30, some of the daily papers have selected the facing switch as the main cause, and have even asserted that it was sinful to run a switch from the main track in the direction in which trains move on it. This is evidently the assertion of men not very well posted in the exigencies of American railroads, for, as the majority of all railroads in America are single track, it is at once evident that trains running in one direction would have to face switches arranged all right for trains moving in the opposite direction. Hence, the idea could not be carried out on a single track road, because of the necessity to make turnouts at meeting and passing points, even if they were not required for freight and storage tracks.

On double track roads it would be possi-

to make switches to face in the direction in which trains are moving, so as to require trains to back into switches when delivering cars or getting out of the way of fast trains; but even here the problem is beset with difficulties which will strike the practical railroad man at once and which will serve to delay operations and introduce new elements of danger. Take a crowded eastern double track road, where as many as five heavy freight or coal trains are run in one number of the trains of the schedule, the four last being called first, second, third and fourth extras, or by sections, as some roads call them. These trains all have the same time schedule and are marked for the same passing points for passenger trains behind them. The first and second trains, we will suppose, arrive at the passing switch at a time, but do not see, hear or know whether the others, or any of them, will be able to make the switch, hence they must wait on the main track until the time for clearing the main track is so near up as to preclude the possibility of any other train setting there, or they must back into the switch and if the others arrive have them back in ahead of them, thus reversing their order, or requiring another pull ahead and back up of the last trains to let the first ones out ahead, all of which would have to be done on a switch facing the back-up movements of the trains and taking a great deal of time, labor and steam. The ordinary American plan of double-end switches lets the first train and all the succeeding ones in at one end of the passing switch and out at the other in their regular order; and while the entering switch must have its points facing trains, it is certainly as safe as the other way would be, with its encumbrance of train movements and delay and its expenditure of labor and steam. Four or five eastern freight or coal trains would take up a mile of track; the first locomotive would, therefore, have to run past the switch one mile to give the others room to get over the switch, and then all would have to back up a mile to get into the switch, thus using up steam and fuel, with the added danger from leaving the other train delayed by the tedious process, even if it is not allowed to come into collision. Switches are a necessary evil on all roads and nothing can be done to eliminate them entirely; the only thing to be done is to select the best, and have as few as possible even of them, for even with the points in the direction of movement no careful engineer would like to run over a split point switch at full speed, although the chances are in favor of the safety of the train. A stub switch set for a side track would, of course, be as dangerous at the outlet as it would be at the inlet of a double end switch and should never be used, and is, in fact, relegated to the scrap

heap just as fast as the more safe and modern split point switch can be obtained.

..

Fast Runs. As was predicted, the recent fast run made on the N. Y. C. & H. R. R. R. has put other roads on their mettle, and in different sections fast runs have been made, some of which are even quoted as being at the rate of a mile in less than forty seconds, yet it was only for a comparatively short distance, and no run of over 400 miles has ever been made before nor since at the rate of a mile a minute. As was supposed by many at the time, this fast run was made to test the practicability of putting on a fast train over the road in anticipation of the vastly increased tide of travel which is expected to make its way westward to Chicago next year, and this has been verified by the daily train now scheduled to make the run between New York and Buffalo, 439 miles, in eight hours and forty minutes, thus making it the fastest train in the whole world, as it is at the rate of over fifty-two miles an hour, beating the B. & O. Royal Blue Line between New York and Washington, and the P. R. R. between New York and Philadelphia. It is quite natural that this is only the precursor to other fast trains which other trunk lines will be obliged to put on to compete with this train, as the American fully believes that "time is money," and will not willingly ride twelve hours if the journey can be made in less than nine hours. The N. Y. C. & H. R. road has the longest distance to cover between New York and Buffalo of all its competitors, the Lehigh Valley excepted, which is a few miles longer, while the West Shore is a few miles shorter, with the Erie 423 miles and the Lackawanna route only 410 miles. The latter, under the vigorous conduct of General Manager Halstead, with its equipment of vestibuled cars, drawn by its powerful engines, over a well ballasted track of steel rails, will no doubt form no mean antagonist in the "coming fray," for it certainly has the "inside" and most direct route, and lacks in nothing but the signals to make it pre-eminently the route, yet even this has not proven any great hindrance, for in spite of the numerous trains on its eastern section it can boast of an immunity from fatalities to its trains vouchsafed to none of the trunk lines. Its trains have made their mile a minute when required, and can no doubt do it again and keep doing it as long as the demand requires it.

..

Compounds Again. In spite of the fact that the Pennsylvania railroad has been very chary of giving any information about the "Webb Compound," enough is now known to show that she did her work right along with other locomotives

of her size, in as good time as any of them made, and at a greatly reduced cost for fuel. Other tests made since have fully corroborated this experience, and we have now before us tables showing the performance of two engines on the Western New York & Pennsylvania railroad, one being a standard consolidation, and the other a compound consolidation. The engines were of the same class and type, of nearly the same weight and same size drivers. The grate surface, number, size and length of fires, and the total heating surface were the same, and yet, strange as it may seem, the compound got more heat out of its coal, for every pound of it evaporated an average of $1\frac{1}{2}$ pounds more water in her boiler than it did in the common locomotive, thus showing an average per centage of about 18 in evaporation in favor of the compound.

Besides this, the compound pulled more cars in the same time, making another average of 36 per cent more work done by her, and all this, as may be judged by the saving before noted in evaporation, with 8,800 lbs. less coal in the three round trips to which the test extended, or nearly $1\frac{1}{2}$ tons saved on each round trip. This is certainly an item worth saving, and it is therefore no wonder that the Master Mechanics' Association have a committee out who are to consider and report on the subject, and with the rapidly increasing number of compounds that are now being built at the locomotive shops and by the railroad companies there ought to be no lack of data for an exhaustive report at the next meeting of the Association, and it is to be hoped that the gentlemen composing it will have the time and opportunity to fully settle the point of economy, which is the only point ever claimed for them which is worthy of consideration. Their first cost and running repairs are no doubt somewhat heavier than the standard, but with a saving of from \$4 to \$15 each day in fuel, a little extra expense would soon be made up and a handsome surplus left over as clear profit each year. In the meantime "Yankee ingenuity" is at work and will soon make such improvements on the machine as will make us all anxious to fire and run "compounds."

P. S.—It is now given out officially that Engineer Hartman, who ran the Pennsylvania railroad Webb compound twenty days per month received a premium of \$23.75 for fuel saved, and that his fireman received the same amount, and as they get sixty cents per ton each for fuel saved it would indicate a saving of nearly forty tons in twenty days.

A Chicago inventor has constructed an engine that does away with cranks. We hope it will work.

Compound Locomotives.

MR. EDITOR:—In perusing the October number of your valuable paper I found an article on page 885, entitled "One Hundred Miles an Hour," giving a description of a four (4) cylinder engine by Mr. Wm. L. Lockwood and designed by Mr. Richards.

As I have been several years in Cuban railroad business, I was interested in compound locomotives, and had "designed a four (4) cylinder locomotive" to do away with "counter balances," using a steel crank axle, four (4) eccentrics, two (2) links, four (4) rocker-shafts and my "patent balanced piston valve." From the description "it nearly describes my own drawings." My drawings call for a slab form, four (4) cylinders tandem or horizontal, the two outside cylinders 14x24, the inside low pressure cylinders 20 $\frac{1}{2}$ x24 and all horizontal, using the usual mogul guides. I had intended to finish it last winter but was prevented by unforeseen circumstances. I had drawn it for the usual "curved link" but as I have built five locomotives with the "straight link" that proved successful (three in the state of Ohio and two in Cuba), I had deferred finishing on that plan. I am a practical engineer and mechanic, and ran the first locomotive on the Great Western Railway of Canada and the first locomotive in the state of Wisconsin on September 17, 1850, having landed it in Milwaukee on September 12, 1850, above the mouth of the Menominee river from the barge or brig "Abiah," also landing the second a few days after from the schooner "Patrick Henry" for the old Milwaukee & Mississippi R. R., Byron Kilbourne, President and Chief Engineer. During the war I ran passenger on the old Indiana Central by way of Richmond, Piqua, Urbana, to Columbus, from Indianapolis. My name is found on the books of Division No. 11, George W. Tyre, Chief B. L. E., during the trying times of the war.

I took these locomotives from Edward Norris' works and left previous to Peter Ebberts who took the first locomotives to the old Chicago & Galena Union for E. B. Ogden, President; Jack Ebberts, Master Mechanic.

KINGSLAND, N. J.

Walter S. Phelps.

THE West Shore Railroad people make a reverse lever quadrant with very fine notches, and do not mark the points of cut-off. Those in authority have learned that working the quadrant does more to make enginemen wasteful in the use of steam than anything else put on the engine. A quadrant is marked for certain inches of cut and by some means the real cut comes an inch or two later on. Enginemen feel contented if they are working their engine cut off at 6 inches, when all the time it is cutting off at 8 or 9 inches.

Firing.

Our friend, "M. J. L." from New Orleans, would like to have some boys give their experience in firing. A number of experiences have been given, but no general rules can be given, when there are so many different engines and so many different men to run them that no rule would apply to all cases. Three things ought to be in every fireman's mind; the first, to keep her hot, if such a thing is possible; next, to do it at the smallest expense for fuel; and third, with as great an ease to himself as possible. Now, there are lots of firemen who do one or the other of the three things, but the happy combination which meets the three conditions at one time is where the brain work comes in and makes the difference between the fireman and the automatic stoker, as described on page 992 of November *Magazine*.

As a general rule, in both hard and soft coal firing, the lightest fire makes the easiest work, and in some cases will meet all the conditions, that is, keep her hot and at the least expense of fuel and labor, but still there are cases in hard coal firing where it takes a big lot of coal at a time to successfully retard the air enough in passing through the fire to get such an admixture of the gases as to produce the greatest heat. The intelligent fireman must study the peculiarities of his engine, know all about the grades and heavy pulls, and in order to be fully successful he must know the methods and ways of the engineer, and even then he may be completely nonplussed by an occasional whim of the man at the throttle to try his capacity or temper. In a ten years' experience as fireman you will meet all kinds at the throttle—some who will do everything in their power to help you, some who will be utterly indifferent to your efforts, and others who, out of sheer ignorance or out of "malice prepense and aforethought" will strive to do all they can against you. It is just as imperative to know the man as it is to know the engine, the coal and the grades, and even if you do know some men, it is to your sorrow, for it is to know that no mortal can keep steam for them.

In trying to carry out the rule to keep her hot with the least amount of fuel and labor, will be found the best test of a fireman's ability, and to do this he will have to adapt himself to varied circumstances, and try different plans until he finds the one best adapted to his case, but he should bear in mind the fact that after he has done all he knows and can do, the responsibility must be on some other shoulders, for if after all his schemes fail to make his steam, some change in the draft arrangements or nozzles may be needed, without which no other man may be able to do anything.

♦♦

Acknowledgments.

Mr. Lockwood's publicly declared sorrow at his failure to get his invitation into my hands in time to take that ride in the train pulled by the "Shaw Locomotive," I am sure is no greater than mine was at being so near and yet not in it. However, let us hope for better luck next time. Where is the "Shaw" now, and when is she to run again?

Mr. Lockwood's explanation about the matter in Philadelphia is noted and I may have been mistaken. Mr. Lockwood came to me and Bro. Tucker, as we were going up the stairs in the Y. M. C. A. building, and said, in substance, that an election for officers in a (as I understood) cemetery association was pending in a room in the building, that he wished us to take an assignment of stock, for the purpose of voting some proxies he had received from a number of ladies who could not be present, and whose rights would be infringed and their property practically confiscated if their wishes were not expressed by their proxies. After consultation with the gentlemen who acted as tellers, and the assurance that it was all right, certain shares, as I understood, were transferred to us, we voted the tickets as prepared, and again signed off our shares to the original owners. It did not take us more than fifteen minutes to do all this, and we were assured we had benefited the widows and orphans and the ladies in general by our act. I will ask Bro. Tucker how he understood the thing, but even at Mr. Lockwood's explanation it had something to do with "sleepers," he says, "on the rails," I understood, "under the ground." Had I known that several million were involved, I might not so readily signed off my shares of stock. Who knows?

Now about the fulcrums. The answer on page 695, to which Mr. Lockwood has replied, was an answer given editorially in the *Locomotive Engineer*, I suppose by its editor, John A. Hill, and so fully concurred with my idea, that a locomotive was just as powerful with the pin below as above the fulcrum, and that the fulcrum remained unchanged, and I therefore drew Mr. Lockwood's attention to it. If the locomotive was actually so badly constructed that she had three times as much leverage or power at some portion of the stroke as she had at others it would, indeed, be high time to revolutionize the construction of these machines, but when these "poor makeshifts, gotten up in contempt of all correct mechanical principles," go over the roads at ever increasing rates of speed and fail to crush bridges and way by their rapid and ponderous "hammer blows" it will take more than mere words to convince the world that locomotives, as now built, are a failure.

Vulcan.

Extraordinary Freight Locomotive Mileage.

Those familiar with the operating of trains on the New York, Chicago & St. Louis, of which Mr. John Mackenzie is superintendent of motive power, are aware that unusually great mileage is obtained from the locomotives in use. For some time we have been trying to secure the exact figures of engine mileage on this road for a few years back and are now pleased to be able to supply this interesting information through the annexed table. The extended mileage secured is not only highly creditable to the locomotives used, which were all built in the Brooks Locomotive Works, and to those having charge of them, but it also furnishes the best kind of testimony respecting the handling of trains by the operative department. When freight engines are able to average more than 4,000 miles a month on a single track road it indicates that the train dispatching is particularly efficient.

Concerning the different classes mention-

ed in the table, Classes F and H, which show the best results with coal per car mile were used principally upon the light grade or what is known as the Second district between Conneaut and Bellevue. The Class G has been used upon the First district between Buffalo and Conneaut, where in the first 50 miles there are very heavy grades, running as high as 60 feet to the mile. The Class I engines are used on the division between Chicago and Fort Wayne where the grade runs up to 45 feet per mile. In the Class I engines the pounds of coal per car mile being shown heavy is caused probably by the fact that the engines were comparatively new and were run for several weeks with light trains, and all the coal used for preparing them for regular service is charged up in this statement. In evidence of this several of this class of engines ran as low as 3½ pounds of coal per car mile.

The interesting point in the statement is the mileage made. For five years five

months Class F engines have averaged over 4,100 miles per month; Class G engines have averaged over 4,200 miles per month for three years five months; the Class H engines have averaged over 5,000 miles per month for one year two and a half months. This is a very good showing for the locomotives, and this statement is not taken from any special engine. The average mileage of the entire equipment for the last three years was, in 1888, 45,398 miles per engine; in 1889, 45,374 miles per engine; in 1890, 49,260 miles per engine.

In looking at this statement we must remember that this is all classes of engines—switching, passenger, work and freight. The average number of miles made by freight engines has been over 5,000 miles per month, or, if we take the Class G engines, which are the 19-24, the average mileage of fifteen engines is 59,965 miles. This company has some individual locomotives whose performance is very much better than that given. For instance, we have one of the Brooks 17x21 61-inch wheel centers, running between Fort Wayne and Chicago, making 304 miles every day. As an experiment to see what could be done they turned

this engine out of shop January 25, 1890 and up to June 30, 1891, seventeen months this engine had made 126,019 miles, and is still on the run. This is an average of over 7,400 miles per month. The average train hauled by this engine is four cars. She is run by two sets of engineers. This engine lays over at Chicago at nights, and is required to back out from the depot to the round house, and back to the depot in the morning, a distance of ten miles, which is not credited to the engine mileage, as the performance sheet requires actual time and mileage only.—*National Car and Locomotive Builder.*

HAWKINS' CALCULATIONS FOR ENGINEERS AND FIREMEN has now reached its sixth edition. This is a book which sells itself, owing to the fact that men who have been benefited by its contents warmly recommend it to their fellows. The work begins with the figure one and proceeds step by step to teach the student how to figure everything necessary for the engineer or fireman to calculate. The Index is a real dictionary of mathematical and technical terms. The whole work thoroughly studied will fit practical men for some of the "soft places" now held by persons who need to be succeeded by more worthy because more intelligent men. The work and publishers are particularly described in the advertising department, as well as a complete work, "Hawkins' Instructions."

The Growth of Steam as Applied to Transportation in the United States.

Editorially the Philadelphia *Ledger* says: To-day, Bordentown, the management of the Pennsylvania Railroad Company will publicly dedicate with impressive ceremony a historical monument, erected to mark the first piece of track laid between New York and Philadelphia, and to commemorate the twentieth anniversary of the first movement by steam upon a railway in the state of New Jersey, November 1, 1831."

The history of this "first piece of track," the laying of which is to be so impressively commemorated, is almost the beginning of that of the railway system of the United States, for, though the efforts of Oliver Evans, John Stevens and Robert Fulton outlasted by several years the practical operations of steam transportation by rail, the former stating that as early as 1772 he was engaged in efforts to construct steam wagons, it was not until 1830 that the actual development of the present great system began. That year being generally accepted as the starting point of successful operation. Up to 1825 the few short lines of tramways, constructed chiefly to carry anthracite coal to the canals, were crude and inefficient, and the largest and most important of them all was the Mauch Chunk railroad, in Pennsylvania.

The authorities differ with regard to the operation of the first locomotive engine in the United States. In 1826 John Stevens built a short, circular railway, on which he ran a steam carriage of his own construction. It carried a half dozen persons, and attained a speed stated in some accounts of six and in others of twelve miles an hour. It was not, however, until 1829 that the first traffic locomotive was used on the Western continent. Here again the authorities differ, though the weight of the evidence is in favor of the claim of a steam engine imported from England in that year and put to work on a railroad fifteen miles long, running from the forks of the Dyberry to Carbondale, in Pennsylvania, the trial of which, however, was unsatisfactory, as the engine proved to be too heavy for the roadbed. The other claim is made in behalf of the Stourbridge Lion, an engine also imported from England by the Delaware & Hudson Canal Railroad Company. Mr. Allen, the engineer who ran it, died only last year.

Not counting Stevens' "steam carriage," the first locomotive constructed in this country was the Best Friend, built at the West Point foundry; it was the third traffic engine put in use upon an American railway, the Charleston & Hamburg, which, it is stated, was the original passenger service line on this side the Atlantic. The trial trip of the Best Friend was made in November, 1830, and it resulted in the explosion of the boiler.

FUTURE POSSIBILITIES.

The one man who, many years preceding the date of that experiment, most distinctly perceived the future possibilities of the railway system of the United States, was Oliver Evans, who, in a work published in 1813, predicted: "The time will come when people will travel in stages, moved by steam engines, from one city to another, almost as fast as birds fly, fifteen or twenty miles an hour." "A carriage will set out from Washington in the morning, the passengers will breakfast at Baltimore, dine at Philadelphia and sup at New York the same day." Robert Fulton's prophecy was more conservative. He said, at Pittsburgh, in 1811: "The day will come gentlemen—I may not live to see, though some of you who are younger will, probably—when carriages will be drawn over these mountains by steam engines, at a rate more rapid than that of the stage on the smoothest turnpike."

The genius of Fulton, great as it was, was not sufficiently great to conceive the possibility of carriages being drawn from Pittsburgh to Philadelphia by steam engines at a speed on parts of the route of from forty to sixty miles an hour, and yet they have been. Neither Evans, Fulton nor Stevens could have imagined the Chicago Limited Express, with its parlor, sleeping, dining and smoking cars, as luxurious in their appointments as the apartments of the wealthiest citizen, speeding over these mountains

five times faster than the fastest stage coach on the smoothest turnpike.

SOME STATISTICS.

A bulletin recently issued from the Census Office, containing statistics of the operations of the railroads of New York, New Jersey, Pennsylvania, Delaware, Maryland and parts of West Virginia, shows the growth of the railway system in those states during the decade ending in 1889. In this latter year the roads in the territory indicated carried 189,079,005 passengers, as against 81,730,119 in 1880. The freight carried in 1880 was 145,733,619 tons, and in 1889 it amounted to 241,939,230 tons, and the number of miles of all lines operated increased during the same period from 14,585.85 to 18,820.18.

Taking 1830 as the real starting point of the American railway system, there being then but a comparatively few miles of rails laid, and only two roads on which locomotive engines were running, the railway statistics of 1890 demonstrate not only the phenomenal growth of railroads in the United States, but the enterprise, energy and liberality of those who have built and operate them. On the 31st of last December the aggregate railway mileage of this country was 166,817.41.

But it is not this vast mileage, nearly or quite equal to that of the rest of the civilized world, that best shows the growth of the railway system of America. That is to be largely seen in the improvement of the road—each part of which is being made as strong as the strongest—of the rails, switches, signals, of the appliances for insuring safety, comfort or luxury and great speed. The celebration of any eventful incident of the railroad movement in the United States could not be more fittingly observed than by the Pennsylvania company, which has carried the system to the highest standard of efficiency thus far reached either here or abroad. When, indeed, the complete history of the railways of this country comes to be adequately written, it will contain no more illustrious names than those of some of the Presidents, Vice-Presidents, engineers, and other officers of this company who did so much to develop the ideas which Evans, Fulton and Stevens evolved, and so earnestly urged upon the attention of their countrymen. The railway system of the United States is not yet, in respect of any of its lines, perfect, but it is being perfected in almost every desirable particular, and especially in the essential particulars of safety, comfort and speed.—*West Chester (Pa.) News.*

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, room 26, Atlantic building, Washington, D. C., expired during the month of November, 1891, and are now free to be used by anyone; viz.:

Ventilating car, S. L. Latta.
Freight car door, J. B. Goff.
Car coupling, J. D. Mills.
Rail joint, Burch and Smith.
Locomotive smoke stack, T. Lanston.
Locomotive boiler, S. A. Hodgman.
Car coupling, E. Stone.
Car truck, I. Dripps.
Car door, D. Connor.
Railway switch, A. Quimby.
Car roof, J. G. Thayer.
Railway gate, G. W. La Baw.
Safety car, H. B. Myer.
Crossing gate, O. Cassett.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

"This is something I have just dashed off," said the farmer's wife, as she took the butter from the churn.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, IND'ANA.

THE WHEAT FROM THE CHAFF.

Our readers have doubtless noticed that from month to month we have spoken of the large number of letters received for the Woman's Department, averaging between forty and fifty per month during the past year. They also will find by looking over the different numbers of the *Magazine* that, although we have had from ten to twelve pages in each issue, by no means all of these letters have appeared, although most of them were prepared and sent in for publication. A short time ago Mr. Debs and the publisher of the *Magazine* were compelled to make a bonfire of the accumulated mass of manuscript, as it had become old and it was impossible to hope ever to use all of it. Mr. Debs then held a consultation with the editor of the Woman's Department and insisted that she must use heroic measures, select only the best of the letters received and discard the rest. She protested in this wise: "That will be a very hard task; I have a warm feeling for all of those writers; I know with what care and trouble they have prepared these letters, and how anxiously they will watch for their appearance; I shall be very sorry to have to discriminate and put some of them in that much-talked-of but little-used waste basket." "I know just how you feel," said warm-hearted Mr. Debs, "but there is no help for it. We can not spare any more space for the Department, and it is utterly impossible to use all of the letters. I was obliged to adopt this method long ago in regard to the Brotherhood correspondence and, although it created some dissatisfaction at first, the men soon recognized its necessity and were willing to make some sacrifices for the good of the *Magazine*."

Our writers now see just how the matter stands. The Woman's Department must represent the survival of the fittest. While we do not wish to discourage any one from writing, we shall have to urge that there shall be no ill-feeling if it is not found possible to use all of the letters. It is not an easy matter to make a selection. Some times a communication will be so badly

written that it can hardly be read, and when deciphered it is found to contain some excellent and valuable thoughts. Others will be beautifully prepared and still have no ideas. The most difficult letters to reject are those which come from hard working, painstaking wives and mothers, every line showing the kind heart and the warm interest in the Woman's Department and the railroad boys, and yet they contain nothing of sufficient importance to entitle them to a place in the *Magazine*. We appreciate the spirit which prompted the letters but we feel that we must fill the space allowed to us with what will possess the greatest interest to the largest number of persons. When a woman writes and says that she has the best husband in the world, it is, of course, a pleasant thing to know, but hardly worth telling to a hundred thousand readers. When a correspondent assures us that she has long wished to break the ice, having seen no letters from the lodge of which she knows nothing but has heard it is in a flourishing condition and its members are a noble set of men and if this is accepted she will come again and write something interesting she may expect to see her second letter in print, if she keeps her promise, but not her first.

In brief, remember, when you write, that the *Magazine* goes into every state in the Union, into Canada, Mexico and across the ocean. Decide for yourself whether your letter is worthy a place in its pages. No matter how short it may be, let it contain an idea, an opinion, something that will entitle it to a reading. Especially would we urge upon our correspondents, as a rule, not to attempt poetry. Bad prose is preferable to bad verse. The number of real poets is very small. Poetry is a gift that is rarely bestowed. We have published some beautiful poems in this department. We have also printed some alleged poetry that was enough to make angels weep. Unless you are sure of your poetical genius, stick to prose. We would much prefer the contributions to come in the shape of an article upon some subject, with a title, instead of in the form of a letter, although the latter is not barred out. Now let our correspondents take courage, select some subject in which they are interested and upon which they are informed, write briefly and to the point, no matter whether it is about babies, books, homes or husbands, pin money or politics, sign their name, and they will find themselves among the elect in the Woman's Department.

Mrs. C. B. B., a fireman's wife, of Maryline, Mo., writes enthusiastically of Lodge 461. She urges husbands and wives to be smiling and cheerful in order to make home life happy.

CHICAGO WOMEN WANT TO VOTE.

During the session of the Illinois legislature last winter it passed a law conferring upon the women of that state the right to vote for all school officers. The first election under this law has taken place in Chicago and, according to the statute, all who wished to vote had to register their names. Upon the day appointed for this purpose ten thousand women went before the registration board, the wives of bishops and judges, lady physicians, ministers, lawyers, writers, teachers, etc. Meanwhile the county attorney discovered what he conceived to be a technicality in the law that would render all women ineligible except such foreign women as had been naturalized previous to 1870, and he instructed the registration boards not to receive the names of any others. A number of able lawyers differed from this opinion, but only about seven hundred women succeeded in being registered. The case was carried to the Supreme Court with the request for a decision before the election. The opinion was rendered sustaining the county attorney. The next session of the legislature will doubtless pass another law to the same effect, which will stand.

MERRY CHRISTMAS.

This number of the *Magazine* will find our friends in the midst of preparations for Christmas. We offer the fervent hope that none may be so poor as not to receive or give some memento of the day. Especially do we trust that those may be remembered who have not an abundance of things to make life pleasant. Above all others the children should be made happy upon this occasion. It seems peculiarly to belong to them, partly because it celebrates the birth of the Christ-child, partly because they deserve a large share in whatever is bright and beautiful in life. We urge upon our parents not to fail to make this day a pleasant one for your little ones. Though the demands upon your time may be many, though the call for the necessities of life may leave but a small amount of money for the luxuries, consecrate a portion to the making of this anniversary one of sweet remembrance to these children whom you love above all the world.

"DIRT FLOOR," of Mexico, contributes to the waste basket this month. The general tone of his letter was not such as to entitle it to a place in the Woman's Department, although it contained some good things.

The editor acknowledges with thanks the receipt of the song "When the Pay Car Comes Again," words by W. I., and music by Mrs. Lizzie Leggett.

The *National Federationist* for September is at hand, ably edited by C. W. Martin, of Eureka Lodge, No. 14. The handsome face of Grand Master Sargent looks out from its pages. The Woman's Department is conducted by Mrs. Henry B. Jones, in her usual bright and entertaining manner.

The Woman's Department appreciates the kind words of Mrs. M. H., of Newport, Ky., and would be glad to use her verses, but instructions have been given to omit as much as possible all amateur poetry. Perhaps the writer will send us something in prose.

We are obliged to omit the poem of "Elnora" for the reason mentioned in another paragraph. It is not surprising that so handsome a photograph should make you poetical. Tell your engineer what you think of it the next time he comes to see you.

"ROSE TEMPLE" writes in praise of Tuckson, A. T. She compliments the poem of Mrs. Coffenbarger and the one called "Within One Mile of Home," published in the September number.

"A FIREMAN'S WIFE," of Radford, Va., writes in complimentary terms of the *Magazine* and tells of a happy home.

THANKS to Mrs. Nellie Bloom for her pleasant private letter. Her poem was sent in for publication.

SHALL BACHELORS BE TAXED?

In Woman's Department for September, I noticed a letter from Marie F., who asks: "Has not the time come when girls hesitate to sacrifice their independence for the dependent position of a wife?" Moreover, she says she has never seen anything in the lives of wives she has known to tempt her to give up her pay and work for theirs. Perhaps, Marie, no one has ever asked you to make that sacrifice; but be of good cheer and keep your powder dry. Now as to the first question. Just as I am to acknowledge it, I believe it is well upon us, in fact it is a question no longer shrouded in the misty future, but is in plain view, and as a precedent it suggests some serious reflections. It is believed that the more girls who ask themselves this question and deliberate thereon, the more bachelors there will be. And it is believed that there are enough bachelors and spinsters on hand to supply all needs, for neither one or both are very desirable and society is not socially benefited by either class. The great increase in the ranks of bachelors has given cause for alarm in certain states and the legislatures have been thinking strongly of passing a law taxing bachelors for leading a life of single blessedness, but not a word about the feeble spinsters. Now I am a firm believer in woman's rights and think they should have rights with the men in a general way. But it does seem an unjust law that both sexes have a voice in making, that don't treat all alike when equality of rights is brought into consideration. In most states the laws in regard to woman's rights in the division of property and other rights and privileges are very unjust and severe. But women are not slow to recognize the fact and are striving by every fair and honorable means that appeals to justice, to overcome the

prejudice of sex and will eventually take their places alongside of the men by a large working majority. May kind Providence speed the day.

Now as to a law and the justice thereof of taxing bachelors for leading the supposed life of single blessedness. Statistics go to show that the bachelor does not live as long as his more fortunate married brother, but that is not at all surprising when we take into view what he is forced to eat in the average boarding house. Think of the leaden biscuit, the faded vegetables and the fresh eggs of the year previous that have long ago outlived their usefulness, the leathern beefsteak and choice cuts from around the horns, the tea and coffee whose taste and flavor smack of something he wots not of, and every dish reeking in grease and all prepared in a slipshod way peculiar to boarding houses. Boarding houses are generally run on a plan to make the most money out of the least possible investment for eatables in which the appetites and comforts of the boarders have no voice. The laws of health are set at defiance and it is no wonder that the poor boarder is forced to take his "morning" before he can summon enough courage to attack his meals. I think the lady who recently said that the increase of intemperance could be traced to bad cooking more than any other cause struck the key note of the temperance question. She must have been taking her meals in a boarding house. Think of the horrors of the lodging house with its long list of nuisances, or what is worse, bachelor quarters. Think of the long, dreary evenings spent in such abodes. Instead of a nice, pleasant home of a man's own, surrounded by all that one holds dear in this life. It is no wonder that he becomes cold, morose, sour and selfish to every one's wishes but his own. I hold in most cases of bachelors and old maids, that love gives way to selfishness and the very basest of selfishness. Love is the supreme bliss of this painful existence, the only thing reconciling us to life and exalting us to the equality of angels. But we don't find such love among bachelors and spinsters. The tramp who asks for bread from this class of people would not meet with the reception at their hands that he did at the hands of Prue. In her letter in regard to "What shall we do with the tramp?" A certain great writer said of the average man and his pleasure, discipline, self denial, the highest and best in this life, "If he has not some great ideal, such as a religious illusion, a love for science, a craze for art, a passion for charity, one of those all-absorbing delights of the soul, he re-descends into instinct, begins to live for the day passing over his head and appeals to satisfaction of a grosser nature, but prompt and certain." And such seems to me the life of a bachelor. As I said before the life of such a person is a life of selfishness and is seldom a life of virtue. Moreover, it seems almost safe to assert that his is not a life of usefulness. I make this remark without ignoring the fact that some of the world's most noted men have led single lives, but they are the exception and not the rule. A bachelor's life is a life of luxury. Bah! Compare such a life with the lives of a well mated couple in marriage, and it strikes one who has a true sense of justice and is honest enough to acknowledge it, that it is a question almost beyond argument. I agree with the words of Dixon, who says that "the difference between a selfish old bachelor and a man who is happily mated, or an old maid who could have married and did not, is about the same as between an American yacht and a Chinese junk, one will sail in the eye of the wind and the other only when it is dead astern." Space forbids indulging in further remarks of the circumstances that surround a bachelor's life that make it anything but bright and sunny. It is reported that the Wyoming legislature has passed a law taxing bachelors \$2.00 per year. Not a very burdensome tax but a very unjust law. Bear in mind that Wyoming is a woman suffrage state, and it is but fair to assume that both sexes had a voice in its making. It is the justice of this law which I question. The latest census goes to show that the males are far in excess of the females, not only in Wyoming but all over the northwest. So if all the females were married there would be still thousands of masculine left overs. Think of the cruelty of it. The love sick swain who has purchased ice cream, soda water and red lemon-

ade by the barrel, gum drops and confections by the box, to say nothing of the livery rigs, excursions, balls, parties, etc., that he lavished upon the lady of his heart. For her sake he has read whole sections of Shakespeare, ransacked all the volumes of the poets for tender passages and committed them to memory. Sighs have taken the place of substantial diet. His rest is disturbed, his mind refuses to dwell upon anything else but his adored. After long months and weeks, which seem to be a century, during which time he is kept in a fever of excitement by musters up his courage to the sticking point, and he finds that he has now that thrice despised letter." Gall and wormwood are sweet when compared to such a declaration. And to think, at such a time when he is ready for the lunatic asylum or to commit suicide, when he is a fit subject for kind words, tonics and poultices, the legislature caps the climax by demanding \$2.00 for not getting the girl and a remaining single. With what two-fold feeling he can say with the poet,

"'Tis sweet to love, but oh, how bitter,
To love a gal and not to git her."

It was to be hoped when women were accorded the privilege of the ballot we would have some just and wise legislation. But alas for human expectations! I, for one, make a vigorous protest. In the name of poor, rejected, long suffering and always persecuted bachelorhood, I protest. It is the two fold duty of every bachelor in this broad land to vociferously claim his protest on tip toe, or cry it from the housetop, the injustice of such a law. If any state treasury becomes so empty of funds that they find it necessary to skimish for another means of revenue, instead of taxing their bachelors who tried to wed and failed, let them begin taxing their old maids who refused to wed, make the amount burdensome and in bad cases affix a penalty, and there will be some justice in such a law. With best wishes for a I am,

Bystander.

HOPE, IDAHO, Sept. 28, 1891.

[The sisters will have to come to the defense of their sex. This is a strong argument for the bachelors.—Ed.]

THE DUTIES AND DELIGHTS OF HOME.

It is through the kindness of a friend that I am permitted to peruse the pages of your wonderful *Magazine*, and I must say I am perfectly delighted with it, especially the Woman's Department. There is anything I do admire it is women who have real, genuine ideas of their own, and are not afraid to speak out. The world is better off for all such women. I say this without fear of successful contradiction. I am nineteen years old and my father, a younger sister and myself constitute the family. My mother died when I was only eight years old, so you see I have been brought up without the tender refining influence of a mother. And right here let me say to all the girls and boys who are readers of the *Magazine*, make much of it while you have the most precious of all gifts, a loving mother. In later years you may have friends, kind, dear friends, but never again will you have the inexpressible love lavished upon you which none but mother can bestow. Notwithstanding I have never had the instruction of a mother, my education in housekeeping and the culinary department has not been neglected. I have kept house for my papa ever since I was sixteen and could give numerous receipts for cooking but will not do so, as if I shall make my letter too lengthy. I think it the duty of all to learn to make themselves useful as well as ornamental, and especially young ladies who are contemplating marriage. Before entering on another sphere of life we should prepare ourselves, study housekeeping, cooking, economy and last but not least, read good books and store the mind with good things, so we can sit down and entertain him, and we will reap our reward in the way of a devoted husband and a happy life, and can influence him onward and upward. I agree with the Rev. Talmage when he says: "Thank God, O woman, for the quietude of your own home and that you are queen in it. Men come at eventide to the

ome, but all the day long you are there beautifying, sanctifying, adorning, blessing it. It may be a very humble home, but by your faith in God and our cheerful demeanor you can garniture that place with more splendor than the upholsterer's and ever kindled." The influences of home perpetuate themselves; the gentle grace of the mother lives in the daughter long after her head is pillowed in the dust of death, and the fatherly kindness finds its echo in the nobility and courtesy of the son, who, in time, comes to fill his place.

It is in the home life that man's piety gets tested. Let the husband be cross and the wife soon grows old and unamiable. The art of forgetting is a blessed art, but the art of overlooking is quite as important. Most of us have had trouble all our lives, and each day has brought all the evils we have been able to endure. But if you would notice what it was that threw you off your balance before breakfast and put it down in a little book, follow it out and see what becomes of it, you would see how foolish you were in the matter. Life is too short to be worn out in petty worries, frettings and vexations. Let us try to look on the bright side. Times may be hard but it will make them no easier to wear a gloomy and sad countenance. It is the sunshine and not the cloud that makes the flowers grow. The family circle ought to be the most charming place on earth; the center of purest affections and the most desirable associations this side of paradise, and it is the duty of parents to see that home is made as attractive as possible for the children, just the same as it is the duty of the children to be courteous and considerate toward the parents. Murray says: "A great many homes are like the frame of a harp that stands without strings. In form and outline they suggest music, but no melody arises from the empty spaces." And thus it happens that home becomes dreary, unattractive and dull. Many a time a cheerful home and smiling face do more to make good men and women than all the lecturing and eloquence that can be used. If then, the spell of home is so powerful, how important it is to make it pleasant and lovable. Oh! then may our homes on earth be the center of all our joys, may they be as green spots in the desert, to which we can retire when weary of the cares and perplexities of life.

I was especially pleased with the letter written by Mrs. Steadman, of Taylor, Texas, and I know she must be perfectly happy with her R. R. boy. I agree with Fannie, of Caddo Mills, in regard to card playing; think it should by all means, be kept out of the family circle, but perhaps, like Fannie, I may not be worthy of giving advice to those who are older than myself. With best wishes for all the R. R. boys and the Woman's Department,

I am

Annie Sams.

ROANOKE, TEXAS, Sept. 2, 1891,

[An excellent article for a young girl. Let us hear from you again.—Ed.]

CHOOSING A WIFE.

Do men like the best women best? No, they don't; and it is one of the most remarkable things in the study of the opposite sex to see how they pride themselves upon their discrimination with regard to women, and how very, very little they know about them. This, no doubt is one ground for the cynical, jaundiced, bitter scoffs flung about the world in regard to women, and all emanating from men. They thought they knew something about women, these poor cynics, and they found they didn't, and instead of blaming their own stupidity they turned and rent the illusive objects of their mistaken theories.

It is very annoying, I grant you, for a man to build up a fine ideal temple wherein to enshrine his own image and watch the goddesses of that temple sitting at the feet of her chosen lord, and then suddenly to discover that that temple was founded upon "laughing sand," and in some unusual quake the whole affair tumbles down and his image is left stranded in the mire. I suppose one would be tempted to revile the goddess who mortified him sorely. No; these poor, dear men do not understand women at all, and nothing vexes them more

than to have the consciousness brought home to them. They are so accustomed to feeling that the world runs on the line that they have laid down, and that there is nothing in heaven or earth beyond or above their comprehension.

Some men in choosing a wife show no more discrimination than a child who dives in a grab bag at a fair. What are the grounds of his choice? Well, of course, youth and beauty are always sure cards, and it would be too bad to lose the pleasure we receive from them; but we all know that there are pretty faces, but while some are as attractive and refreshing as a handful of dewy flowers, others are as monotonous as a photographed smile, and others still as dead as sweet as nought.

When we come to the matter of choosing a wife, which is the only important result of man's preference for one woman over another, prettiness becomes a mere detail, and not the one thing, if man looks before he leaps. Man ought to choose his wife as a sensible wife would choose her wedding gown, not for the present effect, but for its effect thereafter. Don't choose a wife who boasts of never being tired, one who imitates the coarser sex, or the kind they call a "nonentity," who really can't be found fault with, she being tolerably good looking, tolerably well educated and fairly well mannered, but who is untired by temptations; her ideas of marriage being wedding gowns and wedding presents and cards with "Mrs." instead of "Miss" on them. But has she for one instant thought if she and John were adapted to each other by habits, temperament and mutual intentions to make each other happy? No; she just plunges into matrimony as she would into the ocean at a new bathing place, without the least idea of what lies beneath the summer sea. This is the average woman chosen by the average man. Therefore, many such marriages are the topic of the satirist and cynic. What then is the description of the best woman, do you ask?

With a thousand good wishes to the B. of L. E. I will draw my letter to a close by wishing all success in choosing a sensible wife. But I nearly forgot. Don't tell your promised wife that you will never make her wash for fear she would get drowned in the wash tub, as a man I know of whose wife now takes in washing to support him.

Sincerely, a fireman's cousin,

Cushla Machree.

ST. ALBANS, VT., October 22, 1891.

[Why did you not give your own ideas of a suitable wife? Sign your correct name in the next letter.—Ed.]

LOOK AS WELL AS YOU CAN.

Nearly all women, whether young or old, are fond of being well dressed; not necessarily in rich or showy clothes, but in those which are neatly fitted and tastefully made. This is a commendable ambition, by no means to be discouraged. Henry Ward Beecher has said that a woman is no more to blame for dressing prettily and attractively than a flower is at fault for blooming in its brightest.

It is every woman's duty to look as well as she can, consistently with her circumstances; and because one has only small means and cannot command the luxurious elegance of apparel that is indulged in by women of wealth, it is not necessary to dress shabbily or unfashionably. Taste and ingenuity may be made to take the place of money in a large degree. Ladies who, from choice or necessity, do their own dress making will, after a little practice, find it just as easy to imitate pretty styles as any others, and the work is much more entertaining and agreeable, if a good, artistic effect is the aim in view. It is a great mistake for those with whom strict economy is a necessity, to hire the most expensive part of their work done. If their avocations do not allow them to accomplish it all themselves, then let them hire assistance in their plain sewing, and use their own skill and taste upon the manufacture of outside garments, which are by far the most expensive things to pay for.

A fireman's friend.

Blanke.

DECATUR, ILL., October 7, 1891.

WE HAVE LAID THEE TO REST.

Written in memory of Mrs. Marie F. Hubbard, who died in Oakland, Cal., August 15, 1891. To the bereaved husband Henry F. Hubbard, the following lines are respectfully dedicated:

We have laid thee to rest where the bright sun-beams linger,

As the sun slowly sinks in the far distant west;
And the deep, slumbrous silence that so calmly enshrouds thee.

Fills my heart with keen anguish—with sorrowful unrest.

We have laid thee to rest with hands mutely folded,
While over my life grief has cast its drear blight;
Where happiness once reigned voiceless sorrow has entered.

While life's shadows fall 'round me dark and dense as the night.

We have laid thee to rest, yet I ne'er shall forget thee—

Forget not thy fond love so faithful and true;
And though fate has now severed the wedded ties that once bound us,
God grant at life's close that I may again meet with you.

When the shadows of evening shall gather and fall
'Round our once happy home, one form I would recall;

It is thine, oh, my darling! How I shall long for you there.

As grief stricken I gaze at thy lone vacant chair.

In fond memory I cherish sweet thoughts of thee, darling,

Though hidden from sight my heart still yearns for thee;

When my soul shall go forth to enter God's heavenly kingdom,

I know you'll be waiting and watching for me.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL., Sept. 30, 1891.

CHANUTE, KAN., Sept. 30, 1891.

Editor Woman's Department:

deed could you peep inside my house you would see one foolish thing. I have no fancy yet although when I was a girl I've been happy in the thought of how I'd have everything nice and sumptuous in fancy work to decorate my rooms. I have been common clothing and my baby but plain white as though neat. I do all my work to save him the expense of a girl, and I work so hard to have my baby tidy for I am a lover of neatness, and often regret my baby rather than leave something undone, so that when he comes he will find his home comfortable, but I cannot see that he appreciates it in the least. Sometimes after I have my work done I try oh, so hard to win a compliment from him when he does come, and think he will surely see the changes and extra touches and pains I have taken, but my reward is "what you been doing?" or "been laying off this week?" Oh, my poor heart, sometimes I nearly break. Some of you contented wives will say or think I am lacking in my duty. How I wish you could tell me. But you can't. I do not believe a woman's right to handle the purse, but I do think a wife should receive more than her board and lodging and should have her own spending money to use as she thinks best, for she is the one supposed to know best her own requirements, for the running of her house and for herself and children's clothing. A wife in return so trusted should prove worthy of the trust and try to value every dollar earned by her husband's hard work, for no railroad man gets a dollar unearned. I love my husband perhaps more than many a wife, and should perhaps be happy and more contented, but, oh, I miss greatly the books I had built in my air castle before my marriage. My heart cries for more than the bare necessities of life. I want love and trust. I want a wife's privilege. I want to be more to my husband than some one to do his work. I ask advice from all who have a thought or an idea that would perhaps benefit me after reading this letter. With success to all contented wives,

I am very truly yours,

Mrs. M.

[This is a most pathetic letter and relates the experience of many wives. We commend it to our correspondents of both sexes for an answer. Unfortunately the husband spoken of is not an exception.—Ed.]

MONETT, MO., October 24, 1891.

Editor Woman's Department:

I look with much anxiety to the coming of the dear old *Magazine*, in which my husband and I are deeply interested. Some are more deeply interested in the *Woman's Department*, but I take an interest in all. My husband is a fireman and we have been married four years. The time has seemed very short. We have one sweet little boy that makes home happy, and as night draws nearer and nearer we long for the moment to come for papa's "toot toot," to whistle for town. Hearts are lightened in thinking God has spared my darling to return home once more. Husbands speak kind words to you: wives as you did in your courtship days, and when you come home leave some of the cares behind you. Come in with a smile on your face. It always takes two to make a bargain. A wife cannot make home happy without her husband helps her. Love lightens labor.

The kindest and the happiest pair
Will find occasion to forbear,
And something every day they live
To pity, or perhaps forgive.

I always try to be as neat in home and personal appearance as I can, and try to keep him so, watching the rips and the buttons that are always missing. Yes, the dear old boys of the B. of L. F. are a brave set. I must admit that I am proud that my boy is a member of Cherish Lodge, 410, as he seems to think so much of his lodge. Wishing the boys of the B. of L. F. much success.

A Fireman's Wife.

Nels.

COMO, COLO, October 13, 1891.

Editor Woman's Department:

I observe that novel reading is the theme under discussion in the October number of the *Magazine*, and I must say the subject is ably handled. I agree with "Irene" in thinking that the perusal of "The Curiosity Shop" could not be otherwise than beneficial to the reader, and who can read the sweet, tender story of "Paul and Virginia" without having more earnest belief in the fidelity of love, integrity and truth? I think that the reading of standard novels is more helpful than injurious, and we can gain much useful information from their pages. I have read many novels and I know from experience that their influence has given me a higher ideal of life, a more noble conviction that to one's duty, to endure with patience one's lot, whether it be a cheerful one or an unenviable one, the surest way to contentment. It is not considered by some people what a great part our thoughts and actions play in the story of life. How much happier we may be if we accomplish our daily tasks with patience and take life as we find it, than to be ever striving after what we have not. I do not encourage ambition for it is a good thing, but too much is dangerous to contentment. I am only a young married woman and feel incapable of giving advice, but trust my communication may find an echoing answer in other hearts.

Here I take my leave I will give you a description of Como. It is situated in South Park, which extends from the town rolls in undulating prairie land until it merges into the distant blue and cloud-like mountains. From my window, looking northward, the low-lying mountains seem almost within reach. In reality they are two or more miles away. A peak of lighter color shows where the iron horse crosses its way along the mountain side until lost behind a projecting hill. Some thirty pine covered mountains to the westward form a pleasing background to our village. The elevation of Como is 9000 feet, and the greater part of the inhabitants are railroad men and their families. I am proud to say my husband is an engineer. He is also a member of the B. of L. F.

Good wishes for all.

Mrs. Wm. Dunning.

LETHBRIDGE ALBERTA, N. W. T., CANADA, }
October 19, 1891. }*Editor Woman's Department:*

After an absence of nearly a year I come again to claim a small corner in your much valued Department. Since writing last we have removed from Medicine Hat to Lethbridge, which is a very scattered town with a population of about 2,150. It is incorporated and has a Mayor, four churches—English, Methodist, Presbyterian and Roman Catholic—large brick town hall just being completed, a hospital, a beautiful brick school house, Protestant, large northwest mounted police barracks, a convent, a Roman Catholic school, round house and station, besides the hotels, grocery stores, etc. A river flows long on its peaceful way close by, from which Lethbridge gets its supply of water.

The railway here is narrow gauge, trains running from Lethbridge to Dumore and from Lethbridge to Great Falls, the Montana Junction being just opposite our house, and about two miles out of town. Three or four trains pass every day, so it is not quite so lonely as if there were none. Some of the engines here have been repaired lately and they look very bright and nice now. The train from Great Falls is just coming in as I am writing. The engines here are much smaller than the ones at Medicine Hat. They have large water wagons which hold about seven or eight barrels, for taking around the water in. We very often hear the coyotes, especially in cold nights, and have seen them too, in the morning. They come very close to the house and it is almost as good as a concert to hear a lot of them barking and howling together. We can also see the Rocky Mountains from here, they look beautiful when the sun is shining on the snow. On a clear day you can just about discern the passes among them. Well, I think I will close now for the present, wishing the B. of L. F., their *Magazine* and all connected with it success, I remain your friend and a fireman's sister.

Helen B. Miller.

CLEVELAND, OHIO, Oct. 19, 1891.

Editor Woman's Department:

As this is my first attempt at writing for your *Magazine*, I do not know with what success I will meet.

In regard to novel reading, I think that question has been ably defended and the ladies have written my sentiments to a T. I hope Miss Emma will think differently on that subject.

I will write a few lines in regard to my home and family. I am proud to state that I hold the title of A Fireman's Wife. I am also the daughter of a railroad and the sister of two railroad boys. Is it any wonder that I have a very great liking for railroad men? Our home is in Cleveland, Ohio. A husband, little girl three years old, and myself, constitute our family. We board with a private family. I have very little to do, consequently have a great deal of time in which to entertain husband and baby.

Of course, as all railroad people know, a railroad husband's time at home is very limited. But when he is here I endeavor to entertain him to my best ability, even play cards and read novels, and I think this an excellent way to keep his society. I think if we wives would study to make ourselves and surroundings more agreeable there would be fewer of those "horrid railroad men" of which we hear.

With success to the B. of L. F., I sign myself,

Puss.

DAYTON, OHIO, October 10, 1891.

Editor Woman's Department:

As I have been a reader of the *Magazine* for some time and a member of the brotherhood, I take pride in noticing the great change that has taken place in the correspondents to this department, and must say that your gentle hints are having the desired effect.

Dayton is a beautiful town of 60,000, and is the greatest manufacturing town in the State of Ohio, has the best of water, and an unlimited supply, broad streets, several lines of horse cars, also ten lines of electric cars, which run to the Soldiers Home, an institution that is known far and near. There are about 4,000 inmates and the grounds and buildings, especially in the summer time, are grand and a great attraction for excursionists and visitors. The public library is a beautiful building of stone, set in the midst of a fine park. Nice, artificial stone walks, good seats, and shade trees make it a popular resort of a warm day or evening.

Should like to see the subject, "Which has the greater influence over man—women or money?" discussed, as there are some able contributors to this department.

Respectfully,

Eclipse Lodge, 107.

[Open the discussion with an article giving your own opinions on the subject.—Ed.]

SELF-INVITED PEOPLE.

Don't be a sponge. When an invitation is extended to you, don't take it for granted that it was given for all time and eternity. When you are simply invited to call again when in town, don't take bag and baggage when you do so. Above all things in the world avoid wearing your welcome out. Don't drop in on your friends at unexpected times and spend a day or so with them. Even if they have the room, they may wish it for the pleasure of another's company. The best of friends should ask permission to spend the night if they have not informed one of their coming.

When you see you are discommoding any member of the family you should go to a hotel. It is not proper to go anywhere and expect to live for even a week without paying board; especially when you know every member of the family is working hard to lay by something for the "rainy day."

The best way to keep your friends is to always "put up" at a hotel and pay your board. Then if asked to dinner or some specified meal, go by all means, and enjoy yourself. When you do call again you will be more appreciated, but remember, self-invited people are seldom, if ever, welcome.

Hilda Chesterfield.

MONTEREY.

In a mantle of old tradition
In the rhyme of a vanished day,
Sits the shrouded and silent city,
The city of Monterey;
The ruined fort on the hilltop
Where never a running stream
Looks down on a cannonless fortress,
On the solemn city of dreams.

Gardens of wonderful roses,
Climbing o'er roof tree and wall,
Woodbine and crimson geraniums,
Hollyhocks, purple and tall,
Mingle their odoriferous breathings
With the crisp, salt breeze of the sands,
Where pebbles and sounding sea shells
Are gathered by children's hands.

Women with sun burned faces,
And the liquid Spanish eye,
Dark as the forest berries
That grace the woods in July,
Feeble and garrulous old men
Tell in the Spanish tongue
Of the good, grand tunes at the Mission
And the hymns that the fathers sung.

Of the oil and the wine and the plenty,
And the dance in the twilight gray—
"Ah! these," and the heads shake sadly,
"Were good times in Monterey."
Behind in the march of cities—
The last in the eager stride,
Of the villages born later,
She dreams by the ocean side.

A Fireman's Sister.

SAN JOSE, CAL., October 4, 1891.

ROODHOUSE, ILL., October 5, 1891.

Editor Woman's Department:

I come seeking admission to your charming fre-side. I am a reader of your grand *Magazine*, and have been patiently waiting to see another letter from Roodhouse, but have seen nothing from here since "Marguerite's" letter in the May number. (Our J. M. Dodge Lodge, No. 79, is still alive, and well may we be proud of her. My husband is neither fireman nor engineer, but for each he is earnestly working. This place is composed mostly of railroad people, and not a brighter, or more flourishing town can be found along the C. & A. In the neighborhood of 500 new buildings have gone up inside of a year.

Now, my dear readers, just a word for the railroad men. How my heart goes out to each and every one of them. I often hear a remark like this, "Oh! he is nobody; he is nothing but a dirty railroad." How can anyone speak so lightly of them? Knowing the risk they run, the hardships they endure, the many nights' rest which are broken, the wind and storm which they are, oh! so often in, seeing the thousands of lives trusted into their keeping day after day, and then say he is nothing but a "rail-roader."

Of course there is always bitter mixed with the sweet. Take any class of men, you will always find good among the bad. Just so with our railroad men, but do not cast all of them away. Now, if I were a young girl seeking a companion through life, I would not fail to give these railroad men a call, for I think they make the best husbands of all.

And now, to the mothers, sisters, and wives, you who have dear ones out on this great field of battle, exposed to the dangers which lie around them, let your voice ascend to the Master above in an earnest prayer for the safety of your son, of your brother, of your husband. May he be ready to grasp the pencil and sign that great Callier's book with a firm and steady hand. Let him run his engine with that self-same steady hand and earnest heart so when his last race is run he will be ready to meet that pay car of all pay cars with a glorious check.

Wishing the *Magazine* success, and for God's ever watchful care and protection over the boys who shovel the coal, and over our noble engineers,
I sign myself,
Peggy M.

TROY, N. Y., Sept. 23, 1891.

Editor Woman's Department:

Mrs. Henry B. Jones in her letter in this month's *Magazine*, mentions a subject in which I am much interested. She says she knows "many a girl who has married a workingman before she knew how to cook a steak or bake a loaf of bread or a biscuit." Did these many girls propose to the men they married? Why did not the men, who, at other times think so much of their stomachs, find out during courtship whether their best girls could cook and bake? They were so blinded that they were content to be with the girls and did not care what those girls knew about domestic affairs. A man has only his self to blame if he marries a woman who cannot do what he desires her to do. David Copperfield came to understand that fact thoroughly after he had tried in vain to train Dora's mind.

About the question: Why should a woman be compelled to ask her husband for money? Suppose, for instance, "the lord of creation," had to go to his employer and say: "I want to get a pair of shoes, a couple of pounds of coffee and ten pounds of sugar to-morrow. The coffee and sugar will cost \$1.30 and the shoes \$1.50 and you might as well give me a quarter for beer." I think I can fancy the blank look of astonishment on the poor man's face, if such a thing were even hinted at. Does not his wife work for him as much as he works for his employer? And is she not worth of her hire, even as he is worthy?

We may truly say she is his companion, not his servant, and that makes the difference. She is his companion and he requites her for her companionship with his own. She works for him besides, and he should pay her for that. Of course she has no right to be extravagant, and perhaps she would not be inclined that way if she had a monthly allowance or wages. She would know how much she had to spend, and if she had any common sense she would use her money wisely. Will the kind hearted editor ask me to come again, or have I made myself obnoxious?

Sincerely yours,

Wilde.

[Come again. Perhaps some of the brothers will answer your questions.—Ed.]

PINE PLAINS, N. Y., October 8, 1891.

Editor Woman's Department:

I have been a constant reader of this splendid *Magazine* nearly two years, and it is always welcomed in my home. In the August number "Marie W." asks for the names of some books on engineering for a young fireman to read. I would recommend to her Mr. A. Forney's "Catechism of the Locomotive," published by the *Railroad Gazette*, Broadway, N. Y.; price, \$3.50. Also, "Progressive Examinations for Locomotive Engineers and Firemen," published by John A. Hill, lock box 173, New York City, N. Y.; price, 50 cents. I am a young fireman myself. I studied "Forney's Catechism" and it helped me a great deal.

Yours truly,

Harry E. Palmer.

TO ONE I LOVE.

Why do we keep from dear ones
The tender, loving word?
Why should we hide the friendship
With which our hearts are stirred?

Why not speak out, my darling,
The wonderful love we feel,
And make the dear ones happy
With what our lips conceal?

How many hearts are hungry
For words they never hear,
Some little sign to tell them
That they to us are dear.

We set the seal of silence
Upon our lips and so
The depths of our affection
They guess, but never know.

You Know We

ENVILLE, TEXAS.

LAUREL, MONT., Oct. 12, 1891.

STATION —, October 11, 1891.

Editor Woman's Department,

I knock for admittance to your charming circle this rainy morning. It has rained for the last two days and is so muddy one can't even go to her next door neighbor's to chat, and being so lonesome, I'll write a few lines.

I will try to interest you by telling you of my trip to Montana from South Dakota. I left St. Paul late, and the next afternoon I found we were in the Bad Lands. It was the first time I had ever seen hills rise up to peaks; others looking like haystacks, then a side of a bluff would run up as straight as the side of a house, horrible chasms, beautiful glens, deep gulches, all one continuous picture and one of nature's own. Now and then coal would crop out of the sides of the bluffs, showing majestic ruins, or the whole place looked as though it had been burned out. I looked at this wonderful and fearful sight until my eyes ached and finally darkness hid it from sight.

The next morning the first sight was mountains and has been ever since; I can see high mountains to the southeast, and higher to the southwest—the east are of the Rockies—and are covered with snow all the year round.

The Yellowstone Valley is a very pretty place; it consists of three benches or steps; the one next to the river is one and a half miles wide. Farther back is the second; it is two or three miles from the river, I am on the one farthest back. The soil looks like yellow clay, and all over the farms litches are dug for the purpose of irrigation, as it does not rain very much or often. The ranchers pay from \$50 to \$100 for the right to use water from the big or main ditch. The extreme limit is \$100 for water privilege.

Wherever one looks it is beautiful. A guide took me up a large bluff called Square Butte; it is about one mile square at the base, and the top is about 60 acres square. One can look 90 miles and it seems as though it was only 20 or 25 miles. The air is very light up there. I have also been on Custer's battle ground.

A Fireman's True Friend, *Myrtle.*

MANISTIQUE, MICH., September 30, 1891.

Editor Woman's Department:

I thought I would write you about our little town of Manistique, whose population is nearly four thousand, and whose edge lies on the shore of Lake Michigan. We have two commodious school houses and a goodly number of stores, which I think are all doing well. We have a number of churches of different denominations and a great many church-going people. There are two large saw mills and one planing mill which are all doing a good business, running day and night most of the time. There is also a fine iron furnace which melts iron and casts it into bars. That, also, runs day and night. The switch engine carries the iron bars from the furnace to the main line, which is the Soo line, and they carry it away to other parts. They have many visitors to the furnace to see them cast, as it is a beautiful sight. We have nice, pure air, and in consequence have many summer visitors, and their chief resort is the Big Spring, which lies nearly three miles from here. The spring is a wonder in itself, as it is very large and very beautiful, consisting of over a quarter of an acre of ground, and is about forty foot deep and very clear. One can distinctly see a small coin lying on the bottom of the spring. There is a little stream flowing from it filled with lovely moss. The stream runs about eighty rods and empties into Indian Lake. From Manistique we drive to the lake, from there take a yacht to the stream before mentioned, then paddle up the stream in small row boat till we come to the Big Spring, which is truly picturesque. Now, if any of my readers should ever come to Manistique in summer time, do not fail to visit the Big Spring, if possible, as you will never regret it. Mrs. Editor, a special invitation to you. Yours truly,

Mrs. Amelia Lyman.

[Many thanks. I wanted to visit that part of the state while at the "Soo," but had not time.—Ed.]

Editor Woman's Department:

Allow me to say a few words about novels. I suppose there is only one opinion about the good novels. Everybody ought to read them. But the question is, What is a good novel? There are a very few that suit me. I want a novel to be a true picture of the real life; but most of our novels are lying; they make us believe that the world is different from what it is. In every novel there is a hero; he is always an angel; he is often in danger, but you will never see him die; everything comes out all right at last. Charles Dickens is not better than the rest of them, so far. And the most of the American novelists are writing books of the same kind as were written hundreds of years ago, and we can blame ourselves for it, because we want it that way. We do not want to see the truth. We condemn Zola and Tolstoi, and go back to Dickens and Scott. We do not know that the world is in progress. We are looking backward and are more than satisfied.

Ed Lynch.

[Perhaps it is because we suffer so much from the sorrowful endings in real life that we want it different in novels.—Ed.]

JERSEY CITY, N. J., Oct. 13, 1891.

Editor Woman's Department:

I have read the *Firemen's Magazine* for several months and find it a very interesting book. I take great pleasure in reading through the Woman's Department. I don't know of any better subject to write upon than the welfare of the railroad men. I, for one, think if those who are inclined to go astray could have acquaintance with true Christian women it would not take very much to reclaim them. Would it not be a grand thing to see all our R. R. men true Christian gentlemen? Well, now, I think if each relative and friend of the R. R. men would decide to take a step in this direction to reclaim all those who like sheep, have gone astray and wandered far from the Father's fold, there would be a mighty harvest. Sister, pray for your brother or friend. Mother, do not forget your boy, or perhaps your husband is not a God-fearing man; talk to him and pray for him until you accomplish what you set out to do, to make him one of God's own chosen ones. I trust that some one interested in this work will write something better than these few lines. I think a great deal but have not the gift of giving expression to all my thoughts.

A Fireman's Friend,

J. H. N.

JUSTICE.

BY REV. STOFFORD BROOKE.

Three men went out one summer-night,
No care had they, or aim:
They dined and drank, and said, "ere we go home
To-night, we'll have a game."

Three girls began, that summer night,
A life of endless shame:—
And went through drink, disease and death,
Swift as a racing flame.

Homeless and lawless, loathed, they died,
Rich, honored, praised, the men—
But when they all shall meet with God,
And Justice speaks, what then?

LONDON, ENG.

NO WOMAN in ordinary circumstances can rear four children in eight years and keep the run of society too. A mother, of all women, should be in bed by 10 o'clock each night if she values her looks. Better still if she goes to bed at 9, not to sleep always, but to read comfortably or chat with sister or intimate. But one might as well talk to women about turning Mohammedan as about going to bed at 9 o'clock. Patti does it, and Lucca, and all the great singers who are radiantly handsome at an age when other women retire from the foreground.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE NORTHWESTERN CONSPIRACY AND FEDERATION.

It is an axiom that "a chain is not stronger than its weakest link." If the stronger links could speak they would point to the weakest link and demand its removal. They would say, "that link is totally unreliable when any strain is put upon the chain. It will break at a time of supreme importance and will bring about disaster." The reasonableness of such conclusions is apparent, they are logical and conclusive. The weakest link is always the dangerous link. A ship riding at anchor goes upon the rocks, with all on board, because the weakest link in the cable breaks. And thus we could multiply illustrations demonstrating the dangers which lurk in the "weakest link."

Suppose we call federation a chain which binds certain labor organizations in union. Is the suggestion extravagant? Is the idea far-fetched? As an illustration is it not apt, pertinent and appropriate?

The various organizations constituting the federated body are not stronger, in a certain sense, than the weakest organization, and this weakness, like the imperfect link of a chain, is never disclosed until its strength is put to the test.

Now, then, a federation known as the Supreme Council of the United Orders of Railway Employés was instituted. It was composed of four organization of railway employés, viz:

The Brotherhood of Locomotive Firemen.

The Brotherhood of Railroad Trainmen.

The Switchmen's Mutual Aid Association.

The Brotherhood of Railway Conductors.

The organizations, by their representatives, constituted the Supreme Council; they were the links in the chain which bound the orders together in fraternal fellowship.

We may be reciting history that some persons will regard as a little ancient. This is a fast age and there are those who are disposed to treat things of recent date as if

small consequence. There are others who deem it the part of wisdom to treasure up incidents which mark epochs in the ascending or descending grade of nations, organizations and individuals. They become monumental land-marks which resist decay and obliteration.

Is it to be supposed that the treason of Benedict Arnold is to be effaced while the rivers run to the sea? Does not the apostacy of the miscreant take on darker coloring as the years join the centuries?

Is it to be presumed that the three New York militiamen, Anderson, Paulding and Van Wert, will ever be forgotten? In the drama of Arnold's treason, the names of the three young men, though poor and obscure, by an irrevocable decree, must forever shine in the constellation of American patriots as stars of the first magnitude.

It was these three men who required Major Andre to halt his steed. They searched the spy; they found the treasonable documents; they handed the traitor's associate to the proper officer. They saved West Point, the Gibraltar of America, from the grasp of the British forces; and this they did though tempted with shining gold. These poor militiamen spurned a bribe, and made their names immortal by patriotic devotion to their country.

The traitor, Arnold, had been a courageous, patriotic soldier. He had sealed his devotion to his country's cause by his own red blood, and had won the confidence of Washington, who said, when informed of Arnold's treason:

"I thought that an officer of courage and ability, who has often shed his blood for his country, was entitled to confidence and I gave him mine. I am convinced now, and for the rest of my life, that we should never trust those who are wanting in probity, whatever abilities they may possess."

Arnold escaped. England endorsed his treason, gave him gold and a responsible and lucrative command, but he did not, therefore escape the universal loathing of mankind. Major Andre, the spy, died of a broken neck. The cause of the colonies eventually succeeded, but treason did what it could to overthrow it in irretrievable disaster.

Arnold was the weakest link in the military chain which bound the colonial armies together, but the three humble New York militiamen discovered it before the strain was put upon it, designed to drag West Point into the clutches of the enemy of colonial federation.

The trouble with Arnold, the traitor, was that he lacked probity. Courage he had, of a certain order, but he was mean, sordid and revengeful. As a foe he was relentless and implacable, and being disqualified by nature for any generous deed, he nursed his

ates, and in secret association with the enemies of his country formed a conspiracy which, had it succeeded, might have changed the destiny of mankind for centuries.

What of all this? Why such a lengthy assertion on Benedict Arnoldism? Simply this, that Benedict Arnoldism is just as infamous in a federation of orders of railway employes, as anywhere else.

Manifestly, the grand officers of the B. of R. T. were guilty of conspiracy to vent their revenge upon the members of an associate order.

Is this allegation true? If it is true, if it rests upon a solid foundation, if it has been proven true after the long and patient investigation by the peers of the parties charged with a monstrous offense, then it must stand against the parties charged until properly atoned for, though a thousand conventions were transformed into washing and white-washing machines for the purpose of removing or obscuring the insufferable stain.

The records show the following charge:

SWITCHMEN'S MUTUAL AID ASSOCIATION OF NORTH AMERICA, OFFICE OF THE GRAND LODGE, CHICAGO, ILL., June 17, 1891.

To the Supreme Council of the United Orders of Railroad Employes:

GREETING: The Supreme Council having refused to accept the withdrawal of the Switchmen's Mutual Aid Association from membership in the United Orders of Railway Employes, it therefore becomes our duty as the representatives of the above Association to prefer charges before this body against the Brotherhood of Railroad Trainmen.

We charge that the Brotherhood of Railroad Trainmen, on and prior to the 14th day of May, 1891, entered into a conspiracy with the Chicago & Northwestern Railway Company, whereby the switchmen in the employ of that company were discharged, and their places filled by the members of the Brotherhood of Railroad Trainmen.

The act of conspiracy we regard as a violation of the recognized ethics of labor organizations, as well as the letter and spirit of the laws of each of the organizations which compose this federation.

(Signed)

FRANK SWEENEY,

JOHN A. HALL,

WM. A. SIMSROTT.

Representing the Switchmen's Mutual Aid Association of North America.

The investigation of the foregoing charge required 148 pages of closely printed testimony. Every extenuating word, every denial was taken down and considered, and after all the verdict of the investigating committee was as follows:

To the President and Members of the Supreme Council of the United Orders of Railway Employes:

GENTLEMEN:—We, the undersigned committee, appointed by the Supreme Council June 17, 1891, to investigate and report to this body on the charges of conspiracy preferred by the Switchmen's Mutual Aid Association against the Brotherhood of Railroad Trainmen, beg to render our report in pursuance of the instruction given. Your committee went into session at 2 P. M., June 17, 1891, at the Grand Pacific Hotel, Chicago, Ill., in room 201, and adjourned June 20, 1891. As a result of our labor we herewith present to the Council a full and complete stenographic report of the evidence given. After a careful deliberation on the evidence as submitted we find the

Brotherhood of Railroad Trainmen guilty of conspiracy as charged. And would, therefore, recommend that the Supreme Council impose such penalty on the Brotherhood of Railroad Trainmen as they in their judgment may deem prudent.

JOHN J. HANNAHAN, Chairman.

DANIEL J. CARR, Secretary.

J. W. MARTIN.

The verdict is explicit. It is without circumlocution. The charge of conspiracy with the officials of the Northwestern railroad, to discharge switchmen and fill their places with members of the B. of R. T., was made, and it was shown to be true.

Suppose it was charged by the grand officers of the B. of R. T. that individual switchmen had violated the rules of their order, does such acts justify treason?

Benedict Arnold charged that he had been improperly treated by the Colonial Government. Was it ever urged on that account that his treason was justifiable, and ought to have been indorsed?

We have never sought to make it appear that either individual switchmen, or the S. M. A. A. were immaculate or infallible. That order was not on trial, and to use any real or supposed wrongs inflicted by them as an excuse for treason only brings the guilty parties into more odious conspicuousness.

We discuss the charge of conspiracy made against the grand officers of the B. of R. T. and assert that they were proven guilty. All that these men could say in their own defense did not change the facts. There they stand, black and towering. To indorse them, to condone them, to applaud them, to pooh, pooh at them, to belittle them, and treat them as of little or no importance, is stultification which exhausts all their sources of folly and invites universal contempt and abhorrence.

We are profoundly interested in federation. We have believed it to be the one thing needful to secure to railway employes, in the largest measure, all rightful demands and to enable them to resist all improper encroachments upon their welfare. In these regards our mind has undergone no change whatever. In the advocacy of federation we take back no one word we have ever written or spoken, in public or private. It is to come. It is to be firmly established. It is to win victories for labor. But any federation that endorses treason, that condones conspiracy, that applauds apostasy, will not succeed, and ought not to succeed. No federation of organizations can, by any possibility, command the respect of honorable workingmen, that includes an order which bears all the odium that attaches to scabbing.

Organized workingmen, no matter under what banner they march, abhor scabs. And this being true, what must they think of an order whose grand officers are so lost to all sense of honor as to enter into a con-

spiracy with an enemy of organized labor to strike down four hundred innocent switchmen, who were quietly pursuing their perilous vocation to earn food, shelter and clothing for wives and children dependent upon them?

Look at these switchmen; see them on all the lines of the Northwestern railroad. Note the trains thundering along, bearing as a part of their freight, the lives of Brotherhood (?) Trainmen; and now note the blank despair upon their manly faces as the order of their dismissal is read to them?

A thunderbolt from a clear sky could not have astounded them more. They could not understand it. They could not be made to believe that the grand officers of the B. of R. T. had entered into a conspiracy to inflict upon them such a grievous wrong.

They could not believe that the grand officers of the B. of R. T. had, like the serpent that beguiled Eve, squatted near the ears of railroad officials to concoct a scheme to rob them and their families of bread.

But all too soon the damning testimony was forthcoming and a jury fixed the stigma upon these grand officers.

Even now switchmen do not believe the rank and file of the Brotherhood of Railroad Trainmen indorse the unmitigated act of wrong and treachery. The Railway Trainmen are hard workers, their vocation is perilous. Many of them have wives and children dependent upon them whom they would dislike to hear cry for bread. And when they reflect that their grand officers, for the purpose of revenge upon two or three or a half dozen switchmen, engulfed *four hundred* men in misfortune, their better nature will revolt. As men—as workingmen, they are built that way, else some evil genius has transformed them into some form of animated beings without heart or soul.

But it is said the great order of Railroad Trainmen have indorsed their grand officers with their guilt clinging to them. This is true, and it is not true. The Galesburg convention did indorse the grand officers of the B. of R. T., but in doing that the convention was governed by the declarations of the grand officers denying that they were conspirators, that they had conspired with the officials of the Northwestern railroad to strike down the four hundred innocent and unoffending switchmen in the employment of that corporation, and the convention, acting under influences created for the purpose of debauching judgment and dethroning reason, failed to consider that the grand officers of the B. of R. T. had been proven guilty of conspiracy, that they were guilty of treason to obligations as sacred as were ever imposed or assumed by men.

Nor was this the only misguiding influence brought to bear upon the convention.

The fact that the order instead of the grand officers had been expelled from the Supreme Council, was made to serve as a pretext why the grand officers should be indorsed. The men reasoned, "We are not guilty, but the penalty has fallen upon us as it has upon the guilty, and therefore, to do ourselves justice, we will indorse those who were guilty and who should have been punished."

This course of reasoning, if reasoning it can be called, served the grand officials a valuable purpose. It insured their escape from merited odium and maledictions. They could say, and doubtless did say, "The order committed no offense, and yet it has been adjudged guilty, therefore, to rebuke the action of the Supreme Council, you are bound to whitewash us," and then with a whoop which music and banqueting emphasizes the grand officials were indorsed. But there were **FOURTEEN** sturdy Railroad Trainmen who could not be debauched, who could not be swayed from a purpose as honorable as ever animated men charged with the performance of a great duty. These men saw through every design, every trick and scheme, and to the last stood firm. They could neither be bought nor bribed nor intimidated. They knew the grand officers had been guilty of treason to the order and to organized labor. They knew the grand officers had reduced the great order to a *scabbing* organization in the estimation of all honorable men. They knew that Benedict Arnoldism had been introduced into the order, and that because of the treason four hundred innocent switchmen had been deprived of the means of making an honest living for their wives and children, that their humble homes had been broken up, that want and penury, hunger and rage had taken the place of comfort and contentment, that these men had been set adrift because of the treason of the grand officials of the B. of R. T., and that when they applied for work the fact that they had been locked out and kicked out by the act of conspirators, work was denied them, and that they were compelled to seek work anywhere in street cleaning gangs that they might keep soul and body together.

This at least fourteen delegates to the Galesburg convention knew, and their revolting manhood would not permit them to indorse conspiracy and treason. They would have as soon subscribed money to build a monument to Benedict Arnold.

Do the grand officers of the the B. of R. T. believe that any honorable labor organization in the world would indorse their conspiracy, their treachery, their treason? There is not such an organization in the world, unless one can be found that indorses scabbing. Such an organization, fit only for "stratagems and spoils," whose very corner

ones are laid in treason to labor, might do a more offensive act, but none other.

Do the grand officers of the B. of R. T. doubt this? Would they like to put the proposition to the test. Let them name Chicago as the city. Let the arena be — hall, and they shall be accommodated, and when a vote is taken, when 5,000 workmen compose the audience, they shall save, if they believe they are not conspirators and traitors, an opportunity to change their minds.

To this it must come, to this it will come in due time. Treason to protection in the interest of the enemies of organized labor must be properly rebuked, properly exposed. It deserves the condemnation, the maledictions of all honorable men, and the guilty will not be permitted to escape.

We have said that we are in favor of federation, but it must be without the taint of reason. In the chain that binds orders together for the good of all there must be no link with the corroding rust of treason upon it. Better far that all labor organizations should cease to exist than that they should flaunt a flag in the face of workingmen black as night with Benedict Arnoldism.

CHILD LABOR.

There are a few, a precious few, as compared with the millions, who have a correct conception of the ills which flow from child labor. If the most thoughtful in the land were required to designate a social and industrial wrong more than any other prolific of mental, physical and moral degeneracy, we doubt not that "child labor" would be named.

Turn it which way you will, examine it as you may, the question of child labor has no bright side, nor can its contemplation afford satisfaction to anyone unless their being is shockingly debased.

It is worth while in the discussion of the subject to descend to particulars, to analyze with unhesitating candor and severity.

Starting out with the proposition that child labor is a crime against humanity, the question arises, Who is to blame? or, Where does the blame rest? Quite likely the reply will be "Society is to be blamed," therefore, as in criminal proceedings, since a whole community or a state can not be indicted, the crime escapes punishment.

"Oh," says one, "our civilization is to blame, the body politic, social, industrial, religious," all are involved, and hence the verdict, "Nobody is to blame."

The discussion of the evil effects of child labor is not of recent date, it began in England more than a century ago, where employers regarded children as material to be worked up, and it was worked up to an extent that horrified civilization, and finally

brought Sir Robert Peel to the front to devise ways and means by which the poor children might be redeemed from conditions compared with which savagery would have been a supreme blessing.

It is held in some quarters that our civilization is peculiarly English; admit it, and then read the reports that have been submitted to parliament upon the condition of the industrial classes, and there will be little difficulty in arriving at the conclusion that American ideas of "child labor" are eminently English.

It has been held that in the United States of America in all things pertaining to the well being of the people, we were in advance of all other nations. In the form of government we boast that we did not borrow European ideas, but on the contrary, constructed a government especially designed to establish the sovereignty of the people; a government in which the poor had rights as sacred as the rich; and that the laws would protect the rights of all alike, and yet it is true, humiliatingly true, that even now, with all our boasting, the rights of workingmen are cloven down by decisions of English courts, made when the employer was master and the workman a slave.

But cutting adrift from such reflections, the question arises, What is the American view of child labor? Can it be said that there is any well defined sentiment upon the subject such as exists in England?

It is possible, but by no means certain, if an appeal were made to the whole people, as in the case of a presidential election, the national judgment would be recorded against child labor, and this uncertainty indicates to what a deplorable extent the national conscience has been warped and deformed regarding a matter which the profoundest thinkers of the period regard as of supreme importance.

Why is child labor permitted? What are the incentives which underlie this crime against humanity?

Child labor is permitted by society because society is soulless, heartless, because it is dominated by ideas which regard with apparent contempt questions which relate to labor, to the employment of children, notwithstanding the age is distinguished for the discussion of all sorts of moral questions.

As a general proposition only poor people have large families. In the homes of the rich it is no longer fashionable to be prolific. One child is the real aristocratic idea, and beyond three is plebeian and vulgar. This being true, questions relating to the prerogatives of poor men of the future are already mooted, the idea being to relieve them of the ballot. In England, while the elective franchise is being extended, in free America the codfish aristocratic class discuss the

propriety of abridging it. The argument is that the masses are degenerating and that, therefore, the institutions of the country are in peril.

It is held that the life of a generation is thirty-three years, hence the male infants of to-day in thirty-three years will be the men who will control the destinies of the republic. It is readily seen that with such facts in full view the child labor question becomes one of commanding gravity.

It is held by men who have investigated the subject in its moral and physical aspects, that child labor is of all others which now confronts the nation, the one that should create the most active solicitude.

Who are those who favor child labor? and why are they opposed to any movement looking to the emancipation of children from toil?

There are several classes of people who favor child labor: First, indigent families whose poverty is the result of circumstances over which they have no control. Widows whose orphan children must work to keep themselves and their mothers out of the poor house. Second, parents degraded by multiplied vices, who have less regard for the welfare of their children than bears have for their cubs; whose children are required and compelled to work that their degenerate parents may be idle and gratify their beastly inclinations. Third, parents whose greed of gain totally obscures all consideration of the moral, physical and intellectual welfare of their children, who are willing to coin their young lives into dollars and cents to gratify mercenary instincts and force upon society moral and physical deformities to propagate in due time a still more degenerate generation. Fourth, there is still another class, known as employers, whose natures are so deplorably depraved that the employment of children is one of the means devised to augment their wealth.

Such employers are the monsters of the age. They are without conscience. In all the fens, swamps, jungles and stagnant waters of the world, no animated thing is found more repulsive than the creature, having the form of man, who counts his gains, secured by child labor. His palatial home, his purple and fine linen, the luxuries which surround him, the food upon which he subsists, the downy bed upon which he reposes, all, everything, is damned, irrevocably cursed by the crime of child labor, by which the "human form divine" is distorted, the immortal soul shrivelled, the intellect shackled, and the child slave, at last grown to manhood or womanhood, sent forth to multiply a degenerate species of humanity, to describe which, the language supplies no adequate terms.

Does the pulpit take cognizance of the deplorable drift of events? Does it sound

the alarm? Does it mass its anathemas and hurl them at society and seek to arouse universal hostility to conditions which the devil and his imps have foisted upon humanity? How gladly would we now and here reproduce the declarations of the pulpit against the degrading crime of child labor, but, unfortunately the pulpit is silent.

Our readings enable us to say that lecture bureaus are numerous, and the intellect of the country is summoned to lecture upon "temperance, righteousness and a judgment to come," but whoever heard of a strolling lecturer, high or low, who chose for his theme the crime of child labor?

We have great institutions of learning and educators of renown, and millions are annually expended for education, but who of all the professional educators the country boasts, has sought to arouse the national conscience to the blighting curse of child labor?

The discussion of tariffs and currency, double standards and single standards, commerce and transportation, food and famine, etc., like Tennyson's brook, goes on forever, but who discusses the crime of child labor? Does echo answer who? It does more. It declares chiefly, we might say exclusively, the crime of child labor is discussed in the ranks of labor.

If there is in the United States a growing sentiment against the crime of child labor, it is chiefly due to the influence exerted by organized workmen.

Labor bureaus are taking up the subject and compiling facts.

We have before us, as we write, the report of the Minnesota Bureau of Labor Statistics, a book of nearly 400 pages, devoted exclusively to child labor and education. From this report we make the following extract:

If there is one proposition of government more universally accepted by our people than any other it is that the safety and permanence of republican institutions depends upon the virtue and intelligence of the people. But, children having nothing worthy the name of education, forced into factories at an early age, to toil for ten hours each day, cannot save in very exceptional cases, develop into intelligent men and women. Yet they are to become an integral part of our people, and the men, at least, who grow from such children are to be, by our theory and practice of government, entrusted with the important rights and duties of citizenship equally with the most intelligent persons in the land. We have based our government and public institutions upon the intelligence and virtue of the people. Everything which tends to build up that intelligence and virtue tends to strengthen and perpetuate republican institutions. Everything which tends to destroy that intelligence and virtue tends to break down our institutions. If certain tendencies of our industrial development are found to be at war with the development of the people, there an argument needed to convince any thoughtful man that such tendencies should be checked. To illustrate: If it be found that great factories best be developed, goods cheapened to the public and the production of certain classes of commodities facilitated and multiplied by applying child labor to improved machinery, does it follow that, in the

long run, the people are benefited thereby? We will admit that goods are made cheaper and more plentiful, but what is the effect upon children? Are they maimed, crippled, dwarfed, distorted, withered? Will they grow up human manikins, intellectually and physically, or full rounded men and women? Are they fitted in any degree to take part in the direction of affairs, or must their lifelong lot be meek obedience? or can they be trusted with power only at the expense of disaster? Some philosopher has said that "dirt is only matter out of place," and, so, the multiplication of machinery is not in itself an evil; it is simply, in many cases, a perverted good. We cannot afford to destroy our men and women in their childhood for the sake of cheapening commodities. We cannot afford to undermine republican institutions, nor profit in any way by tendencies and influences which have their issue in lowering the standard of humanity. If it is well that factories should prosper, it is better that men and women should be developed. Our institutions are more valuable and sacred than the material prosperity of a few individuals.

The foregoing indicates what labor bureaus are doing to point out the essential iniquities of child labor. The appeal is made to the patriot and philanthropist, to the statesman and the political economist—and above all, to the conscience of the nation. The employment of children of tender years in factories and shops should be declared a felony. It is a crime against humanity and the state. It contemplates generations of dwarfs, physical and mental.

In this connection it is worth while to state that "Dr. Snow, of Fall River, Mass., testified that the laboring people of that city were largely made up of foreigners, induced to come here by the manufacturers; that they were, as a class, dwarfed physically, and that after a careful examination of their antecedents he had come to the conclusion that the character of the labor they had been performing from childhood was responsible for their inferior development." Besides, he said that these dwarfed people were lacking in vitality. Parents thus dwarfed mentally and physically, have no higher conception of childhood than to harness it to a machine at the earliest possible day, and the factory lords of Fall River, still more debased, employ children to increase their wealth.

It is doubtless true that there is a growing hostility to child labor in the United States, but the sentiment is not sufficiently pronounced to bring about a sweeping reform. Laws are often dead letters, because there are few sufficiently courageous to note their violation and fly to the protection of the infant toilers, in which regard the working children of the United States are in a more forlorn condition than dumb animals, for whose protection there is a powerful association of philanthropic men.

We have said that the champions of the children subjected to toil are found in the ranks of organized labor, and if a public sentiment is to be created that shall emancipate those children from degradation, and make their lives something better than a

curse, labor organizations will have a large share of the responsibility. Said President Gompers, of the American Federation of Labor, at Detroit:

"Of all the ills that mankind suffers from, the unjust and cruel tendencies of modern methods of wealth producing, the one that seems to me to rise to horrible proportions is that of child labor. Our centers of industry, with their mills, factories, and workshops, are teeming with young and innocent children, bending their weary forms with long hours of daily drudgery, with pinched and wan cheeks and emaciated forms, dwarfed both physically and mentally and frequently driving them to premature decay and death. The innocent smile of youthful happiness is soon transformed into wrinkles and other evidences of early decay. The life's blood of the youth of our land is too frequently sapped at the foundation. The hope of a perpetuity of free institutions is endangered when the rising generation is robbed of the opportunity to enjoy the healthful recreation of the play-grounds or the mental improvements of the school house. The children of the workers have none to raise a voice in their defense, other than the organized wage workers, and I appeal to you to take such action as will protect them from the contemptible avarice of unscrupulous corporations and employers."

These are brave words; words opportune and fitly spoken, and should be heeded by every workingman in the land, who would emancipate childhood from the debasing influences of labor.

T. V. Powderly, General Master Workman of the Knights of Labor, is on record as saying, "The question of child labor and education is the most important that can come before us now or at any other time."

But, after all, labor organizations are not half aroused upon the enormity of the crime of child labor. In many factories children are practically buried alive, and in others, according to the New York report of factory inspectors, "children are crippled for life by machinery, which they should not be permitted to approach, much less control." The tale is one well calculated to horrify all people not dead to sympathy.

What of it all? This. Labor organizations can, if they will, score a triumph for God and humanity, by making child labor a burning question, and if they fail, generations of children, born deformed in body and in mind, will bear testimony to their incapacity to grasp a question fruitful of untold ills to humanity.

We have received No. 2, Vol. I of *The Trackmen's Ballast*, published at Charlotte, Mich. In the number before us we find the following:

The Trackmen's Ballast will be issued monthly in the interest of the Brotherhood of Railroad Trackmen and solicits the support of every member of the order and all men connected with railroad interests. Subscription, per year 50 cents. Address all correspondence to GEO. E. GUNN, Publisher.

Geo. E. Gunn is editor of the *Ballast*, and earnestly appeals to trackmen to join the order and subscribe for the organ of the order.

AMERICAN FEDERATION OF LABOR.

This great organization of the working-men of the nation holds its annual convention at Birmingham, Alabama, on the 14th inst.

That our readers may be advised as fully as practicable, we insert the full text of the following official circular:

AMERICAN FEDERATION OF LABOR.

HEADQUARTERS, 21 CLINTON PLACE, NEW YORK.

NEW YORK, OCT. 22, 1891.

To the Trade and Labor Unions of America—Greeting:

FELLOW UNIONISTS:—As the time approaches for the holding of the Eleventh Annual Convention of the American Federation of Labor, the thought arises in the minds of all sincere workers in our cause that every organization affiliated to the American Federation of Labor should make the greatest efforts and even temporary sacrifices, if necessary, in order that every Union may be fully and fairly represented. It should be our effort to make each succeeding Convention of the American Federation of Labor an improvement upon the preceding one, both in numbers and intelligence; keeping pace with the ever-increasing intelligence and pressing demands of the masses, and the development of the industries of our country.

On every hand we find organization and combination on the part of those who own or control wealth, and using their possessions to crush out the liberties, to stifle the voice, and pervert the rights of the toiling masses.

While it is true that many attempts have been made to grapple with this condition of affairs, puny and futile have been the results. These combinations can only be successfully met and coped with by a compact and thorough organization of the wage-working classes of our country. The more thorough our organization, the more complete our representative capacity in the Conventions of the American Federation of Labor, the more we will demonstrate to the world our fitness to grapple with this nineteenth century phenomenon.

The whole cause of humanity appeals to us to be true to the mission of our class; and help, in the never ending contests for reform, justice and right. The perpetuity of the institutions of our country, the freedom of the citizen and the man, the burdens upon the shoulders of our sisters, the cry of the young and innocent children for relief demand of us to do all in our power, to exert every effort we are capable of to bring about a condition of affairs more rational and humane, and relieve us from the stigma of carelessness, indifference, or negligence of these great wrongs by which we are surrounded.

It is for the above reasons that we urgently appeal to every organization entitled to representation at the conventions of the American Federation of Labor to be thoroughly and fully represented.

The Eleventh Annual Convention of the American Federation of Labor will be held at Erswell's Hall, Birmingham, Alabama, December 14th, 1891, and will be called to order at ten o'clock A. M.

The representation in the convention will be upon the following basis: International and National Unions with less than 4,000 members, one delegate; for 4,000 members or more, two delegates; for 8,000 members or more, three delegates; for 16,000 members or more, four delegates; for 32,000 members or more, five delegates, and so on. Local, Trade, or Federal Labor Unions, State Federations, Central Labor Unions, Trades Assemblies, or Trades Councils, one delegate each. All organizations to be entitled to representation must have a certificate of affiliation (charter) at least thirty days before the date upon which the convention is about to be held. Any delegate representing a Union, must be a member of the Union, and if not a craftsman of the trade Union which sends him, the Union must give the reason why such delegate was chosen. Delegates must be elected at least two weeks before the time of holding the convention, and the names of the delegates forwarded to the Secretary immediately.

The per capita or delegate tax must be paid full to entitle organizations to representation. By Article IX, Constitution A. F. of L. Since the constitution requires the Secretary to furnish the Committee on Credentials at the convention with a statement of the financial standing of each affiliated body, organizations will see the necessity of sending their accounts previous to the convention, and the aid in the facilitation of the work.

Hotel accommodations have been arranged by the Local Committee, at the rate of \$2.00 and \$2.50 per day, at the Florence Hotel. The Headquarters of the Executive Council during the convention will be at the Florence Hotel.

Again urging that all Unions entitled may be represented, and to notify the Secretary of the name and address of the delegates elected at least ten days before the holding of the convention. We are,

Fraternally yours,

SAM'L GOMPERS, President

CHRIS EVANS, Secretary.

American Federation of Labor

P. J. MCGUIRE, 1st Vice-President, } Executive

WM. A. CARNEY, 2d " " } Council

JOHN B. LENNON, Treasurer, }

N. B.—Bring this call to the notice of your Union. Labor and friendly papers please copy.

The American Federation of Labor, so far, has accomplished splendid results, and Samuel Gompers, President of the organization, is eminently the right man in the right place. Mr. Gompers is practical. He wants workmen to have fair wages and reduced number of hours of toil, and the great organization, grasping this proposition firmly, moves steadily forward in the line of success.

This *Magazine* expresses the hope that the convention will be harmonious and fruitful, of lasting benefits to the American toiler.

WORLD'S FAIR WAGES.

A writer signing himself "American Toiler," writes to the *Chicago Herald* as follows:

I should like to know why, in view of the fact that many thousands of dollars have and will be put in ways that are not essential to the success of the fair, the same spirit of liberality is not shown to the poor laborers. I see that the rate of wages has been fixed at 15 cents an hour or \$1.50 for a day's work of ten hours. A man cannot support a family in Chicago on this wage. The bare necessities of life are high, and lost time through wet and bad weather will place them beyond his reach. In a great national undertaking like the world's fair, surely the promoters can afford to pay the men who will do the hard work a fair day's pay for a fair day's work. They at least ought to pay their men as much as unskilled labor is paid in the stockyards and packing houses, which is \$1.75 per day. There was no lack of money to entertain and pay for the state parties for the lady delegates when they came to Chicago, and there has been a great outcry over the cutting down of the salaries of some officials of the fair. But the poor laborer has to be content and expected to be thankful for a pittance on which he cannot live. If the fair is to be of any benefit to the workingmen employed on it fair wages and the benefit a large number. It will be of more benefit to the community at large that 500 heads of families get even 25 cents a day more than that one or two men get \$4,000 or \$5,000 per annum. In letting the contractors the directors should make it bind the contractors to pay not less than 17½ cents per hour for unskilled labor.

So far, the World's Fair, the Columbian exposition, to be had some time in Chicago, has been one continuous exposition of dis-

sting snobbery. There has been no recognition of labor except to beat it down on the earth, while the payment of princely salaries to snobs of both sexes went forward at such a plutocratic rate as to cause the indignation of Congress. "American Toiler" puts the case in its true light. The savagery of those who control the Colombian Fair, or whatever it is called, in tting wages at a point that a man cannot e and support a family, is as Christless as ything to be found in this age of Bibles d high civilization (?). It is a continental, international infamy, and American toilers should permit the exposition to hang e for another four hundred years, rather an erect the buildings as Pharaoh's slaves ilt the pyramids. If American toilers are work, sweat and starve that a few plutats may shine, then it were better that e foundation of such a stupendous monument of pride and poverty should never laid.

LOCOMOTIVE ENGINEERING.

The *Locomotive Engineer*, in its November ue, contains the following notice of "a ange" in the ownership and management that valuable publication:

On the first of October, Angus Sinclair, editor of *National Car and Locomotive Builder*, and John A. Hill, editor of *The Locomotive Engineer*, formed a partnership and purchased of the American Marxist Publishing Co., *The Locomotive Engineer*. The paper will complete its present volume to quary next exactly in its present form. For 1892 e name will be *Locomotive Engineering*, with "a ctual Journal of Railway Motive Power and elling Stock" for a sub-title. The page will be en- gered to four columns, so as to admit of the use of ger and better engravings, and the number of ges will be increased very much—twenty pages of iding matter anyway—and the price advanced to 00 per year.

Mr. Sinclair, who is well known as the author of *Locomotive Engine Running and Management*, d as Secretary of the American Railway Master echanics Association, will hereafter devote all his ne and attention to this paper, while John A. Hill ll continue just as he has, only with increased zeal. The present owners have secured for the next year umber of new and intensely interesting features, d propose making the paper a model of its kind. The e educational features will be kept up and in- eased, historical matter, current events, and, in t, everything new that can be of interest to any an employed in the motive power or rolling stock partment of an American railroad, will be sought d shown.

Our readers have repeatedly assured us of their mplete satisfaction with *The Locomotive Engineer*. any have expressed a wish to see it a weekly, and indreds have written that it was worth a dollar a umber.

Now, we believe that a good monthly is far better an a poor weekly—the average railroad man can't ep track of a weekly.

We will have room to show everything of interest e new paper; we are concretid enough to think e can make the best practical paper in the field— th of us have earned our bread with the scoop d the throttle—and we propose putting *Locomotive Engineering* on trial for her life. Will you be on the ry?

We have established an office at 912 Temple Court, rner Nassau and Beekman streets, where we will e glad to welcome all our friends.

ANGUS SINCLAIR.
JOHN A. HILL.

In railroad literature no two men have won a more enviable reputation than has been awarded Messrs. Sinclair and Hill. In theory and practice, they are the highest authority in railroad circles in all matters pertaining to "locomotive engine running and management." They have been close students of the locomotive engine and of the railway service generally, and as writers and authors have won enduring distinction. That they will make *Locomotive Engineering* a necessity to locomotive enginemens is a foregone conclusion, and the price of subscription will place in the hands of firemen and engineers more valuable information than can be secured for the amount required, \$2.00, from any other source; and speaking for ambitious firemen, we advise them to become subscribers.

Under the editorial management of Mr. Hill, the *Locomotive Engineer* has more than met expectations, and in association with Mr. Sinclair still larger expectations will be manifested, and that they will be fully realized we do not doubt.

PREMIUMS FOR VOL. XVI, 1892.

We desire to address a few words to all the Magazine Agents of the lodges throughout our entire jurisdiction.

The premiums for 1892, Vol. XVI, are as follows:

First prize, one hundred dollars.

Second prize, fifty dollars.

Now is the time to begin the work with that earnestness that commands success. We indulge in no vain boasting when we say the *Magazine* is worthy of the best efforts, of not only its agents, but of the united efforts of the membership.

We make no comparisons, we attempt no parallels. We say of the *Magazine* as Webster did of Massachusetts, "There she stands."

If the *Magazine* has not stood fast and firm by the Brotherhood of Locomotive Firemen, in shine and storm, let it go. If a principle of organization and federation has been struck down by the *Magazine*, let it go. If the *Magazine* has been less than true to every obligation the brotherhood imposed, let it go. But, if it has stood by the order of which it is the official organ, first, last and all the time—if when the battle was fierce, our flag was still waving—then the agents should realize more fully their obligations, and independent of premiums, send it forth on its mission of championing the interests of the order.

Nevertheless, the premiums need not be disregarded. They await the verdict, and will go to the ones who win.

The new year is close at hand, and if the agents take hold with a will success will come to their efforts.

MISS IDA HEWITT, THE LOCOMOTIVE ENGINEER.

It were useless to be hypercritical about woman's sphere. Men are required to keep an eye upon their laurels, their plumes, etc., for now-a-days and frequently, women demonstrate such masculine qualities as to create alarm. In this connection, *Railroad Topics* has the following:

Miss Ida Hewitt is the only regularly commissioned and regularly employed woman railroad engineer in the world, and West Virginia has the honor of having produced her. She is good looking, well educated, twenty-three years old and a blue grey eyed blonde. She is the daughter of Charles H. Hewitt, one of the chief owners of the short line which connects with the Baltimore & Ohio railway at Cairo, W. Va. During her schoolgirl days she passed most of her leisure time in the railway shop near her father's residence and not only grew familiar with every detail of an engine, but became very much interested in the work. After graduating from the high school her favorite amusement was to ride in the cab, and when one day the engineer was sick she managed the train, and did it so well she was soon given a regular run. It is a narrow gauge road, and one of the prettiest sights on it, they say, is Miss Ida, with a natty engineer's cap and a neat fitting suit of blue woolen, as she sits in the little cab.

It will be well to bear in mind that other girls, seeing Miss Ida's success at the throttle, will aspire to seats on the "right hand" side.

The advent of plucky girls in the train service of railroads may not create immediate alarm, but it should be remembered that the present is a fast age and revolutions partake of the characteristic of the restless times.

Firemen, we doubt not, will felicitate themselves as they remember how difficult it is to feed the maw of old 92 and make her go, confident that no girl could fill the bill, but there might be a new departure in promotions, and to formulate a grievance against the girls by the boys—well—*sic transit*.

THE LABORER.

The New York *Evening World* remarks that "the laborer of our days is without property besides the bare necessities of life. His relation to the family has no longer anything in common with the family relation of the 'better classes.' Modern industrial labor, his subjection to capital, has stripped him of every trace of a national character. He has become an international commodity, bought and sold in the open market as long as his body is strong and healthy." The New York *Evening World*, be it remembered, is not a "labor organ"; its editor is not a "walking delegate" and yet it talks in a way which, were it less great and influential, would be referred to as an "anarchist organ." The picture it paints of labor cannot be contemplated with serenity.

THE WESTERN RAILWAY.

That caption is the title of Cy Warman's paper, published at Denver, Colorado—one of the most readable publications of its class on the continent—always newswy, always spicy, full of wit and wisdom, sparkling and sometimes foaming—it never fails to get there and is always on time.

We notice that *The Western Railway* publishes a new departure—if that is the right term—in the fact that it has secured its manager Mr. H. D. Pike, who is introduced to the readers of the publication, as follows:

We take pleasure in introducing to our friends our readers our new business manager, Mr. H. D. Pike formerly secretary to general manager Smith, of the Denver & Rio Grande railroad. Hundreds of railway employes will remember having stood with him in hand at Mr. Pike's desk and asked a favor, and they will remember that when they were asked to it they did not ask in vain. Now Mr. Pike tips his hat to the fraternity and asks your patronage, sympathy and support. The *Western Railway* is a paper of which its editor is proud, and we bow with the assistance of our able manager to make it better still.

We most cordially welcome brother Pike into the *sanctum sanctorum* of the great fraternity of Faber fablers, fallible perhaps, with their full share of fallacies and fancies, but withal, good fellows, who make the world move.

Come right in, brother Pike,
Take whatever you like.

Cy. Warman could express it more poetically, we know, but practically it means that we wish *The Western Railway* all the prosperity it can carry.

DEATH, WITHDRAWAL OR EXPULSION.

It is important that when an officer of a subordinate lodge dies, withdraws, or is expelled, that the fact should be explicitly set forth in the notification to the grand lodge. Too frequently it occurs that the name of the member only is given, without any reference to the fact that he is any officer of the lodge, when such is his relation to it. As a result, while the proper record is made on the register kept by the grand lodge, the fact that the notification from the subordinate lodge does not refer to the official relation of the member, his name continues to appear in the lodge directory of the *Mayazine*.

To remedy this cause for embarrassment the official relation of the member to the lodge, if such relation exists, should be particularly stated, so that the required correction of the officers of subordinate lodge may be made.

In this connection it should be stated that in case of the death, withdrawal or expulsion of an officer of a subordinate lodge, the law provides that a successor may be elected and installed at the same meeting.

It is to be hoped that this matter will, in future, receive the attention of subordinate lodges.

THE ENGLISH SERVANT GIRL AND HER CAP.

At once, and at a single bound, a Miss Mary Chappell, of London, England, has become famous. She is a heroine, and no mistake. She knew her rights and dared maintain them.

This Miss Chappell was employed by a Mr. Kennedy in the capacity of house and parlor maid, at \$4 a week. It appears to be the custom in English houses where house and parlor maids are employed, to insist upon the maids wearing a cap to indicate their position in the family, so that visitors may not commit the unpardonable blunder of mistaking the maid for the madam, or the madam's daughter, to be engaged in conversation or invited out to walk or ride. Miss Chappell concluded she would not wear the servant cap. She doubtless had a wealth of auburn or raven curls which she delighted in fixing up artistically and bewitchingly. At any rate, after nine days in the employment of Mr. Kennedy she refused to don the cap and was forthwith discharged, and her wages refused.

Miss Chappell immediately sued Mr. Kennedy for her wages, and the court held that Mr. Kennedy must pay the claim and all costs accruing. The incident kicked up a big bobby in London, and a half dozen newspapers pitched in and denounced the heroic maid and the judge. The London *Standard* devotes considerable space to the question, and "lays down the broad principle that the female servant who is so much too good for her place that she declines to wear a highly convenient, not to say decorative, headpiece is one whom a judicious mistress should get rid of as speedily as possible. It dismisses with scorn the hygienic plea that cap wearing is unhealthy and tends to make the hair fall off, although, as one of its maid servant correspondents had pathetically pointed out, a bald parlor maid would lose her usefulness. With equal contempt it thrusts aside the æsthetic argument that there is no use in cultivating the nascent taste in the feminine masses with free exhibitions of pictures and statuary, if girls in service are to be reduced to the dull uniformity of white caps and black or 'sad colored' frocks. Yet nothing is more obvious than that when the æsthetic education of the people shall have done its perfect work a maid servant is very likely to entertain different views touching costume from those of her mistress. She may want, for instance, to wear her hair done up in a Grecian knot, or deem her style of beauty best set off by ringlets and a bang; or a parlor maid may have a fancy for appearing in a low-neck gown or in short skirts, or even in diaphanous undergarments. Must the so-called master of the house submit to her waiting at table in any of these startling

guises? If not, why not? If it be not lawful for him to order her to wear a cap, whence derives he his authority to insist upon a shawl or petticoat? Where, in other words, is the liberty or license conceded to maid servants by the decision of the county court judge to stop?"

It may be difficult to tell just what the London parlor maids will wear in the future, but if, like Miss Mary Chappell, they will not don badges of degradation there will be trouble.

THE COMING MILLENNIUM.

In the *New Nation* we find a dialogue between Mr. Smith and "Balaam in the Bible," from which we take the following:

B. in B.—Do you believe that this new era of universal brotherhood and good fellowship, which you nationalists are hoping for, is identical with the millennium predicted in the Scripture?

SMITH.—You may call it what you please, I don't care about words. I believe the world is upon the verge of the realization of the visions of universal peace, love and justice, which the seers and poets of all ages have more or less dimly foreseen and testified of. Of course I do not expect that humanity is to be perfected in a day; but I believe it is about to enter upon an era of progress wholly different from any previous one, not only in the immediate actual improvement and ennobling of human conditions, but still more in the full recognition of the illimitable possibilities of human nature, and the impassioned pursuit of them. No longer, as in previous ages, groping blindly through the night, humanity will be like an army marching swiftly and steadily forward by the light of day.

We see no good reason why the dreamers of beautiful dreams should not tell them. Dreaming and seeing visions, if the millennium is coming, are in order and in consonance with prophecy, for it is written:

"And it shall come to pass afterward, that I will pour out my spirit upon all flesh; and your sons and your daughters shall prophesy, your old men shall dream dreams, your young men shall see visions."

The *New Nation* is filling the bill. It is meeting the requirements. It prophesies, it dreams delightfully and sees visions of coming events. In the language of the great Dr. Watts,

"How happy are our ears
That hear the joyful sound."

THE DIFFERENCE.

Here is something that appears in the *North American Review* which "women sphere" writers can wrestle with at their leisure. Says the writer:

When a man sins he defiles himself alone; but when a woman forgets her honor, a whole family—nay, a whole generation, sometimes even a whole nation—may share the consequences of her shame. Once degraded, she can never regain the physical, even though she may regain the moral purity which she has lost. This may seem a coarse and material way of putting her case, but is it not a true one? And, being true, is it not fitting, as her crime is greater than man's, and the consequences thereof more vital, that she should suffer accordingly?

The verdict may seem hard but it is inevitable.

RAILROAD TITLES.

To the uninitiated the alphabetical titles of railroads are as occult and enigmatical as Egyptian hieroglyphics. The P. Q. & D., the K. T. & O. P. L. for instance. As a result people inclined to be facetious have often made these titles laughable. In this connection the *Columbus (O.) Dispatch* remarks that "the use of initials to designate the roads has become so universal that oftentimes the initials are known when the name is not. Grown so familiar some person attempts to play on the initials and in consequence the appellation clings to the road for years. The old I. B. & W. road was in years gone by spoken of as the I Better-Walk road or the Indiana Bologna Works. The P. Ft. W. & C. road was known as Patsy Finnigan's Wife & Children, while the J. M. & I. used to be called the Jerusalem, Mississippi & Ireland. The new P. C. & St. L. is known to Panhandle trainmen as the Piqua, Cambridge City and State Line, instead of the Pittsburg, Cincinnati Chicago & St. Louis. The Columbus, Shawnee & Hocking already has its title of Cold Slaw & Hominy Line, while the Columbus, Hocking Valley & Toledo is called on to bear a similar title in the Cold Ham, Veal & Turkey road. The old Chicago & Indiana Central, now a part of the Panhandle, used to be called the Coffee Cake & Ice Cream road."

L. W. ROGERS.

We have on our table the *Railroad Trainmen's Journal* for November, and note with even more than gratification the courageous ring of Brother Rogers' valedictory. He says:

After a careful investigation of the Northwestern affair the editor decided he could not conscientiously support what had been done and resolved to say so regardless of the personal consequences. Believing that the adoption of such a policy meant the ultimate wrecking of the brotherhood that belief was set forth, together with the reasons for it. In this matter, as in all others, the editor thought for himself and fearlessly expressed his opinion. He is now told that this was a great mistake—practically told that he had no business to do his own thinking and that he should have supported, without question, any policy adopted by the Grand Master. If this is the kind of journalism desired it was a mistake to elect the present editor, who proposes to think for himself as long as he lives and who hasn't the slightest intention of supporting something against which his soul rebels.

Byron, in his *Sardanapalus*, says:

"Fate made me what I am, may make me nothing, But either that or nothing must I be: I will not live degraded."

It is the language of all heroic souls. It is not only in great exploits that true courage is beheld—not only on battlefields that "clothe the ground in crimson," where men are transformed into demons and the ear is no longer offended by dying groans—No, no. There are other arenas where the loftiest courage is put to the test, and our friend,

Rogers, experienced the ordeal and came out of it, as did the Hebrew children, without the smell of fire upon his garments, and no particle of the insufferable slime of the Northwestern conspiracy adheres to him. Brother Rogers had convictions and he had the courage of convictions. He dared to think for himself and he dared to express his thoughts. When a man degenerates to such a craven that he dare not defend a principle, such an apostate that he will sell out or back out, back down and crawl, he may shine for a time until his "thirty pieces of silver" are gone, but the mills of the gods grind on, and the fate of the dastard will eventually overtake him. The convention deemed it wise to make L. W. Rogers the victim of penalties, because he would have saved his great brotherhood from the ineffable stigma of *scabbing by authority*, and his reward is as certain as that

"Truth crushed to earth shall rise again."

We anticipate with real pleasure the coming of Brother Rogers' new paper, and the *Magazine* has that faith which is "the substance of things hoped for" that it will be a power in the defense of all things of "good report" in the ranks of organized labor.

WORK ON SUNDAY.

Pittsburg has what is called a Law and Order Society, and this L. O. S. concluded that supplying a railroad locomotive with coal on Sunday, was unnecessary, and had two men arrested. The case was tried before a fellow by the name of Stowe—Judge Stowe—who delivered the following opinion:

"I can not find any evidence tending to show that the work done on Sunday was such as falls within the statute as works of necessity. The only necessity urged by the defendant, Robbins, so far as he is concerned, is that he has a contract to deliver coal to the railroad company, and by Nichols that he works for him to perform the contract. So far as the railroad company is concerned, it is sufficient to say that even if the running of trains can be considered a necessity, no reason is shown by the evidence why the company may not easily, and without undue expense, afford sufficient storage capacity for coal, so that all it may require on Sunday can be delivered on a week day in such manner as that it can be procured for use in the engines on Sunday by its own employees without the intervention of outside parties. To hold such a case as this sound would be in effect to repeal the statute prohibiting worldly employment on Sunday."

The "necessity" dodge ought long since to have been played out, or something approximating common sense and justice should mark the opinion of the judge.

THE "Odd Fellows' Grand March" and the "Air Ship Waltz" are two of the latest compositions of Isaac Doles, 234 West Michigan St., Indianapolis, Ind. Both are musical gems. They comprise five pages each, sheet music size, besides illustrated title pages, not difficult in execution but beautiful in composition, and sell at 40 cents each. By way of introduction Mr. Doles will mail them to any address on receipt of 10 cents each.

RAILROADS AND FORESTS.

The Forestry Division of the United States estimated in 1890 that 60,000,000 ties are required annually for renewal of worn out ties alone, not taking any consideration of ties consumed in new construction each year, which is enormous and tends to increase the number of ties required for renewals each year. Figuring in the ties used for construction in 1890 the total number of ties consumed will reach the tremendous number of 73,000,000 ties or about 365,000,000 cubic feet of timber.

A rough computation of the proportion in which the various timbers participate in this consumption allows the following distribution of material:

Oak ties	45,000,000
Chestnut ties	3,500,000
Pine ties	12,500,000
Cedar ties (red, white and California)	5,000,000
Hemlock and tamarack ties	2,500,000
Cypress ties	1,500,000
Redwood ties	2,500,000
Various	500,000

The oak, therefore, our most valuable timber, furnishes over 60 per cent. of the material, and not only from choice trees mostly, but from the young growth, which may make "one tie to the tree" or "one tie to the cut."

For bridge and trestle timber, etc., another 60,000,000 cubic feet of sawed material are to be added; so that a consumption of 500,000,000 cubic feet of wood, in the shape of forest grown (round) timber for railroad purposes, which was claimed in a former publication, stands as a reasonable figure. This requires the annual cutting of the best timber from probably more than 1,000,000 acres of our natural forest lands; and to furnish this amount continually not less than 10,000,000 to 15,000,000 acres of well-managed forest would be required, or in the absence of management—as at present—the area to be reserved for this purpose would have to exceed probably 50,000,000 acres, or more than 10 per cent. of our present forest area.

In contemplating such figures, the question doubtless arises, "Well, what are you going to do about it?" We answer, talk. Already the forest question is up for debate, statesmen, thinkers, writers, economists, assent that it is a question of immense importance. But the great public is not aroused to any very great extent. Tree planting is suggested, but amounts to little or nothing in the way of replacing the ceaseless destruction of our forests. Men realize the fact that "no forests, no rain;" "no rain, deserts." But the evil day is too remote to create alarm and the forests, as the auctioneers say, are "going, going, gone." It is no exaggeration to say that within the next hundred years the United States will have 500,000 miles of railroad track. But the hope is that the metal tie will at no distant day take the place of wood. If not, the forests of the continent will disappear to come no more, forever.

NATURALISTS agree that there are 256,500 species as follows: Of vertebrates and mammals, about 22,000 species; of birds, 6,000; of reptiles, 1,500; of fishes, 10,000; of mollusks, 15,000; of insects, 200,000; of radiata, starfishes and the like, 2,000. Some naturalists give a higher sum total, but 256,500 ought to suffice.

SOME one suggests "televoice" for telephone message. Why not teletalk.

A SHORT STRIKE.

One of the shortest strikes on record occurred on November 11th, on the part of the engineers and firemen in the employ of the East St. Louis Connecting and St. Louis Transfer Railroad Company, more generally known as the Wiggins Ferry Company. For some time previous to the rupture there had been dissatisfaction among the locomotive men on account of wages and overtime, which resulted in a joint committee being appointed by the B. of L. F. and B. of L. E. representing the firemen and engineers respectively, for the purpose of submitting the grievances to the proper officials of the company. During the course of proceedings, Grand Master Sargent and Grand Chief Arthur were called in and on October 23 the following schedule of wages and rules was agreed to by the officials of the company and the representatives of the employees:

SCHEDULE OF WAGES AND RULES AGREED UPON BY THE ENGINEERS AND FIREMEN AND OFFICERS OF THE EAST ST. LOUIS CONNECTING AND ST. LOUIS TRANSFER RAILROAD COMPANY—EFFECT NOVEMBER FIRST.

ARTICLE 1. All Engineers shall receive \$3.25 per day, eleven hours or less to constitute a day. All over eleven hours will be paid at the rate of 32½ cents per hour.

ARTICLE 2. All Firemen shall receive \$1.90 per day, eleven hours or less to constitute a day. All over eleven hours will be paid at the rate of 19 cents per hour.

ARTICLE 3. That the rights of Engineers and Firemen to engines and runs will be determined by seniority, merit being equal. Engineers and Firemen to rank as to seniority from the time they are employed as such.

ARTICLE 4. That the above named roads be considered as one in regard to seniority, providing two-thirds of the Engineers and Firemen employed thereon agree to it.

ARTICLE 5. That Engineers or Firemen attending Court or appearing before proper parties on Company business will be allowed for Engineers \$3.25 per day, Firemen \$1.90 per day.

ARTICLE 6. Engineers and Firemen will not be suspended or discharged except for a just cause and when suspended shall be given a hearing within five (5) days before the proper officers of the company and shall have the privilege of having one of their own number to represent them. When an Engineer or Fireman is suspended, and on investigation it is found that he is innocent, he shall receive pay for all time lost by reason of such suspension.

ARTICLE 7. Any Engineer or Fireman who is dissatisfied with the decision of the Master Mechanic, shall have a right to an appeal to the General Manager.

ARTICLE 8. The rules now in vogue regulating the dinner hour shall remain in force.

Approved,

C. H. SHARMAN.

J. P. COLLINS for Engineers.

JOE SMITH, for Firemen.

D. J. TIMLIN, M. M.

This schedule was to take effect November 1st. It will be observed that Article 8 provides that "the rules now in vogue regulating the dinner hour shall remain in force." Out of the construction placed upon this article grew the trouble which eventuated in the discharge of a number of employees and finally involved the company in a strike, which, but for the timely interposition of cool-headed men, might have had serious and far-reaching consequences.

The rule relating to the dinner hour which had been in vogue provided that if the men worked during that hour they should be entitled to extra pay, while the officials maintained that the schedule required eleven straight hours of service without regard to the dinner hour.

The employés, having been instructed by the grand officers and the committee to put in their time on the basis of extra allowance for work performed during the dinner hour, naturally enough credited themselves with the time thus made, which the master mechanic refused to allow. Then followed a peremptory order on the part of the master mechanic to eliminate all such time from the report sheets. This the employés, in view of the instructions they had received, declined to do and then began the dismissal of engineers and firemen, until the heads of eighteen of them had fallen in the basket.

The men, of course, immediately appealed to the grand officers of their respective orders. Grand Chief Arthur and Grand Master Sargent, promptly responded, and after a brief investigation, concluded that the agreement between the company and employés had been misconstrued to the great detriment of the men, and that their grievance was a righteous one. Then followed interviews with the higher officials. General Manager, C. H. Sharman, was approached but the conference was fruitless of results. Next, President John Scullen was called on and the grievances of the employés were canvassed in detail. Still no satisfactory conclusion could be reached and finally, the last and highest authority having been appealed to, in vain, the men resolved to strike, and in this they were given the sanction of the chief executives of their orders. The company were given until Wednesday, the 11th inst., at high noon, to adjust the grievances, failing in which, the men were to withdraw from their service in a body. The hour arrived, and in the absence of any proposition from the officials of the company to avert the trouble, the strike was declared on, and the men left their engines in a body. Meantime, Grand Chief Arthur and Grand Master Sargent, were on the ground. Negotiations with the officials were again opened with a view to ending the difficulty if there was any hope of doing so. At this juncture more prudent counsels prevailed. The grievances were discussed in a spirit which was almost a certain guaranty of an adjustment. After a careful and thorough consideration of the matter a compromise was effected, which was satisfactory to both employés and officials. The matter of the overtime for the dinner hour was waived by the employés, in consideration of the reinstatement of all the discharged employés. And thus ended

one of the shortest strikes on record. The men were all promptly reinstated and the strike was declared off at 7 o'clock P. M. having lasted just seven hours.

It is fortunate for all concerned that the trouble was brought to a speedy close, for if it had continued the connecting lines on both sides of the river would doubtless have become involved to a greater or less degree, and this would have been something in the nature of a calamity. We are informed that W. S. Hodges, Esq., general freight agent, an old and experienced railroad man, gave valuable advice and otherwise contributed in a large measure to the adjustment of the difficulty. Strikes are always to be deprecated, but if they come, as sometimes they do, it is well that they are as brief as the one here recorded.

LAND.

The figures relating to the operation of the general land office, at Washington ought to be highly entertaining to Mr. Henry George.

Mr. Commissioner Carter, in his report shows that "the number of acres of public land disposed of during the year shows that the cash sales amounted to 2,143,090 acres. Of the miscellaneous entries (not cash) 5,040,393 acres were homesteaded and 969,006 were entered under the timber culture law. The railroad selections amounted to 1,857,572 acres; the state selections to 174,404 acres; the Indian allotments to 117,483, and the original swamp selections to 23,167 acres. Total cash receipts during the year were \$5,429,220, and the filings during the year 20,241, the fees on which amounted to \$77,069. Final entries during the year were 51,934, representing an acreage of 7,359,905; original entries at the same time, 45,845, aggregating 6,409,832 acres; decrease of entries for the year, 15,664, representing an acreage of 2,596,820; patents to land grant railroads during the year, 3,088,679 acres an increase over previous year of 2,724,817. Surveys have been accepted during the year to the amount of 8,096,004. The vacant public land in the public land states and territories are 579,664,683 acres. Commissioner Carter makes a strong plea for the irrigation of the arid lands."

The commissioner shows the vacant public lands in acres in each of the public land states and territories, as follows: Alabama, 947,310; Arizona, 55,061,005; Arkansas, 4,998,398; California, 52,299,499; Colorado, 42,167,030; Florida, 3,468,381; Idaho, 33,781,851; Iowa, 6,000; Kansas, 791,078; Louisiana, 1,243,118; Michigan, 781,856; Minnesota, 6,849,975; Mississippi, 1,201,298; Missouri, 1,023,898; Montana, 74,372,799; Nebraska, 11,460,436; Nevada, 53,689,324; New Mexico, 54,893,679; North Dakota, 16,135,440; Oklahoma, 3,502,406; Oregon, 39,

20,151; South Dakota, 14,085,394; Utah, 5,428,387; Washington, 20,401,691; Wisconsin, 1,003,133; Wyoming, 50,842,424. Total, 579,664,683 acres.

It appears that there is enough land left or 36,229,154 farms of 160 acres each, but it is not first quality, and is not likely to be speedily under cultivation unless water can be obtained for irrigation, and to this problem the government is likely to give special attention. If water can be obtained then millions of acres will be subjected to the plow and made fruitful. If bombarding clouds will bring rain, and science so declares, then at no distant day our American deserts will disappear. By all means let the bursting of balloons and bombs proceed.

PENALTIES FOR OPINIONS.

Courageous men are not all dead. Occasionally one is found in the pulpit who dares stand forth and utter words that weigh a ton and that will never die. One of these men is Rev. C. H. Hobart, of the Baptist church, Oakland, California, who recently said:

Personally I am an intense believer in absolute religious liberty. No individual has the right to interfere with the freest exercise of this knowledge on the part of his fellow-men. I have ever stood for the right of conscience responsible only to God, and beyond control or regulation by any human organism. So far as their fellow-men or the state is concerned, Robert G. Ingersoll has the utmost right to teach his infidelity, and the Unitarians to build their churches and preach their views; and any man who attempts by physical force or legal enactment to prevent them, has struck a blow at the liberty of which as Americans, we are so justly proud. On the other hand, I claim and glory in the right to combat their errors by all the power of my pen and voice. My right I propose to exercise, and would be the last to deny to others what I claim for myself.

Leaving religious dogmas out of the discussion, the spirit of intolerance is abroad in other matters. There must be no penalties for honest opinions, else the dark ages will return, or times which will be fruitful of horrors far exceeding anything authentic history proclaims of the dark ages.

Just now money, or more properly, those who wield the power which money confers, are intolerant. Bigotry is one of the distinguishing characteristics of plutocracy. Let it mass its strength, but in the name of eternal justice another power is coming to the front, the unified mind power of workingmen, and once marshalled, no doubts need be entertained as to the outcome.

METALLIC MONEY AND HARD TIMES.

The caption of this article is the title of a valuable treatise on the money question by James D. Holden. Mr. Holden has made a special study of the subject of finance, and presents the result of his investigation in a pamphlet of fifty-five pages which should be read by every student of economic affairs. Mr. Geo. C. Ward has been appointed agent for the book, as will be seen by the following circular:

To the Brethren in the Faith:

During the past eighteen months I have written for the various reform journals hundreds of educational articles, explanatory and in advocacy of the Alliance demands, and my many readers will bear witness to my zealous and faithful labor for the cause. This work has entailed upon me much arduous and laborious study and brain work, and (I being a wage-worker), has meant the sacrifice of my noon hour, the devotion of my Sundays to work and the burning of much midnight oil. For none of these labors, nor for any of these articles have I ever received one single cent. As editor of the A. N. Kellogg Alliance page, I have striven earnestly to make the page an effective aid to the Alliance propaganda and a reliable exponent of the people's demands, while I have endeavored to furnish a series of cartoons that would be valuable adjuncts in the work of education.

In view of these facts, I now take the liberty to announce that I have secured the sole agency for the publication, sale and distribution of the pamphlet entitled "Metallic Money and Hard Times," by J. D. Holden, of Emporia, Kan. The author of this remarkable little production has spent many years in the banking and investment brokerage business, and possesses a thorough knowledge of finance generally, and banking in all its branches. The book is the very essence, boiled down, of luminous, unique and logical argument, premised upon fundamental and immutable truths concerning money, its nature, uses, attributes and functions. There is not a superfluous or idle sentence in the argument, while the ultimate is an unanswerable plea for absolute legal tender paper money based upon productive real estate and issued to the owners of such lands at not to exceed two per cent.

The price of this pamphlet is twenty-five cents by mail prepaid, six cents net of which falls to my share. I trust that every one who endorses and advocates the Ocala demands will buy two copies, one to keep and one to sell to a banker or business man.

Address orders enclosing postal notes to

Geo. C. Ward,
1928 Virginia Ave., Kansas City, Mo.

Mr. Ward has been a valuable contributor to the columns of this *Magazine*, as thousands of our readers know who have read his excellent articles on industrial reform. In purchasing a copy of "Metallic Money and Hard Times" the reader will get value received for his investment, while at the same time helping a staunch advocate of the rights of labor.

THE ROBINSON MONUMENT FUND.

The following subscriptions to the *Robinson Monument Fund* have been received since our last report:

J. H. Cunningham, Pan Handle, Texas	\$1 00
C. Bodmer, LaCrosse, Wis	1 00
Cyrus M. Moser, Columbia, Penn	50
W. Reed, Fairhaven, Wash	1 00
Biston Lodge, No. 57, B. L. F., Boston, Mass.	10 00
J. H. Kernau, Washington, Ind.	50
Previously acknowledged	150 85

Total \$164 85

Remittances should be directed to *Locomotive Firemen's Magazine*, Terre Haute, Ind.

The Mormons have obtained in the state of Chihuahua, Mexico, a tract of land 125 miles long and fifteen miles wide to which they propose to immigrate, and the exodus has already commenced. Those with two wives or more are the first to go, because they want to "live their religion."

WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the *Magazine* we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer. We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground
where heroes sleep?
'Tis not the sculptured
piles you heap!
In dew that heavens far
distant weep
Their turf may bloom,
Or genil twine beneath the
deep
Their coral tomb.

"What's hallow'd ground?
'Tis what gives birth
To sacred thoughts in souls
of worth!
Peace! Independence!
Truth go forth.
Earth's compass round
And your high priesthood
shall make earth
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unsaid, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

WM. D. ROBINSON.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices the half of which will never be told. He lived and died in poverty,

that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine, Terre Haute, Indiana*, all of which will be acknowledged in its columns.

A MISS EDWARDS, of New York City, some time ago established a Home for Friendless Cats, and a Mrs. Calkins was employed to take charge of the feline waifs. The home prospered. Cats flocked to the home and found food and shelter. Fortunately the cats, however destitute otherwise, were, usually, decently clad. It was thought to be a great philanthropic enterprise, and Miss Edwards was delighted. She loved cats, she was pleased in seeing them happy and contented. She was never more gratified than when attending a caterwauling concert. She made no distinctions, the Maltese, the Angora and the scrub were all on a dead level at the Home for Friendless Cats and Kittens. When a cat died it was sent to the catacombs on a catafalca, and Miss Edwards enjoyed a cataclysm of tears which finally produced a cataract in one of her eyes, and frequent symptoms of catalepsy.

All who know Miss Edwards say she is high authority on cats. A catanarian who can link together incidents in cat history, she relates numerous catastrophes, and is authority on catacoustics and cataplasms. She always bobs for catfish and loves a fiddle on account of its catgut equipment. In a fight with incorrigible cats, wild cats and catamounts Miss Edwards always uses a catline, and indulges in much catnip tea. For those who do not love cats Miss Edwards has been known to recommend a cat-o'-nine-tails. In describing Miss Edwards' Home for Friendless Cats, the *World* says "the odor of the place is unbearable. Upon entering the hall door a score of dogs of all sizes, ages and breeds sprung forward and nearly knocked a reporter down. On the second floor a vicious-looking cat, which had been correctly christened John L., sprung upon the reporter's shoulders and attempted to give him some lessons in scientific boxing. In the middle of the back room stood a pile of furniture. Scattered over it were at least fifty cats. The rest were under the stove or in the attic." Such is the drift of New York philanthropy, a city where thousands of virtuous women annually seek the station houses for a night's repose; a city where thousands of girls and women are required to work for starvation wages; a city of filth, squalor and wealth which defies exaggeration; a city with a home for friendless cats, while the station houses and worse are the homes of friendless women.

We have received from the publishing house of John Wiley and Sons, 53 E. 10th st. New York city, a copy of the *Practical Cat-chism*, by Robert Grimshaw, author of *Steam Engine Catechism*, etc. The *Catechism*, as indicated by the title, instructs by a series of questions and answers and treats

of a series of forty-nine topics, embracing air, combustion, fuels, gas, gravity, iron and steel, locomotives, lubrication, mechanical processes, power, railways, ventilation, waters, etc. The book contains 296 pages, including an exhaustive alphabetical index, and is replete with information of much practical value to students of the subjects named. Mr. Grimshaw is a consulting engineer of wide reputation and has written a number of other works which have had an extensive circulation. The *Catechism* is gotten up in convenient size and form, and the subject matter is so treated as to be within the mental grasp of the average reader.

We have received from the Twentieth Century Publishing Co., 7 Clinton Place, New York City, a copy of an essay on United States Money from the able pen of Reginald P. B. Johnson. The contents are as follows: "What money is and is not. Single and double systems. Review of United States currency legislation. European currency laws. Silver nations. Present position of the United States money. Results of unlimited silver coinage. Consequences of passing to the silver standard. Arguments for unlimited silver coinage considered." The argument of Mr. Johnson is lucid and cogent and commands the closest attention of the reader. This pamphlet can be had for the small price of 5 cents which places it within the reach of all.

We are indebted to Hon. Carol D. Wright, Commissioner of Labor, Washington, D. C., for a copy of Parts I and 2 of the Sixth annual report of the Commissioner of Labor for 1890 which treats of the cost of production of iron, steel, coal, etc. In his message to congress, referring to the report, President Harrison says: "This report relates to the cost of producing iron and steel and the materials of which iron is made, in the United States and Europe, and the earnings, the efficiency, and the cost of living of the men employed in such production." The book contains 282 pages, filled chiefly with tabulations of the greatest value to students of the industrial interests of the country. The work throughout is clear and exhaustive and will doubtless serve effectually the purpose intended.

In our advertising columns will be found a special offer to the wives and daughters of our members from the publishers of *The Ladies' World*. This is a reputable house and their offer seems very attractive and worthy of perusal. In answering, don't fail to quote the *Magazine*.

ELY BROTHERS have favored us with a renewal order of their Catarrh advertisement, so well pleased are they with the results from the *Magazine* last year. They now inform us that they have a bottle of Cream-Balm with a screw metal top, calculated for any railroad man to carry in his pocket for constant use. Price 50 cents. The house is old and reliable.

THE PARISH FAIR.

With an unctious delivery, pliously uttered,
 His reverence named a committee to-day;
 And many a bosom expectantly fluttered,
 To catch every name in the favored array.
 He averred that the church was in need of assistance,
 And each one, he said, must do his or her share
 Of the labor required for its future subsistence,
 By having the parish take hold of a fair.

Dear reader, you may be oblivious to scheming
 'Till you observe congregations let loose;
 With their teasing beseeching, purloining, defaming,
 Which constitute nuisance and public abuse.
 Little children go begging, they meet with temptation,
 Their seniors go also with blandishments rare,
 Soliciting signers to help out salvation,
 And send us to heaven by way of a fair.

'Tis brazen ones, chiefly, I find are selected
 For every department required to be filled;
 The modest parishioners all are rejected,
 Because they are not in rank beggary skilled.
 The church needs the money, our Lord is so needy!
 His temple, they say, is of ornaments bare;
 The pastor—God bless him—in garments is seedy,
 To clothe and adorn we must needs have a fair.

Such artful devices the cash for obtaining
 One never set eyes on or ears on before;
 Of your change you'll discover your pocketbook draining
 As soon as your feet you put inside the door.
 How the booths and the tables are set for your capture!
 How tinsel abounds in the hall everywhere!
 How the "dear leading ladies" preside in their rapture!
 And think they are angels in charge of the fair!

Come walk with me now, I have tips which I'll give you
 About a few beauties in charge of the booths;
 I'm right well acquainted and shall not deceive you,
 The way that those ladies do innocent youths:
 That wrinkled old spinster, with frizzes and curls
 You see tilted back in the high arm chair,
 Still fancies, by aping the ways of young girls,
 She'll capture a man ere the close of the fair.

There's Kitty McCann, she is booked as another
 High, dignified damsel in charge of the cash.
 Kate keeps her eyes lifting for some girl's brother,
 To make what we call in slang phrases "a mash."
 "For the pure love of God" she's devoting her labors
 In language emphatic she'll often declare—
 If Kitty could hear how she's chewed by her neighbors
 She'd furl some sails which she spreads at the fair.

Old Judy Devine, that on pigs made her money,
 Is out in her silks at a table each night.
 Lord guide her! She thinks she's sweeter than honey,
 But long tongued Nell Reardon avers she's a fright.
 There's Biddy McSweeney; the grab bag she carries.
 Her forehead is hidden by carrotty hair!
 It isn't her fault she is singleness carries.
 She, too, is an angler for hearts at the fair.

Sal Crogan insists she's neglecting her babies
 To help on the cause of the lowly and meek;
 I've heard fellows say they'd prefer having rabies,
 Than list to her scandalous tongue for a week.
 And Norah McLaughlin struts looking for signers
 Along with her chum, crazy Kitty O'Hare.
 I know them to be two unchristian designers,
 Whose tongues villify every night at the fair.

Many more I could name of "the dear leading ladies"
 The clergyman pliously calls to his aid,
 The Callaghans, Murphys, O'Haras and Gradys,
 Old hen-wives and geese herds, both matron and maid.
 They are make penny mongers, in ignorance steeping,
 As dense as a mud hole in summer's hot glare.
 They're sure to drive pure-hearted Christians off weeping,
 To think what the Lord must endure at a fair.

If we cannot exist on this earth without gambling
 With grab bags and chance games perniciously wrong,
 Where flirting and slander, lewd posing and ambling,
 Abound at bazars 'mongst the time-killing thro' g.
 We had better nail tight every church door securely,
 And out in His Temple our heads bend in prayer,
 Beneath the blue heavens both meek and demurely—
 'Tis better than temples we build by a fair.

Shandy Maguire

Notice to Secretaries.

Secretaries will please report to the Grand Lodge immediately the names and addresses of Magazine agents for 1892, so that the same will appear correct in the January issue of the *Magazine*, thus avoiding difficulties and perplexities that are embarrassing to subordinate lodges as well as the Grand Lodge. This is a matter of special importance and we shall open for prompt returns.

Magazine Agents for 1892.

As the Magazine Agents for 1892 should now begin their canvass for subscribers, it is necessary that we should have their names and addresses for the lodge directory in the January issue of the *Magazine*. Secretaries will please report promptly to the Grand Lodge the names and addresses of the Magazine agents for 1892, so as to insure accuracy and promptness in all matters of correspondence between agents and the grand lodge.

THE MASON REGULATOR Co., of Boston, Mass., have lately published a pamphlet entitled "Key to Steam Engineering," being a thorough and practical catechism of the Steam Engine and Boiler. A feature of the treatise of special interest to locomotive firemen is an analysis of the combustion of coal. The author in his preface says: "There have been many works published on steam and the Steam Engine, which, although treating the subject in a comprehensive and scientific manner, have, nevertheless, failed to accomplish that which was intended (the education of the engineer) simply because the terms used by the college educated writers and scientific character of the books are beyond the comprehension of the great majority of the men who are expected to profit by their contents." The treatise is divided into ten chapters, as follows: Air, Water, Fuel, Steam, Boilers, Engines, Engineers, Belts and Shafting, Speed and Pulleys, Tables, etc. We have perused the work with much interest and commend it to those who are in pursuit of information relating to steam and steam engineering.

We have received from the publishers, The F. H. Leavenworth Publishing Co., Insurance Publishers, publishers of that well known Insurance Journal, *The Indicator*, at Detroit, Mich., a copy of the Seventh Annual Edition of the Pocket Chart of Co-operative Life, Accident and Fraternal Associations. According to this Chart, on Dec. 31st last, there were over two million members in these various associations in the United States and Canada. This Chart contains in its over 100 pages much valuable information, and sells for the small sum of 25 cents a copy. Address the publishers.

Addresses Wanted.

THOMAS DONNELLY.—A member of Neches Lodge, No. 156; when last heard from was at New Albany, Ind. Anyone knowing his whereabouts will please correspond with W. T. Shroyer, box 223, Palestine, Texas.

ALBERT TYAS.—A member of Bay State Lodge, No. 72; was in North Platte, Neb., when last heard from. Anyone knowing his whereabouts will please address the Secretary of said lodge.

Acknowledgments.

WICHITA, KAN., October 23, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—We desire to extend our sincere and heartfelt thanks to the B. of L. F., Star of the West Lodge, No. 340, for their kindness, sympathy and assistance in our great bereavement. May God, in His infinite mercy, protect and prosper the brotherhood all over the land and spare all the intense pain it has been our lot to endure is the prayer of

MRS. EMMA WADE.

MOUNT AIRY, November 4, 1891.

To the Brotherhood of Locomotive Firemen:

We desire to express our sincere thanks to you for the prompt payment of \$1,500, the full amount due on the policy held by our son, Everett McCormack, who died July 8, 1891.

May God ever bless and prosper your noble order is our prayer.

D. M. MCCORMACK,
HARRIET MCCORMACK.

HOWELL, MICH., November 5, 1891.

To the Brotherhood of Locomotive Firemen:

DEAR SIR:—We have received, through Mr. L. A. Ogden, of Lodge No. 265, a draft for fifteen hundred dollars, the full amount of the policy held by my late son, Dwight M. Mitchell, who was killed on the Port Townsend and Southern Railroad, June 15, 1891. My daughters join me in taking this opportunity of expressing our heartfelt thanks to the brotherhood, and especially do we wish to thank the members of Lodge 265, of which he was a member, for their kindness and sympathy, and Lodge 192, whose officers and members laid my dear son to rest and did so much for us. Although we were so far from home, and among strangers, they made us feel that we had in them true friends, and left nothing undone that was possible for them to do.

May God ever bless the noble order.

Most gratefully yours,

MRS. M. MITCHELL.

ST. ALBANS, VT., November 6, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN AND BROTHERS: I desire to acknowledge the receipt of a draft for \$1,500 from Bro. C. P. Kelley, our Receiver, the full amount of insurance on the policy which I had in your order. I take this opportunity of expressing my heartfelt gratitude to the brotherhood for the kindness shown me during the long weeks of pain and suffering which was my misfortune to endure; also for the prompt payment of my claim. I cannot find words to express my sincere thanks. May Heaven's choicest blessings rest on every member, is my wish. Allow me to say one word to the members of the brotherhood: Take my advice and keep your dues paid up promptly, for you know not the moment misfortune may overtake you. I sincerely wish that prosperity and success may always attend the brotherhood and that it may forever continue on its mission of charity and peace. Hoping that I may always be able to remain a worthy member, and again wishing God to bless you all, I am,

Yours fraternally,

J. H. SWENEY.

NASHVILLE, TENN., Oct. 25, 1891.

To the Brotherhood of Locomotive Firemen:

I desire to express my sincere thanks for the prompt payment of fifteen hundred dollars (\$1,500) by the hands of Mr. W. C. McCombs and Mr. J. H. Porter, due me by the death of my late husband, Jeff. D. Nicks. I also wish to express my gratitude for the beautiful flowers presented by W. H. Thomas Lodge, No. 159, and to those who so kindly assisted at the funeral. Words are inadequate to express my gratitude for kindly favors shown me by the brotherhood. God grant that you may seldom meet with adversity, and may you have such friends to share your trouble in time of need as have consoled me in my late affliction. My most sincere appreciation of kindness urges me to especially offer heartfelt thanks to the members of Lodge 159, Nashville, Tenn. May each and every member of the B. of L. F. be visited by every earthly pleasure, perfect health and glowing prosperity. Earnestly praying that you may all be as well prepared to meet your Redeemer as my dear husband was, and that when this painful exile is ended you will enjoy the vision of God, I am

Your friend,

MRS. IDA NICKS.

A Good Man's Tenderness.

[Manchester Times.]

Boys are sometimes tempted to think that to be tender hearted is to be weak and unmanly. Yet the tenderest heart may be associated with the strongest and most forcible mind and will. Take, for example, the story told of him to whom we owe our wonderful railway system. George Stephenson went one day into an upper room of his house and closed the window. It had been left open a long time because of the great heat, but now the weather was becoming cooler and so Mr. Stephenson thought it would be well to shut it. He little knew at the time what he was doing. Two or three days afterward, however, he chanced to observe a bird flying against that same window, and beating against it with all its might again and again, if trying to break it. His sympathy and curiosity were aroused. What could the little thing want? He at once went into the room and opened the window to see. The window opened, the bird flew straight to one particular spot in the room, where Stephenson saw a nest—the little bird's nest. The poor bird looked at it, took the sad story in at a glance, and fluttered down to the floor, broken-hearted, almost dead.

Stephenson, drawing near to look, was filled with unspeakable sorrow. There sat the mother bird, and under it four tiny little ones—mother and young all apparently dead. Stephenson cried aloud. He tenderly lifted the exhausted bird from the floor, the worm it had so long and bravely struggled to bring to its home and young still in its beak, and carefully tried to revive it; but all his efforts proved in vain. It speedily died, and the great man mourned for many a day. At that time the force of George Stephenson's mind was changing the face of the earth, yet he wept at the sight of this dead family, and was deeply grieved because he himself had unconsciously been the cause of the death.

A Dog that Could Count.

[St. Nicholas.]

Old Fetch was a shepherd dog and lived in the highlands of the Hudson. His master kept nearly a dozen cows and they ranged at will among the hills during the day. When the sun was low in the west, his master would say to his dog, "Bring the cows home;" and it was because the dog did this task so well that he was called Fetch.

One sultry day he departed as usual upon his evening task. From scattered, shady, and grassy nooks he at last gathered all the cattle into the mountain road leading to the distant barnyard.

A part of the road ran through a low,

moist spot bordered by a thicket of black alder, and into this one of the cows pushed her way, and stood quietly. The other passed on, followed some distance in the rear by Fetch.

As the cows approached the barnyard gate he quickened his pace and hurried forward as if to say, "I'm here, attending to business." But his complacency was disturbed as the cows filed through the gate. He whined a little and growled a little, attracting his master's attention. Then he went to the high fence surrounding the yard, and standing on his hind feet peered between two of the rails. After looking at the herd carefully for a time, he started off down the road again on a full run. His master now observed that one of the cows was missing, and he sat down on a rock to see what Fetch was going to do about it. Before very long he heard the furious tinkling of a bell, and soon Fetch appeared bringing in the perverse cow at a rapid pace, hastening her on by frequently leaping up and catching her ear in his teeth. The gate was again thrown open, and the cow, shaking her head from the pain of the dog's rough reminders, was led through it in a way she did not soon forget. Fetch then lay down quietly to cool off in time for supper.

A Slight Mistake.

[Boston Record.]

"I am going to have the celebrated Professor von Dunkelheim at the reception to-night," said Mrs. Marlborough Creans to Mrs. Sharpe; "he's a great acquisition—so very profound and learned, you know—but he won't talk. Nobody has succeeded in making him talk. If there's anybody at Newport that can draw him out, my dear, it's you, and I want you to try your skill on him."

"What's his specialty?"

"Butter. (That was what Mrs. Sharpe understood Mrs. Marlborough Creans to say.)

"Butter? Why, that's a queer sad for a learned Professor. But I'll do my best."

That evening, at the reception, Mrs. Sharpe opened out bravely upon Professor von Dunkelheim at the first opportunity.

"As we were driving out on the island this afternoon, Professor," said she, "I saw some of the most beautiful herds of Jersey cows that I have ever seen in my life."

"Ah?"

"And one place the cows beyond the fence contemplated us with such gentle, tender eyes and such soulful moos that for a moment I forgot their practical value in their æsthetic attractions. But after all, I thought, it is not for their beauty we should value them, but for the butter they produce."

"Um."

Mrs. Sharpe rattled on about the cows for conversational mile or two without drawing out any responses from the Professor. It is because he thinks I don't know anything about the way butter is made that he on't talk," thought Mrs. Sharpe. "Well, I will convince him that I do know something about it." And she proceeded to discuss the creamery methods in vogue in Vermont, with an infinite deal of talk about colors and temperature and mechanical utter workers, and so on. She hadn't rammmed on the subject all the afternoon or nothing.

But not a word could she get out of the Professor beyond "Um!" and "Ah!" He was plainly very much bored, and edged away after a while. Mrs. Sharpe was in despair.

Presently Mrs. Marlborough Crœsus got her into a corner, and said:

"Why, what in the world do you mean by talking forever to Professor von Dunkelheim about cows, and creameries, and all that sort of thing?"

"Isn't that his specialty? Didn't you tell me so?"

"Why, never in the world!"

"What is it, then, for heaven's sake?"

"Buddha, of course. He's written any number of books about Buddhism."

There is a marked coolness now between Mrs. Sharpe and Mrs. Marlborough Crœsus. Mrs. Sharpe says that a woman who pronounces "Buddha" like "butter" is hardly fit for cultivated society.

A Queer Story of Lincoln.

Mattoon, Illinois, Correspondence Cincinnati Enquirer.]

George B. Black, who lives in the southern part of this county, near the old Lincoln homestead, was a great admirer of the first martyred President. He has made it a hobby to pick up all stories concerning Abraham Lincoln, and tells me the following, which he has received from Rev. Dr. Harsha, of Omaha:

"General Winfield Scott, when a young man, was stationed at Fort Shelling—at that day perhaps the remotest military outpost in the country. When the Black Hawk war was begun some Illinois militia companies proffered their services. The lieutenants were sent by Scott to Dixon, Illinois, to muster the new soldiers. One of the lieutenants was a very fascinating young man of pleasing manners and affable disposition; the other was equally pleasant but extremely modest. On the morning when the muster was to take place, a tall, rawky, slab sided, homely young man, dressed in a suit of blue jeans, presented himself to the lieutenants as the captain of the recruits, and was duly sworn in.

"The homely young man was Abraham

Lincoln. The bashful lieutenant was he who fired the first gun from Fort Sumpter, Major Anderson. The other lieutenant, who administered the oath, was in after years the President of the Confederate States, Jefferson Davis."

Dr. Harsha was in Carter Brothers' book store, in New York City, where he chanced to repeat this story to a friend. An elderly gentleman who was sitting nearby listening arose and remarked that he was happy to be able to confirm the facts, as he was the chaplain at Fort Snelling at the time, and was fully able to corroborate each statement. A bystander then gave the original testimony that he had often heard Mr. Lincoln say that the first time he had ever taken the oath of allegiance to the United States it was administered by J. ff Davis.

Baldheaded Men.

[Detroit Free Press.]

"You've lost him for good this time," said the boss barber to one of his shavers as a customer went out and slammed the door behind him.

"Yes, but I forgot."

"That's no excuse. If you can't attend to business you must go."

"What is the trouble?" queried a reporter of the boss.

"He didn't brush the man's head."

"But his head was as bald as a bone."

"Certainly, and that's why he should have brushed it. Bald-headed men are very sensitive; you must use the brush the same as if they had plenty of hair. To do so, gives them an idea that you don't take particular notice of their baldness."

"And won't that man return?"

"Never. He'll try some other shop next time, and will even advise his friends to keep away from here."

The Question of Bugs in Court.

[Pall-Mall Gazette.]

How many bugs in a house suffice to make it "unfit for human habitation?" This was the question which Mr. Justice Matthew was called on to answer on Saturday. It was proved that "the furnished house in the fashionable West End quarter" contained several dozen of the brutes; but this number the learned judge decided was "not enough to oust the tenant," who accordingly had to pay the rent. How many, then, are enough to oust the tenant? As a matter of fact they had been ample enough to oust this particular tenant, who had left the house at the first attack. But law is not made for particular cases. It would have been satisfactory, however, if Mr. Justice Matthew had laid down at what point a tenant may capitulate to the enemy without forfeiting his right to legal consideration.

A Bright News Agent.

"It takes an artist to sell books on the railroad cars. You never see an artist slam into a car, bang the door, and start right down the aisle, hit or miss, throwing a 'Life of Jesse James' down by a minister, 'Gems from Moody's Sermons' by a Texas cow-boy, Allen Pinkerton's detective books by a young lady from Vassar, and 'Bouquets of Verse' by a sheriff taking a prisoner to Waupun. Your artist saunters noiselessly into a car without a book, tells the brakeman a funny story while he sizes up the crowd, and moves leisurely down the aisle, picking out suckers. When he has studied the people long enough he determines just how he will strike each one and gets his stock ready. Then he sits down by the minister and talks to him gravely, and in a pleasant, subdued tone about Moody's great work. He drinks some of the cowboy's whisky and tells him a story that keeps him laughing all the way to Utica. He discusses poetry with the young woman from Vassar, and converses in an engaging manner with the slim young salesman from the dry goods store. The result is that he catches every one of them. Those are the men who make \$60 or \$75 a week and throw the peanuts and fruit stock out of the window rather than bother with it. Ain't they artists? The Hebrew clothing merchants down in Baxter street think that it is a great thing to sell a man a coat at all. That's simply nothing to selling a man a book he doesn't, want, can't read, and has been importuned a hundred times in three days to buy. And that's what book-sellers who are artists do.

"Now, there was 'Homely Dave,' red-headed, ugly as a hedge fence, without a single handsome feature—he could talk any man that ever lived into buying a book. Did you hear about Senator Evarts' experience with Dave? It was when Mr. Evarts was Secretary of State under Mr. Hayes. He had been out to California on a kind of jaunt, and was coming back with a number of distinguished gentlemen—senators, congressmen and officials. They struck Dave's run at Council Bluffs. Before they had gone ten miles Dave had looked the party over and determined to sell them some books. He decided that he would make his first assault upon Secretary Evarts. Mr. Evarts was not feeling very well that day, and when he saw Dave coming he turned away impatiently and motioned the porter to put him out."

"I have been bored to death by news agents and book peddlers ever since I left San Francisco, and I am heartily sick of it."

"Homely Dave was not frightened in the least; he said with a bland smile.

"Excuse me, Mr. Secretary, but I don't want to sell you anything. I just want to

read you a page or two out of a book just issued. Have you seen it?"

"Mr. Evarts glanced at the title page and said he hadn't."

"Now just let me beguile the tediousness of the journey by reading the first page to you."

"So Dave, who had a remarkably clear and sweet voice, read on, not only the first, but the second and third pages, with Mr. Evarts a deeply interested listener. When 'Homely Dave' stopped, Mr. Evarts simply said: 'I'll take that book. Name your price. Now, what else have you got?'"

"That book was Edwin Arnold's *Light of Asia*. It had just come out then. After Mr. Evarts had picked out a lot of other books and Dave had read to him from them, he called to the senators and congressmen introduced Dave to them, and made them sit down and listen while Dave read a lot of things. He sold more than \$200 worth of books to those people before they got to Chicago. You bet he did not touch the peanut basket that trip."

"That was red-headed 'Homely Dave.' There ain't many news agents in the business nowadays that can equal that performance."

The Morphine Habit in France.

[London Telegraph.]

The deplorable habit of using morphine, not to relieve pain, but for the pleasurable sensations the narcotic produces, seems to be spreading in France, in spite of the warning note uttered by medical men, and the terrible consequences that must follow upon the use, or rather abuse, of the drug. During the hearing of a case at Macon recently, the facts that transpired corroborated the assertion made by doctors as to the alarming tendency which prevails. A chemist that resided in that town was prosecuted for selling morphine without medical authority to a number of persons, among them being the wife of a doctor, who, quite unknown to her husband, consumed it daily, and in large quantities, by injecting it under the skin. In the course of the trial several physicians came forward to attest that the pernicious habit of morphine injections was spreading greatly—especially among women, to the destruction of their moral and physical health. One of those witnesses—attached to a large hospital at Macon affirmed that more than a dozen of the day nurses were regularly addicted to the use of morphine, in one shape or another, and habit with them had become second nature. It is, however, in Paris—and especially in the fashionable world of Paris—that, if all we hear, be true, morphine causes the most serious havoc to mind and body.

The Sport of Cross Country Riding.

Theodore Roosevelt, in *The Century*, demands the sport of cross country riding from be charge that it is artificial and un-American. "Of course it is artificial," says Mr. Roosevelt; "so is every other form of sport in civilized countries, from tobogganing or yachting to a game of base ball. Anything more artificial than shooting quail on the wing over a trained setter could not be imagined. Hunting large game in the west with the rifle undoubtedly calls for the presence of a greater number of manly and sturdy qualities in those who take part in it than is the case with riding to draghounds; but unless the quarry is the grizzly bear, it does not need nearly as much personal daring. To object to hunting because they hunt in England is about as sensible as to object to lacrosse because the Indians play it." Mr. Roosevelt also adds: "To say the sport is un-American seems particularly absurd to such of us as happen to be in part of southern blood, and whose forefathers in Virginia, Georgia, or the Carolinas, have for six generations followed the fox with horse and hound."

An Eccentric Patriarch of Cape Cod.

"One of the oddest fellows I ever met in my travels was in the town of——, in Cape Cod," said a Massachusetts "drummer" the other night at the Hoffman house. "Every New England village has its odd genius, but this one surpassed all competition. He was called 'Uncle Abe,' and he was the station master, baggage master, telegraph operator, express agent and general factotum. Having been born in this place, and lived in it his four score years and ten, his knowledge of the people and their antecedents was uncompromisingly familiar. By the introduction of the telegraph he was put in possession of a means of enlarging his private fund of information which gave him a great advantage. He had great respect for the telegraph and would not have it misused. I happened to be at the station one day when a lot of pretty girls visiting the place came to him and wanted to send a telegram to New London to learn the result of the race between Harvard and Yale.

"'No such blanked nonsense will ye be sending over my wires,' said the old man, locking up his office and telling them to be off, with no respect to person.

"I naturally made some inquiries about the old fellow. On another occasion he had a message to be sent to Sister Margaret, a member of a religious order in some Massachusetts city, who was summoned to the town to take care of a sick relative. Uncle Abe eyed the address and soliloquised as follows:

"'Sister Margaret—Now if that don't beat

all! What folks won't do when they is in trouble! Sister Margaret; Why, they hev writ the directions without any hind name. No, Mr. Jones, he hain't no sister Margaret, Must be Mrs. Jones' sister; she was a Smith.'

"So he directed the letter accordingly, without consulting any one, to Miss Margaret Smith. No answer was received.

"Once a dispatch came announcing the death of a person he had never heard of, a relative of some one living in the town whose family he thought he knew all about. He carried the message himself, but instead of delivering it at once began in this way:

"'Who is there in your family by the name of Jackson? Hev ye got anybody by that name?'

"'Yes,' was the reply.

"'Must be a cousin, I guess?'

"'Yes.'

"'Wal, did Jane——marry a Jackson?'

"'Yes.'

"'Wal, one of them Jacksons is dead; you can read what it says,' handing over the message."

Had a High Forehead.

A gentleman was standing in a prominent bar-room the other morning, when a rather dilapidated looking specimen of the genus dude walked in, and saluting the bar-keeper familiarly, said: "Old chappie, I feel deuced 'rocky' this morning. I was out with a wine party last night. I have a fearful head on me, and want a 'bracer.' Supposing you make me a—ah—Manhattan cocktail." "Very well, sir," responded the natty, cut glass manipulator who stood behind the bar. The decoction was speedily prepared and placed before the figure in male attire. Quaffing the mixture with feverish haste, his dudieship placed the empty glass back on the bar, and said:

"By the way, old fellow, I'm a little short this morning. Just remember it, will you, and I'll make it all right the next time I come in."

"Oh, no," said the bar-keeper, "have that on me."

After a feeble protest or two the dude returns his thanks and glides out into the street. The gentleman who had been a silent witness in this silent transaction inquired of the bar-keeper why he had insisted on treating to the drink, instead of charging it up.

"Why don't you see?" replied the dispenser of liquids, "if I had said I would 'remember' it, the dude would probably never show up again, and I'd have been done up, but by asking him to have it on me, I won him. He thinks we're white-people now, and when he gets thirsty again he'll like as not spend a dollar over this bar."

Ancient Methods of Measuring Time.

No wonder the ancients did not get along in the world as well as the people of to-day—they lost too much time. And the reason they lost time was because of their imperfect ways of measuring it. They had to depend on the sun dial for the most part. A sun dial might be very useful when there was any sun, but it was entirely useless on cloudy days and during the night. In the latter case the truant husband inclined to hang out late profited much. It might be two o'clock in the morning when he crept in, but he could swear it was only ten, and his poor wife had no way of proving that he was lying. It removes much of the bitterness of a lie when you can't prove it on a fellow.

The Greeks and Romans, of whom we have occasion to speak occasionally, although this is not a strictly classical journal, had an improvement on the sun dial, which they could resort to when the sun was on a strike for eight hours as a day's work. It was a large jar filled with water, and a hole was made in the bottom through which the water could escape. The flow of the water tolled off the hours. It was called the clepsydra, which means "The water that steals away."

Sometimes an old Roman who had been drinking a good many Roman punches before going to bed would wake up in the silent watches—we mean sun dials—of the night parched with thirst. No other liquid being handy he would drink the contents of the clepsydra. That stopped the clock, of course, and he would everlastingly lie abed waiting for morning to come. He would never miss the water till the clepsydra was dry.

King Alfred burned candles to tell the time by, each candle lasting two hours. A dozen candles would make one day, though he got a little confused when the grocer, in order to hold the royal patronage and advertise himself as the special candle-maker for the king, gave him thirteen for a dozen.

There are few kings since Alfred's time who could make note of time in that manner, because so many of them were in the habit of burning their candles at both ends.

PAPER bottles were patented in America in 1883. Their sale was not extensive at first; but now that European patents have been secured, covering nearly all fields of probable competition, the controllers of the patents, we are informed, intend to manufacture the bottles in large quantities. Paper being an excellent non-conductor, fluids stored in air-tight paper bottles will withstand a more intense degree of heat or cold than they could endure without injury in bottles of any other material.

In the Smoking Car.

Nowhere among a crowd composed solely of men is there so much of the good natured undignified *bon comrade* element of human nature to be seen, as in a smoking-car; and nowhere else does the average masculine throw off so much of the cares of business, the stiffness of social position, the reserve of strangers, and smoke, as here. It is though a lot of old acquaintances had met, lit their pipes and cigars, and gone to chatting, laughing, and playing cards. Here he of diamond studs, gold-headed cane, glossy front, and much stiffness, chats freely with he of the labor hardened hands, meat ways, and last year's suit of clothes; and here the reserved man grows social, the timid man courageous, the cross man jolly and all opposites seem to catch the common spirit of good nature, and, forgetting their hobbies, talk, laugh, and grow happy. A car full of business men as they appear in the usually well filled smoking-cars of any main line, resembles very much a lot of overgrown school boys out for recess.

How to Treat Corpulence.

A physician of Germany, who objects to the Banting system of reducing flesh, insists upon abstinence and active exercise, and gives a middle aged man who has been over-stout for twenty years the following bill of fare: Breakfast—A large cup of black tea without milk or sugar; an ounce and a half of white bread or toasted brown bread with plenty of butter. Dinner—Soup—four to six ounces of meat, boiled or roasted with fat gravy, fat meat being preferable; a small quantity of vegetables, particularly leguminous, and all kinds of cabbage. Turnips and potatoes are not allowed. Fresh fruit, when in season, as dessert; salad or baked fruit without sugar. Soon after dinner take a large cup of black tea without milk or sugar. Supper—In winter regularly, in summer occasionally, a large cup of black tea without milk and sugar; an egg or broiled meat; sometimes fat ham or fresh fish; about an ounce of bread with butter, occasionally cheese and fresh fruit.

An Innocent Sport.

[From the Detroit Free Press.]

In a recent game of football played in Pennsylvania the casualties were:

1. Leg broken.
2. Ribs broken.
3. Nose flattened.
4. Knocked senseless.
5. Arm broken.
6. Thumb broken.
7. Terrible injury to spine.

And yet if a man is knocked senseless by a blow in a prize fight a hundred papers howl about brutality.

A Russian Empress.

Concerning the famous Catherine, the *Vincent* Century says: Her perfect self-possession on an occasion which would try the nerves of most women (it is to be hoped) may be seen in an account given by Gibbon, who heard it from a French officer. Peter was poisoned in a glass of brandy; on his refusing a second glass he was thrown down and strangled with a handkerchief by Orloff, Potenken and Bariatinaki. Orloff instantly returned to St. Petersburg, and appeared at the Empress's dinner in the disorder of a murderer. She caught his eye, rose from the table, called him to her closet, sent for Count Panin, to whom she imparted the news, and returned to dinner with her usual ease and cheerfulness. The Czar's body was publicly exposed, the collar of his uniform being pulled up to conceal the manner of his death, which, however, was very visible in his features. The defenders of Catherine asserted that the dethronement and murder of Peter were necessary to prevent her own death, which the Czar was preparing, "in order," writes Catherine, "to marry the very ugliest of my ladies, Elizabeth Woronzow."

Why the Czar Killed Him.

It is now certain that Maj. (not Count or Gen.) Reutern was killed by the czar under the following circumstances: The czar had set him to write letters which would take him two hours, and had told him to bring them to him when ready. Maj. Reutern consequently calculated on being left undisturbed for a couple of hours, and though working in a room adjoining the czar's, fixed a cigar in a cigar holder and began smoking. The czar suddenly re-entered. Reutern, confused at being caught smoking, hastily placed the cigar and holder behind his back. The czar fancied he saw a pistol about to be fired. He drew a revolver and shot Reutern. He was aghast on discovering his mistake, and sent one of his trustiest aides de camp to the Reutern family to explain the fatal misconception and express his deep regret. The family not only did not give the newspapers the information of Reutern's death, but still maintain that he died a natural death.

The steamship *British King*, from Liverpool, landed at Philadelphia a few days ago an immense English locomotive for experimental use on the Pennsylvania railroad. It was built at the shops of the London and Northwestern railroad at Crewe, England, and is of the double-expansion type, after the style of marine engines. This sort of engine has never been used with a locomotive in this country. It is claimed that the big machine can attain a speed of 70 miles an hour.

SUNLIGHT.

[By Cy. Warman.]

With soft caress, her hands I press,
While to her fair face rushes
A fiery flood of hot heart blood
That burns and blooms in blushes.

Her eyes divine, upon me shine,
With trembling tones I tell her
That she illumines this life of mine
Like sunlight in a cellar.

Importation of English Rabbits.

[San Francisco Chronicle.]

The rage for anything that is "English, you know," has at last developed itself in the importation of English rabbits, which are to be turned loose and allowed to propagate at large in order to afford sport for fastidious hunters, for whom the familiar American cotton tail is not good enough. The peculiarity of the foreign game is that it burrows in the ground and escapes, or, at least, hides from its enemies in subterranean warrens, a habit which the more straightforward American species do not possess. The depredations of the former upon the crops and pastures of farmers occasion very serious losses in England, and in Australia have caused the sheep husbandmen to expend very large sums of money for the protection of their ranges.

Heat and Light in the Sick Room.

A recent writer gives the following sensible suggestion on this subject:

Each person in a room should be supplied with 3,000 cubic feet of air per hour; and this should be done, where possible, without creating a perceptible draft, for the nervous irritation induced by drafts is liable to produce internal inflammations.

As a patient can bear a greater degree of cold when in bed than when out of it, convalescents from disease, fevers especially, should have the temperature of their rooms higher than that maintained during the height of the attack. Diseases of air passages, as croup and diphtheria, require a high temperature (80 to 85 degs. Fahrenheit) and a moist atmosphere. The best method for heating the sick room is by the open grate fire. The room should not be darkened by blinds, except where there is disease of the eyes, with photophobia, or when the patient is very restless and cannot sleep; then strong light must be excluded. Otherwise the sunlight must be allowed to enter and act chemically by decomposing the noxious gases, and thus purify the air. Of course it is not advisable to place the patient under a strong uncomfortable glare of sunlight, nor in summer to allow the sun's rays to shine into the room and raise the temperature too high. Artificial light has no useful effect, but does harm by burning up oxygen.

Mexican Ruins.

The Chihuahua (Mexico) *Enterprise* reports the discovery of some remarkable ancient ruins near Magdalena, in Sonora. Half way up the hill, which is about 700 feet high, is a layer of gypsum, white as snow and easily cut, yet hard enough to retain its shape after being cut. In it are cut a great number of rooms. The walls and ceilings are plumb, the walls being about eight feet high. There are no windows, though the stone is so white that the rooms are not dark. Figures carved on the walls show human hands having five fingers and a thumb, and the feet having six toes. The rooms are one above another to the height of three or four stories, but they recede at each story the width of a room, presenting the appearance of steps.

Where Violins are Made.

[Brainard's Musical World.]

In one of those mountainous districts of Bavaria, there is a town called Mittenwald, shut in by snow-clad peaks and dense forests, in which every yard is crossed by a labyrinth of ropes and poles, on which hundreds of violins are hung up to dry. For a couple of centuries the entire industry of the town has been violin making, for which the surrounding forests produce the best of material. Men, women and children all have their allotted share of the work, and violins, cellos, base violins, zithers, and every stringed instrument, from a copy of some old and priceless Stradivarius, perfect in form, color and tone, down to the cheapest banjo, are exported in great quantities, all, hand-made, to every quarter of the globe.

A comparative table of the strength of the merchant navies of the world which has just been published in France shows that Great Britain possesses 22,500 trading vessels, with an aggregate tonnage of 11,200,000 tons. Of these vessels 45,649 are steamers, with a tonnage of 5,919,000 tons, or rather more than one-half the grand total of the burden. The United States makes a very bad second, with 6,600 sail and 2,700,005 tons. Norway has 4,200 vessels, with 1,500,000 tons, and Germany, which comes immediately after her, has 3,000 sail with a total of 1,400,000 tons; France, Russia and Italy bring up the rear, each with less than 3,000 vessels. The proportion of steamers is, however, of greater importance than the total number of ships engaged in trade, and in this regard France stands second, although she has but 458 steamers, of 667,000 tons in all, to England's 4649. Germany presses her closely with 420 steamers and 478,000 tons.

The Ox Gored on the Other Side.

At the race fair, Thornhill, in upper Nithe-date, England, a farmer was trying to engage a lad to assist on the farm, but he would not finish the bargain until he brought a character from his last place, so he said:

"Run away and get it and meet me at the cross at 4 o'clock."

The youth was up to time and the farmer said:

"Well, have you got your character with you?"

"No," replied the youth, "but I've got yours and I'm not comin'."

In the Ball Room.

Major—Who is that young lady on the opposite side of the room?

Widow—That is my daughter. This is her first season. She is not quite 19 yet.

Major—Will you introduce me?

Widow—Certainly. Rosa, my dear, this is Maj. Guns. Major, my daughter Rosa.

Rosa—Good evening. And so you were in the war?

Major—Yes; I enlisted immediately after the battle of Bull Run and served till the close.

Rosa—My poor dear father was killed in that battle.

The major is now buried in deep thought.

Jack's Explanation.

It was at a dinner table. His father was saying something to his mother about dynamite. "Oh," exclaimed Jack, looking across to Eloise with an evident desire to impress her with his acquirements, "I know what dynamite is." "What is it?" inquired Eloise. "It's something that you blaspheme rocks with," Jack explained.

A LITTLE girl who is just at the age when her table manners are beginning to be looked after, called out at supper one night recently, "Give me some cake." "How do you ask?" said mamma, correctively. "Please give me some cake," returned the little miss, and added, unabashed: "I didn't forget. I was saving it up."

EVEN in the sphere of politics, so often declared unfit for women by those who would, if they could, make and keep it unfit for men—do not be afraid, my sisters, to follow the lead of your better impulses there. The hospitals of the Crimea were not too bad for Florence Nightingale to tread. Newgate Prison was not too bad for Elizabeth Fry to frequent. Shall the place where your fathers and brothers and husbands go in the discharge of a duty be too bad for you? If so, then your very presence shall purify it and make it a fitter place for them.—*Rev. F. A. Hinckley.*

THE RAILROAD OF LIFE.

As we speed out of youth's sunny station,
 The track seems to shine in the light,
 But it suddenly shoots over chasms,
 Or sinks into tunnels of night;
 And the hearts that were glad in the morning
 Are filled with repining and fears.
 As they pause at the "City of Sorrow,"
 Or pass through the "Valley of Tears."

But the road of this perilous journey,
 The hand of the Master has made,
 With all its discomforts and dangers,
 We need not be sad or afraid;
 Paths leading from light into darkness,
 Ways plunging from gloom to despair,
 Wind out through the tunnels of midnight
 To fields that are blooming and fair.

Though the rocks and the shadows surround us,
 Though we catch not one gleam of the day,
 Above us fair cities are laughing
 And dipping white feet in some bay;
 And always, eternal, forever,
 Down over the hills in the west,
 The last final end of our journey
 There lies the great "Station of Rest."

'Tis the "Grand Central" point of all railways,
 All roads center here, when they end;
 'Tis the final "Resort" of all tourists,
 All rival lines meet here and blend.
 All tickets, all mile books, all passes,
 If stolen, or begged for, or bought,
 On whatever road or division
 Will bring you at last to this spot.

If you stop at the "City of Sorrows,"
 Or wait in the "Valley of Tears,"
 Be patient, the train will move onward,
 And rush down the track of the years.
 Wherever, the place is you seek for,
 Whatever your aim or your quest,
 You shall come, at the last, with rejoicing
 To the beautiful "City of Rest."

You shall store all your baggage of worries,
 You shall feel perfect peace in this realm;
 You shall sail with old friends on fair waters
 With joy and delight at the helm.
 You shall wander in cool, fragrant gardens
 With those who have loved you the best,
 And the hopes that were lost in life's journey,
 You shall find in the "City of Rest."

—Selected.

Caves of Vultures.

A letter in the *Ventura Free Press* says: The writer has, for the last few years offered a liberal reward for a set of vulture eggs, and numerous have been the attempts of both hunter and urchin to procure them, with one common result—they were unable to find where they nest. Believing that the Pacific condor nests somewhere in the Sespe Mountains, I determined to make one grand effort, if possible to obtain the eggs. After considerable search I finally discovered the locality where these birds bring forth their young.

High up in one of the deep, dark gorges that put into the turbulent Sespe, a few miles above Devil's Gate, on the west side of the stream, at an altitude of more than four thousand feet, the home of the vulture was discovered, with all its strange and peculiar features. Climbing up the rocky gorge to a point where a perpendicular wall of rock fifty feet high stopped any further

progress, and following along the base of the rocky cliff a few yards, I observed a cluster of pine trees that grew near the base of the cliff, and, seeing one that shot above the projecting rock some sixty feet, being full of limbs that projected at right angles from the trunk, I determined to climb the tree and, if possible, get on top of the rocky shelf that, like a terrace, extended for hundreds of feet around the rocky bluff.

With but little exertion I climbed to a point parallel to the rocky shelf, and by careful attention walked out one of the projecting limbs six or eight feet and stepped down upon the terrace. Here I found a rocky shelf some ten feet wide, and extending far along the bluff and back to an overhanging wall, arranged something after the manner of the Cliff-Dwellers of Arizona, in which were excavated chambers large enough for a person to comfortably pass in, being on an average ten feet deep.

On the floor of the cavern lay scattered around a very Golgotha of bones, while near the back I observed a pile of sticks, grass and other debris resembling a wood rat's nest, about three feet high, culminating in a uniformly pointed hillock. Taking a dry stick that lay near by, I proceeded to tear down this pile, believing that I had found at last a vulture's nest, and that the birds had covered up the eggs before departing in the morning. Denuding the pile a few inches, I came to the heads of half-decomposed carcasses of numerous small animals, in which I recognized the head of a pig, sheep, several jack rabbits and other small varmints. The stench was so great that I was compelled to retreat.

I entered a second chamber, where I found a similar pile, and pursuing my further investigations I entered a fourth one, containing one of these peculiar nests, in which I observed a hole at the base about six inches in diameter, and at the point of thrusting a stick into the hole, out came a most miserable looking creature, remaining for a moment and then darting back again. It once more appeared at the hole, completely filling it up, and this time I discovered that I was gazing upon a young vulture, and that these piles were in reality vultures' nests, the sole object of my perilous adventures. Stepping around into the second chamber I began to tear down one of these heaps, believing that I would find the eggs somewhere within the ghastly pile.

Just then casting my eyes upward, I beheld far to the northward the old bird sailing high in the cloudless vault, and with renewed vigor I hastily demolished the pile, and when about one-third of the top had been torn off, consisting of partially decomposed carcasses of small animals, to my horror and surprise, there lay half buried in the heap, protruding from beneath, torn

and lacerated, the hand and forearm of some human being, sufficiently intact not to be mistaken as to its identity. Appalled at this ghastly sight, and again looking to the northward, I beheld the old birds approaching the caverns.

Knowing as I did, that they would sweep down in a few minutes, I sprang to the edge of the rock, seized a protruding limb and rapidly descended to the foot of the tree just in time, for that moment, like a great avalanche, with the velocity of lightning, they came, shaking the very earth I stood upon. Simultaneously they alighted upon the projecting shelf, when with their great wings outstretched, they seemed to know at once that some daring intruder had ventured to enter their home of death and desolation.

Quickly wending my way down the mountain side, I finally reached my gun and outfit and casting a look in the direction of the cave, I beheld that there were unmistakable indications of turmoil in the camp—the great birds attacking each other for a moment in their imperial altitude, then alighting upon the overhanging rock, but too far distant for the range of my rifle. Hurriedly retracing my steps down the dismal and rocky stream, with the horrible and strange discoveries ever vividly before my eyes, it was not until I was past the Devil's Gate, where I halted, that I once more regained my normal condition of mind, determining that at some future day I would again visit the Vulture Caves of the Sespe.

Uncle Billy's Story.

[Pioneer.]

Here is what he said: "When I was a drunkard I could never get my barn more than half full. The first year after I signed the pledge I filled my barn; the second year I filled my barn and had two stacks; this year I filled my barn and had four stacks. When I was a drunkard I owned only one poor cow, and I think she must have been ashamed of me, for she was red in the face; now I own five cows, and I own three as good horses as ever looked through a collar. When I was a drunkard I trudged from place to place on foot; now I can ride in a carriage of my own. When I was a drunkard I was \$300 in debt; since I have signed the total abstinence pledge I have paid the debt and have purchased two hundred acres of wild land, and have the deed in my possession; two of my sons who are teetotalers, are living on that lot. When I was a drunkard I used to swear; I have ceased to be profane. The last year of my drunkenness my doctor's bill amounted to \$10; since I signed the pledge I have not been called upon to expend a cent for medicine."

Medical Superstitions.

A French writer named Challamel has recently issued a book entitled "A Bird's Eye View of France in the Middle Ages," in which he relates a number of medical superstitions current in France in the middle ages, most of which are said to prevail at the present time also. In those days the French seem to have had unlimited faith in preservatives against diseases and infallible means of cure, and it may be added that they were not alone in their trustfulness. The following are some of the superstitious practices mentioned:

To cure fever they abstained from both flesh and eggs on Easter and on other high festivals; they caused a cabbage to be stolen for the purpose from a neighboring garden to be dried on a pot-hook; they wore one of a dead man's bones as an amulet; they inclosed a green frog in a bag and hung it around a sick person's neck; they ate the first Easter daisy that they found, and they received the benediction in three different parishes on Sunday. While telling their beads they searched for a mullein-stalk and threw it to the winds; they passed through the cleft of a tree; they caused a horse to drink a bucketful of water, and then drank after him; they crossed a procession between the cross and the banner; they drank holy water on Easter eve or on the eve of Pentecost; they twined the hems of a shroud about their arms or neck, and they drank three times of a mixture of water from three wells in a new pot. The people of Provence had their fisheries blessed on a certain saint's day. On Assumption day the people of Perigord went before sunrise, walking backward to gather nine sprigs of centaury, which they fastened to a feverish person's neck, after which they gave him an infusion of the herb to drink. A tree choked to death on the even of St. John's day had the same virtue. It was common for a feverish patient to rise early in the morning and walk backward in a meadow, plucking a handful of herbs without turning or looking at them, and then throw them behind him and keep on in his course without turning back; the result of this was that the fever attacked the devil. Another practice was for the fevered person to drop a piece of money in a public place with some mummery; whoever picked up the coin took the fever.

The waters of several fountains cured fevers, and in particular the fountains at Krignac triumphed over tertians. To overcome fear one had only to stick pins in a dead man's shoe, carry a wolf's tooth or eye about, or ride a boar. To banish rheumatism the sick person caused a miller or his wife to strike three blows with the hammer, saying: "In nomine Patris;" etc. Bathing

the painful parts with the waters of the fountain of Montes caused the pain to cease. In Landers rheumatics and paralytics were cured of ills by getting into certain openings, called etrines, in the pillars of a church. In Brittany a child was protected against all diseases by having its shirt put on damp. The people of Perigord carefully preserved the ashes and embers of the yule log, which cures the maladies of man and beast. In some districts the butter made in May was kept as a vulnerary. Among the peasants of the Montagne-Noire a white-handled knife was an infallible remedy for colic. Epilepsy was cured by attaching a crucifix nail to the patient's arm, or by causing him to wear a silver ring or a medal bearing the names Gaspar, Melchoir, and Balthasar. For warts there was a very simple specific—rubbing them with a wad of hair or of broom, and wrapping chick-peas or pebbles in a rag, which the person was to throw behind him on the road. Whoever had the toothache touched the aching tooth with a dead person's tooth.

Etiquette.

It is an accepted rule in New York society that no gentlemen should be introduced to a lady unless her permission has been asked and she be given an opportunity to refuse. In making an introduction the gentlemen is presented to the lady with some such informal speech as this: "Mrs. A., allow me to present Mr. B.," or, "Mrs. A., Mr. B. desires the honor of knowing you." In introducing two women, present the younger to the elder woman, the question of rank not holding good in our society, where the position of the husband, be he judge, general or senator, does not necessarily give his wife a fashionable position. She may be of far less importance in the great world of society than some Mrs. Smith, who, having nothing else, is set down as of the highest rank in that unpublished but well known book of heraldry, which is so thoroughly understood in America as a tradition.

In this country it is the fashion to shake hands, and most women, desirous of being cordial, extend their hands even on a first introduction. But it is, perhaps, more elegant to make a bow only at a first introduction. In her own house a hostess ought always to extend her hand to a person brought to her by a mutual friend and introduced for the first time.

At large gatherings in the country it is proper for the lady to introduce her guests to each other, and it is perfectly proper to do this without asking permission of either party.

A gentlemen, after being introduced to a lady, must wait for her to bow first before he claims her as an acquaintance.

His Mother.

(Pennsylvania Railroad Men.)

The doctor said it was no unusual thing in delirium, but it seemed strange and pathetic to the loving watchers that the middle-aged, care-worn man, tossing on a sick bed, should fancy himself again a child at his mother's knee. The green grave far away in a country village where she slept had no existence so far as he was concerned. She had never died, but was with her boy again. The many trials of life had passed from his memory now, and boyish woes and confidences alone were on his lips.

When his weeping wife laid her hand on his fevered brow, he looked up and smiled and called her "mother." The hand that held the medicine to his lips, that smoothed the pillow, was "mother," and in all the faces that came and went about his bed he saw but hers, the first his baby eyes had known.

He had forgotten her so many years. He had been so busy all these years, and a thousand worldly things had clouded the image of that kind old mother, but as death's mighty hand had set aside perplexing, fretting distractions, all so little now, clear and sweet to his parched soul came the memory of an innocent childhood and a mother's love. All at once he knew himself a weary troubled creature, sick and faint over earth's fevered draught, and he went back like a little child to her whose tenderness had never failed him.

"Your little boy is tired, mother. The sun is hot."

His children broke into sobs as he spoke, but his fatherhood was a thing unknown to him now.

"I'm sleepy and I want to go to bed. I've been a bad boy some to-day, ain't I? But I'll ask God to forgive me, and if you do, I guess He will too. Hear my prayers, mother, I've learned them by heart now."

They saw that the end was close at hand then, and his wife made a frantic appeal to him to recognize her, but his ears were fast dulling to all earthly sounds, and he only struggled to raise himself to his knees. They could have restrained him but he said:

"Why, I can't go to sleep without saying my prayers. I've been a bad boy to-day, and God would be angry, mother."

Then they helped him up, and with tender arms supported the weakened form, while he knelt with upturned eyes fast dimming with death's film, and clasping his hands as a little child does by its crib side, prayed the sweet old petition of:

Now I lay me down to sleep,
I pray Thee, Lord, my soul to keep.
If I should die before I wake,
I pray Thee, Lord, my soul to take.

A DOLLAR TO SPARE.

[S. W. Foss in Yankee Blade.]

The grass it is greener, the snow it is whiter,
The world is sereener and life it is brighter;
The rose has a hue of a deeper carnation.
A lovelier halo envelops creation.
And the goddess of fortune is smiling and fair
When your wallet is fat, with a dollar to spare
O a foe to despair and death to all care
Is that sum of all blessings, a dollar to spare!

O the plethoric pocket, the big, bulging wallet,
However you mock it, whatever you call it,
Is filled with a balm, undiscovered in Gilead—
Fit theme for a bard like the author of *Iliad*!
O the whole world is bathed with a rose scented air
When your wallet is fat, with a dollar to spare;
Strong to do and to dare, and a hard man to scare,
Is the man who is blessed with a dollar to spare!

O Age bright and sunny! O era propitious!
When the poor will have money, unless they are v
dious,
Come on at a pace that is brisker and quicker,
Don't stray like a sot who is loaded with liquor;
O list to the wail of a poor fellow's prayer,
And make all wallets fat, with a dollar to spare!
Come Age bright and rare, have a seat, take a chair—
Fair Age when all men have a dollar to spare!

My Horrible Friend.

[Wallace P. Reed in Atlanta Constitution.]

Just why I stopped in Panama on my return from my trip to California is a mystery. The quaint Spanish fashion of the old city interested me, and I found it difficult to tear myself away.

When I was ready to leave, my brief sojourn in the country had inspired me with so much confidence that I eagerly embraced the suggestion of my landlord to cross the isthmus on horseback.

"Take it leisurely," he said; "follow the old transit road. It touches various points along the canal. You can make the journey in a couple of days, and you will not mind spending a night in one of De Lesseps' villages."

Now the canal was a pet hobby of mine. I was anxious to see how it was progressing. Besides, I had an American friend who was one of the contractors and I wanted to pay him a visit.

The next morning I mounted a gentle mustang furnished by my host and set out for Aspinwall, the Atlantic port, where I intended to take the steamer for New York. As I wished to reach the camp of my friend Jackson by midday I rode rapidly during the morning.

At one place the road ran along in sight of the canal for half a mile. Here I saw a scene not to be matched anywhere on earth. Enormous machines were at work excavating thousands of tons of dirt, and countless wagons were employed removing the loose earth. Myriads of workmen swarmed everywhere, jabbering to each other in all the tongues of the known world. Among them were men from all the countries of Europe, Americans, Africans, Chinamen, West Indians and Malays. The fierce looks

cast upon me by these people alarmed me, but I pretended to be a calm spectator of the animated scene. One of the contractors was an Englishman, and from him I learned that I would find Jackson about five miles further on.

"Are you armed?" asked the English man.

I told him that I had a revolver.

"You will probably need it before you reach Aspinwall," said he. "You are passing through 30,000 of the bloodiest cut-throats that were ever collected together."

After hearing this I had a great mind to return to Panama, but the dread of being laughed at made me decide to push on. Assuming a determined, business like look, I put spurs to my mustang and ambled through the motley gangs of laborers until I had the satisfaction of leaving them behind me. Fortunately I encountered no obstacle, and Jackson's camp was made just in time for dinner.

Here I felt safe. Jackson was a big, double fisted fellow whose men were nearly all Americans. He was delighted to see me and gave me a capital dinner. During the two hours I spent with him I filled him full of news from the states, and he, on the other hand, told me a lot of wonderful things about the canal. He made no secret of his conviction that the enterprise would drag along for years, but as he was making bushels of money the delay played into his hands. As I declined to stay all night with him, Jackson gave me some directions about my route, and at my departure confided to me a package containing \$5,000, asking me to deposit it for him in one of the banks at Aspinwall. I suggested that there was danger in carrying such a sum of money through the country, but the stalwart fellow laughed at my fears. He said that I would make the hacienda of Don Francisco Mendez at nightfall, where I would be royally entertained. By daylight he thought that I could take care of myself.

While this was going on I saw two brutal looking Mexicans at a short distance watching us intently and conferring together in low tones.

"I don't like the looks of those rascals," I said.

"Hello, there! Pedro, and you, Juan!" shouted Jackson. "Get to work, you lazy devils!"

The Mexicans growled out a few oaths and sullenly retired.

"They are two of the worst men in the camp," said Jackson, "but they are not likely to bother you."

I had my doubts, but the prospect of staying all night with Mendez somewhat reassured me, and I started off in good spirits. My road took me through a scene of bewildering beauty. The tropical foliage around

e glittered with all the hues of the rainbow. Unknown flowers of gorgeous magnificence and overpowering fragrance brightened the roadside.

Suddenly I came upon a small pond of clear water in an open space. Hot, dusty and travel worn, I could not stand the temptation. Without counting the consequences, I fastened the mustang to a sapling and un-ressed in a hurry, placing my revolver under my clothes on the edge of the water. Then I plunged in and enjoyed a refreshing swim. One thing annoyed me. All along the way I had met with monkeys everywhere. They were of all sizes, and the interest they took in my movements amused me not a little. Sometimes they chattered at me indignantly and shook their fists almost in my very face. At a wave of my hand, however, they fled in precipitate terror. As soon as I entered the lake the monkeys seemed to take fresh courage. They scrambled in droves and abused me to their hearts' content. Among them was one of a species that I had not seen before. He was a ferocious looking monster, fully five feet high and as muscular as a bear. Before I realized the situation this long-legged giant swooped down on my clothes and started with them for the woods. For a moment I was absolutely paralyzed. It was no joke to ride to Aspinwall in a decent rig, but I had no fancy for the role of Lady Godiva. There was no time to lose. The monkey had left my pistol and as soon as I could seize it I fired. He gave a howl of rage and dropped everything but my coat. I hastily jumped into my recovered garments and gave chase. It was useless. The fiendish thief scurried up into the top of a tall cocoa tree, and in the twinkling of an eye put on my coat, buttoned it around him, and then proceeded to hurl cocoanuts at me with such precision that I was glad to leap into my saddle and ride off.

But my troubles had just begun. I had reconciled myself to the loss of my coat, as Jackson's money was in an inside pocket of my vest, but the monkey showed a disposition to follow me. After firing at him several times I gave it up. His tough hide seemed bullet proof, and there was no chance to kill him unless I hit him in the eye. The declining sun warned me that it was time to seek shelter for the night, and I knew that in these tropical solitudes there was no twilight. I saw no cultivated fields, no houses, no signs of the hacienda of Don Francisco Mendez. The situation was growing serious. Occasionally a stone weighing a pound or two was hurled at me from some leafy covert and then the gigantic monkey would give a horrible laugh and scamper away. He was a funny looking chap in my blue flannel coat, but I was too mad to enjoy the comic aspect of the matter. It

struck me that if the brute caught me in the dark he would make an end of me in no time. It was both horrible and humiliating, such a death in the tangled forests of this savage land. Just then I saw a short distance off in a clearing a square adobe hut. Here was shelter and protection.

I was not much disappointed to find the hut uninhabited. It was strongly built, with no windows and one entrance from which the door had long since rotted away. A step ladder led to a loft. Ascending I found a small apartment dimly lighted by round holes in the wall which had evidently been used by sharpshooters at some revolutionary period in the history of the country. My mind was made up in an instant. I went back to my mustang and picketed him about a hundred yards from the hut in the bushes. Then I returned to my fortress just as darkness closed in upon me and sought refuge in the loft, pulling up the ladder after me. I was safe here, even from the monkey, and I lay down feeling a sense of perfect security.

It must have been late in the night when I heard something moving in the room under me. Looking through the opening in the floor I could see nothing. I struck a match and by the flickering flame recognized the monkey. The wretch still wore my coat, and in the dim, uncertain light his appearance was more repulsive than ever. I lay down again, knowing that the beast could not get into the loft, and commenced planning for his destruction in the morning. I was satisfied that the animal belonged to a species of mountain apes, of great strength and terrible ferocity. Their cunning I had heard was almost human, and they did not scruple to attack men and rend them limb from limb. I concluded when the morning light appeared to draw the brute's attention and shoot him in one of the eyes.

Having settled this plan, I was about dropping into a doze when I heard voices outside the hut. I listened with alert ears.

"If, as you say, Pedro, that this American devil is inside, we should ambush him and shoot him when he comes out in the morning."

"Now, by all the saints, Juan," was the reply of Pedro, "you are a cowardly fool. The American devil, like all his devils of countrymen, has his eyes open and may get the drop on us."

I understood it all. I recognized the voices. Pedro and Juan had followed me all the way from Jackson's camp.

What to do was the question. It was hard to decide, and I waited further developments.

The two robbers conversed in low whispers, and all I could hear was their final agreement to rush in and overpower me.

"Wonder what they will do with the monkey?" I said to myself with a chuckle.

"I hear the American moving," said Pedro.

It was the monkey. The monster was walking in a circle all the time, and the dead leaves that had drifted into the hut rustled under his feet.

There was another whispered consultation and the Mexicans rushed into the room below.

The outlaws saw a huge dark form and made charge with their long, murderous knives.

I heard two dull thuds and knew that Pedro and Juan had been dashed headlong against the walls.

"Mother of Jesus!" gasped Juan, "knife him you son of Satan!"

"Fool!" cried Pedro, "knife him yourself!"

The robbers made another rush.

"Thousand devils!" yelled Pedro, "where are you, Juan? This hog of an American has me by the throat and I have lost my knife."

"He is a demon," groaned Juan; "he is pounding my head against the wall!"

A volley of oaths followed and then a chorus of groans. Through it all I heard the ominous dull thud. At length silence prevailed and I knew that all was over.

My last match was gone but to my great delight it was nearly morning. With the first rays of daylight I peered through the hole in the floor.

It was a ghastly sight that met my gaze. The two Mexicans lay on the floor quite dead. Their heads had been mashed to a jelly against the adobe walls and their throats bore a dark blue mark.

Sitting in the corner was the monkey. He was bleeding profusely and was evidently seriously hurt. At first I thought that I would spare him. He had saved my life and I felt grateful. But when I fixed the ladder and descended the untameable beast prepared himself for a spring and there was such evident malice in his eyes that I drew a bead and fired. One shot did the work. He rolled over dead.

It was no place for me after such an adventure, and I at once went in search of my mustang. To my great joy my faithful steed was all right and I was soon in the saddle and on my way to Aspinwall.

Depositing Jackson's money in the bank when I arrived I immediately boarded the steamer. I knew that it would not be prudent to speak of my affair with the two Mexicans, and I had a suspicion that a statement of the part the monkey had in the tragedy would be regarded by the authorities as a cock and bull story. So I wisely kept my mouth shut until I was again

under my own flag and among my own countrymen.

Of course I have never wasted any regrets on Pedro and Juan, but I still hold my horrible friend, the monkey, in grateful esteem.

Safety in Duty.

"We are much safer if we do our duty than if we neglect it." The way of the transgressor is not only hard; it is unsafe.

In 1853 an earnest Christian soldier, Col. Martin, of the Ninth Bengal Native Infantry, purposed to devote one thousand pounds to establish a mission in Peshawur, the large Mohammedan city where his regiment was stationed.

As he could do nothing without the civil authority, he asked permission of Col. Mackeson, the English Commissioner. Peshawur, a city of sixty thousand Afghans and wild hill-men, who pointed their arguments with the dagger, had but recently come under English rule.

The commissioner, thinking it would be dangerous to English authority to plant a Christian mission in one of the most fanatical cities of India, peremptorily refused the request. He also assured Col. Martin that the first missionary who crossed the Indus to enter the Peshawur Valley should be turned back. The plan of the Christian soldier was laid aside until a more propitious season. It came.

One day the commissioner was hearing the appeal of the people in the veranda of his house at Peshawur. Among them came a man, who, having spread his prayer-rug within sight of the house, had been engaged all day in making prostrations.

Coming up to Col. Mackeson, he made his salaam and presented a paper. The Colonel, supposing it to be a petition, raised his arm to receive it, and the man thrust a dagger into his chest. He was seized and found to be a Mohammedan fanatic, who had assassinated the Englishman because he was an "infidel."

Gen. Sir Herbert E. Edwardes, then a colonel, succeeded the dead commissioner. He, being a Christian, and believing that the path of duty is the path of safety, earnestly sanctioned Col. Martin's proposal.

A meeting of the European residents at Peshawur was called. After the call had been issued some one suggested that as the Peshawur races were to be held on the same day, the meeting should be deferred.

"Put off the work of God for a steeple-chase? Never!" exclaimed Col. Martin.

The meeting was held, the mission founded, and a subscription list sent round. One English captain, who looked upon the experiment as a dangerous one, put his name down for "one rupee towards a Colt's revolver for the first missionary."

That captain moved, shortly after, to Meerut, the "quietest" part of India. The mutiny broke out; he saw his wife and children cruelly killed, and then he, too, was murdered.

Four years after the formation of the mission came the testing days of the mutiny. All Bengal was convulsed, but at Peshawur there was less crime than had ever been known in that city. The work of the missionaries was not interfered with, and safety reigned in that most dangerous outpost of English rule.

One of the missionaries, Dr. Pfander, would take his stand, Bible in hand, on the bridge, or in a thoroughfare, and proclaim the truth of Christianity. The empire of England in India was trembling in the balance, but not the least insult was offered to the brave missionary.

"What is your opinion of the crisis?" asked an Englishman of a native chief, who lived near Lahore.

"Tell me just what the state of things is in Peshawur," answered the chief.

"Things are going on well there, under Col. Edwards," said the Englishman.

"If things are well at Peshawur," replied the chief, "then all is well in the Punjab. If not, then," rolling up the skirt of his garment, "the Punjab will be rolled up like this cloth, if things go wrong at Peshawur."

Things went on well, notwithstanding the sixty thousand of fanatics within the city, and the thousands of armed hill-men, because the commissioner, Sir Herbert Edwards, was a Christian, who acted upon the maxim, "We are safer in doing our duty than in neglecting it."

Mexican Vanilla.

[Druggist's Circular.]

The vanilla bean (usually called vainilla) is the produce of an orchid creeper which, although growing from the root, is a parasite, as it will grow even when cut from the root; for it takes its substance from the tree around which it clings by means of its thousands of fine tendrils. Like all parasites, there are trees which are particularly adapted to its support. They are planted about ten feet apart, in rows, at the foot of small trees which are left in clearing the land. They begin to bear the third year, and in favorable years give from \$400 to \$1,000 per acre. No cultivation is needed but to cut down the grass and weeds, no plowing or digging being necessary. The bean is often gathered in September or October, but if left till the end of November or December it comes to perfection. It is then gathered carefully and spread out in the sun on mats, if the weather be favorable, but if otherwise, it is placed in ovens; which process changes the color from a pale green to a rich brownish or purple, and at

the same time develops the oil, which on pressure exudes from the bean. They are then packed in blankets while warm, and put into large tin cases to go through a sweating process; again put in the sun, and again in the blankets, until they attain the proper color. They are then placed in a dry room upon shelves made of some open material, so that the air can circulate around and under them. This evaporates all the watery part of the bean. When sufficiently dried they are put into large cases ready to be assorted into sizes and qualities. The person that raises the bean seldom cures them, for that requires a good deal of care and special attention. There are about fifteen different classes, but they are sold by the packers at one round price. The people will work only about one hundred days in the year, which provides them with all they need; and as they will do no more, there is very little increase in the production of anything. When the beans are assorted they are tied up neatly in bunches of fifty beans each, and packed in cases often holding from two to three thousand. These tin cases are lined with tin foil, and a ticket placed on the lid giving the quality, size and quantity. Some five or six of these tin cases are put into a neatly made cedar chest, which is sometimes lined with zinc and hermetically sealed, so as to prevent moisture from getting to the vanilla in transport, which would ruin it. These cedar cases are then sewed in mats and covered with a coarse bagging, to avoid the danger of transportation on mules. In this manner all the Mexican vanilla goes to places of sale in Europe and the United States. Formerly France was the great market for Mexican vanilla, but the enterprise of some of the American merchants has diverted the trade to New York, which is now the great depot of vanilla.

Prayer.

[D. L. Moody.]

Some people tell us that prayer does not affect God, because his plans are all made and he never changes anything, but still they encourage us to pray because prayer is good for us. Now suppose that you were to go, hungry and miserable, on a bitter cold night, to a prosperous neighbor and knock at the door, and he should arise and say, "I can not let you in for my plans are all made for the night, but I want you to keep knocking until morning because I know it is good for you to knock." What would you think of him, and of the blessing of being permitted to knock at the door all through the freezing hours of the night? And what do you think of God urging and commanding needy suffering humanity to pray just for the sake of exercise?

His Son Bill.

[New York Sun.]

A New York artist who was down on the Jersey shore sketching and painting last summer sold a farmer a crayon drawing in which the central figure was old Father Time with his deadly scythe. The buyer took it away well pleased with his purchase, but returned next day with a grin on his face and the picture under his arm, and said:

"I've got a son Bill to home."

"Yes."

"He hain't but fifteen years old."

"Yes."

"He's got tow hair and a cataract eye, but he's smarter'n chain lightning."

"Indeed, but I'm glad to hear it."

"I hadn't this pictur' home five minites when Bill set up a roarin', and laughing, and pintoed out—what d'ye think? You've gone and drawn old Father Time a-mowing left-handed. I might never have noticed it, but you can't fool Bill fur cider."

"My dear man," answered the artist, "did you ever see Father Time?"

"Of course not."

"Did your son Bill ever see him?"

"Sartinly not. He ain't to be sawed."

"Well, then, how do either of you know whether he was right or left-handed?"

"By Gum!" gasped the farmer as he stood with open mouth, "you've got the yoke on us. That's it; how do we know? I've had three different hired men who were left-handed, and I've knowed other folks to be. I jist jumped at it without stopping to think. When Bill began to haw-haw and pint to the scythe, I jist sot in and agreed with him. Say, mister?"

"Yes."

"I've got a son Bill."

"Well?"

"He's smarter'n chain lightning at sizing up a tin peddler, but the biggest fool in the state on picturs."

Cheap Cigars and Cigarettes.

[Brooklyn Eagle.]

The gathering of cigar stubs gives employment to a large number of Italian women and children. As a reporter wended his way homeward early one morning recently, he saw an Italian lad with a bag strapped upon his shoulders walking in the gutters of the streets in the vicinity of the city hall. The boy was collecting burned cigar ends. At dawn the public thoroughfares are thronged with industrious little laborers, who before the sun rises clean the streets of all discarded cigar stubs. Until an inquiry was made at a local cigar store the reporter was at loss to know what became of the cigar stubs gathered. The dealer in tobacco said:

"You would be surprised to know the

amount of money Italians make by gathering cigar stubs. I do not think I put the figures high when I state that no less than 50,000 cigars are smoked in Brooklyn daily. The number consumed may be more or less, but nevertheless the fact remains that nine out of ten men smoke. During the day a larger part of the smoking is done out of doors, and the stubs of the cigars, wholly or partly consumed, are thrown into the gutter. In the vicinity of the city hall, where large crowds of men gather at all times during the day, the number of cigar stubs found is scarcely credible.

"The cigar stubs are utilized in many ways. After being gathered, the butts, by which name cigar ends are sometimes known, are sorted and graded, and the dark and light shades of tobacco placed in separate heaps. The tobacco in the stubs is then pulled out and thoroughly washed. The washing process is done to eradicate all ashes and burned tobacco. After the tobacco has been dried and graded again it is ready for sale. Cigar stubs are sometimes made up into a cheap quality of five-cent cigars, or oftener sold to cigarette manufacturers, who mix the stubs with other tobacco."

What a Boy Accomplished.

A boy who always attends Sunday school went out into the country one summer to spend his vacation—a visit he had long looked forward to with pleasure. He went out to help the men harvest. One of the men was an inveterate swearer. The boy, having stood it as long as he could, said to the man:

"Well, I guess I will go home to-morrow."

The swearer, who had taken a great liking to him, said:

"I thought you were going to stay all summer?"

"I was," said the boy, "but I can't stay where everybody swears so. One of us must go, so I will leave."

The man felt the rebuke, and said: "If you will stay, I won't swear," and he kept his word.

Boys, take a bold stand for the right. Throw your influence on the side of Christ and you will sow seed, the harvest of which you will reap both in this world and that which is come.

There are some troubles that even religion fails to allay with comforting ministry. When a man goes to church on a hot morning wearing a collar a size smaller than the neck of his shirt it's no earthly use for the parson to talk about heaven to him when he feels that neck break out of its reservation in a new bulge as fast as he tucks an old one under.—*Brooklyn Eagle.*

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

II Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

DECEMBER, 1891.

Assessment Notice for December.

OFFICE OF THE GRAND LODGE B. OF L. F.,
TERRE HAUTE, IND., December 1, 1891. }
ASSESSMENT No. 25, \$2.00.

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 543. Robert Spencer, of Van Bergen Lodge, No. 62, was Run Over and killed, August 21, 1891.

CLAIM No. 544. A. A. Read, of Ft. Ridgley Lodge, No. 65, died of Cholera Morbus, August 31, 1891.

CLAIM No. 545. Frank M. Hicks, of Kennesaw Lodge, No. 247, was killed in a Collision, September 22, 1891.

CLAIM No. 546. Fréd Fox, of Deer Park Lodge, No. 1, died of Typhoid Malarial Fever, September 23, 1891.

CLAIM No. 547. Jas. T. O'Shea, of Hill City Lodge, No. 460, died from injuries received in a Railway Accident, October 2, 1891.

CLAIM No. 548. B. F. Wertz, of Robt. Andrews Lodge, No. 165, was declared totally disabled with Tuberculosis, October 7, 1891.

CLAIM No. 549. Thomas Y. Wright, of Great Western Lodge, No. 21, was killed in a Railway Accident, October 8, 1891.

CLAIM No. 550. Walter S. Patterson, of Susquehanna Lodge, No. 71, was killed in a Railway Accident, October 8, 1891.

\$1,000 allowed on this Claim, (No. 548) by Second Biennial Convention.

CLAIM No. 551. Byron Needham, of Bonanza Lodge, No. 194, was killed by being Caught between Engine and Cars, October 11, 1891.

CLAIM No. 552. Ben. S. Strange, of Adair Lodge, No. 100, was Run Over and killed, October 11, 1891.

CLAIM No. 553. Lewis R. Deubler, of Acme Lodge, No. 228, died of Typhoid Fever, October 13, 1891.

CLAIM No. 554. Henry F. Christman, of Clark-Kimball Lodge, No. 113, died of Typhoid Fever, October 15, 1891.

CLAIM No. 555. Chas. M. Mitchell, of Iron Range Lodge, No. 206, died of Typhoid Fever, October 20, 1891.

CLAIM No. 556. W. H. Kitchen, of Nottoway Lodge, No. 435, died of Consumption, October 20, 1891.

CLAIM No. 557. Jno. Kelley, of Franklin Lodge, No. 9, was caught and killed between two Engines, October 20, 1891.

CLAIM No. 558. Jno H. Jordan, of Rose City Lodge, No. 45, was killed by Explosion of Engine, October 21, 1891.

CLAIM No. 559. Jasper M. Weaver, of Rose City Lodge, No. 45, died of Uremia, October 21, 1891.

CLAIM No. 560. Jesse L. Porter, of Oriole Lodge, No. 214, died of injuries received in a Railway Accident, October 25, 1891.

CLAIM No. 561. Harry S. Anderson, of Chamberlain Lodge, No. 186, died of Intestinal Obstruction, October 27, 1891.

CLAIM No. 562. Lewis F. Atwood, of Boston Lodge, No. 57, was declared totally disabled by Progressive Spinal Sclerosis, November 2, 1891.

CLAIM No. 563. Frank E. Shoutell, of Mt. Hood Lodge, No. 167, was declared totally disabled by Phthisis, November 6, 1891.

CLAIM No. 564. David Bruner, of Belvidere Lodge, No. 329, died of Typhoid Fever, November 10, 1891.

CLAIM No. 565. Thomas L. Crusen, of Vigo Lodge, No. 16, died of Dysentery, November 12, 1891.

CLAIM No. 566. Frank Bowen, of Air Line Lodge, No. 409, was declared totally disabled with Consumption, November 17, 1891.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership DECEMBER 1ST, 1891, also for all members having taken a withdrawal (limited or final) after NOVEMBER 1ST, (and for all members who died or were totally disabled since that date) said remittance to reach the Grand Lodge not later than DECEMBER 20TH, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

\$750 allowed on this Claim (No. 562) by Second Biennial Convention.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., NOV. 1, 1891.

A Sad Sweet Song

Words by Cy. Warman. Music by H. B. Leonard.

"THE OPEN SWITCH." (Copyrighted.)

[This new song is a beautiful and touching tribute
to a locomotive engineer who lately lost his life on a
Western road. Following is the last stanza of the
song:]

Clinkety-clink, and down the track
The train will dash to-day,
But what are the ribbons of white and black
The engine wears away?
Clinkety-clink on, oh, world's apart—
The fireman hangs his head;
There is no clink in the maiden's heart—
The engineer is dead.

The music is different from anything heretofore
published, very melodious. Price, 50 cents, by mail,
postpaid. Address

LOCOMOTIVE & ENGINEERING.

A Practical Journal of Railway Motive Power and Rolling Stock.

ANGUS SINCLAIR, { Editors and Proprietors.
JOHN A. HILL, {

912 Temple Court,
NEW YORK.

IT ONLY COSTS YOU A CENT FOR A POSTAL CARD TO SEND FOR A
SPECIMEN OF THE ABOVE PAPER.

It will only cost you a Two Dollar bill to receive it regularly every month for a year. If you don't say it is worth more to any railroader in the motive power department, we will try to sell it to farmers, and let you alone.

Keep posted on locomotive work and improvement. The pictures alone will be worth the price of the paper next year.

The grand officers of your brotherhood will tell you that the paper is first-class and practical.

The A B C articles for next year will be A FEATURE. They will get down and explain foundation principles.

And then, this paper is all about *your* particular business, edited by men who have "been there."

See the JANUARY NUMBER and then you can't help sending a subscription to

If You Read This Rebus

MESS. CANWELL & COMPANY, publishers of
the HOUSEHOLD COMPANION, will give

\$200 IN GOLD

to the first person sending a correct answer to the above rebus before February 15th, 1892; to the one giving the next correct answer, \$50; to the third, \$25; and to the next 15 persons sending in the correct answer we will give \$5 to each.

To the person sending in the last correct answer we will give \$100 in Gold; to the next to the last, \$50; to the next, \$25; and to the next 15 persons (should there be so many who send in the correct answer) \$5 to each. With your answer send 25c. cash, postal note, or \$100. In stamps for a subscription to our Illustrated 16 page Paper, worth a dollar a year. Our February issue will announce the result of the contest, with names and addresses of the winners. We have given away over \$30,000 in prizes and premiums to our subscribers in the past two years and now have over 250,000 Circulation. Write your answer and name and address plainly, and enclose subscription money to

CANWELL & COMPANY,
41 & 43 Beekman Street, New York.

\$300 CASH!

For Solving this Rebus.
It is the name of a Tribe of Indians.
ALL HAVE A CHANCE TO GUESS.

We will give \$100 for the first correct answer received; \$50 for second; \$25 for the third; \$10 each for the next five; and \$5 each for the next fifteen.

Each Reply, to be eligible to competition, must be accompanied by 50 cents for a year's subscription, or 25 cents for 6 months, to the

Illustrated Home Journal.

Acknowledged to be the best 60 cent monthly in America. Devoted to the Home, Fashion, Mark, Stories and Decorative Art.

Remits with answer before Jan. 1, 1892, when the prizes will be awarded and names published. NEWMAN & SON, 202 Randolph St., CHICAGO, ILL.

A PRESENT

A sample bottle of the best medicine on earth that gives prompt relief and actually performs positive and permanent cures in all cases of Dyspepsia, Indigestion, Liver Complaint, Biliousness, Sick Headache, Sour Stomach, Nervous Debility and even Consumption, will be sent free to every reader of this paper who writes during this month. I have thousands of testimonials from grateful patients who have been cured of these distressing and dangerous diseases. As I do not ask you to pay even one cent for a sample bottle of this wonderful remedy and prepay all charges, you will be guilty of a crime against yourself if you do not send for it at once, and give it a fair trial. Remember it costs you nothing but the trouble of writing for it. If it does not prove as I claim, I am the loser, not you. Write to-day. Address

Prof. HART, 68 Warren Street, New York.

Special Offer to the Firemen's Wives and Daughters.

OUR PEERLESS STAMPING OUTFIT FREE!

The Ladies' World is a mammoth illustrated magazine, each issue comprising 20 large pages, 80 columns, including a handsome cover, and is devoted to stories, poems, ladies' fancywork, artistic needlework, home decoration, housekeeping, fashions, hygiene, juvenile reading, etiquette, etc., etc. It is one of the best and most popular of ladies' magazines, having a circulation of over 200,000. Its publishers, wishing to introduce it into thousands of homes where it is not already taken, now make the following unprecedented offer:

(Upon receipt of only sixteen cents in postage stamps, we will send The Ladies' World for Three Months, and to every subscriber we will also send Free and post-paid, our new Peerless Stamping Outfit, containing 22 entirely new patterns, as follows: 1 Carnation Pinks and Forget-me-nots, 5x7 in.; 1 Clover, 5x10 inches; 1 half wreath Wild Roses, 8 in. wide; 1 design for Laundry Bag, 8 in. high; 3 designs Roses for all-over work; 1 Scallops, with corner, for Blanket; 1 spray Bachelor's Button, 6 in. high; 1 corner design for Lunch Cloth, 8 in.; 1 design for Canvas Cloth; 4 designs for Tray Cloths; 1 design for Corn Napkins; 1 set Fruit Designs for Napkins; 1 design for Shaving Case; 3 designs for Silk Embroidery; 1 Braiding Design; 1 spray Wild Roses, 3x1 in.; 1 spray Daisies and Forget-me-nots, and 65 other beautiful designs, making in all 82 artistic patterns, well made on good paper, and which may be used for fine powder stamping 50 to 75 times without injury. With each Outfit we send free our Manual of Instructions in the Art of Stamping, which tells all about stamping, how to make the powder, etc. The patterns contained in this Outfit would cost several dollars if purchased singly at retail, yet we send the whole lot to any one sending 16 cents for a three months' subscription to our charming magazine. Five subscriptions and 5 Outfits will be sent for 64 cts. Do not miss this chance! Satisfaction guaranteed. As to our reliability, we refer to any publisher in N. Y. Address: S. H. MOORE & CO., 27 Park Place, New York.

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all
use? Nearly all Brotherhood men wear overalls, and
I am making overalls that can't be beat. It won't
cost you a cent and will help me a great deal if you'll
ask your dealer for the "Brotherhood Overalls" and
insist upon getting them. He will handle them if
you insist, and when you get them you will be get-
ting overalls as good as can be built. Every garment
warranted not to rip. Look for "Brotherhood" on
the buttons.

Health is Wealth!

For over FIFTY YEARS this old sovereign remedy for CATARRH and all its attendant maladies has been in use. It was introduced by CHAS. BOWEN, in 1835, and while other remedies have appeared, and after a brief period gone out of existence, the **OLD MARSHALL'S SNUFF** sales double each year. All Catarrhal Affections, A COLD IN THE HEAD and headache proceeding from it are QUICKLY CURED, and it often REMOVES DEAFNESS. Keep the bottle well corked. Notice the fac-simile signature of CHAS. H. BOWEN on the label. For sale by all Druggists.

DR. E. C. WEST'S NERVE AND BRAIN TREATMENT, a guaranteed specific for Hysteria, Dizziness, Convulsions, Fits, Nervous Neuralgia, Headache, Nervous Prostration caused by the use of alcohol or tobacco, Wakefulness, Mental Depression, Softening of the Brain, resulting in insanity and leading to misery, decay and death.

Each box contains one month's treatment. \$1.00 a box, or six boxes for \$5.00, sent by mail prepaid on receipt of price.

WE GUARANTEE SIX BOXES

To cure any case. With each order received by us for six boxes, accompanied with \$5.00, we will send the purchaser our written guarantee to refund the money if the treatment does not effect a cure. Guarantees issued only by

J. & C. BAUR,

Druggists, Terre Haute, Ind.

Alexander's Ready Reference!

For Engineers and Firemen. Broke Down. What I Should do.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty-five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old cuts, one of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK ACTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanations of the operations of all its parts as well as the manner of handling them are given. A diagram of SLIDE VALVE MOVEMENT, 16 1/2 by 18 1/2 inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on the road are given in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR RUNNING. A careful study of the principal items of the old editions has qualified very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their letters to me say in substance, "I would not have been promoted without it," or, "it put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive FIREMEN AIMING AT PROMOTION. Every CONDUCTOR and BRAKEMAN, as well as ENGINEERS and FIREMEN, should become acquainted with the workings of the Air Brakes now in use. ONE HOUR careful study of this description of the operations of the WESTINGHOUSE AUTOMATIC and AIR BRAKE will qualify ANY INTERESTED PERSON for examination on that subject. This item has been recently added to the edition. No books sent C. O. D. Price of Ready Reference, postage prepaid, \$1.50 per copy. Address,

Both books are fresh, bright and helpful. Send for catalogue containing many testimonials and other particulars, and also a list of other mechanical and scientific books, drawings, instruments, etc.

He who reads (this work) must learn.
Aid, Collins, Inspector.
This work is now complete and can be furnished, in parts or strongly and handsomely bound in one volume for \$2.50. Send for descriptive catalogue.

\$1,000

FOR AN

OLD COIN.

and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since, a Lynn, Mass., shoe dealer found a coin worth \$1100. Recently a Scotchman in an Illinois town came across a coin worth \$700. Others have done even better. The *New York World* says: "Many people have become rich by looking after coins wanted by collectors." The *Home Journal* says: "Collecting coins is a very profitable business now-a-days, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices. Write at once for further particulars enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune to you. **W. E. SKINNER, Reliable Coin Broker, 325 Washington St., Boston, Mass.**

IF YOU HAVE ANY COINS dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1869; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1878; all large copper cents, also small cents with eagles on, also cents of 1853 and 1857; all half-cents; foreign coins, fractional and Confederate currency, etc. For above we **PAY BIG AMOUNTS** over face value, if in required condition. This is a comparatively new business, and

**BICYCLES
Given Away
FREE.**

FREE OF BOYS AND GIRLS UNDER 18 YEARS OF AGE.
WITHOUT ONE CENT OF MONEY.

If any boy or girl under 18 wants an elegant High Grade Safety Bicycle they can obtain it free without one cent of money. We shall give away, on very easy conditions, 1,000 or more.

DESCRIPTION OF BICYCLE: The wheels are 36 inches with crescent steel rims and molded rubber tires, and run on hardened steel cone bearings, adjustable to wear; geared to 46 inches; detachable cranks; four to five inches throw; frame finely enameled, with nickel trimmings. Each machine is supplied with tool bag, wrench and oiler. Equal in quality to those sold on the market for \$45.00. We have both boys' and girls' styles. We deliver the bicycle free of all charges anywhere in the U.S. If you want one write at once to **WESTERN PEARL CO., 324 Dearborn St., Chicago, Ill.**

ALL RHEUMATIC AND NERVOUS DISORDERS,
Including KIDNEY AND LIVER TROUBLES, RHEUMATISM, GOUT, SCIATICA, LUMBAGO, NERVOUS EXHAUSTION, IMPAIRED VITALITY, BRAIN FOG, SLEEPLESSNESS, INCIPIENT PARALYSIS, HYSTERIA, INDIGESTION, CONSTIPATION, LOSS OF APPETITE AND VIGOR, &c., yield like magic to the marvelous healing properties of

DR. BRIDGMAN'S ELECTRO-MAGNETIC BELTS, SUPPORTERS, BRACES, INSOLES AND APPLIANCES,

Which have cured thousands of sufferers (both sexes)

Without the aid of poisonous drugs or quack nostrums. If any of our readers doubt the remarkable curative powers of these genuine and convenient appliances, we would ask them to write for our pamphlet of testimonials; or call, if possible, at our complete and extensive establishment, 373 Broadway, New York.

DISEASE is the result, largely, of depleted nerve force and demagnetized blood. DR. BRIDGMAN'S ELECTRO-MAGNETIC CORSETS, BELTS, INSOLES, and APPLIANCES have been demonstrated to be the best agency yet discovered for preventing this depletion and demagnetization, as well as restoring such forces when lost. These garments are unlike any other device for electrifying the system or charging it with magnetism. As a force it is self-supplying, retaining its virtue for years, and invariably benefits. They can always be relied upon.

Important to Ladies and Gentlemen who may be suffering from Nerve Weakness and General Debility, and who do not yet deem themselves sick persons.

THIS Belt or Corset, with Insoles for ladies, or Belt with Insoles for men, will be found of the utmost possible value in the incipient stages of disease; more especially in the earlier stages of nervous prostration. There are thousands to-day, male and female, living a lingering life of misery, who, had they but worn these life-giving appliances, would be now enjoying the blessing of life nature intended they should.

ENGINEERS AND TRAINMEN OF ALL DECREES NEED THEM.

These Belts are especially adapted to Engineers, Firemen, Conductors and Trainmen whose Nerve and Organic Systems are constantly subjected to the jarring, disturbing and Enervating causes when on the road. To such we particularly recommend them. They will be found invaluable in preventing as well as curing these diseases.

A BOON TO WEAK AND NERVOUS MEN.

VERMILLION, OHIO.

Your Appliances are of the best quality and very reliable, and I can heartily recommend them to all suffering humanity.

S. V. RONK, Editor.

BRIGHTON, MICH.

Dr. Bridgman's Appliances have proved entirely satisfactory, and I can confidently recommend them.

H. A. DAY,
Pub. "Wesleyan Advocate."

PORTSMOUTH, OHIO.

My daughter has been greatly benefited by wearing Dr. Bridgman's Corset. She cannot do without them.

CARL HUBER, Pub. and Editor.

Thousands of others voluntarily testify to the wonderful therapeutic and curative efficacy of these appliances, stating they vastly excel all other so-called and spurious Electric Belts.

Price of our "Clincher"

Full Power Belt, \$5.00

Postpaid. All Sizes.

A BLESSING TO DELICATE WOMEN.

These Belts are truly Electro-Magnetic, as any tyro in Electro-Therapeutics will inform you, and are absolutely reliable.

These Appliances promptly annihilate those weak and languid feelings, those back and side aches, and exterminate Rheumatism and many other diseases from the system. They are light and comfortable to wear, and are guaranteed to imperceptibly generate a mild continuous current of Electro-Magnetism, all-healing in its effect. They differ from the so-called Electric and Galvanic Belts which are usually worthless, and create sores on the body, leading to blood-poisoning.

Satisfaction Guaranteed

or Money will be cheerfully Refunded.

PRICE, \$5.00.

Full Power.

Always Effective.

SPECIAL HOLIDAY OFFER:

With each order for \$5.00 we will send free a pair of our Insoles if you state size and mention LOCOMOTIVE FIREMEN'S MAGAZINE.

This is the cheapest cure in the world, and the best remedy for cold and wet feet, which often produce long and painful diseases. They also cure Rheumatism and Gout in the feet, and when worn with some of the above Appliances, materially assist in effecting a quick cure. They can be worn in your regular size shoe.

50c. Per Pair. All Sizes.

They generate a pleasant flow of warmth, do not shock, and last long. Their price, 50c. may seem an expensive doctor's bill and yet your sicknesses. If your feet are cold, you will find these Insoles a real cure. They excite the circulation and destroy that nerve disease usually accompanying creeping sores. 50c. pair. All sizes.

We also have a fine line of high-grade stylish long, medium and short waisted Corsets and Waists, ranging in price from \$1.00 to \$1.50. Also Arm and Leg Appliances, Shoulder Braces, Chest Protectors, Sciatic and Shoulder Appliances, Wristlets, Anklets, Arm and Leg Appliances, Shoulder Braces, and Flesh Brushes, all thoroughly and permanently charged under our Electro-Magnetic system. Send for descriptive pamphlets. We will mail any article, postpaid, on receipt of price, stating size. Remit by P. O. or Express Money Order, Draft, or Currency in registered letter, to THE A. BRIDGMAN CO., 373 Broadway, New York, or inquire at your drug store for Dr. Bridgman's.

References: This publication and Tradesmen's National Bank, N. Y. Agents wanted. Liberal terms.

Say Joe, why don't you get your Overalls by mail, same as I do; then you won't have to go around looking like a tramp.

overalls; breast measure under arms for coats, saying whether long sleeves or regular are wanted.

Address all letters plainly to **HAMILTON CARHARTT & CO.,**

dations as above, mailed on application.

Special prices to Members of the Brotherhood R. R. Firemen.

JAROS HYGIENIC UNDERWEAR CO., 831 Broadway, New York.

LEGS AND ARMS WITH RUBBER FEET AND HANDS.

(MARKS' PATENTS.)

Indorsed by the United States government, the Industrial Exhibition Commissioners of New York, Philadelphia, Atlanta, New Orleans, etc., the eminent surgeons of the country, and over 12,000 men, women and children who wear them, residing in all parts of the world.

The rubber foot and hand possess the most natural appearance, the greatest durability and comfort of artificial limbs. Vast numbers of mutilated men and women are, by the use of rubber feet and hands enabled to mingle with the rest of the world without betraying their loss or experiencing great inconvenience.

Railroad men who have lost one or more of their limbs are enabled to resume their vocations by the use of these remarkable inventions.

Mr. Wm. Harmes is station agent and baggage master at Meadow Brook, N. Y. It is a daily occurrence for him to shoulder heavy trunks, boxes, etc., and place them on the train. In 1884 Mr. Harmes became the victim of a railroad accident which necessitated the amputation of both of his legs. Five months after he provided himself with a pair of Marks' Patent Artificial Legs with Rubber Feet. In a few days he was enabled to walk without the aid of a cane. The railroad company gave him a position as flagman; a short time afterward he was appointed station agent, the position he holds at the present time. The labor of this position are arduous, trying and difficult, requiring heavy lifting and much walking and quick movements.

Mr. Harmes says: "With the Marks' Rubber Feet and Patent Legs I am able to handle boxes, barrels and trunks weighing 125 pounds. I can carry them and place them on a car without help. I can get on and off a train when it is moving at the rate of fifteen miles an hour. I can walk as far as any ordinary walker.

By a copyright formula, furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished to us are made from measurements and profiles, without our seeing the wearers. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 430 pages with 258 illustrations and a thousand indorsements and testimonials will be sent free of charge. Address

MANUFACTURED SOLELY BY

THE DREHER MANUFACTURING COMPANY,

37 PLATT STREET, NEW YORK.

STILL ON TOP.

PRICES REDUCED.

BAKER'S TRIPOLINE

THE BEST METAL POLISH IN THE WORLD.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Bed rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

THE MATCHLESS METAL POLISH CO.,

38 MARKET STREET, CHICAGO, ILLINOIS

Castner & Curran

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

BERWIND-WHITE COAL MINING Co

Miners and Shippers of the

EUREKA

Bituminous Coal

55 Broadway, New York.
Bullitt Building, 139 South Fourth St.
Philadelphia.

19 Congress St., Boston, Mass.

An Unexcelled Fuel for

LOCOMOTIVES AND STEAMSHIPS

Shipments Last Year, 3,000,000 Tons.

SHIPPING WHARVES:

PHILADELPHIA, Greenwich Point.
NEW YORK, Eureka Pier, Harsimus (foot Sixth st.),
Jersey City, N. J.
BALTIMORE, Canton Piers.

CAST STEEL WORKS OF FRIED. KRUPP,

ENGINE, COACH & CAR OILS

Are in constant use on many
Large Railway Systems.

References and comparative tests furnished on application.

Baldwin Locomotive Works.

ESTABLISHED 1831.
ANNUAL CAPACITY, 1000.

LOCOMOTIVE :- ENGINES,

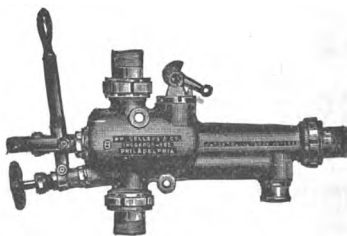

Adapted to every variety of service, and built accurately to standard gauges and templates. Like all parts of different engines of same class perfectly interchangeable. Broad and Narrow Gauge Locomotives; Mine Locomotives by Steam or Compressed Air; Plantation Locomotives; Noiseless Motors for Street Railways, Furnaces, etc. **COMPOUND LOCOMOTIVES.**

BURNHAM, WILLIAMS & CO., Proprietors,
PHILADELPHIA, PA.

WM. SELLERS & COMPANY,
(INCORPORATED.)

SOLE PATENTEES AND MAKERS OF

Self-Acting Injector of '87

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the steam or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam and vice versa.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in.

Descriptive Circular and Price List sent on application to Office and Works.

PHILADELPHIA, PA.
